VOL. XXIII.

NOVEMBER, 1881.

NO. 1.

A DILIGENCE JOURNEY IN MEXICO.

THE journey was made in the winter of 1880-81, when the rapid progress of work on the two great railroads had already put a limit, not far in the future, to the period of diligence journeys as a necessity in the interior of Mexico. My husband's business related to certain silver mines, for which Morelia, the capital of the State of Michoacan, was the nearest point of departure. The softly vow-eled name of the old Catholic city was alluring. Beyond the mountain wall which encompasses the valley of Mexico there lay an interior full of indefinite promise; strange figures walked the streets of the capital, or camped in its market-places, who had come over the mountains on their sandal-shod feet from a country of which travelers said, "There is nothing stranger out of Egypt." The *diligencia general* is the ordinary Concord coach, drawn by eight mules, harnessed in a complicated tangle, which is technically described as "two wheelers, four on a swing, and two leaders," *i. e.*, two at the wheels, four abreast in the middle, and two ahead. The driver wore a pair of goat-skin breeches, with the long yellow hair outside, comically suggesting the legs of a satyr. He had an assistant beside him, who wielded the whip, or, if whipping failed, pelted the mules with small stones from a leather bag filled for the purpose. There was extraordinary neatness and precision in his aim. The offender was admonished by sharp, unerring little taps upon the ear, or the root of the tail, or a projecting hip-joint. On these occasions, unlike the teamsters of the North-west, the Mexicans do not rely on profanity.

The season was late January, but triumphant spring in the old city of Cortez—clear, intense sunlight, young leaves spreading, a commotion of birds in the city gardens, and a damp, earthy smell mingled with the per-

fume of violets. There was that thrill in the air which "stirs the blood with the instinct of travel," and gives one a longing to "tarnish the blue of distant mountains with one's feet." The old pavements of Mexico are laid in a pattern, outlined with large stones which have become painfully prominent with the tread of centuries. We started with a heavy jolt and a succession of shocks, as the wheels bounded from the intersecting lines of this ancient pattern, but the torture ceased at the square, where stands the equestrian statue of Charles IV., which the common people call the Trojan horse (*el caballo de Troya*), the focus of several historic streets. We diverge upon the *Paseo de Bucareli*, named for one of the viceroys, where the Mexican ladies were wont to take the air in their carriages, before Carlotta founded the new *Paseo de la Reforma*, and gave it the tragic association with her memory. The city is steeped in tragedy, but one does not remember this on a spring morning, when even the gray arches of the aqueduct are putting forth new life in the tufts of young grass trembling against the sky.

The houses in this part of the street have an individuality and a strong facial expression which impresses an American vividly in contrast to the monotonous, wide-eyed stare of a respectable New York street; each house is worthy a description which would apply to no other. It would not be easy to guess the life of the people inhabiting them. The houses repose behind their crumbling garden-walls, looking out upon the shifting world of the street with a dull, slumberous dignity which ignores the pathetic look of social decadence and general discomfort creeping over them. Their windows are deep-set and heavily shuttered; the balconies have formidable railings; the gardens look weedy and wild; the strong

sunlight spares no detail of decrepit wood-work, or faded paint, broken tile, or stain of leaking spout meandering down the stuccoed wall with a grotesque suggestion of unwiped tears on unwashed cheeks. One, a low house in pale yellow stucco, peeling in flakes and exposing the gray adobe, had a grass-grown bridge crossing the moat, where floating weeds and water-plants scarcely stirred upon the sluggish current; a few thin poplars rose against the low horizon, through which a rising moon might peer with weird effect. The aqueduct followed us beyond the city gate, its massive arches, each one the tribute of a conquered Indian village, marching with pomp across the plain, and framing it in solid gray shadow—a succession of pictures, all in the same low morning light, with the same background of blue mountain-wall, overtopped by volcanic peaks with world-resounding names. It would have been an immense encouragement to my youthful geography if I could have believed in the actual existence of Popocatepetl, and that I should ever see him cutting the tropical heavens with his dazzling, snowy helmet. I do not remember even trying to learn the name of his bride, Istacihuatl, or the “white woman.” The aqueduct is such a bulky embodiment of the past that one may easily overlook the historic marshes which were once covered by the now shrunken lake, and reflected on such a morning as this the far-famed floating gardens of Montezuma, and the Aztec pirogues flitting into the markets of Tenochtitlan, with their loads of fruit and flowers for the tables of the nobles and the sacrifice of the dread priests. Now, as we swing along past the aqueduct, Chapultepec is in sight, the light arches of its loggia rising above the tops of the cypresses, which have outlived four empires and countless vice-royalties, succeeding each other like dreams of a troubled night. There is a tradition that the ghost of Cortez’s Indian mistress, the gentle Doña Marina, walks where the shadows are deepest in the cypress avenues; but one cannot understand why Doña Marina should be there, alone, of all the sad Indian queens and fair Spanish vice-queens who have walked there in life. What a company they would be—many times greater than the daily assemblage of the living on the Alameda—if all the restless and disappointed men and women who have inhabited Chapultepec in the past should gather like the twilight shadows in its melancholy walks, and look at each other as they passed, with dumb, wistful, reproachful, or threatening, or despairing eyes!

The stage-road is the ancient *camino real*, built very soon after the conquest, and apparently never mended since. It was paved with

the miscellaneous stones of the country through which it passes, unhammered, and laid in a pattern, like the city pavements; but this source of exasperation time has nearly removed. Traces of it are left here and there, and when not visible we knew it by a painful perpendicular movement of the hind wheels of the diligence. Across the valley to Tacubaya the road is broad and level; cool morning shadows cross it; the country is like a garden; flights of birds hover over the freshly turned earth, where men are plowing with oxen yoked by the horns, and plows of a pattern probably older than Christianity. With this rude implement they have been scratching the surface of the soil for centuries, while depths of unexhausted fertility lie below. The men at work on the windy plain wear wide white cotton trousers flapping about their bare brown ankles. Their great hats swing around with the sun—at midday resting on top of the head, at sunset framing it in a halo of shadow. The *sarape* illustrates the old fable of the sun and the wind—closely enfolding arms and shoulders during the chill hours, and tied in a roll about the waist at noon. The leather sandal allows the foot to take hold of the ground so firmly that, remembering the modern shoe, you feel that you have never seen a man walk before.

Four miles from the capital we jolted through the main street of Tacubaya, a city of country-seats, gardens, churches, and beautiful trees,—among them the black ash (the Mexican *fresno*), and the delicate foliage of the pepper-tree (*arbol de Peru*). Looking through the gate-ways of its courts, we saw the most tantalizing interiors framed in the blank wall. Blossoming plants were ranged along the railing of the gallery (*corredor*) which surrounds the stone-paved court, or *patio*; sometimes there was a staircase, always interesting with its suggestion of human feet going up and down; or a glimpse of an inner court, with a stone fountain, and women at work, or gossiping, babe on arm, or with a water-jar poised on the shoulder and a backward turn of the head.

The intimate life of a Mexican house centers in the *patio*. Through the deep arch of the portal you look in upon its domestic economies, its dignities, its social life, its charities; you behold the common fireside, where it seeks the sun’s warmth on chilly mornings; you see the family carriage and the horses, the fetching and carrying of the servants, the dogs and parrots and children, and the perpetual “beggar at the gate.” By good luck, you may catch a glimpse of the young girls in the *corredor* behind the screen of plants, the sound of a piano in some lofty *sala*, or a sono-

rous young voice conjugating French verbs in a monotonous recitative.

Beyond Tacubaya are long hills, which we climb slowly, leaving behind us the view of the wonderful valley. Prescott's description of it as the Spaniards first saw it is to-day the best that could be given, allowing for the changes which he speaks of:

"In the center of the great basin were beheld the lakes, occupying then a much larger portion of its surface than at present; their borders thickly studded with towns and hamlets, and, in the midst, like some Indian empress with her coronal of pearls, the fair city of Mexico, with her white towers and pyramidal temples, reposing, as it were, on the bosom of the waters—the far-famed 'Venice of the Aztecs.' High over all rose the royal hill of Chapultepec, the residence of the Mexican monarchs, crowned with the same gigantic grove of cypresses which at this day fling their broad shadows over the land. In the distance, beyond the blue waters of the lake, and nearly screened by intervening foliage, was seen the rival capital of Tezcuco, and, still further on, a dark belt of porphyry, girdling the valley around, like a rich setting which Nature had devised for the fairest of her jewels."

The day grew hotter, the sunlight blinding on the dry and verdureless hills. The destruction of so much of the magnificent forest timber of the valley has greatly increased the dryness and barrenness of its winter climate. The Spaniard has been a terrible foe to the virgin forests, laying waste with short-sighted greed, which his descendants pay for, and perpetuate. I recall very little of this part of the journey except the faces of our fellow-travelers, the philosophic Mexicans, who dozed, and woke to smoke cigarettes and doze again. Two young gentlemen, brothers, on the middle seat, conversed together silently in the language of the deaf and dumb; one only was a deaf mute, but they were equally fluent with their fingers.

At twelve o'clock we breakfasted at an Indian village, the name of which is not to be found on the map—a few low adobe houses and a hilly street. Two women were washing dishes in the inclosed end of the porch of the *café*, screened from the sun by an awning of matting; and household utensils of native pottery were set out on the broad, low adobe wall on which rest the wooden pillars which support the roof of the porch. There were a great many dogs, pigs, and children, not to mention the ubiquitous flea of the country, in active circulation, but the room where we ate was clean and cool. The breakfast was far beyond what we had expected so poor a place to furnish; even those chiefest luxuries, fresh eggs and milk, were not wanting.

Thus far we had met no vehicles except the two-wheeled carts drawn by oxen,—wheels without tires, hewn out and showing the separate strokes of the ax,—but many

humble travelers on foot, trotting into Mexico with back-loads of market stuff. Fruits and vegetables were carried in a four-sided hamper or cage called a *huacal*, made of osiers; often it was filled with live fowls, the tail feathers of the cocks gayly fluttering through the bars of the cage, or was divided into compartments, with eggs below and fowls above.

We met huge masses of pottery ingeniously woven together with cords of the *agave*, and towering perilously above the bearer's head; rolls of matting, wooden trays, bundles of sugar-cane, *camote* (a kind of sweet-potato), tomatoes wrapped in green leaves. A pair of live hens never came amiss, swinging by the legs from a disengaged hand, or tied to an available corner of the load. Whole families were *en route*, even to the baby, rolled in one end of the long cotton scarf which the Indian mother wears over her head, or suspended in its folds at her back. I do not think a stranger procession could be met with on the high-roads of this century.

Steadily climbing, the country growing poorer and wilder, we pass many little heaps of stones, supporting the fatal cross,—the place of a murder,—making a mute appeal to the traveler to pray for one cut off in his sins. We enter the mountain passes, dark with pines and firs, and ascend to the battleground of Las Cruces, on the divide which separates the valley of Mexico from that of Toluca. We pass the monument to Hidalgo, and I ask with shame who was Hidalgo, and am answered: "He was our Washington—this is our Bunker Hill!" It was here, on the 30th of October, 1810, that Hidalgo with his Indian insurgents, armed chiefly with slings, bows, clubs, lances, and *machetes*, met the troops of the Spanish Government, under Colonel Truxillo, and drove them back upon the capital. The loss of the Indians must have been frightful; in their ignorance of the nature of artillery, they charged Truxillo's guns and "tried to stop the mouths of them with their straw hats, until hundreds had perished by the discharge." After the battle, a sad train of Indian women went up on the mountain to bury their dead, and the many crosses that were raised by their hands gave the spot its name.

Many of the Indian huts by the way-side have a frugal lunch set forth, on a clean white cloth, held down by stones—dulces, fruit, and bread, and always a bottle of *pulque*. We wondered much for what expected guest this humble invitation was extended, until we saw the wayfaring Indians set down their packs on a rude platform before the house, evidently built for that purpose, and refresh themselves at the road-side counter. Women came for-

COURT AND STAIR-WAY OF A MEXICAN HOUSE.

ward from the interior, to receive payment, and gossip with the guest in their soft, half-pleading voices, the very sound of which is an invitation. We descend about a thousand feet from the divide to the plain of Toluca, and are still nine thousand feet above the sea-level. Here are rich *haciendas*, the first we had seen since leaving the valley of Mexico. I recall one with a high gate-way—a kind of canopy,

supported on stone pillars, and roofed with red tiles; a long avenue of cotton-wood trees leading to the white-walled *hacienda*, like a low fortress, looking out over its brown pastures. Toluca lies at the foot of the extinct volcano of San Miguel de Tutucuitlapico, which is said to contain, in the very midst of its once fiery core, two lakes of the purest and coldest water. We entered Toluca about

ON THE ROAD TO MEXICO.

four o'clock; the shadow of the mountain was already creeping down into its streets. It was like a town in a romance of the Middle Ages—mellow in color, with dark cypresses, white bell-towers, and tiled domes against the background of dream-like mountains. No street-cars or hacks profaned its streets; the horses were unshod; there seemed to be no sound in all the place except the roll of the diligence-wheels as we thundered through the narrow, roughly paved streets, and into the court of the Hotel de la Diligencia.

Our room opened on the *corredor* of the hotel; it was meagerly furnished, but clean and restful, with a kind of rude stateliness from its lofty ceiling and tiled floor. I lay down on one of the narrow brass bedsteads, furnished with linen as white and cold as new frost, and looked at the great spaces of dull color with thankfulness for the absence of perplexing patterns of modern wall-paper and cretonnes

with conventionalized flowers. One long window, with heavy inside shutters, opened upon a balcony, from which we could look down on the flat, chimneyless roofs, the stone water-spouts, and the languid life of the street below.

The broad, luminous shadow of afternoon had crossed the street, and was creeping up the opposite houses. Along the perspective of stuccoed façades,—washed in dull yellows and blues,—we saw, leaning over other balcony railings, other feminine heads, covered with the long-fringed scarf, the *rebozo*, or uncovered, black-braided, with pale, low-browed tropical profiles. We had supper by the light of two candles, in a bare and lofty dining-room. The returning stage for Mexico was not yet in, and there were rumors that we might not get through to Maravatio on the following day. We went to bed early, in preparation for a short night. At three o'clock, we were wandering along the dim corridor, protecting our

MAGUEY FIELDS IN THE VALLEY OF MEXICO.

one candle from the draughts, in search of the dining-room and hot coffee. In the court there was a trampling of hoofs and a heavy jarring of wheels as the coach was dragged out from under the arches; brigand-like figures, muffled in *sarapes*, were moving about by the light of a torch, stuck in a crevice of the pavement. There was plenty of time before the start to eat and drink, and wrap ourselves well from the chill, thin air, and to look at the stars in the quiet space of sky above the court. The man who sits beside the driver carried a torch, made of *agave* rope, covered with pitch; by its yellow glare, the unfamiliar landscape was revealed in sudden flashes framed in darkness. We had left the tumult of the pavements, and gained the silent country road. There were glimpses of *hacienda* walls and pasture bars—not of chestnut, gray-lichened and weather-bleached, but of massive stone, pierced with round

holes for the long, smooth bars to slide through, and instead of the shuddering twigs of withered golden-rod planted in the wayside snow-drift, a rich mass of nopal cactus stood out, pale green, like jade-stone, in the torch-light, throwing a blotch of black shadow against the wall. We slept, and woke, and tumbled about in the coach. There was a pretty young *señorita* beside me, with whom we had begun an acquaintance in experimental Spanish and English. Sometimes her head was on my shoulder, sometimes mine on hers, as the diligence hurled us from side to side, and the miles of dim country were left behind. Now and then the crack of a wax match, and a spurt of white flame, showed two or three faces and two or three cigarettes meeting in their midst, with a murmured "*gracias!*" then darkness again.

Morning broke solemnly, with a single streak of light where the gray cloud-curtain

lifted above the horizon. We were on the great plain of Toluca,—the bed of an old sea,—its long undulations stretching, without a break, between us and the brightening East. Three figures were riding against it, who proved to be the escort accompanying the diligence. Between Mexico and Toluca it is guarded by pickets, stationed along the road at intervals. They were picturesque fellows, in *sombreros* and *sarapes*, swinging along in their saddles with an ostentatious clank of carbine and sword and spurs. One, who rode a gray horse beside the coach-window, wore a wonderful great hat, quite heavy with silver

before. Their dull, melancholy faces had a vagueness, a lack—to call it a hunger would be sentimental, yet they seemed to be waiting for their souls. We met immense droves of black swine, driven by two or three Indians, with food rolled in a piece of matting, a few billets of wood, and a brown earthen jar for cooking, hung at their backs. During the heat of the day, the hogs and their drivers slept by the road-side, traveling in the cool hours of the morning and evening and far into the night. The strangest figures were those who wore the cloak made of the shredded leaves of the *maguey*, woven into a kind of

A PULQUE SHOP BY THE WAY-SIDE.

braid, and a silver cord wound four times around the brim, and fastened with silver buttons. His *sarape* had been brilliant in its day, but was in better tone for having been dulled by age; it enveloped and concealed him all but the lean, brown bridle-hand, and one dark eye, which ranged backward and forward like the eye of a spirited horse. He looked half-soldier, half-bandit, and, I doubt not, was prepared to enact either rôle with gusto.

We met fewer traveling Indians on this day's journey; but their solitary figures in the desolate, unpeopled landscape were even more impressive than the moving market of the day

thatch, which rustles in the wind. I have seen suggestions of this weird garment in Japanese drawings. It might have been the earliest sartorial expression of the human mind.

At noon we reached a *hacienda*—the owner non-resident. There were two courts, communicating by a gate-way in the dividing wall; the inner one was entirely surrounded by buildings of adobe, one story in height, roofed with dull red tiles, their deep corrugations sloping downward in "descriptive lines," showing the heaving and sagging of the roof. Here also was the fountain, like a flying-buttress to the main wall, severe, almost Greek, in its design. A

THE FOUNTAIN AT LA JORDANA.

curious little chapel opened on the outer court opposite the stone bath for the horses—everywhere were broad spaces of sunlit wall, with luminous shadows slanting across them and resting on the worn, channeled pavement. The *hacienda* appeared to be very old, and perhaps not prosperous. Here we saw in perfection that costume of the Indian women which had delighted us at a distance. The petticoat of wool, woven with fine horizontal red stripes on a dark blue ground, is of their own manufacture, coarse, but of excellent texture and colors; it is merely a straight breadth of the cloth, girded about the waist with a scarf of rich colors; the fullness all in front (recalling the beautiful straight folds in Greek drapery, that descend from the girdle below the bosom), and the scantiness at the back, which gives expression to the movement in walking. The short, square mantle which covers the shoulders and bosom is of darker,

finer material than the petticoat. Without the head-cloth, which protects the head from the wearing of the leather strap which supports their burdens, they are much wilder in appearance, their black masses of hair almost covering the low, retreating forehead, and hanging in a rough braid at the back. While we breakfasted, a crowd of beggars were hovering around the door—children and women of the most abject class,—“*esclavos*,” we were told, on the estate,—clothed in remnants of the costume I have described, some of them scarcely clothed at all. The old women, with their shrunken, unvenerated bodies exposed, were unspeakably dreadful. The Mexicans were very gentle always with the *léperos*; if they gave nothing in response to the plaintive “*por amor de Dios*,” they never harshly repelled them, perhaps for fear of the “evil eye.” Our breakfast, with this group at the door, was not, it may be imagined, a very pleasant meal.

Tortillas were brought in by an Indian woman on the palm of her hand, and laid in a pile on the table-cloth. Don A. (the *licenciado*, the father of our pretty *señorita*) gathered up those which were left and tossed them to the supplicants at the door, who seized and scuffled over them like ravenous dogs.

Toward sunset we crossed the "line" into the State of Michoacan, descending from the high, unshadowed plain through passes of the hills into a rugged country, with spurs of the nearer mountains, darkly wooded to their tops, narrowing the outlook toward the rich valley and distant blue ranges beyond. We passed the great live-oak under whose shelter Maximilian breakfasted magnificently with his suite,

coach, sang the first songs of the country we had heard. Their monotonous tremolo came to us fitfully, as the creaking of the heavy wheels through the mud permitted us to hear, and the night stillness of the unknown country gave a peculiar impressiveness to the fragmentary notes, as spontaneous as those of a belated night-bird. The circumstances under which one hears this music may account, partly, for its singular charm. It is very simple, with much repetition, and a "dying fall," which haunts the memory; it is sung in the high Spanish tenor which suits so well the light tinkle of the guitar-strings, or the *bandola*, a kind of lute still used in Mexico. We heard these songs everywhere—at night, on

RANCHEROS IN THE PLAZA AT MARAVATIO.

on his last "progress" on horseback from the capital to Morelia.

The historic pavement crops out here on the slope of a long hill, down which the diligence plunged and staggered, the eight mules pelting the stones with their little hoofs, apparently with no more control over its insane lurches than we inside had over ours. It was a relief to feel the wheels sink into the mud of a despondent stretch of road below.

Twilight found us still plodding along, tired and supperless. The outlines of the rolling wooded plain grew dim in a mist that gathered in the hollows. The new moon began to shine faintly; the guard, lounging along behind the

the steamer's deck, sung by the Cuban girls in the intervals of cigarettes, sitting along the rail with their faces in shadow and their hands blanched in the moonlight; by the boatmen in the harbor of Havana, crossing between ship and shore, with a single lantern in the stern of their gondola-like boats—the music as faint and thin over the water as the pale phosphorescent gleam in the wake of the boat; by all sorts of people in the streets of the cities at night; again on the steamer, one stifling night, off Yucatan, sung by the half-naked convicts in the steerage, climbing the hatchway-ladder for a breath of pure air. (We saw them go ashore next day with a guard of

Mexican soldiers, to be left on the government works in a climate which is slow death.)

About eight o'clock, we stopped before the white colonnade of a large, unlighted building of the *hacienda* of Tepitongo. We walked many times the length of its tiled pavement, back and forth, before doors were opened or any sign of occupation came from within. We were destined to a better knowledge of Tepitongo on our return, but that night, as we saw it by candle-light and faint moonlight, it was no more real than the house of the Three Bears in the wood, or the palace of the Sleeping Beauty. Two or three low-voiced Indian women brought us supper, and made up beds on the stone floors of two great bare rooms opening on the cloistered court, where plants were growing in spaces provided in the pavement. It had a sad, formal, convent-like aspect in the uncertain light of the setting moon. We breakfasted next morning from our lunch-basket, and departed on the edge of day-break. The lands of Tepitongo on each side the road, for some distance, are carefully cultivated by antique methods.

The massive stone dams which hoard the waters in the rainy season, and let them out by means of ditches across the levels, would put to shame many of our city reservoirs. The heavy buttresses add greatly to their picturesqueness, if not to their strength, and they have that rich ingrained color and texture which only time can give. There is an immense amount of old stone-work in Mexico of great artistic and archæological interest; men and materials were not spared under the Spanish *régime*. Every little provincial town, unnamed, perhaps, on a foreign map of the country, has its plaza, with a fountain and stone benches facing the walks; its arcaded sidewalk on the principal street, and a noble church, with bell-towers, dome, and broadly sculptured façade. When the Tlascalans, Cortez's Indian allies, were helping him in his work of destruction at the siege of the capital, razing the temples and palaces, and heaping the canals with their ruins—"Go on!" the Aztecs called to them, bitterly,—“the more you destroy, the more you will have to build up again. If we conquer, you shall build for us; if your white friends conquer, they will make you do as much for them!” The bridges on the *camino real* are grand and simple structures, built with the indifference to human labor which characterizes all the work of this period. There will often be an obscure date, or an inscription which has sunk back into the stone. The Virgin's image is gone from the niche where the traveler of old paused to cross himself, and the stone seats are worn and hollowed by all the tired figures that

have rested there since they were first hewn out of the broad parapet.

Taking advantage of the first change of mules after sunrise, A—— tossed a piece of silver to the driver, and we walked on ahead of the diligence for a mile. The sun had not burned away the dewy freshness of the morning. Here in the lower country, spring was farther advanced; flowers were not plentiful as yet, but a rich growth of trees, in half-leaf, was added to the gaunt, sculptured cactus which alone grew on the plains. This is Mexico *Templado*; there is little of the tropical except the nopal, planted in hedges by the road-side, and singularly effective, with broad patches of light and shade on its prickly palms. There was lavish promise of blossoms which we did not see, owing to a phenomenal snow, which brought a second winter upon this part of Mexico. We passed fields of the *maguay* (American aloe), but they did not form a feature of the landscape, as in the valley of Mexico. Each *hacienda* or *ranchito* raises enough to supply its household with *pulque*, the national drink, which is to a Mexican what beer is to a German, or *vin ordinaire* to a Frenchman.

We met this morning the only private carriage which we saw on the *camino real*. It was very old and cumbersome; it was drawn by two mules, and occupied by a stout, majestic-looking, middle-aged lady, with a black shawl over her head; two men servants, conspicuously armed, and dressed in leather jackets and leggings, *sarapes* and broad straw-hats, rode behind the carriage. Soon after, we passed the *hacienda* from which the carriage had probably come. The Indian laborers whom we met all said, “*Buenos días*,” and lifted their great hats and their great eyes to us, with the stare of one of Circe's beasts. Somewhere, you feel, in that dull body a man is imprisoned. A strange sight on the road was a number of Indian women, stooping and moving rapidly across a great field in the distance. Their employment seemed very mysterious, but proved to be the gathering of the dried droppings of the cattle, which they put rapidly in a sack, and emptied in a heap.

Often I thought of that strange book, “The Cossacks,” by Tolstoy. Such a strong pencil in this country could do a wonderful work. The shadows are black and broad. There could be found nothing more intensely local. Only the French influence, which appears not to have extended much beyond the capital and the shops of the cities, has interrupted the national expression, strangely mixed, as it is, with one civilization imposed upon another, yet homogeneous, like the architecture. There is a class which will always have the foreign

A Country Store

furniture and costumes and manners; but here is a tremendous interior, more remote and peculiar than anything an untraveled American can imagine.

A provincial Mexican town has no suburbs, no straggling outlying streets, no approaches of any kind. It rises like a mirage from the uninhabited plain. There is no converging network of telegraph-wires, no increase of travel on the one road which leads into and leads out of it; not even a smoke-cloud darkens the blue above its sun-warmed *azoteas*. You see it a long way off across the hot plain, like an impossible vision. You do not believe in it until, from the rough, stony highway, you enter between the pillars of a half-ruined gate into the heart of a city which looks as if it had never been young.

We drove into Maravatio at high noon of a *fiesta*,—the circumcision of our Lord,—a day which might have been made on purpose for a holiday, if all days of this season in Mexico were not perfect. It was a warmer, more southern-looking town than Toluca, on the high table-lands, with more tropical fruits in its markets and less clothing on its dark children. The *rancheros* and country people, in their best *sarapes* and *rebozos*, had come in town to attend the bull-fight, and were sitting about on the stone benches of the sunny little plaza, in motionless content. A continuous proces-

sion of sandal-shod feet shuffled along the sidewalk, under the arches of the *portales*; gayly dressed horsemen, in braided leather jackets and tight trowser-legs blazing with buttons, paced their barefooted ponies through the streets, often with a friend accommodated behind. We sat in the deep stone window-seat of the hotel, looking out on the bright, yet strangely listless throng, and partook of ices handed in at the window by a street vender, who, having served us, passed on down the street, trailing behind him the diminuendo repetitions of his long, musical cry, "*¡Ni-é-ve!*"

The returning stage from Morelia had not arrived; there were bad, very bad roads ahead, and no further effort was made to proceed that day. "If not to-day, to-morrow," is a Mexican proverb. Possibly, the driver did not care to turn his back on a bull-fight. A procession of *toreros*, in their brilliant costumes, uplifting a huge garland of *banderillas* and accompanied by a band, paraded the streets. We could not see the figures distinctly; but we heard the music—the thrilling dance-music of the country. As an invitation to the *toros*, nothing could have been better. It did not perceptibly stir the loungers on the stone benches; they were already convinced; but I, who abhorred the thing, and would not go in the capital, fell suddenly under the spell of the senseless, intoxicating music, and begged A—— to take me to

the bull-fight with the rest of the town! It seemed all the town did not go, for we were obliged, in reaching the entrance, to press through a crowd (that "smelled to heaven") of humble Maravatians, who remained outside because of their extreme poverty, not from any lack of taste for the popular amusement. We mounted a perilous wooden ladder to the scaffolding surrounding the arena. The entire structure had been reared without aid of nails or saw; the timbers showed the shaping blows of the ax, and were lashed together with ropes of *maguey*. It may not have been particularly safe, but was quite in keeping with the performance we had come to see, which resembled the scenes in a Roman arena as this rude amphitheater did the Colosseum. The city authorities sat in the place of the Cæsars; from the stall below, the band played the national airs, to accompany a dance of clowns, which was interrupted by cries of "*Toro! toro!*" from the spectators. In the great blue arc of sky above the densely packed seats, the buzzards mounted, wheeled, and sank. One mountain-peak looked down at us dispassionately, from a long way off. It was a very vulgar horror. Of all the figures in the arena, the bull seemed by far the noblest. In the pauses of his charges, he faced his throng of persecutors with a large-eyed bewilderment, pawing the dust and taking quick breaths of excitement. The space was too small for anything but butchery; there was little skill shown in defense by the men—not even very fine horsemanship. The spiritless, blindfolded horses were wantonly sacrificed—absolutely thrust upon the bull's horns. In less than ten minutes one was wounded to death. A—put his hand before my eyes; and, indeed, I could not have looked, for I was seized with an uncontrollable fit of nervous crying. No nerves, not trained to it for generations, could have stood it,—the cries, the music, the peril,—for, wretched burlesque as it was, the simple fact of death was before our eyes. We went out ignominiously, with all the dark-eyed women around looking at us with fixed curiosity.

On our way back to the hotel we passed a conspicuous handbill of the Teatro Nacional, advertising the performance of "*La Cabaña de Tío Tom*." An illustration, in the most obvious style of art, representing a scaffold, a headsman lifting the bleeding head of a prostrate knight in armor, while a long-haired maiden knelt distractedly on the steps, apparently referred to the general character of the exhibitions at the National Theater, rather than to that particular performance—unless the Spanish dramatization of "Uncle Tom's Cabin" be a very free rendering of the original.

In the garden of the plaza, the violets were

filling the warm air with their fragrance, the streets were quite deserted, and the bursts of music from the *plaza de toros* broke a stillness as deep as that of a June meadow at noon. On one of the stone benches near the fountain, an old man was patiently shaping a broom of palm-splints, with the help of a small, half-naked boy with a rosary crossing his brown, polished bosom.

We left Maravatio at three o'clock next morning, by the light of an *hachon*—an iron basket holding flaming brands of pitch-pine, elevated on a long handle stuck in the crevices of the pavement of the *patio*. Again we rumbled away, carrying a flash of yellow torch-light through the dark landscape, which seemed to wake and look at us for an instant as we passed. Again, at the first posting-station, we walked ahead of the diligence, with the long morning shadows stretching before us, the mountains of Michoacan rising very dark and near. Indistinct trails led here and there across the plain, among the wild acacias—crabbed little trees, covered with mistletoe, and, in some cases, quite bled to death by it. We met an Indian with a cloth tied over his head, like a Bedouin Arab—his wife, the primal woman, trotting behind, with a young child asleep in the folds of her *rebozo*. She had broken a branch from a way-side shrub, and held it up to protect her from the sun.

At noon, we entered another of those unreal cities springing suddenly from the plain. It was market-day, and the country people were encamped in the plaza, under their huge umbrellas of matting, and (trade being dull at the hour of the siesta) were doing a little unobtrusive cooking, in queer-shaped earthen vessels, over charcoal braziers; it looked more like a kind of alchemy than cooking. Heaps of tropical fruits, pottery, dulces, curious articles of Indian industry, were heaped in rich masses of color around the gray stone circle of the fountain, with its cool spots of mold and oozing dampness. The design of the basin was bold and florid, of a much earlier period than the shaft rising in the center, crowned by the Mexican eagle clutching the national cactus, which, as a triumphant bit of realism, had been painted a bright green. A little Indian boy, nearly naked, lay asleep in the sun, opposite the coach-window. We woke him by tossing cakes upon his bare, softly heaving breast. It was amusing to see his grave bewilderment over the happiness that had come to him so mysteriously. He was enlightened, however, by the by-standers, who pulled and pushed him to the coach-window, where he murmured some shy, unintelligible words of thanks, and then rushed away, with his cakes in the folds of his one garment.

NOON IN THE "CORREDOR" OF A MEXICAN HOTEL.

We left the town with reluctant backward looks. Brief glimpses along the vistas of its streets were like turning the pages of a fascinating story—begun, but never to be finished. The book closed, we were again on the lonely highway, and the landscape gave as little sign of the city we had left on the other side of

the last hill, as the ocean of a sail that has just dipped below the horizon. Was it at Sinapecuaro, or another dream-like old town we passed through that afternoon, that we saw a church, lovely in color and massively simple in form, with rich sculptures in low relief, opposed by broad spaces of stone,

carved only by the hot fingers of the days and the cool touches of the nights, that had seen it standing, clear against the sky, at top of a triple flight of stone steps, leading down to the level of the streets? The people sitting on these steps, or shuffling up and down with sandal-shod feet, were not dressed, but rather clothed in garments which belonged to them as the leaves to the bough.

We were going down, all that afternoon, into a beautiful country. The road for miles lay between hedges of nopal and organum cactus, softened by a fringe of willows. There was a glimpse of a distant lake, Cuitzio, and among the low meadows still ponds or reservoirs of water reflected the sky and the flight of wild fowl passing over them. The guards on this part of our journey were slim, boyish-looking young fellows, in a gray cavalry uniform, enlivened by the colors of their *sarapes*, twisted around the pommel of the saddle. One of them shot a wood-dove on the wing, and dressed it with his fingers as he rode. The afternoon grew cool and shady; twilight came, and the moon rose over a stretch of muddy road, as we plowed through on our way to Tepitongo. The *camino real*, as it crosses this rolling plain, could not be distinguished from a number of experimental tracks, which showed how despairing drivers had wandered to the right or left in search of better ground.

We walked ahead for a long distance, forgetting the day's fatigue in the bliss of movement and the calm of the softly lighted sky over that wide, dim landscape. Our tired eyes rested far off on the measureless horizon. The stillness was like sleep, after the rumble of the diligence. We were like caged birds set free. I had not been in the saddle for six months, since leaving Colorado, and the hollow, measured tread of the light-footed cavalry horses stepping beside us, and their familiar smell in the night air, stirred my old passion for riding, which had slumbered during the Northern winter. I found myself indulging a wild, childish hope that the diligence might break down, and we be obliged to wander on through the soft, cool hours of the night. One of the guards would, of course, offer me a horse, and I might ride into Morelia behind my husband, like a lady in a ballad!

The young fellow who shot the bird rode up alongside and offered to relieve A— of his overcoat, which he carried over his shoulder. Its weight appeared to astonish him greatly; he even handed it to his comrades to lift, as a curiosity in clothing. It had been an unusually cold winter in Mexico, and among the common people a saying went around that

the Americans had brought it with them from the North. The soldier riding beside us attempted a conversation, but we could understand very little except his opening question to me—I was “*Una Mexicana?*” “*No, Señor—una Americana del Norte,*” which, of course, accounted for the astounding peculiarity of a lady walking over a bad road and appearing to enjoy it. The diligence did not break down; we were obliged to climb in again after a while, and fell asleep in our places, all the old aches re-asserting themselves in our confused dreams. We traveled late into the night, dozing and waking at the changing stations, listening to little scraps of talk in the darkness—“*Cuántas leguas ahora á Morelia?*” “*Dos—dos y media; no mas!*” (“How many leagues now to Morelia?” “Two—two and a half; no more!”) “*Ah! muchas, muchas!*” with a groan.

Once, in a strange little Indian village on a hill, we caught a beautiful view of the dim country—the moon had set—from the fountain where the mules were watered. At last, from the talks in the darkness, we knew that we were “*cerquita*”—“nearly in.” A—translated freely. We rattled violently down a long hill; looking out, we saw by the light of a lonely street-lamp the stone pillars of a gate-way. We passed the arches of an aqueduct, the street-lamps became continuous, as we ascended a roughly paved street, and rolled into the echoing court of the Hotel Michoacan.

A sleepy-looking servant, with a perfect mat of black hair, which seemed to have absorbed into its coarse fibers all his intelligence, was able to distinguish us as Americans, and presented the card of the Señor Don —, who had most kindly waited for us until midnight, and then ordered a room and hot supper as his welcome. We climbed the stone staircase to the *corredor*,—plants, arches, and starlight,—a place so restful and cool that we could contentedly have stretched our cramped bodies out on the tiled floor; but the sleepy servant opened a door with a key which looked as if it might be the key of the city gate, and showed us something better. The heavy shutters of the one great window were closely barred. The Mexicans have convictions on the subject of night air as absolute as their religion.

We dragged the shutters open and stepped out on the balcony. Opposite us, across the dark, leafy plaza, rose the towers of the cathedral, standing alone, its huge bulk clearly outlined against the sky. It was two o'clock; we counted the four quarters as they were struck; then a deep-voiced bell intoned the hour.

IN THE FOOTSTEPS OF FORTUNY AND REGNAULT.

OUR short, stormy voyage from Gibraltar is done. The waves are playing at cup and ball with our steamer, while boats are swarming about us, manned by villainous-faced orientals, gibing, shrieking, and swearing in Arabic, as the surges bring the boats to a level with the deck, and then, sinking suddenly, suck them under the paddle. Swart hands clutch at the ropes, linen-trowsered legs kick in the air, as the boats sink away from under, until finally, after more vociferation and blasphemy, we are boarded by what appears to be a band of Riff pirates, who fight frantically for our baggage, and, seizing our persons as unceremoniously, thrust us into the skiffs rising and falling in the boiling sea. Lusty arms pull stoutly, and as the boat mounts the crest of a breaker, we catch the domed and minareted silhouette of an oriental city sparkling in the sunlight. The whole population seems to have crowded to the quay to see us land. With wrenched arms the gentlemen are hoisted to the platform, while a single unhappy woman waits in the stern until the boatmen in the prow finish a fight which is to determine the rightful recipient of the landing money; then we reach a grand stretch of ocean beach, and see, sitting cross-legged at the entering in of the city-gate, a Moor of noble aspect, with snowy beard and turban, who listens with calm, impassive face to the shrieks of the boatmen, clamoring for more money, and dominates the tumult by a wave of the hand, which bids us enter the city.

Narrow streets, veiled women drawing the *yasmak* close with henna-tipped fingers, and glancing at us curiously with one *kohl* black eye, jostling crowds, spangled tile-fronted gateways, a high-stepping horse led by a half-naked groom, camels, donkeys, jet-black negroes, wild Arab sheiks from the desert, luxurious Moors and shabby Jews—a carnival masquerade with a background of Eastern architecture—a leaf from the Arabian Nights—Tangier!

Little by little our eyes accustomed themselves to this kaleidoscope of color, and we returned to the hotel less bewildered and more delighted from each walk. We were in the last days of the month Ramazan—the sacred moon of fasting for the Mussulman; from sunrise to sunset not a morsel of food, no sip of water, no puff of his beloved peace-pipe, must pass his famished lips. Daily, in the market-place, women sat surrounded by

luscious, tempting heaps of purple figs and bursting pomegranates—looking wistfully with thirsty eyes at the fruit they sold but could not taste. Men lingered as they passed the tobacco bazar, inhaling the forbidden aroma with distended nostrils. More cruel still must be the ordeal for the faithful Mohammedan who, Tantalus-like, goes through the prescribed ablutions in the scorching heat of day without allowing a drop of the water to pass his determined lips. At night there was a sound of revelry and feasting, which was at its height just before the dawn, as the devotees fortified themselves for the fast of the day. Ramazan has one important compensation, however: he who dies this month, though he be the vilest criminal, is sure of heaven.

The bazars were a panorama of never-failing interest. Being mere boxes, the entire fronts open to the street, and hardly large enough for the entrance of the purchaser, the merchant seemed to have taken his seat in his show-window, and it was hard to realize that the shop itself was not somewhere behind. The silversmith sat in his little niche, hung around with massive chains and bands of clinking coins, bangles and ear-rings, anklets and hair-clasps, filigree ornaments, amulets, and round salvers of every size, decorated with hand-hammered *repoussé* work of arabesque design. The merchant himself might have been mistaken for a central bit of bric-à-brac, had he not been hard at work patiently engraving a bracelet with designs handed down from the chief jeweler to Her Majesty the Princess Badroulbador. The bazar of spices might have been quartered bodily in a New England pantry. The bazar of soaps and scented oils adjoining the bath breathed a mixed perfume suggestive of attar of roses, sandal-wood, jasmine of Aleppo, water-lilies of Damascus, long-enduring musk, orange-flower water, shaving-soap, and pomatum. More pungent odors announced the presence of the tobacco and snuff bazar, while that of sweetmeats reminded us of the feasts of the Arabian Nights, for any of these slices of candied fruit might be Othmanee quinces, peaches of Oman, Sultanee citrons, or Egyptian limes.

There was an obvious evil side to the picture. The streets were villainously dirty, and fever, the daughter of filth, had found her way into the noisome dens of the lower classes. Unsalubrious smells came up from the sea-

MARIANO FORTUNY. (FROM A PHOTOGRAVURE, BY PERMISSION OF GOUPILO & CO.)

shore, the depository for the offal and garbage of the city. The only scavengers were the flies, which settled in black clouds on man, beast, food, and refuse. And the vicious Barbary flies were not the only Egyptian plagues which had found their way to this western corner of Africa.

The mob cared not to incommode themselves by turning aside for "Christian dogs"; but we found a coign of vantage in a niche beside the southern city-gate, where, safe for the moment from donkey-paniers and the shoulders and elbows of Islam, we could watch the succession of pictures presented. The slender tower of the Djmah, model in small of the Seville Giralda, flashed back the sunlight from its glazed tiles of malachite-green at the end of the street; the broken blue tiling about a fountain at the right formed another sparkling background, and the passing crowd made scenes of inexhaustible variety of form and color.

Just without the gate was the Soc, or market-place, crowded with wild-looking creatures—women from the interior, with coarse straw-hats with flapping brims, often two yards in circumference, crouched upon the stones beside piles of melons and other fruit. Everywhere the mellow, light-brown color of desert sand harmonized the more garish contrast of azure sky, glaring white walls, and the infinite costume tints. An English artist in Africa has noted the tendency of the most violent colors to arrange themselves harmoniously—a boy in deep red and spotless white, carrying upon his head a basket-tray of purple grapes or figs; a negro hag from the Sus, with a handkerchief of turquoise-blue twisted about her ebony face, sitting with her lap full of oranges and citrons. They were all here, while a noisy, surging crowd hurried backward and forward, buying and vending every possible commodity, from dates to donkeys.

We passed on to the part of the grounds devoted to the camels. They had come from long distances, and looked travel-worn and weary, while their faces wore a lugubrious expression of sullen mournfulness that was irresistibly mirth-inspiring. The under-lip drooped in obdurate pout, genuine tears trickled down the side of the nose, while the beast uttered a complaining, snuffling bray more like an Irish wail than any other articulate sound. If the jubilant trumpet-note of the donkey could be subdued to tears, it would resemble the cry of a sulky camel. On another side of the Soc was an encampment of Arab pilgrims, on their way to Mecca. Their tents of dirty striped blankets formed an effective background for the women preparing, over smoky gipsy fires, the evening meal of

cuscusu, a kind of mush of most unappetizing appearance. It was not quite sunset, and they regarded their untouched porridge, some of it burning and some of it cooling, with hungry, waiting eyes. A very handsome baby boy threw kisses to us, and ran forward for pennies. His mother and grandmother joined in the same salutation, kissing also the coins given. Facing the sunset stood many grave, white-turbaned men, with dark, sharp features, a small prayer-rug spread before each, their hands lifted with open palm, as though warming them in the slant beams of the sun. It was the oriental attitude of prayer; they were waiting only for the great fiery ball to sink below the horizon to fall upon their carpets in prayer, obeying the injunction of the Koran to pray at night and morning, since "the shadows prostrate themselves before the Merciful at the extremities of the day."

It was not from any love of Morocco that we had come to this strange country. We had spent the summer on pilgrimage, following through the length of Spain the footsteps of two prophets of the beautiful to this Mecca of their hearts. Everywhere we had found traces of Fortuny and Regnault—studios which they had occupied, models from whom they had painted, friends who worshipped their memory. But here in Tangier the rays seemed to concentrate as under a burning-glass. Their paintings became *tableaux vivants*: figures and costumes which they had made familiar were grouped in the same attitude and combinations of color. Something, however, was lacking in these living pictures, and nature had not quite the charm of their marvelous art.

We wandered on, pausing now before the rich rugs from Tunis, which, draping the niche of the carpet merchant, brought to mind at once Fortuny's "*Marchand de Tapis*"; now at the slipper bazar, where we remembered our intention to purchase a bit of genuine Morocco leather, with which to bind a history of Fortuny's life, with a few reproductions of his etchings. We were offered a choice of several kinds of their unsurpassed leather: the green from Tafilet, ordinarily used for cases for the Koran (Fortuny in one of his letters refers to an Arabic manuscript with an envelope of Tafilete); the rich red from Fez, employed largely in the ornate saddles and trappings; and the unapproachable yellow of Morocco proper, which, although it is devoted to the menial slipper, we preferred because its peculiar tint seemed more distinctively Moorish than any other.

We were constantly recognizing with delight Fortuny's riot of sunshine, and occasionally in the sinister faces about us we caught a

hint of Regnault's tragedies. In Ramazan the Moslems are even more fanatical than at other seasons, and their hatred for the Giaour shows itself more unreservedly. An artist friend told us that, traveling in the interior, he was frequently stoned by the children, who were evidently instigated to the act by their parents. At one time he saw a beautiful boy thrust out of a house by a pair of black hands. The child threw a missile, and sprang back with a terrified expression upon his countenance, which showed that he would not have ventured out of his own accord. The cruelty of the Moor, on which Regnault insisted so strongly, is not more apparent in his paintings than here. They are as cruel to each other as to strangers. An execution is described by Sir Drummond Hay which, in its blood-curdling horror, surpasses Regnault's terrible painting at the Luxembourg. The Khalifeh-Allah-fichalkihi, or Vicegerent of God upon Earth, as the Sultan is styled, is an absolute despot, and takes away the life of a subject without accounting for the deed to any one. We were told by a European who had enjoyed the favor of the Sultan that, on one occasion, while waiting in the court of the palace for an audience, he saw a sheik received by the Sultan with every appearance of cordiality, and presented by him with a magnificent saddle. While the sheik was bowing his thanks the Sultan made an almost imperceptible gesture to some black soldiers, who seized the unsuspecting man, hurried him into the court, and decapitated him before the eyes of the horror-stricken European. It was an *Execution sans Jugement*, with all the revolting characteristics and none of the dignity of Regnault's picture of that title, which, with all its horrible details fixed in the memory by the mordant of rich colors, is still the greatest ever painted at Tangier.

The gayer aspects of oriental life also appealed to Regnault. His "*Sortie du Pacha de Tanger*" is remarkable for its dash, in color and design. The Pasha, in a turban and burnoose of white camel's-hair, is seated upon a white horse decked with rose-colored trappings, and is followed by Moorish cavaliers in delicately contrasting and harmonizing colors. His harem interiors are equally successful, and a rare opportunity was afforded us for studying the *locale* of these pictures in a visit of ceremony which we paid one morning to the Pasha of Tangier. Our way was by a long and winding lane, bordered with whispering canes and hedges of aloe, which, gently gnashing a bayonet song as the wind rattled their formidable arms, reminded us that there were murderous types in the animal and vegetable, as well as in the human, world around us. Suddenly the

lane lost itself in a tangle of buildings, and, admitted into the Hall of Justice, we waited while the guard sent a negro slave in quest of the Pasha. We had brought an interpreter, and knowing that European ladies were sometimes allowed to visit the harem of his eminence, we commissioned our man of words to request this favor. The Pasha, a handsome man of apparently sixty years of age, stepped from an arched door-way, and, with many a flirt and flutter of his voluminous muslin draperies, seated himself on the rug-covered divan at the upper end of the apartment. We rose and made a *salam* respectfully, and Antonio, our courier, made known our petition, adorning it with many flowers of his own imagination. The distinguished guests before him, he informed the Pasha, were of the highest nobility of America, intimate friends of Generals Grant and Washington,—the only two Americans, doubtless, with whose names the Pasha was familiar.

Our request was granted, and the lady friend of Washington was led away by a diminutive Nubian in the direction of the seraglio. I entered a beautiful court, surrounded by porticoes supported by antique pillars dug from Roman ruins, and used in the construction of this palace just as the Cordovan Moors utilized the columns of the Cæsars in their mosque. Some of these fine monoliths may have antedated the Romans, though I saw nothing of the inscription of which Procopius writes, as existing, in the Phenician language, upon two white marble pillars at Tangier—"We are the Canaanites who fled from Joshua, the son of Nun, that notorious robber." The inscription might easily have been there and have escaped my notice among the many objects of interest which claimed it on every hand. A fountain occupied the center of the tile-paved court, an old woman was praying devoutly upon a rug beside it, while, from an alcove across the court, issued the musical voices of the ladies of the Pasha. Elegantly dressed in Eastern fashion, in purple, green, and gold vests, brocade caftans, and variegated scarfs, with silk handkerchiefs knotted about their black braids, they were seated upon a raised divan and engaged in sifting corn-meal, which lay piled in golden drifts upon a sheet stretched across the floor. They received me cordially, a slave bringing a European chair for me to sit upon. Our medium of conversation was a little broken Spanish and a copious use of the sign-language. A beautiful little boy of three came and regarded me wonderingly. His head was shaved, with the exception of a spot behind one ear, from which depended a single curl—the lock of youth of Egypt; to keep the

equilibrium, two large hoop ear-rings, adorned with a single turquoise, were inserted in the opposite ear. His name they told me was Selim. He received a coin with sublime indifference, and continued his inspection of the strange lady's costume. The Pasha's harem consisted of ladies of varying ages. Here were wrinkled crones,—his matrimonial outfit at the beginning of his uxorious career,—comfortable women in the prime of life, devoted to smoke and sweetmeats, and the *odalisque* of sixteen, already two years a wife. They pitied the lonely life in a "harem of one," and felt a strong sympathy for the poor American wives, with no sister favorites to share their solitude and aid them about their household affairs. In this princely house, where there was food and finery enough for all, the bevy of wives seemed to live together with a merry good-fellowship, but we heard of poorer families where the state of affairs was not so paradisaical. On the occasion of a new addition to the seraglio, the older wives are stripped of their jewelry to bedeck the bride, and loud is the cry of lamentation—Badoura bewailing her bangles, and Zumroud weeping for her anklets. One of the favorites took me by the hand, and led me over the building—to the Pasha's own apartment, sumptuous with decorated ceiling and rich carpets, to their own plainer rooms, and to the neglected garden, where my guide filled my hands with flowers from the tangled bushes which had covered the walks, and where the bees found the honey with which they had filled the hollow capitals of some carved columns of the arcade. On bidding adieu to the ladies, they exerted themselves with one accord to prevent my departure; the chair was brought forward, I was pushed toward it with gentle insistence, and had quite to tear myself away. As I crossed the pavement, their intention was explained by the appearance of a small Nubian, who darted before me clashing together a pair of tiny coffee-cups, decorated with a red-and-gold arabesque ornamentation, which gave them a resemblance to Kaga ware. A delicious odor of coffee aided the explanation: they wished me to remain and partake of refreshments. Not wishing to keep the party in the Hall of Judgment longer waiting, and hardly knowing whether it would be etiquette, as it would certainly not be kindness, to eat and drink in their presence during their time of fasting, I declined their courtesy and took my leave. The coffee of Morocco, as of most Mohammedan countries, is excellent. Moorish tea is not so palatable, being a mixed infusion of green tea, mint, and verbenä, with sufficient sugar to render the consistency almost that of

sirup. We had been warned of the strange messes before entering the country. One artist friend assured us that a ragout frequently served him was flavored with *frangipanni*, which so reminded him of a cousin at home, who used the perfume, that he never tasted of the dish without an unpleasant feeling that he was eating his relative. Signor Edmondo de Amicis reports the flavoring of a dinner as unpleasantly suggestive of toilet perfumes, and gives an amusing *ménu*:

"Chickens with pomatum.

Game with cold cream.

Fish with cosmetics.

Livers, puddings, vegetables, salads, all with some dreadful combination suggestive of the barber's shop."

Tangier itself is a daughter of the corsair; it is a walled town, and the heavy guns of its citadel command the harbor. The ravages of the pirates of the Riff have been abolished through the efforts of the United States and of Austria, France, and Spain—the last nation, in the campaign which Fortuny followed in 1859, compelling the Sultan of Morocco to exercise his authority over these robbers. Eastward the mountain chain of Gebel Muza lifts itself above the horizon like a far-stretching caravan. The highest peak is Tetuan. One day's ride by donkey or camel, or, if we prefer a rough voyage, in one of the piratical-looking feluccas, with lateen sails, that skulk along the coast, will bring us to Tetuan, the scene of the victory of the Spaniards, and of Fortuny's great picture, the "Battle of Wad Ras." Standing in front of the Pasha's palace and treasury, Señor Tapiro, a devoted friend of Fortuny, who is with us, presents us to a Moorish soldier, one of the Sultan's guard, who was a servant of Fortuny, and also, doubtless, a model, though this we dared not ask, for such service would have been a transgression of the Mohammedan law. Such a horror had Mohammed for idolatry that the Mosaic command, "Thou shalt not make unto thee any graven image," etc., was even more strictly enforced than among the Hebrews. The Moslems believe that, at the Judgment Day, artists will be required to furnish with souls all representations of human beings which they have made, and, failing in this requirement, will lose their own souls as a forfeit for their presumptuous imitation of the work of the Creator. For a man holding such a belief, this tall, grave soldier evinced a somewhat peculiar interest in the sacrilegious and almost idolatrous artist. He took a ring which Señor Tapiro handed him, and looked long and reverently at a lock of Fortuny's hair pre-

FORTUNY'S STUDIO IN PARIS. (PEN-SKETCH, BY R. BLUM, FROM A PHOTOGRAPH.)

served within it, and then returned it silently as though it were a sacred amulet.

From the treasury we passed to the prison, the inmates of which eagerly offered the baskets and mats which they were braiding, through the narrow wicket, and begged us to buy. As we came out under the rough cane trellis, covered with blossoming passion-vine, we met a woman toiling up the steep hill, with a baby at her breast. She was coming to take her husband's place in prison, for his labor could support the other children at home, while hers could not, and Moorish justice allows of this vicarious punishment. She humbly kissed the coin given her, and hid it in her bosom, and the baby clutched at the white petals of the passion-flowers as she disappeared within the prison doors.

During the day, other relics than the Pasha's pillars of the ancient Roman city of Tingis

presented themselves. A mosaic pavement had been discovered while excavating a cellar, and we passed through a house to see it. Pompeian in style, and very extensive, it seemed to have been the floor of a triclinium, or dining-room.

In our walks about the city, we saw several *santos*, or lunatics, who, in Morocco, are adored as saints. One, a most repulsive creature, was evidently idiotic; the other, arrayed in an elaborate costume, tricked out with a string of amulets formed of wild beasts' teeth, bits of scarlet flannel, gay feathers, fangs, beads, strips of snake-skin, shells, broken pieces of gay porcelain, and other nondescript objects, had a face of cunning, but with no maniac glare in the eye. He was evidently an impostor, profiting by the generally received notion that Allah had withdrawn his soul to live in heaven, while the mindless body still continued to inhabit the earth.

These lunatics receive the donations of the pious, and are indulged in all their fancies, which are often extremely absurd. One, we were told, insisted upon promenading the seashore with a chaplet of vine-leaves crowning his head,—this bacchanalian adornment constituting his sole costume.

We threaded the narrow streets of the Jews' quarter, and heard boyish voices chanting joyously in the synagogue, on our way to Regnault's studio. The exterior is not remarkable, but after stumbling through a long, dark entry, you emerge in a small but ornate court. There was the marble basin in the center, where a fountain had lifted its crystal crozier, flashing and falling in the sunlight. The arches of the door-ways suggested the architecture of the Alhambra, but the iron sockets alone hinted of the beautiful doors which Regnault painted in intricate Moorish designs, and which his friend Clairin carried away after his death. Clairin occupied this studio with him. Hamerton says of it:

"The two friends set up house at Tangier, in rather handsome style. They rented a delightful old Moorish house, which had a *patio* or court, which they covered with a glass roof, so that it made a splendid studio, and the glass was so arranged that it could be removed at will. The two artists permitted themselves some oriental comforts and splendors. Their establishment of servants was rather numerous. There was Lagraine, to begin with, 'exclusively occupied with photography, joinering, care of stretching frames, canvases, colors, and accounts.' Then there was Nana, a Christian cook, a youth called Khadder, who went on errands and kept the house clean, a maid called Aïschah Tchama, who was laundress. Regnault had, also, a master of the horse in the person of his groom Ali Pata, 'a little fellow, fifty years old, monstrously ugly, four feet high, a real Triboulet, gifted with a charming originality, with a great intelligence, and an elephantiasis into the bargain, which makes one of his legs as big as his body, whilst the other is shriveled, and no bigger than a thin lucifer match.' This grotesque personage comes in capitalily in the description of an oriental establishment; despite his deformity he had the reputation of being the best horseman in Tangier."

This house, says Henri Cazalis, the two young men ornamented with "Moorish decoration, and sought to gather within it all the luxury of oriental curios, carpets, curtains, stuffs brocaded with silver and gold, the splendidly ornamented saddles of African horsemen, Morocco caskets damascened with arabesques, and others from Persia and India still more ornate, incrusting with mother-of-pearl and inlaid with ivory. The decoration of this studio is recognizable in several of the numerous compositions begun during Regnault's sojourn at Tangier."

Regnault wrote of it himself to a friend:

"We are living, as you know, in a Moorish house, in a little palace of the Thousand and One

Nights. We have heaped above our doors, above the beams of our *patio*, decorations from the Alhambra, and you shall see, shortly, a picture begun only a few days ago—a work-room of Moorish women, which represents our *patio* itself, and in the background the door of our bedroom. Each time that we mount our terrace, we are dazzled by the light of this city of snow, which descends from our feet to the sea, like a grand staircase of white marble, or a brood of white gulls. Upon a neighboring terrace, the negroes stretch carpets to expose them to the sun, or Moorish women hang upon lines to dry their haiks and their linen, yellow caftans with silver embroideries, caftans of rose-colored silk, of delicate green, foulards threaded with gold, etc. My eyes at last see the Orient. I believe, God pardon me, that the sun which lights you is not the same as ours.

"Before returning I wish to cause to live again the true Moors, at once rich and great, terrible and voluptuous, those that we see only in the past. Then Tunis, then Egypt, then India."

The work-room of Moorish women mentioned by Regnault as true in *locale* to his own studio is thus described in his memoirs:

"In a niche, whose walls of enameled faïence are hung with a somber Asiatic rug, and which is partly closed by a curtain of fine gauze,—diaphanous, aerial, delicately sprigged with pink flowers,—a young woman crouches with the immobility and indifference of an idol, her beautiful eyes almost closed, her bosom incased in a vest embroidered with gold, and the entire body enveloped in a long trailing veil of rose-colored satin. Aside, standing and reclining, young women mingle like a bouquet of charming colors, in haiks of yellow, black, orange, and violet."

But the glory of the studio had departed, and a Jewess was doing laundry work in the beautiful *patio*. The spectacle of curious foreigners, who stare about them as in some mystic and wonderful place, was not a new one to her. She smiled good-humoredly, and invited us to come again and sketch the arabesque arches over the door-ways.

To the student of Eastern poetry and the lover of the stories of Scheherezade, Morocco has a mine of treasures upon which we have not touched. Everywhere occurred the familiar names, Fatima, Zuleika, Leila, Hassan, Mustapha, and, most common of all, Hamet, the abbreviation for Mohammed. We know that our collection of the Arabian Nights forms but the one thirty-sixth part of the stock in trade of the story-tellers of the Levant. These story-tellers wander through Morocco, and are formidable rivals of the jugglers and snake-charmers. The style in which their tales are written shows a merchant-people, such as the Moors of to-day. Riches and luxury, princes, merchants, robbers, slaves, and a few religious fanatics, figure in them, and these you will find in Morocco. You will find the fatalism of the East everywhere. The ejaculation, "It was written," is the only response to misfortune. "He whose death is decreed to take place in one land," they say,

"will not die in any land but that." No Moor, if he hears steps following him at night, will look behind him, lest he be found in the morning dead, with his neck twisted by an afrit. The phrase so often repeated in oriental stories, "So she wept and slapped her face," you will see acted in pantomime in the Moorish cemetery. No joke will be perpetrated or understood, for the Moors are a grave people by temperament, with a devout belief in the assurance of "the perspicuous book" (the Koran) that, on the day of resurrection, all practical-jokers, and those who have indulged in ridicule, will see the doors of Paradise opened, only to have them again and again banged in their faces. Notwithstanding their numerous proverbs in favor of travel, and expressive of the high repute in which travelers are held in foreign countries,—such as, "The aloes-wood, where it groweth, is a kind of fire-wood; if exported it becometh an object of high demand, but if not it attaineth to no kind of distinction,"—the Giaour in Morocco may expect to hear only such greetings as, "May Allah roast your grandfather, Christian dog!"

But Nature, with all the flowers and fruits of oriental literature, seems making a constant apology for the inhospitality of her human children, and the hyacinth, the tulip, the passion-flower, and the rose seem to have blossomed for us from some illuminated manuscript, while the fruits are Aladdin's own. Of all tropical fruits, the one belonging most distinctively to Islam, both in fact and fancy, is, perhaps, the melon. Adsched, of Meru, wrote of it:

"Colour, taste, and smell—smaragdus, sugar and musk;
Amber for the tongue, for the eye a picture rare;
If you cut the fruit in slices, *every slice a crescent fair*;
If you leave it whole, the full harvest-moon is there."

But our view of Morocco is a narrow one, and entirely from an artistic instead of a literary stand-point. We are following only the traces of the two artists who have interpreted best its varying phases, and this relic-hunting has given us a pleasant summer at various way-side shrines.

Our pilgrimage proper began at Reus, a little town in the north-east of Spain. Noisy, dirty, and unpicturesque, as most factory towns are, there was little in it to inspire or foster artistic taste. And yet this was Fortuny's birthplace. We threaded the disagreeable streets, and stood before a most commonplace house, a flat white wall, pierced with rows of staring windows, lacking both the taste and elegance of wealth and the quaint-

ness of age and dilapidation. There was nothing in its entire appearance to attract the eye, excepting the tablet which announced that Mariano Fortuny was born here, June 11th, 1838. We picked our way through narrow alleys, sloppy with the drainage of factories of imitation champagne and Chablis, and reeking with repugnant odors, through the Babel market, where peasant women with superb shoulders and wonderful eyes shrieked and wrangled over their crates of fruit with charcoal-blackened operatives—short, sturdy men, strong as little Titans, whose excitable eyes and sledge-hammer fists told of their love of riot and revolt.

Both the women and men present fine physical types, race characteristics which Fortuny inherited as well. Strength, indomitable will, energy, and fire—just the physique to equip his genius for the severe campaign before it, and to insure its victory in advance. Regnault inherited talent. His father, the director of the Sèvres manufactory, was an artist of cultivated taste, and Regnault himself seems to have been formed of some finer French kaolin; while Fortuny, though cast in an original and remarkable mold, was framed of common clay. But the clay of Catalonia is a different stuff from the brittle and gaudy Andalusian ware—the Catalans a different race from the indolent peoples of southern Spain, and Fortuny's genius was none the less that it was not inherited, but directly God-given.

We lingered a moment in the old church, rich with blackened pictures and tarnished gilding, to see the font of ancient marble under the painting of the Baptism of Christ, where the baby Mariano was christened, and the tomb in a side chapel, which contains his heart. It bears this inscription: "*Dió el alma al cielo, su fama al mundo, el corazón a su patria.*" (He gave his soul to heaven, his fame to the world, and his heart to his country.)

Fortuny's father died early, but his care was replaced by that of a doting grandfather, whose life was bound up in that of the lad. The old man was a traveling showman, exhibiting a little theater of marionettes, in whose manufacture and management little Mariano assisted. His first essays with the brush were the tinting with carmine the waxen cheeks of some puppet heroine, or the nose of a Punch. In after life he rarely referred to these histrionic excursions, though he mentioned to one of his friends his childish awe of the great city of Tarragona, in whose market they played, and his fright at night when, lying under the tables of the fish-venders, he heard the discordant "All's well!" of the *serenos*, or night-watchmen, or was awakened by a half-famished dog hunting for a bone. We

made eager search for traces of the puppet theater, but its little actors had entirely disappeared. On the Rambla at Barcelona, we paused before a Punch and Judy show, which reminded us forcibly of it. The wit of the unseen performer was greeted with uproarious plaudits, and an old gentleman, threadbare and poverty-stricken, but courteous and kindly faced as Fortuny's grandfather, slipped behind our chair and explained that it was his son who had such a talent for amusing the populace. The people of Spain are especially fond of dolls and puppets. The devotional images in the cathedrals form a remarkable instance of this taste. Each of the larger cities has its miraculous doll loaded with brocades and jewels, with a wardrobe in the sacristy which a queen might envy. Lesser images, decked with cut paper and tinsel, occupy household shrines, and votive gifts to the great wonder-performing "queens" are made of waxen models of arms, legs, and heads, whenever afflicted members are supposed to have been cured by their intervention. Fortuny's grandfather carried on a small business in making these votive offerings, and it is probable that Fortuny learned his first lessons in anatomy as well as modeling from shaping these limbs for the devout. Clusters of them, covered with dust and broken,—some, doubtless, the work of the boy artist,—hung in the church at Reus. Sometimes a picture of our Lady of Pity was ordered, and once or twice he framed a ship as a votive offering from mariners miraculously saved.

The boy's cleverness convinced the grandfather that he was formed for better things than a mere showman and maker of puppets, and he placed him at the Reus academy, a little school kept by Señor Domingo Soberano. We had a letter of introduction to one of his early school-fellows, his life-long friend the artist Tapiro, who passes most of his time at Rome and Tangier, but whom it was our special good-fortune to find at this time at Reus.

They had been chums from boyhood, and once—though this we did not learn until later, and from another—Tapiro had saved Fortuny's life when swimming with him. Señor Tapiro showed us many photographs, and some copies of his paintings, and a cabinet of souvenirs—a sort of shrine lined with black velvet, where the plaster mask taken from the artist's dead face was draped with a portion of the pall used at his funeral, and two of his paint-brushes, crossed below it, were preserved as sacred relics, with a letter or two, and a pen-and-ink sketch of Tapiro by Fortuny. It was altogether rather a

ghastly little sanctuary, and we turned from it with feelings of relief to pay a visit with Señor Tapiro to his and Fortuny's old school-master, Señor Soberano. It was a quaint little place, very foreign and provincial; but the school-master carried himself with the stately dignity of a man who worshiped his disciple, and who felt that something of the glory of the new star was reflected upon himself. He led us to a Lilliputian art-gallery, the *penetralia* of the house, where the central picture was the altarpiece which Fortuny painted at his school at the age of fourteen, and to which he owed his reception at the Academy of Fine Arts of Barcelona. "The picture, as a work of art," said Señor Soberano, "*is très peu de chose*. I have been offered large sums for it by amateurs, but Fortuny gave it to me, and—you can comprehend."

The picture was, indeed, not remarkable, except when the boy's age was taken into consideration. It was called the "Apparition of Our Lady of Mercy to a Shepherdess," and was entirely his own composition. The frame—a plain gilt one—was pierced with openings for smaller medallion pictures with Scriptural subjects. From the art-gallery, which contained also a few copies of different pictures by Fortuny, by Señor Soberano's son, we passed to this young man's studio, across a little hanging-garden, where flowers and vines grew in boxes and vases, and the sun flashed through openings in the striped awning upon a marvelously clean pavement of tiles. Young Soberano's original work—pen-and-ink sketches, with which several old account-books were filled—showed a talent of its own; but an overweening worship of the idol of the household seemed to have checked all personal ambition. He showed us a small but exquisite painting of a Moorish sentinel, holding a long Barbary gun, and apparently conversing with another evil-faced Moor, who had thrust his head from out an opening in the wall, in front of and beside which the sentinel was posted. "He painted it, here in my studio," said the young man, "after his return from Morocco. He wished to give us some souvenir of that bizarre place. He told us many wonderful stories of it. Ah! he never forgot his old friends, even after his marriage, when he entered into the *grande monde*."

The relic which interested us most, however, was Fortuny's drawing-book at nine years of age. Not a trace of talent here, only a child's scrawls—wild flights of the imagination and poor copies of commonplace drawing-cards—but a treasure, nevertheless. We found hints in it of his future tastes, if not of

genius. Turbanned Turkish heads scattered through it, with camels and Moors, copied probably from the pages of his geography, told that the boy's instinct was already feeling for his art, like a plant for the sun.

Regnault was more precocious. At thirteen, it is said, he could have earned his livelihood as designer for the illustrated papers. A tiger, drawn by him at eight years of age, was published in "L'Art" in 1876. He sketched from nature, frequenting the *Jardin des Plantes*, and choosing especially the African beasts. In drawing an old lioness, the bars of her cage interfered with his work, and he asked the keeper to be allowed to go inside, where (to the horror of the by-standers) he calmly finished the portrait. That the lioness was known by the keeper to be of an amiable disposition does not lessen the intrepid character of the little artist.

Smiling Señora Soberano served us before we departed with sweetmeats and with delicious cold water, rarer to be met with in Spain than the most costly wines; and, altogether, there was something more than courtesy in the farewell of the family, for our interest in their divinity had opened their hearts.

Fortuny's student days at Barcelona were as full of privation as his boyhood. His art lessons were free, and a charitable society allowed him ten dollars a month for his support. This was hardly sufficient, and out of working hours he colored photographs, made designs for jewelers and architects, and painted some portraits. At length, at the age of twenty, he gained the grand prize of Rome, enabling him to live for two years in the Eternal City with a pension of five hundred dollars per year. No after success probably ever seemed so great to him as this. It was honor, wealth, and opportunity at once; and he applied himself to his art with a zeal and ambition which, having lost the fetters of poverty, "mounted up on wings as eagles." His income for three months was paid him in advance, and this, before leaving Spain, he divided with his grandfather. No doubt he would have continued this division of his slender means, but the old man died a few months later, and Fortuny was left alone with Art. He worked incessantly, and, after a day of severe labor, commonly spent four hours at an evening life-class. His studies, says Baron Davillier, he considered of so little importance that he left them upon his drawing-desk, and the proprietor of the rooms sold them or gummed them to the walls of the room. In 1860, Fortuny's second opportunity presented itself. Spain had undertaken to chastise the Riff pirates, and had declared war with the Sultan of Morocco. The *Dipu-*

tacion, or city government, of Barcelona concluded that they would prefer a grand battle-painting of this contemporaneous war to the historical picture which the recipients of the prize of Rome were expected to send back to Barcelona. Accordingly, Fortuny was notified that he might leave Rome and follow the Spanish army into Africa. And so it happened that Morocco found Fortuny. She could well afford to pardon a whole army of enemies that brought her one such lover. How he must have reveled in this wonderful land, full of fascination for every imaginative student and adventurous traveler, as a land of contrast and paradox, of luxury and cruelty, learning and degradation, refuge of the exiled Moor of Granada, and nursery of hate and revenge for wrongs inflicted by Christian hands! Baffling curiosity in proportion as it excites interest, it exercises over intrepid minds all the spell of things prohibited; it is peculiarly attractive to an artist on account of its architecture, its costume, its animals, and, above all, its human types and dazzling effects of light, and to a Spaniard as the home of his hereditary foe and ancient master. That scribe is possibly a descendant of Abd el Rahman, with manuscripts in his possession carried away from the great Cordovan library; this *odalisque* a daughter, though centuries removed, of the Alhambra seraglio; and this half-crazy *santo*, or serpent-charmer, a graduate in the black art formerly taught by the School of Magic at Toledo.

General O'Donnell at this time commanded the Spanish forces, and Prim, the king-maker, was simply one of his staff-officers, but the latter attracted Fortuny the more, and a friendship was at once begun. Tetuan was then in the hands of the Spaniards, and here, for some time, Fortuny sketched assiduously, filling his portfolio with studies and details which afterward served him in good stead—"Arabs, soldiers, Jews, landscapes, buildings, interiors." Then came the terrific battle of Wad Ras, ending in the victory of the Spaniards, and Fortuny had found his picture.

Passing to-day up the cool marble staircase of the Parliament House of Barcelona, and into the rich but shadowy Chamber of Deputies, one stands before this grand canvas, which starts into brightness as the janitor opens the blinds. We are dazzled at first; the coloring, though very delicate, palpitates in the clear atmosphere. The picture is full of movement, of flying figures and draperies, of scintillating sabers, and vaporous clouds of battle-smoke. We must wait a moment, as before nature, for our eyes to become accustomed to the light, and for the different groups to outline themselves distinctly before us. The

GENERAL PRIM (REGNAULT). FROM PHOTOGRAPH OF PAINTING, BY PERMISSION OF LECADRE & CO.

artist has chosen the moment when the Spanish army is swarming over the ramparts into the Moorish camp, and our point of view is from the inside. The whole foreground is filled with the retreating African soldiery. The center group shows Muley Abbas and a party of Arab horsemen dashing toward us out of the picture. The horses, slender and finely made, share in the excitement of their riders, and press forward without the guidance of the Moors, some of whom are firing back as they flee. The tawny sand-dust, the blue smoke from the long guns, the floating scarfs and gauze turbans of light green, sulphur-

yellow, rose, and lilac, make a nimbus of delicate prismatic tints, the color focus of the picture. At the right, Arabs are bearing away a wounded chief, who supports himself with his elbow upon his litter, and gazes sadly back at the lost day. His quiet dignity contrasts with the fright and frantic jostling of the herd of men, camels, buffaloes, and goats that hurry by in an almost indistinguishable *mêlée*. On the left the sun strikes brightest on a little angle of ruined wall, on figures in mortal agony, and on the face of a dead man lying at the door of his overturned tent. The middle distance is dim with smoke. In the back-

ground the Spanish soldiers press forward with O'Donnell, while Prim, dashing through a gap in the wall, sabering a black who is about to plunge a dagger into his horse, is conspicuous for his magnificent action.

General Prim is another link between Fortuny and Regnault. His portrait by the latter artist we had seen before at the Luxembourg, and it appeared to us the finest equestrian portrait of modern times. The memory of this painting came back vividly as we stood before Velasquez's famous equestrian portrait of Philip IV., in the Madrid Gallery, and the picture of the younger artist seemed a worthy companion to this renowned masterpiece. Regnault was passionately fond of horses, and painted them superbly. His first *envoi* from Rome, "Automedon with the Horses of Achilles," had already proved his ability in this difficult branch of art. His painting of Prim was made in 1868, when the general reigned almost as a king at Madrid. All of the horses in the royal stables were placed at his disposal, and the grooms were ordered to exercise them before him. But Prim was dissatisfied with the picture, which Regnault preferred to keep rather than to change, and it was afterward purchased by the French Government. Fortuny's outline in the background of his battle-painting is, of course, not to be compared with the more important portrait, but we have a suggestion of the same soldierly figure, with all the added *verve* of spirited action.

On Fortuny's return, after a sojourn of two months and a half in Morocco, he was sent by his patrons to Paris, where he studied particularly Horace Vernet's "Smala, or Capture of Abd-el-Kader's Harem Tent," during the French campaign in Algeria. This picture, at

the time of its completion, was the largest painted canvas in existence, but Fortuny determined to surpass it in size. Horace Vernet may be regarded as the father of the French military painters. Meissonier, Detaille, de Neuville, and the unnumbered battalions of non-commissioned art-officers who have followed him, have only added newer methods to his *esprit de corps* and genuine love of campaigning. Vernet is said to have been a living encyclopedia of military accouterments and equipage, and to have assimilated himself thoroughly with the French soldiers throughout Napoleon's long and desultory campaign in Algeria. Ouida's "Under Two Flags," with all its glaring faults, gives a vivid picture of this mingling of European and oriental life. It was, doubtless, this similar experience, rather than a sympathy in his style of painting, which attracted Fortuny to Vernet. After a few days' study of the military painting at Versailles, he returned to Rome and began his picture, sending back smaller paintings from time to time to the *Diputacion* as an earnest of what was to come.

But one visit to Morocco was not enough for Fortuny. He was not content to work from memory, from *chic*, from costumed models and masquerade Moors, and in 1862 he returned to Africa, establishing a studio at Tangier. We made inquiry for this building, but it had been pulled down. We found the artist Tapiro, however, and visited his modest studio in an old Moorish house. His servant, a tall Nubian in Eastern robes, with a long pole knocked a quantity of figs from the ancient trees which grew in the court-yard, and served us right royally: we passed to an inspection of costumes,—burnouses, haiks,

THE CAMEL-DRIVER (FORTUNY). FROM PHOTOGRAPH OF PAINTING, BY PERMISSION OF GOUPIL & CO.

caftans, scarfs, and turbans,—and tried to imagine, from the studio of his friend, what Fortuny's surroundings must have been. He made the journey to Tetuan twice, and in his sketching trips often availed himself of the Arab costume. Many of his African pictures were begun during this visit, and sketches and studies were accumulated from which resulted such of his well-known paintings as "The Serpent-Charmers," "Powder Play," "The Carpet Bazar," "A Camel Resting," "The Prayer," "An Arab," "The Camel-driver," "The Kief," "Arabs Feeding a Vulture," and the superb etchings of "The Dead Kabyle," and the "Arab Watching the Body of his Friend," with the numerous other water-colors and studies in oil which have contributed so largely to his reputation.

Charles Yriarte, who accompanied Fortuny to Morocco, says that Fortuny had no sympathy for battle-painting. He devoted himself to this great picture because it was a commission that he was not in a position to decline; but he found his favorite subjects in the ordinary, peaceful life of the Moor, and had a strong aversion for bloodshed and horror, either in Nature or Art. His pictures of Morocco life were rich and glowing, but had not the *papillotage*, or spotty brightness and scintillation, of his third and last manner. He had emerged from his first academical style into what is called his second manner, which is perhaps the most original, while it is freer from affectation than that of any other period of his life.

Again Fortuny returned to Rome. Into his studio of this period we had a magic glance, through the kindness of one of his early comrades, the artist Señor Ramon Amado, of Barcelona, who showed us a painting which he made, in these old days of Roman student-life, of Fortuny at work in his studio. The head of the negro soldier, Farragi, wound in its white turban—a picture which was one of the first purchases of Mr. W. H. Stewart, his Parisian-American patron—hung upon the wall. There was a sketch, too, of the furious group of retreating African cavalry which occupies the center of his "Battle of Tetuan," and a graceful Kabyle rifle, with some bits of Morocco costume, as souvenirs of Tangier; but, altogether, it was a very modest studio—a decided contrast, in its simplicity, to the museum of "curios" into which his taste for elegant bric-à-brac turned his studio of the Villa Martinori. And yet it was here that some of his best work was done, and Señor Amado had represented him painting from a model—a little old man in blue velvet, seated, and bending his white head over a portfolio of engravings. He was painting the famous "Ama-

teur d'Estampes," one of the first pictures which secured him his rank as an artist. When finished, he exchanged it for an old gun at a Roman curiosity-shop, and it was here that Goupil found and secured it. Later, this dealer sold the painting to Mr. W. H. Stewart, and Fortuny afterward retouched it, inserting the portrait of his patron. To these two gentlemen Fortuny owed his introduction to the public and his early renown. They bought all his work; his future was assured financially, and he was recognized as a new power. Success had always acted upon him as a stimulus, and brilliant canvases crowded their way across his easel. But meantime the "Battle of Tetuan," which he wished to make his masterpiece, remained unfinished. The municipality of Barcelona became impatient, and clamored for the fulfillment of his engagement. Fortuny was now in a position to be independent of their aid, and he returned them the funds which they had advanced him, declining to be distracted by their importunities. The municipality saw that they had made a mistake in not letting him take his own time, and after his death purchased the unfinished canvas, giving it the place of honor which it now occupies.

Fortuny had made several visits to Madrid, but it was not until 1867 that, as his humble friends at Reus expressed it, he entered the *grande monde*, by his marriage with Cecilia de Madrazo, the daughter of the director of the Academy of Painting at Madrid. It was a family of artists, in which the sons outranked the father. The younger, Ricardo, has an enviable reputation as a sculptor, while the talented elder brother, Raymundo, holds a high place among living Spanish painters. He is best known to Americans by his "Leaving the Masked Ball," a brilliant picture in the possession of Mr. W. H. Vanderbilt. It was a wealthy and aristocratic family as well, with the prestige of established social position,—a grand alliance for a poor boy who had traveled as assistant to a puppet showman,—and yet the honor conferred upon the Madrazos was greater than that which they gave, and was so regarded by them. Not only was the marriage a happy one, but the family relations were ever of the pleasantest. Raymundo, recognizing that Fortuny was to be the most popular Spanish artist of his time, instead of attempting to rival him, kept his own talent in the background, and set himself the task of advancing Fortuny's fame by every means in his power. Not until after the death of Fortuny did the public give him, or Madrazo place himself in a position to receive, recognition.

At Madrid, during Fortuny's frequent visits

AUTOMEDON WITH THE HORSES OF ACHILLES (REGNAULT). FROM PHOTOGRAPH OF PAINTING, BY PERMISSION OF LECADRE & CO.

to the sacristy for the purpose of winding the necessary lengths of clerical red tape involved in a Spanish marriage, a picture suggested itself to his mind. It was noted at the time in a mere sketch, and grew in the two following years into his masterpiece, the "Vicaria," or "Spanish Marriage." He worked at it in the different places in which he found himself, taking a choice bit here and another there, so that the interior represents no existing sacristy. It was begun in Madrid and finished in Rome. The last touches given to it were some details from a damp Roman church, where he contracted the malaria to which his strong constitution succumbed at last. The delicate *reja*, or screen of intricately wrought iron-work, was copied from the one in the chapel of Ferdinand and Isabella, in the cathedral of Granada. Several of the figures are portraits. Meissonier posed in Paris for the *señor* in light cabbage-green coat, Madame Fortuny and her sister Isabel

de Madrazo also served as models, and it is asserted—though this is possibly a mistake, since Baron Davillier does not mention it—that the Duchess Colonna and Henri Regnault are also recognizable among the wedding guests.

Regnault was in Rome at this time, and it was then that his acquaintance began with Fortuny. Regnault, the younger man, was electrified by Fortuny's genius. Without doubt, it was the latter's interpretation of Morocco which fired Regnault's resolve to himself attempt the interpretation of Moorish life. "I can no longer bear the sight of my own work," he said to M. d'Epinay, with whom he first visited Fortuny's studio. "I shall destroy my water-colors. Fortuny alone understands how to make them. *Vive l'Espagne! Vive l'Orient! Vive Fortuny!*" This was in March, 1869; he had already visited Spain, had painted his magnificent portrait of General Prim and his superb "Ju-

dith"; his tastes had long led him to the Orient, and he wrote to his father: "I long to be in Morocco, in Algeria, at Tunis. I grow old here; Rome now seems to me lighted by a night-lamp. I need more sun." In mid-summer he returned to Spain, lingering awhile at Seville and Granada, whence he wrote to the Duchess Colonna: "Each morning we go to the divine Alhambra, where the walls are of lace tinted with amethyst rose in the morning, of diamonds at noon, and greenish gold and ruddy copper at sunset." Here he painted the background for his masterpiece, "The Execution under the Ancient Moors," but he could not content himself with backgrounds, and the autumn found him with his friend Clairin in Tangier. During the winter that followed, his style changed somewhat.

Meantime, the "Spanish Marriage" was the rage of the day. Théophile Gautier, the art-prophet, sang a laudamus in its behalf. Something of the "*grande monde*" of fashion and folly, of gleaming satin and lustrous velvet, of frost-work, lace, and flashing gems for their own sake, was creeping into Fortuny's work. The Parisian pictures were less simple than the Morocco studies, but the touch of the master gave them their dazzling brilliancy, and the lighter subjects pleased Parisian taste. The rococo pictures of Fortuny were still masterpieces, though decidedly of the world, worldly.

While in Paris, Fortuny occupied the studio of Gérôme, who was absent in the East. Fêted, flattered, and worshiped, he could not endure the society life of Paris, and in the summer of the next year left the city, taking refuge with his family at the Hotel of "los Siete Suelos," at Granada, where Regnault had passed the previous summer. "I intend to remain here until September," he wrote to a friend, "and to go after that to Seville,

and thence to Morocco, where Regnault and Clairin are established and at work."

The triple companionship, however, was prevented by the Franco-Prussian war. Regnault, more thoroughly a Frenchman and a patriot even than an artist, heard the first mutterings in the safe asylum of his Tangier studio, and, hastily turning the key in the beautiful doors, hurried back to his endangered country. In September, when Fortuny had hoped to be painting with him in Morocco, Regnault was in Paris. In October he volunteered. Fortuny, who had no interest in the contest, remained tranquilly at Granada. He went, intending to stay two months, and remained two years—the happiest years of his life, as he assured his friends.

The beauties of Granada have been sung so often and so well, that we fancied we knew the place before we drove up the long hill, arched by noble trees, which leads from the city to the Alhambra. It was not until we had wandered in its shadowy groves, and listened to the continuous music of its many brooks; had seen the magnificent landscape of the Vega, with the winding Darro and the Genil, from the top of the Tower of the Vela; had threaded our way through the bustling Zacatin and explored the cave-dwellings of the Gypsy Quarter; had dreamed on the oleander-canopied terraces of the Generalife, surrounded by bubbling fountains and ancient cypresses of Lindaraxa's time; and had passed, as in a dream, through the Court of the Lions and the *Salon* of the Embassadors—not until we had explored less celebrated towers and courts, with Washington Irving's "Tales of the Alhambra" as a guide-book, that we realized that the charm of the place cannot be conveyed by any amount of

fine writing. It must be felt to be appreciated, and the longer felt the stronger the fascination. Fortuny's studio was occupied by our young American artist, Mr. Edward Weeks. The hospitalities of the place were offered us most cordially, and here, while the gentlemen painted from Fortuny's models,—pretty Candida, in dazzling white, rose, and orange, and old Mariano, the gypsy, who posed for the "Torrero Andaluz," belonging to M. de Goyena,—we sat and chatted, or listened to the tinkle of a guitar, and caught a glimpse of a graceful girl dancing the fandango in a neighboring garden, to the timing of castanets. We went on pilgrimage to the different localities which figure in Fortuny's pictures; to the old Hotel de Ville, with its ornate façade, to a wall overhung with oleanders, which he

had sketched; to the charming little *Patio de la Reja*, in the Alhambra, which figures in his "Fencing Lesson," and to the Cathedral, where we had a wonderful effect in a vista across the shadowy nave to the Capilla Real, where a mellow amber light filtered through the wonderful grating of scrolled and gilded metal work which forms the background of the "Spanish Marriage." We lingered in the Cour of Myrtles, in front of the Hall of the Embassadors, which Fortuny painted, and searched for the background of his "Tribunal de l'Alhambra." Here, too, were Regnault's favorite scenes—the Cupolas which drew one upward; the *Salon* of the Two Sisters; the Bath; the Patio of the Lions, and the Mirador of Lindaraxa. While in the streets below, there was many another booth

of summer fruits to recall Fortuny's "Granada Fruit-seller," and we were reminded of his unfinished picture, "A Burial during the Carnival," where the carelessness of young Life in the presence of Death is so startlingly depicted, by a child's funeral which one day crossed our path. The mourners loitered far behind, and the dead baby was carelessly carried in an uncovered coffin by some little boys, who laid it down by the road-side, and ran to see what the strange artist was sketching. A picture similar to

Fortuny's, where the carnival maskers pass the funeral *côrtege*, was suggested to Regnault in Madrid, though never painted. "You know," he writes, "that when the last sacrament is carried to a sick person, the priest is accompanied to the house of the dying by men who carry torches and ring little bells. It was *mardi gras*: at night, as the crowd quitted the Prado, such a procession passed. According to the Spanish custom, men and women knelt. Nothing could be more strange than to see maskers, with the heads of camels, of

apes, of devils, and merry-Andrews, kneeling thus before the passing sacrament."

From Granada, Fortuny sent a painting to the sale in aid of the sufferers from the Chicago fire. From here, too, he made excursions to Seville, painting the staircase of "The House of Pilate," the "Plaza de Toros," the "Salute of the Espada," and several views in the Alcazar. In October of 1871, he made his third and last visit to Morocco, with his friend Tapiro. Here they found Clairin alone in Regnault's desolated studio, and together they made a horseback ride to Tetuan, where

Fortuny explained to them the battle of Wad Ras. It was only an excursion of a fortnight, but if Regnault had been there, he might have lingered longer.

At Granada, we stopped of course at the Hotel de los Siete Suelos, which backs against the Alhambra town, from which it takes its name. The landlord was garrulous in his memories of Fortuny and Regnault. The younger of Fortuny's children was born here, "and that *petite*," pointing to a photograph of his daughter Maria Luisa, "was always falling down-stairs—always, always." Madame

Fortuny's photograph showed a face full of character, the little Mariano was a blonde cherub, and Maria Luisa's head was far too refined in outline for frequent *salams* upon polished hard-wood stairs.

Regnault, our host told us, was full of fun and high spirits; he was always drawing caricatures; he had saved some of them, which he would show us. Among them was one which the young artist had made of himself. No, it was not like him, for Regnault was handsome. He was a little man, but something of an athlete; and strong as a young Hercules. He looked best on horseback, and, *carramba!* how he could ride.

Mariano, Fortuny's gypsy model, had his souvenirs as well. The model was learned in the lore of donkeys—was a jockey, trader, veterinary surgeon, and something of a blacksmith as well. "And Fortuny; was he not a blacksmith also?" He had his little forge here, and amused himself by forging, graving, and damaskening weapons. He made one magnificent scimitar in Moorish style, with a finely decorated ivory scabbard; welded together some fragments of ancient swords, incrusting the blade with an inscription in gold. He enjoyed the curiosity-shops, and picked up from them many an embroidered vestment and bit of Moorish faïence which served afterward to decorate his palace studio at Rome. He even gave some attention to painting upon tiles, and succeeded in obtaining some of the Moorish tints, glazes, and metallic reflections supposed to be among the lost arts. His life at Granada was pre-eminently happy and healthful; and it was on an evil day that he decided to return once more to Rome. The winter of 1872-73 found him in the Eternal City, and the following autumn his beautiful studio "took rank among the curiosities of Rome," attracting visits which he could well have spared. He had expensive tastes, and at this time he indulged them freely, collecting rare and expensive objects of art, whether arms, ceramics, or fabrics. "Everything which glittered, which mirrored, or which retained light," found a place upon his dazzling walls. Despite his princely surroundings, he was not happy; a vague weariness oppressed him, and he worked the more unremittingly to shake it off. Two of his important pictures belong to this period—the "Academicians Choosing a Model," and the "Rehearsal of the Arcadians." These are both too well known through the medium of photographs to require a description. The "Model" poses in one of the *salons* of the Colonna palace. The picture is in Fortuny's Parisian manner, highly finished, excessively dazzling, and,

though a wonder of *technique*, not an altogether pleasant picture. It is said that, when it was first rubbed in, Fortuny introduced the mother of the model—an ugly little woman, seated composedly beside the table, knitting busily while she regarded the effect produced by her daughter's beauty upon the Academicians. For some reason Fortuny was displeased with the figure, and painted it out. It is a pity that he did not allow the sordid little woman to remain; the spectacle of her keen, avaricious, and shameless speculation would have been worth a three-volume novel on the profession of a model. The Arcadians are a dramatic club, who meet in the Farnese Gardens, and this picture is a study of costume in out-of-door sunlight, contrasted with blossoming flowers, as the former was the study of the nude in an interior. Those who demand something more than technical quality in a picture may well ask whether the subjects were worthy of his genius. Fortuny himself was dissatisfied with them; but he was not in the mood, or, rather, not in the physical condition, to begin such pictures as he dreamed. He laid aside his palette for a short trip to Paris and London. Before setting out, he wrote to his friend Baron Davillier: "I continue to work, but truly I begin to tire (morally) of the kind of art and of the pictures which success has imposed upon me, and which (between ourselves) are not the true expression of my taste. With the grace of God, and in the hope that the result of my last pictures is favorable, I intend to rest a little —"

The dash is significant. The little rest which he so sorely needed he was permitted to take, but the change of style which he purposed should follow the repose we are not permitted to see. His life was spent in learning the *technique* of his art. He can be pardoned, for he was only thirty-six, and doubtless looked forward to long years of mature labor.

Fortuny passed the summer of 1874 with his family at Portici. On his return to Rome, in November, though oppressed with lassitude, he set himself to work in the open air, prolonging his painting until sunset, in a damp locality near the Tiber. Though stricken down with Roman fever, his physician did not consider his disease fatal, and it is probable he did not himself so consider it. On the 21st of November he made a sketch of the mask of Beethoven in his wife's album, and shortly after expired, strangled by a hemorrhage.

Fortuny's works are largely owned by Americans. Mr. W. H. Stewart, of Paris, is a Philadelphian. Mrs. A. T. Stewart, Miss

Catharine Wolfe, and Mr. Cutting, of New York, own several of his Morocco paintings, while Spanish subjects are in the possession of Messrs. Gibson and Borie, of Philadelphia.

And what of Regnault? He passed the winter of 1869-70 in Tangier, painting his leopard-eyed "Salome," his "Departure for the Fantasia," the "Sortie of the Pasha," a harem interior, and the "Hassan and Namouna"; returning to Granada in the spring to paint the background of his "Execution" from the *Salon* of the Two Sisters in the Alhambra. The summer found him working again at his masterpiece in Tangier, expecting to be joined by Fortuny in September, and to penetrate with him more deeply into the Orient. Instead of this, he was lying, with his own free will, on the icy ground before Mont Valerien, his betrothed praying for him in Paris, and the German army just ahead. An officer's rank was offered him, but

he declined it. "You have a good common soldier in me; do not lose him to make a mediocre officer." The war was nearly over; it was in the last action that possibly the last shot fired struck Regnault in the left temple. "Clairin," says Hamerton, "returned to Paris after a fruitless search. At six, news was brought in by an *ambulancier* that Regnault had been found, and in evidence he brought a little chain with a silver tear. This tear had been given him by his betrothed, and when she gave it she had said, 'Take it now that I am happy, but you must give it back to me the first time you make me weep.' And now the tear was brought back to her, and she wept."

For both Regnault and Fortuny recognition and death came early. Regnault's career as an artist lasted but four years; he was but twenty-eight when he died. The laurel and the immortelle bloomed prematurely for each,—but what is the longest life?

CHRISTOPHE.

"KING HENRI is King Stephen's peer,
His breeches cost him but a crown!"
So from the old world came the jeer
Of them who hunted Toussaint down:
But what was he,—this slave that swept
The shambles, then to greatness leapt?
Their counterfeit in bronze, a thing
To mock,—or every inch a king?

On San-Souci's defiant wall
His people saw, against the sky,
Christophe,—a shape the height of Saul,—
A chief who brooked no rivals nigh.
Right well he aped the antique state,
His birth was mean, his heart was great;
No azure filled his veins,—instead,
The Afric torrent, hot and red.

He built far up the mountain-side
A royal keep, and walled it round
With towers the palm-tops could not hide;
The ramparts toward ocean frowned;
Beneath, within the rock-hewn hold,
He heaped a monarch's store of gold.
He made his nobles in a breath;
He held the power of life and death;

And here through torrid years he ruled
The Haytian horde, a despot king,—
Mocked Europe's pomp,—her minions schooled
In trade and war and parleying,—

Yet reared his dusky heirs in vain :
 To end the drama, Fate grew fain,—
 Uprose a rebel tide, and flowed
 Close to the threshold where he strode.

"And now the Black must exit make,
 A craven at the last," they say :
 Not so,—Christophe his leave will take
 The long unwonted Roman way.
 "Ho! Ho!" cried he, "the day is done,
 And I go down with the tropic sun!"
 A pistol-shot,—no sign of fear,—
 So died Christophe without a peer.

A CURIOUS EXPERIENCE.

BY MARK TWAIN.

THIS is the story which the Major told me, as nearly as I can recall it:

In the winter of 1862-3, I was commandant of Fort Trumbull, at New London, Conn. May be our life there was not so brisk as life at "the front"; still it was brisk enough, in its way—one's brains didn't cake together there for lack of something to keep them stirring. For one thing, all the Northern atmosphere at that time was thick with mysterious rumors—rumors to the effect that rebel spies were flitting everywhere, and getting ready to blow up our Northern forts, burn our hotels, send infected clothing into our towns, and all that sort of thing. You remember it. All this had a tendency to keep us awake, and knock the traditional dullness out of garrison life. Besides, ours was a recruiting station—which is the same as saying we hadn't any time to waste in dozing, or dreaming, or fooling around. Why, with all our watchfulness, fifty per cent. of a day's recruits would leak out of our hands and give us the slip the same night. The bounties were so prodigious that a recruit could pay a sentinel three or four hundred dollars to let him escape, and still have enough of his bounty-money left to constitute a fortune for a poor man. Yes, as I said before, our life was not drowsy.

Well, one day I was in my quarters alone, doing some writing, when a pale and ragged lad of fourteen or fifteen entered, made a neat bow, and said:

"I believe recruits are received here?"

"Yes."

"Will you please enlist me, sir?"

"Dear me, no! You are too young, my boy, and too small."

A disappointed look came into his face, and quickly deepened into an expression of despondency. He turned slowly away, as if to go; hesitated, then faced me again, and said, in a tone which went to my heart:

"I have no home, and not a friend in the world. If you *could* only enlist me!"

But of course the thing was out of the question, and I said so as gently as I could. Then I told him to sit down by the stove and warm himself, and added:

"You shall have something to eat presently. You are hungry?"

He did not answer; he did not need to; the gratitude in his big soft eyes was more eloquent than any words could have been. He sat down by the stove, and I went on writing. Occasionally I took a furtive glance at him. I noticed that his clothes and shoes, although soiled and damaged, were of good style and material. This fact was suggestive. To it I added the facts that his voice was low and musical; his eyes deep and melancholy; his carriage and address gentlemanly; evidently the poor chap was in trouble. As a result, I was interested.

However, I became absorbed in my work, by and by, and forgot all about the boy. I don't know how long this lasted; but, at length, I happened to look up. The boy's back was toward me, but his face was turned in such a way that I could see one of his cheeks—and down that cheek a rill of noiseless tears was flowing.

"God bless my soul!" I said to myself; "I forgot the poor rat was starving." Then I made amends for my brutality by saying to him: "Come along, my lad; you shall dine with *me*; I am alone to-day."

He gave me another of those grateful looks, and a happy light broke in his face. At the table he stood with his hand on his chair-back until I was seated, then seated himself. I took up my knife and fork and—well, I simply held them, and kept still; for the boy had inclined his head and was saying a silent grace. A thousand hallowed memories of home and my childhood poured in upon me, and I sighed to think how far I had drifted from religion and its balm for hurt minds, its comfort and solace and support.

As our meal progressed, I observed that young Wicklow—Robert Wicklow was his full name—knew what to do with his napkin; and—well, in a word, I observed that he was a boy of good breeding; never mind the details. He had a simple frankness, too, which won upon me. We talked mainly about himself, and I had no difficulty in getting his history out of him. When he spoke of his having been born and reared in Louisiana, I warmed to him decidedly, for I had spent some time down there. I knew all the “coast” region of the Mississippi, and loved it, and had not been long enough away from it for my interest in it to begin to pale. The very names that fell from his lips sounded good to me—so good that I steered the talk in directions that would bring them out. Baton Rouge, Plaquemine, Donaldsonville, Sixty-mile Point, Bonnet-Carre, the Stock-Landing, Carrollton, the Steam-ship Landing, the Steam-boat Landing, New Orleans, Tchoupitoulas street, the Esplanade, the Rue des Bons Enfants, the St. Charles Hotel, the Tivoli Circle, the Shell Road, Lake Pontchartrain; and it was particularly delightful to me to hear once more of the *R. E. Lee*, the *Natchez*, the *Eclipse*, the *General Quitman*, the *Duncan F. Kenner*, and other old familiar steam-boats. It was almost as good as being back there, these names so vividly reproduced in my mind the look of the things they stood for. Briefly, this was little Wicklow's history:

When the war broke out, he and his invalid aunt and his father were living near Baton Rouge, on a great and rich plantation which had been in the family for fifty years. The father was a Union man. He was persecuted in all sorts of ways, but clung to his principles. At last, one night, masked men burned his mansion down, and the family had to fly for their lives. They were hunted from place to place, and learned all there was to know about poverty, hunger, and distress. The invalid aunt found relief at last: misery and exposure killed her; she died in an open field, like a tramp, the rain beating upon her and the thunder booming overhead. Not long afterward, the father was captured by an armed band; and

while the son begged and pleaded, the victim was strung up before his face. [At this point a baleful light shone in the youth's eyes, and he said, with the manner of one who talks to himself: “If I cannot be enlisted, no matter—I shall find a way—I shall find a way.”] As soon as the father was pronounced dead, the son was told that if he was not out of that region within twenty-four hours, it would go hard with him. That night he crept to the river-side and hid himself near a plantation landing. By and by the *Duncan F. Kenner* stopped there, and he swam out and concealed himself in the yawl that was dragging at her stern. Before daylight the boat reached the Stock-Landing, and he slipped ashore. He walked the three miles which lay between that point and the house of an uncle of his in Good-Children street, in New Orleans, and then his troubles were over for the time being. But this uncle was a Union man, too, and before very long he concluded that he had better leave the South. So he and young Wicklow slipped out of the country on board a sailing vessel, and in due time reached New York. They put up at the Astor House. Young Wicklow had a good time of it for a while, strolling up and down Broadway, and observing the strange Northern sights; but in the end a change came—and not for the better. The uncle had been cheerful at first, but now he began to look troubled and despondent; moreover, he became moody and irritable; talked of money giving out, and no way to get more—“not enough left for one, let alone two.” Then, one morning, he was missing—did not come to breakfast. The boy inquired at the office, and was told that the uncle had paid his bill the night before and gone away—to Boston, the clerk believed, but was not certain.

The lad was alone and friendless. He did not know what to do, but concluded he had better try to follow and find his uncle. He went down to the steam-boat landing; learned that the trifle of money in his pocket would not carry him to Boston; however, it would carry him to New London; so he took passage for that port, resolving to trust to Providence to furnish him means to travel the rest of the way. He had now been wandering about the streets of New London three days and nights, getting a bite and a nap here and there for charity's sake. But he had given up at last; courage and hope were both gone. If he could enlist, nobody could be more thankful; if he could not get in as a soldier, couldn't he be a drummer-boy? Ah, he would work so hard to please, and would be so grateful!

Well, there's the history of young Wicklow, just as he told it to me, barring details. I said:

"My boy, you're among friends, now—don't you be troubled any more." How his eyes glistened! I called in Sergeant John Rayburn—he was from Hartford; lives in Hartford yet; may be you know him—and said: "Rayburn, quarter this boy with the musicians. I am going to enroll him as a drummer-boy, and I want you to look after him and see that he is well treated."

Well, of course, intercourse between the commandant of the post and the drummer-boy came to an end, now; but the poor little friendless chap lay heavy on my heart, just the same. I kept on the lookout, hoping to see him brighten up and begin to be cheery and gay; but no, the days went by, and there was no change. He associated with nobody; he was always absent-minded, always thinking; his face was always sad. One morning Rayburn asked leave to speak to me privately. Said he:

"I hope I don't offend, sir, but the truth is, the musicians are in such a sweat it seems as if somebody's *got* to speak."

"Why, what is the trouble?"

"It's the Wicklow boy, sir. The musicians are down on him to an extent you can't imagine."

"Well, go on, go on. What has he been doing?"

"Prayin', sir."

"Praying!"

"Yes, sir; the musicians haven't any peace of their life for that boy's prayin'. First thing in the morning he's at it; noons he's at it; and nights—well, *nights* he just lays into 'em like all possessed! Sleep? Bless you, they *can't* sleep: he's got the floor, as the sayin' is, and then when he once gets his supplication-mill agoin', there just simply aint any let-up to him. He starts in with the band-master, and he prays for him; next he takes the head bugler, and he prays for him; next the bass drum, and he scoops *him* in; and so on, right straight through the band, givin' them all a show, and takin' that amount of interest in it which would make you think he thought he warn't but a little while for this world, and believed he couldn't be happy in heaven without he had a brass band along, and wanted to pick 'em out for himself, so he could depend on 'em to do up the national tunes in a style suitin' to the place. Well, sir, heavin' boots at him don't have no effect; it's dark in there; and, besides, he don't pray fair, anyway, but kneels down behind the big drum; so it don't make no difference if they *rain* boots at him, *he* don't give a dern—warbles right along, same as if it was applause. They sing out, 'Oh, dry up!' 'Give us a rest!' 'Shoot him!' 'Oh, take a walk!' and all sorts of such things. But

what of it? It don't phase him. *He* don't mind it." After a pause: "Kind of a good little fool, too; gits up in the mornin' and carts all that stock of boots back, and sorts 'em out and sets each man's pair where they belong. And they've been throwed at him so much now that he knows every boot in the band—can sort 'em out with his eyes shut."

After another pause—which I forbore to interrupt:

"But the roughest thing about it is, that when he's done prayin',—when he ever *does* get done,—he pipes up and begins to *sing*. Well, you know what a honey kind of a voice he's got when he talks; you know how it would persuade a cast-iron dog to come down off of a door-step and lick his hand. Now if you'll take my word for it, sir, it aint a circumstance to his singin'! Flute music is harsh to that boy's singin'. Oh, he just gurgles it out so soft and sweet and low, there in the dark, that it makes you think you are in heaven."

"What is there 'rough' about that?"

"Ah, that's just it, sir. You hear him sing

"Just as I am—poor, wretched, blind'

—just you hear him sing that, once, and see if you don't melt all up and the water come into your eyes! I don't care *what* he sings, it goes plum straight home to you—it goes deep down to where you *live*—and it fetches you every time! Just you hear him sing:

"'Child of sin and sorrow, filled with dismay,
Wait not till to-morrow, yield thee to-day;
Grieve not that love
Which, from above'—

and so on. It makes a body feel like the wickedest, ungratefulest brute that walks. And when he sings them songs of his about home, and mother, and childhood, and old memories, and things that's vanished, and old friends dead and gone, it fetches everything before your face that you've ever loved and lost in all your life—and it's just beautiful, it's just divine to listen to, sir—but Lord, Lord, the heart-break of it! The band—well, they all cry—every rascal of them blubbers, and don't try to hide it, either; and first you know, that very gang that's been slammin' boots at that boy will skip out of their bunks all of a sudden, and rush over in the dark and hug him! Yes, they do—and slobber all over him, and call him pet names, and beg him to forgive them. And just at that time, if a regiment was to offer to hurt a hair of that cub's head, they'd go for that regiment, if it was a whole army corps!"

Another pause.

"Is that all?" said I.

"Yes, sir."

"Well, dear me, what is the complaint? What do they want done?"

"Done? Why, bless you, sir, they want you to stop him from *singin'*."

"What an idea! You said his music was divine."

"That's just it. It's *too* divine. Mortal man can't stand it. It stirs a body up so; it turns a body inside out; it racks his feelin's all to rags; it makes him feel bad and wicked, and not fit for any place but perdition. It keeps a body in such an everlastin' state of repentin', that nothin' don't taste good and there aint no comfort in life. And then the *cryin'*, you see—every mornin' they are ashamed to look one another in the face."

"Well, this is an odd case, and a singular complaint. So they really want the singing stopped?"

"Yes, sir, that is the idea. They don't wish to ask too much; they would like powerful well to have the prayin' shut down on, or leastways trimmed off around the edges; but the main thing's the singin'. If they can only get the singin' choked off, they think they can stand the prayin', rough as it is to be bullyragged so much that way."

I told the sergeant I would take the matter under consideration. That night I crept into the musicians' quarters and listened. The sergeant had not overstated the case. I heard the praying voice pleading in the dark; I heard the execrations of the harassed men; I heard the rain of boots whiz through the air, and bang and thump around the big drum. The thing touched me, but it amused me, too. By and by, after an impressive silence, came the singing. Lord, the pathos of it, the enchantment of it! Nothing in the world was ever so sweet, so gracious, so tender, so holy, so moving. I made my stay very brief; I was beginning to experience emotions of a sort not proper to the commandant of a fortress.

Next day I issued orders which stopped the praying and singing. Then followed three or four days which were so full of bounty-jumping excitements and irritations that I never once thought of my drummer-boy. But now comes Sergeant Rayburn, one morning, and says:

"That new boy acts mighty strange, sir."

"How?"

"Well, sir, he's all the time writing."

"Writing? What does he write—letters?"

"I don't know, sir; but whenever he's off duty, he is always poking and nosing around the fort, all by himself—blest if I think there's

a hole or corner in it he hasn't been into—and every little while he outs with pencil and paper and scribbles something down."

This gave me a most unpleasant sensation. I wanted to scoff at it, but it was not a time to scoff at *anything* that had the least suspicious tinge about it. Things were happening all around us, in the North, then, that warned us to be always on the alert, and always suspecting. I recalled to mind the suggestive fact that this boy was from the South,—the extreme South, Louisiana,—and the thought was not of a re-assuring nature, under the circumstances. Nevertheless, it cost me a pang to give the orders which I now gave to Rayburn. I felt like a father who plots to expose his own child to shame and injury. I told Rayburn to keep quiet, bide his time, and get me some of those writings whenever he could manage it without the boy's finding it out. And I charged him not to do anything which might let the boy discover that he was being watched. I also ordered that he allow the lad his usual liberties, but that he be followed at a distance when he went out into the town.

During the next two days, Rayburn reported to me several times. No success. The boy was still writing, but he always pocketed his paper with a careless air whenever Rayburn appeared in his vicinity. He had gone twice to an old deserted stable in the town, remained a minute or two, and come out again. One could not pooh-pooh these things—they had an evil look. I was obliged to confess to myself that I was getting uneasy. I went into my private quarters and sent for my second in command—an officer of intelligence and judgment, son of General James Watson Webb. He was surprised and troubled. We had a long talk over the matter, and came to the conclusion that it would be worth while to institute a secret search. I determined to take charge of that myself. So I had myself called at two in the morning; and, pretty soon after, I was in the musicians' quarters, crawling along the floor on my stomach among the snorers. I reached my slumbering waif's bunk at last, without disturbing anybody, captured his clothes and kit, and crawled stealthily back again. When I got to my own quarters, I found Webb there, waiting and eager to know the result. We made search immediately. The clothes were a disappointment. In the pockets we found blank paper and a pencil; nothing else, except a jackknife and such queer odds and ends and useless trifles as boys hoard and value. We turned to the kit hopefully. Nothing there but a rebuke for us!—a little Bible with this written on the fly-leaf: "Stranger, be kind to my boy, for his mother's sake."

I looked at Webb—he dropped his eyes; he looked at me—I dropped mine. Neither spoke. I put the book reverently back in its place. Presently Webb got up and went away, without remark. After a little I nerved myself up to my unpalatable job, and took the plunder back to where it belonged, crawling on my stomach as before. It seemed the peculiarly appropriate attitude for the business I was in. I was most honestly glad when it was over and done with.

About noon next day, Rayburn came, as usual, to report. I cut him short. I said:

“Let this nonsense be dropped. We are making a bugaboo out of a poor little cub who has got no more harm in him than a hymn-book.”

The sergeant looked surprised, and said:

“Well, you know it was your orders, sir, and I’ve got some of the writing.”

“And what does it amount to? How did you get it?”

“I peeped through the key-hole, and see him writing. So when I judged he was about done, I made a sort of a little cough, and I see him crumple it up and throw it in the fire, and look all around to see if anybody was coming. Then he settled back as comfortable and careless as anything. Then I comes in, and passes the time of day pleasantly, and sends him of an errand. He never looked uneasy, but went right along. It was a coal-fire and new-built; the writing had gone over behind a chunk, out of sight; but I got it out; there it is; it aint hardly scorched, you see.”

I glanced at the paper and took in a sentence or two. Then I dismissed the sergeant and told him to send Webb to me. Here is the paper in full:

“FORT TRUMBULL, the 8th.

“COLONEL: I was mistaken as to the caliber of the three guns I ended my list with. They are 18-pounders; all the rest of the armament is as I stated. The garrison remains as before reported, except that the two light infantry companies that were to be detached for service at the front are to stay here for the present—can’t find out for how long, just now, but will soon. We are satisfied that, all things considered, matters had better be postponed un—”

There it broke off—there is where Rayburn coughed and interrupted the writer. All my affection for the boy, all my respect for him and charity for his forlorn condition, withered in a moment under the blight of this revelation of cold-blooded baseness.

But never mind about that. Here was business—business that required profound and immediate attention, too. Webb and I turned the subject over and over, and examined it all around. Webb said:

“What a pity he was interrupted! Something is going to be postponed until—when?

And what *is* the something? Possibly he would have mentioned it, the pious little reptile!”

“Yes,” I said, “we have missed a trick. And who is ‘we,’ in the letter? Is it conspirators inside the fort or outside?”

That “we” was uncomfortably suggestive. However, it was not worth while to be guessing around that, so we proceeded to matters more practical. In the first place, we decided to double the sentries and keep the strictest possible watch. Next, we thought of calling Wicklow in and making him divulge everything; but that did not seem wisest until other methods should fail. We must have some more of the writings; so we began to plan to that end. And now we had an idea: Wicklow never went to the post-office—perhaps the deserted stable was his post-office. We sent for my confidential clerk—a young German named Sterne, who was a sort of natural detective—and told him all about the case, and ordered him to go to work on it. Within the hour we got word that Wicklow was writing again. Shortly afterward, word came that he had asked leave to go out into the town. He was detained awhile, and meantime Sterne hurried off and concealed himself in the stable. By and by he saw Wicklow saunter in, look about him, then hide something under some rubbish in a corner, and take leisurely leave again. Sterne pounced upon the hidden article—a letter—and brought it to us. It had no superscription and no signature. It repeated what we had already read, and then went on to say:

“We think it best to postpone till the two companies are gone. I mean the four inside think so; have not communicated with the others—afraid of attracting attention. I say four because we have lost two; they had hardly enlisted and got inside when they were shipped off to the front. It will be absolutely necessary to have two in their places. The two that went were the brothers from Thirty-mile Point. I have something of the greatest importance to reveal, but must not trust it to this method of communication; will try the other.”

“The little scoundrel!” said Webb; “who *could* have supposed he was a spy? However, never mind about that—let us add up our particulars, such as they are, and see how the case stands to date. First, we’ve got a rebel spy in our midst, whom we know; secondly, we’ve got three more in our midst whom we don’t know; thirdly, these spies have been introduced among us through the simple and easy process of enlisting as soldiers in the Union army—and evidently two of them have got sold at it, and been shipped off to the front; fourthly, there are assistant spies ‘outside’—number indefinite; fifthly, Wicklow has very important matter

which he is afraid to communicate by the 'present method'—will 'try the other.' That is the case, as it now stands. Shall we collar Wicklow and make him confess? Or shall we catch the person who removes the letters from the stable and make *him* tell? Or shall we keep still and find out more?"

We decided upon the last course. We judged that we did not need to proceed to summary measures now, since it was evident that the conspirators were likely to wait till those two light infantry companies were out of the way. We fortified Sterne with pretty ample powers, and told him to use his best endeavors to find out Wicklow's "other method" of communication. We meant to play a bold game; and to this end we proposed to keep the spies in an unsuspecting state as long as possible. So we ordered Sterne to return to the stable immediately, and, if he found the coast clear, to conceal Wicklow's letter where it was before, and leave it there for the conspirators to get.

The night closed down without further event. It was cold and dark and sleety, with a raw wind blowing; still I turned out of my warm bed several times during the night, and went the rounds in person, to see that all was right and that every sentry was on the alert. I always found them wide awake and watchful; evidently whispers of mysterious dangers had been floating about, and the doubling of the guards had been a kind of indorsement of those rumors. Once, toward morning, I encountered Webb, breasting his way against the bitter wind, and learned then that he, also, had been the rounds several times to see that all was going right.

Next day's events hurried things up somewhat. Wicklow wrote another letter; Sterne preceded him to the stable and saw him deposit it; captured it as soon as Wicklow was out of the way, then slipped out and followed the little spy at a distance, with a detective in plain clothes at his own heels, for we thought it judicious to have the law's assistance handy in case of need. Wicklow went to the railway station, and waited around till the train from New York came in, then stood scanning the faces of the crowd as they poured out of the cars. Presently an aged gentleman, with green goggles and a cane, came limping along, stopped in Wicklow's neighborhood, and began to look about him expectantly. In an instant Wicklow darted forward, thrust an envelope into his hand, then glided away and disappeared in the throng. The next instant Sterne had snatched the letter; and as he hurried past

the detective, he said: "Follow the old gentleman—don't lose sight of him." Then Sterne skurried out with the crowd, and came straight to the fort.

We sat with closed doors, and instructed the guard outside to allow no interruption.

First we opened the letter captured at the stable. It read as follows:

"HOLY ALLIANCE: Found, in the usual gun, commands from the Master, left there last night, which set aside the instructions heretofore received from the subordinate quarter. Have left in the gun the usual indication that the commands reached the proper hand——"

Webb, interrupting: "Isn't the boy under constant surveillance now?"

I said yes; he had been under strict surveillance ever since the capturing of his former letter.

"Then how could he put anything into a gun, or take anything out of it, and not get caught?"

"Well," I said, "I don't like the look of that very well."

"I don't, either," said Webb. "It simply means that there are conspirators among the very sentinels. Without their connivance in some way or other, the thing couldn't have been done."

I sent for Rayburn, and ordered him to examine the batteries and see what he could find. The reading of the letter was then resumed:

"The new commands are peremptory, and require that the MMMM shall be FFFFF at 3 o'clock to-morrow morning. Two hundred will arrive, in small parties, by train and otherwise, from various directions, and will be at appointed place at right time. I will distribute the sign to-day. Success is apparently sure, though something must have got out, for the sentries have been doubled, and the chiefs went the rounds last night several times. W. W. comes from southerly to-day and will receive secret orders—by the other method. All six of you must be in 166 at sharp 2 A. M. You will find B. B. there, who will give you detailed instructions. Password same as last time, only reversed—put first syllable last and last syllable first. REMEMBER XXXX. Do not forget. Be of good heart; before the next sun rises you will be heroes; your fame will be permanent; you will have added a deathless page to history. Amen."

"Thunder and Mars," said Webb, "but we are getting into mighty hot quarters, as I look at it!"

I said there was no question but that things were beginning to wear a most serious aspect. Said I:

"A desperate enterprise is on foot, that is plain enough. To-night is the time set for it—that, also, is plain. The exact nature of the enterprise—I mean the manner of it—is hidden away under those blind bunches of Ms and Fs—but the end and aim, I judge, is the

surprise and capture of the post. We must move quick and sharp now. I think nothing can be gained by continuing our clandestine policy as regards Wicklow. We *must* know, and as soon as possible, too, where '166' is located, so that we can make a descent upon the gang there at 2 A. M.; and, doubtless, the quickest way to get that information will be to force it out of that boy. But first of all, and before we make any important move, I must lay the facts before the War Department, and ask for plenary powers."

The dispatch was prepared in cipher to go over the wires; I read it, approved it, and sent it along.

We presently finished discussing the letter which was under consideration, and then opened the one which had been snatched from the lame gentleman. It contained nothing but a couple of perfectly blank sheets of note-paper! It was a chilly check to our hot eagerness and expectancy. We felt as blank as the paper, for a moment, and twice as foolish. But it was for a moment only; for, of course, we immediately after thought of "sympathetic ink." We held the paper close to the fire and watched for the characters to come out, under the influence of the heat; but nothing appeared but some faint tracings, which we could make nothing of. We then called in the surgeon, and sent him off with orders to apply every test he was acquainted with till he got the right one, and report the contents of the letter to me the instant he brought them to the surface. This check was a confounded annoyance, and we naturally chafed under the delay; for we had fully expected to get out of that letter some of the most important secrets of the plot.

Now appeared Sergeant Rayburn, and drew from his pocket a piece of twine string about a foot long, with three knots tied in it, and held it up.

"I got it out of a gun on the water-front," said he. "I took the tompons out of all the guns and examined close; this string was the only thing that was in any gun."

So this bit of string was Wicklow's "sign" to signify that the "Master's" commands had not miscarried. I ordered that every sentinel who had served near that gun during the past twenty-four hours be put in confinement at once and separately, and not allowed to communicate with any one without my privacy and consent.

A telegram now came from the Secretary of War. It read as follows:

"Suspend *habeas corpus*. Put town under martial law. Make necessary arrests. Act with vigor and promptness. Keep the Department informed."

We were now in shape to go to work. I sent out and had the lame gentleman quietly arrested and as quietly brought into the fort; I placed him under guard, and forbade speech to him or from him. He was inclined to bluster at first, but he soon dropped that.

Next came word that Wicklow had been seen to give something to a couple of our new recruits; and that, as soon as his back was turned, these had been seized and confined. Upon each was found a small bit of paper, bearing these words and signs in pencil:

EAGLE'S THIRD FLIGHT.

REMEMBER XXXX.

166.

In accordance with instructions, I telegraphed to the Department, in cipher, the progress made, and also described the above ticket. We seemed to be in a strong enough position now to venture to throw off the mask as regarded Wicklow; so I sent for him. I also sent for and received back the letter written in sympathetic ink, the surgeon accompanying it with the information that thus far it had resisted his tests, but that there were others he could apply when I should be ready for him to do so.

Presently Wicklow entered. He had a somewhat worn and anxious look, but he was composed and easy, and if he suspected anything it did not appear in his face or manner. I allowed him to stand there a moment or two, then I said, pleasantly:

"My boy, why do you go to that old stable so much?"

He answered, with simple demeanor and without embarrassment:

"Well, I hardly know, sir; there isn't any particular reason, except that I like to be alone, and I amuse myself there."

"You amuse yourself there, do you?"

"Yes, sir," he replied, as innocently and simply as before.

"Is that all you do there?"

"Yes, sir," he said, looking up with child-like wonderment in his big soft eyes.

"You are *sure*?"

"Yes, sir, sure."

After a pause, I said:

"Wicklow, why do you write so much?"

"I? I do not write much, sir."

"You don't?"

"No, sir. Oh, if you mean scribbling, I *do* scribble some, for amusement."

"What do you do with your scribbings?"

"Nothing, sir—throw them away."

"Never send them to anybody?"

"No, sir."

I suddenly thrust before him the letter to the "Colonel." He started slightly, but immediately composed himself. A slight tinge spread itself over his cheek.

"How came you to send *this* piece of scribbling, then?"

"I nev-never meant any harm, sir."

"Never meant any harm! You betray the armament and condition of the post, and mean no harm by it?"

He hung his head and was silent.

"Come, speak up, and stop lying. Whom was this letter intended for?"

He showed signs of distress, now; but quickly collected himself, and replied, in a tone of deep earnestness:

"I will tell you the truth, sir—the whole truth. The letter was never intended for anybody at all. I wrote it only to amuse myself. I see the error and foolishness of it, now—but it is the only offense, sir, upon my honor."

"Ah, I am glad of that. It is dangerous to be writing such letters. I hope you are sure this is the only one you wrote?"

"Yes, sir, perfectly sure."

His hardihood was stupefying. He told that lie with as sincere a countenance as any creature ever wore. I waited a moment to soothe down my rising temper, and then said:

"Wicklow, jog your memory now, and see if you can help me with two or three little matters which I wish to inquire about."

"I will do my very best, sir."

"Then, to begin with—who is 'the Master'?"

It betrayed him into darting a startled glance at our faces—but that was all. He was serene again in a moment, and tranquilly answered:

"I do not know, sir."

"You do not know?"

"I do not know."

"You are *sure* you do not know?"

He tried hard to keep his eyes on mine, but the strain was too great; his chin sunk slowly toward his breast and he was silent; he stood there nervously fumbling with a button, an object to command one's pity, in spite of his base acts. Presently I broke the stillness with the question:

"Who are the 'Holy Alliance'?"

His body shook visibly, and he made a slight random gesture with his hands, which to me was like the appeal of a despairing creature for compassion. But he made no sound. He continued to stand with his face bent toward the ground. As we sat gazing at him, waiting for him to speak, we saw the

big tears begin to roll down his cheeks. But he remained silent. After a little, I said:

"You must answer me, my boy—and you must tell me the truth. Who are the Holy Alliance?"

He wept on in silence. Presently I said, somewhat sharply:

"Answer the question!"

He struggled to get command of his voice; and then, looking up appealingly, forced the words out between his sobs:

"Oh, have pity on me, sir. I cannot answer it, for I do not know."

"What!"

"Indeed, sir, I am telling the truth. I never have heard of the Holy Alliance till this moment. On my honor, sir, this is so."

"Good heavens! Look at this second letter of yours; there, do you see those words, '*Holy Alliance*'? What do you say now?"

He gazed up into my face with the hurt look of one upon whom a great wrong has been wrought, then said, feelingly:

"This is some cruel joke, sir; and how could they play it upon me, who have tried all I could to do right, and have never done harm to anybody? Some one has counterfeited my hand; I never wrote a line of this; I have never seen this letter before!"

"Oh, you unspeakable liar! Here, what do you say to *this*?"—and I snatched the sympathetic-ink letter from my pocket and thrust it before his eyes.

His face turned white!—as white as a dead person's. He wavered slightly in his tracks, and put his hand against the wall to steady himself. After a moment he asked, in so faint a voice that it was hardly audible:

"Have you—read it?"

Our faces must have answered the truth before my lips could get out the false "yes," for I distinctly saw the courage come back into that boy's eyes. I waited for him to say something, but he kept silent. So at last I said:

"Well, what have you to say as to the revelations in this letter?"

He answered, with perfect composure:

"Nothing, except that they are entirely harmless and innocent; they can hurt nobody."

I was in something of a corner now, as I couldn't disprove his assertion. I did not know exactly how to proceed. However, an idea came to my relief, and I said:

"You are sure you know nothing about the Master and the Holy Alliance, and did not write the letter which you say is a forgery?"

"Yes, sir—sure."

I slowly drew out the knotted twine string and held it up without speaking. He gazed at it indifferently, then looked at me inquir-

ingly. My patience was sorely taxed. However, I kept my temper down, and said, in my usual voice:

"Wicklow, do you see this?"

"Yes, sir."

"What is it?"

"It seems to be a piece of string."

"Seems? It is a piece of string. Do you recognize it?"

"No, sir," he replied, as calmly as the words could be uttered.

His coolness was perfectly wonderful! I paused now for several seconds, in order that the silence might add impressiveness to what I was about to say; then I rose and laid my hand on his shoulder, and said, gravely:

"It will do you no good, poor boy, none in the world. This sign to the 'Master,' this knotted string, found in one of the guns on the water-front——"

"Found *in* the gun! Oh, no, no, no! do not say *in* the gun, but in a crack in the tompon!—it *must* have been in the crack!" and down he went on his knees and clasped his hands and lifted up a face that was pitiful to see, so ashy it was, and so wild with terror.

"No, it was *in* the gun."

"Oh, something has gone wrong! My God, I am lost!" and he sprang up and darted this way and that, dodging the hands that were put out to catch him, and doing his best to escape from the place. But of course escape was impossible. Then he flung himself on his knees again, crying with all his might, and clasped me around the legs; and so he clung to me and begged and pleaded, saying, "Oh, have pity on me! Oh, be merciful to me! Do not betray me; they would not spare my life a moment! Protect me, save me. I will confess everything!"

It took us some time to quiet him down and modify his fright, and get him into something like a rational frame of mind. Then I began to question him, he answering humbly, with downcast eyes, and from time to time swabbing away his constantly flowing tears.

"So you are at heart a rebel?"

"Yes, sir."

"And a spy?"

"Yes, sir."

"And have been acting under distinct orders from outside?"

"Yes, sir."

"Willingly?"

"Yes, sir."

"Gladly, perhaps?"

"Yes, sir; it would do no good to deny it. The South is my country; my heart is Southern, and it is all in her cause."

"Then the tale you told me of your wrongs

and the persecution of your family was made up for the occasion?"

"They—they told me to say it, sir."

"And you would betray and destroy those who pitied and sheltered you. Do you comprehend how base you are, you poor misguided thing?"

He replied with sobs only.

"Well, let that pass. To business. Who is the 'Colonel,' and where is he?"

He began to cry hard, and tried to beg off from answering. He said he would be killed if he told. I threatened to put him in the dark cell and lock him up if he did not come out with the information. At the same time I promised to protect him from all harm if he made a clean breast. For all answer, he closed his mouth firmly and put on a stubborn air which I could not bring him out of. At last I started with him; but a single glance into the dark cell converted him. He broke into a passion of weeping and supplicating, and declared he would tell everything.

So I brought him back, and he named the "Colonel," and described him particularly. Said he would be found at the principal hotel in the town, in citizen's dress. I had to threaten him again before he would describe and name the "Master." Said the Master would be found at No. 15 Bond street, New York, passing under the name of R. F. Gaylord. I telegraphed name and description to the chief of police of the metropolis, and asked that Gaylord be arrested and held till I could send for him.

"Now," said I, "it seems that there are several of the conspirators 'outside'—presumably in New London. Name and describe them."

He named and described three men and two women—all stopping at the principal hotel. I sent out quietly, and had them and the "Colonel" arrested and confined in the fort.

"Next, I want to know all about your three fellow-conspirators who are here in the fort."

He was about to dodge me with a falsehood, I thought; but I produced the mysterious bits of paper which had been found upon two of them, and this had a salutary effect upon him. I said we had possession of two of the men, and he must point out the third. This frightened him badly, and he cried out:

"Oh, please don't make me—he would kill me on the spot!"

I said that that was all nonsense; I would have somebody near by to protect him, and, besides, the men should be assembled without arms. I ordered all the raw recruits to be

mustered, and then the poor trembling little wretch went out and stepped along down the line, trying to look as indifferent as possible. Finally he spoke a single word to one of the men, and before he had gone five steps the man was under arrest.

As soon as Wicklow was with us again, I had those three men brought in. I made one of them stand forward, and said:

"Now, Wicklow, mind, not a shade's divergence from the exact truth. Who is this man, and what do you know about him?"

Being "in for it," he cast consequences aside, fastened his eyes on the man's face, and spoke straight along without hesitation—to the following effect.

"His real name is George Bristow. He is from New Orleans; was second mate of the coast-packet *Capitol*, two years ago; is a desperate character, and has served two terms for manslaughter—one for killing a deck-hand named Hyde with a capstan-bar, and one for killing a roustabout for refusing to heave the lead—which is no part of a roustabout's business. He is a spy, and was sent here by the Colonel, to act in that capacity. He was third mate of the *St. Nicholas*, when she blew up in the neighborhood of Memphis, in '58, and came near being lynched for robbing the dead and wounded while they were being taken ashore in an empty wood-boat."

And so forth and so on—he gave the man's biography in full. When he had finished, I said to the man:

"What have you to say to this?"

"Barring your presence, sir, it is the infernal lie that ever was spoke!"

I sent him back into confinement, and called the others forward in turn. Same result. The boy gave a detailed history of each, without ever hesitating for a word or a fact; but all I could get out of either rascal was the indignant assertion that it was all a lie. They would confess nothing. I returned them to captivity, and brought out the rest of my prisoners, one by one. Wicklow told all about them—what towns in the South they were from, and every detail of their connection with the conspiracy.

But they all denied his facts, and not one of them confessed a thing. The men raged, the women cried. According to their stories, they were all innocent people from out West, and loved the Union above all things in this world. I locked the gang up, in disgust, and fell to catechising Wicklow once more.

"Where is No. 166, and who is B. B.?"

But *there* he was determined to draw the line. Neither coaxing nor threats had any effect upon him. Time was flying—it was necessary to institute sharp measures. So I

tied him up a-tiptoe by the thumbs. As the pain increased, it wrung screams from him which were almost more than I could bear. But I held my ground, and pretty soon he shrieked out:

"Oh, *please* let me down, and I will tell!"

"No—you'll tell *before* I let you down."

Every instant was agony to him, now, so out it came:

"No. 166, Eagle Hotel!"—naming a wretched tavern down by the water, a resort of common laborers, 'longshoremen, and less reputable folk.

So I released him, and then demanded to know the object of the conspiracy.

"To take the fort to-night," said he, doggedly, and sobbing.

"Have I got all the chiefs of the conspiracy?"

"No. You've got all except those that are to meet at 166."

"What does 'Remember XXXX' mean?"

No reply.

"What is the pass-word to No. 166?"

No reply.

"What do those bunches of letters mean—'FFFFF' and 'MMMM'? Answer! or you will catch it again."

"I never *will* answer! I will die first. Now do what you please."

"Think what you are saying, Wicklow. Is it final?"

He answered steadily, and without a quiver in his voice:

"It is final. As sure as I love my wronged country and hate everything this Northern sun shines on, I will die before I will reveal those things."

I triced him up by the thumbs again. When the agony was full upon him, it was heart-breaking to hear the poor thing's shrieks.—but we got nothing else out of him. To every question he screamed the same reply: "I can die, and I *will* die; but I will never tell."

Well, we had to give it up. We were convinced that he certainly would die rather than confess. So we took him down and imprisoned him, under strict guard.

Then, for some hours, we busied ourselves with sending telegrams to the War Department, and with making preparations for a descent upon No. 166.

It was stirring times, that black and bitter night. Things had leaked out, and the whole garrison was on the alert. The sentinels were trebled, and nobody could move, outside or in, without being brought to a stand with a musket leveled at his head. However, Webb and I were less concerned now than

we had previously been, because of the fact that the conspiracy must necessarily be in a pretty crippled condition, since so many of its principals were in our clutches.

I determined to be at No. 166 in good season, capture and gag B. B., and be on hand for the rest when they arrived. At about a quarter past one in the morning, I crept out of the fortress with half a dozen stalwart and gamy U. S. regulars at my heels—and the boy Wicklow, with his hands tied behind him. I told him we were going to No. 166, and that if I found he had lied again and was misleading us, he would have to show us the right place or suffer the consequences.

We approached the tavern stealthily and reconnoitered. A light was burning in the small bar-room, the rest of the house was dark. I tried the front door; it yielded, and we softly entered, closing the door behind us. Then we removed our shoes, and I led the way to the bar-room. The German landlord sat there, asleep in his chair. I woke him gently, and told him to take off his boots and precede us; warning him at the same time to utter no sound. He obeyed without a murmur, but evidently he was badly frightened. I ordered him to lead the way to 166. We ascended two or three flights of stairs as softly as a file of cats; and then, having arrived near the farther end of a long hall, we came to a door through the glazed transom of which we could discern the glow of a dim light from within. The landlord felt for me in the dark and whispered me that that was 166. I tried the door—it was locked on the inside. I whispered an order to one of my biggest soldiers; we set our ample shoulders to the door and with one heave we burst it from its hinges. I caught a half-glimpse of a figure in a bed—saw its head dart toward the candle; out went the light, and we were in pitch darkness. With one big bound I lit on that bed and pinned its occupant down with my knees. My prisoner struggled fiercely, but I got a grip on his throat with my left hand, and that was a good assistance to my knees in holding him down. Then straightway I snatched out my revolver, cocked it, and laid the cold barrel warningly against his cheek.

"Now somebody strike a light!" said I. "I've got him safe."

It was done. The flame of the match burst up. I looked at my captive, and, by George, it was a young woman!

I let go and got off the bed, feeling pretty sheepish. Everybody stared stupidly at his neighbor. Nobody had any wit or sense left, so sudden and overwhelming had been the surprise. The young woman began to cry,

and covered her face with the sheet. The landlord said, meekly:

"My daughter, she has been doing something that is not right, *nicht wahr?*"

"Your daughter? Is she your daughter?"

"Oh, yes, she is my daughter. She is just to-night come home from Cincinnati a little bit sick."

"Confound it, that boy has lied again. This is not the right 166; this is not B. B. Now, Wicklow, you will find the correct 166 for us, or—hello! where is that boy?"

Gone, as sure as guns! And, what is more, we failed to find a trace of him. Here was an awkward predicament. I cursed my stupidity in not tying him to one of the men; but it was of no use to bother about that now. What should I do in the present circumstances?—that was the question. That girl *might* be B. B., after all. I did not believe it, but still it would not answer to take unbelief for proof. So I finally put my men in a vacant room across the hall from 166, and told them to capture anybody and everybody that approached the girl's room, and to keep the landlord with them, and under strict watch, until further orders. Then I hurried back to the fort to see if all was right there yet.

Yes, all was right. And all remained right. I staid up all night to make sure of that. Nothing happened. I was unspeakably glad to see the dawn come again, and be able to telegraph the Department that the Stars and Stripes still floated over Fort Trumbull.

An immense pressure was lifted from my breast. Still I did not relax vigilance, of course, nor effort either; the case was too grave for that. I had up my prisoners, one by one, and harried them by the hour, trying to get them to confess, but it was a failure. They only gnashed their teeth and tore their hair, and revealed nothing.

About noon came tidings of my missing boy. He had been seen on the road, tramping westward, some eight miles out, at six in the morning. I started a cavalry lieutenant and a private on his track at once. They came in sight of him twenty miles out. He had climbed a fence and was wearily dragging himself across a slushy field toward a large old-fashioned mansion in the edge of a village. They rode through a bit of woods, made a detour, and closed up on the house from the opposite side; then dismounted and skurried into the kitchen. Nobody there. They slipped into the next room, which was also unoccupied; the door from that room into the front or sitting room was open. They were about to step through it when they heard a low voice; it was somebody praying. So they halted reverently, and the lieutenant put his head in

and saw an old man and an old woman kneeling in a corner of that sitting-room. It was the old man that was praying, and just as he was finishing his prayer, the Wicklow boy opened the front door and stepped in. Both of those old people sprang at him and smothered him with embraces, shouting :

"Our boy! our darling! God be praised. The lost is found! He that was dead is alive again!"

Well, sir, what do you think! That young imp was born and reared on that homestead, and had never been five miles away from it in all his life, till the fortnight before he loafed into my quarters and gulled me with that maudlin yarn of his! It's as true as gospel. That old man was his father—a learned old retired clergyman; and that old lady was his mother.

Let me throw in a word or two of explanation concerning that boy and his performances. It turned out that he was a ravenous devourer of dime novels and sensation-story papers—therefore, dark mysteries and gaudy heroisms were just in his line. Then he had read newspaper reports of the stealthy goings and comings of rebel spies in our midst, and of their lurid purposes and their two or three startling achievements, till his imagination was all aflame on that subject. His constant comrade for some months had been a Yankee youth of much tongue and lively fancy, who had served for a couple of years as "mud clerk" (that is, subordinate purser) on certain of the packet-boats plying between New Orleans and points two or three hundred miles up the Mississippi—hence his easy facility in handling the names and other details pertaining to that region. Now I had spent two or three months in that part of the country before the war; and I knew just enough about it to be easily taken in by that boy, whereas a born Louisianian would probably have caught him tripping before he had talked fifteen minutes. Do you know the reason he said he would rather die than explain certain of his treasonable enigmas? Simply because he *couldn't* explain them!—they had no meaning; he had fired them out of his imagination without forethought or after-thought; and so, upon sudden call, he wasn't able to invent an explanation of them. For instance, he couldn't reveal what was hidden in the "sympathetic ink" letter, for the ample reason that there wasn't anything hidden in it; it was blank paper only. He hadn't put anything into a gun, and had never intended to—for his letters were all written to imaginary persons, and when he hid one in the stable he always removed the one he had put there the day before; so he

was not acquainted with that knotted string, since he was seeing it for the first time when I showed it to him; but as soon as I had let him find out where it came from, he straightway adopted it, in his romantic fashion, and got some fine effects out of it. He invented Mr. "Gaylord"; there wasn't any 15 Bond street, just then—it had been pulled down three months before. He invented the "Colonel"; he invented the glib histories of those unfortunates whom I captured and confronted with him; he invented "B. B."; he even invented No. 166, one may say, for he didn't know there *was* such a number in the Eagle Hotel until we went there. He stood ready to invent anybody or anything whenever it was wanted. If I called for "outside" spies, he promptly described strangers whom he had seen at the hotel, and whose names he had happened to hear. Ah, he lived in a gorgeous, mysterious, romantic world during those few stirring days, and I think it was *real* to him, and that he enjoyed it clear down to the bottom of his heart.

But he made trouble enough for us—and just no end of humiliation. You see, on account of him we had fifteen or twenty people under arrest and confinement in the fort, with sentinels before their doors. A lot of the captives were soldiers and such, and to them I didn't have to apologize; but the rest were first-class citizens, from all over the country, and no amount of apologies was sufficient to satisfy them. They just fumed and raged and made no end of trouble! And those two ladies—one was an Ohio Congressman's wife, the other a Western bishop's sister—well, the scorn, and ridicule, and angry tears they poured out on me made up a keepsake that was likely to make me remember them for a considerable time—and I shall. That old lame gentleman with the goggles was a college president from Philadelphia, who had come up to attend his nephew's funeral. He had never seen young Wicklow before, of course. Well, he not only missed the funeral, and got jailed as a rebel spy, but Wicklow had stood up there in my quarters and coldly described him as a counterfeiter, nigger-trader, horse-thief, and fire-bug from the most notorious rascal-nest in Galveston; and this was a thing which that poor old gentleman couldn't seem to get over at all.

And the War Department! But, O my soul, let's draw the curtain over that part!

NOTE.—I showed my manuscript to the Major, and he said: "Your unfamiliarity with military matters has betrayed you into some little mistakes. Still, they are picturesque ones—let them go; military men will smile at them, the rest won't detect them. You have got the main facts of the history right, and have set them down just about as they occurred." M. T.

THE PORTRAIT OF GEORGE ELIOT.

WE have the pleasure of presenting to our readers an authentic portrait of George Eliot, the only one by which it is likely that she will be known to posterity. We are indebted for this privilege, as we shall presently explain, to the kindness and courtesy of her husband, Mr. J. W. Cross, who has allowed us to be the first to usher this beautiful work of art to the world. In doing so, we believe it will interest readers of *THE CENTURY MAGAZINE* to learn, for the first time, the exact truth regarding the portraits of George Eliot, and we have therefore obtained from the three artists to whom, at different times in her life, she sat, some particulars of those occasions.

Miss Evans passed the winter of 1849-50 at Geneva, in the house of M. F. D'Albert Durade, the well-known Swiss water-color painter, who is also the translator of the authorized French version of her works. At that time she had, however, written nothing original, and had attracted no general interest. While she staid with M. Durade and his wife, the Swiss painter amused himself by making a small portrait of her in oils—a head and shoulders. This painting remains in the possession of M. Durade, who has not merely refused to sell it, but will not allow it to be photographed or reproduced in any form. He has, however, we understand, consented to make a replica of it for Mr. Cross. We have not seen this interesting work, but we hear that it is considered, by those who still remember the great writer as she looked in her thirtieth year, to be remarkably faithful. M. Durade recently exhibited this little picture for a few days at the *Athénée* in Geneva, but has refused to allow it to be brought to London.

Ten years after this, in 1859, as the distinguished portrait-painter, Mr. Samuel Laurence, was returning from America, he happened to meet with "Adam Bede," then just published. He was so delighted with the book that he was determined to know the author, and it was revealed to him that to do so he had but to renew his old acquaintance with Mr. George Henry Lewes, whom he had met years before at Leigh Hunt's. He made George Eliot's acquaintance, and was charmed with her, and before long he asked leave to make a study of her head. She assented without any affectation and, in the early months of 1861, Mr. Lewes commissioned the painter to make a drawing of her. She gave him repeated sittings in his studio at 6 Wells street, London, and Mr. Laurence looks back with great pleasure on the long

conversations that those occasions gave him with his vivacious sitter. The drawing was taken front face, with the hair uncovered, worn in the fashion then prevalent, and it was made in chalks. While it was proceeding, Mr. Laurence asked her if he might exhibit it, when finished, at the Royal Academy, and she at once consented. But when the time for sending in drew near, the artist received a letter from Mr. Lewes absolutely withholding this consent, and a certain strain, of which this was the first symptom, began to embarrass the relations of the two gentlemen, until Mr. Lewes finally refused to take the drawing at all. But before the summer was out, Mr. Langford, the reader of Messrs. Blackwood of Edinburgh, who published George Eliot's works, called on Mr. Laurence, and asked if he would consent to make a copy of the drawing for the firm. The artist replied that he should be happy to sell them the original, and accordingly it passed from his studio, in June, 1861, into the back parlor of Mr. Blackwood's shop, where it now hangs. Like that of M. Durade, Mr. Laurence's portrait of George Eliot is not to be in any way reproduced.

The remaining portrait is that which we reproduce with this number. It is an elaborate chalk drawing, in black and white, with a slight touch of color in the eyes, and was executed, in the latter part of 1866 and the early part of 1867, by Mr. Frederick W. Burton, at that time member of the Society of Painters in Water-colors, and now director of the National Gallery in London. George Eliot gave Mr. Burton many sittings in his studio at Kensington, and the picture was eventually exhibited in the Royal Academy, in 1867, as No. 735, "The Author of 'Adam Bede.'" It passed into Mr. Lewes's possession, was retained at his death by George Eliot, and is now the property of Mr. J. W. Cross. In the spring of this year, Mr. Cross came to the conclusion that—as the shop-windows were likely to become filled with spurious and hideous "portraits" of George Eliot—it was necessary to overcome the dislike felt by the family of the great novelist to any publication of her features, to which in life she had been averse, and he thereupon determined to record in a monumental way what he felt to be the best existing likeness. Mr. Cross took the drawing over to M. Paul Rajon, who is acknowledged to be the prince of modern etchers, and in his retirement at Auvers-sur-Oise, the great French artist has produced the beautiful etching which we

have been permitted to reproduce in engraving. For this permission, and for great courtesy and kindness under circumstances the peculiar nature of which it is not necessary here to specify, we have to tender our most sincere thanks to Mr. J. W. Cross and to Mr. Burton.

These are regarded by her friends to be the only important portraits of George Eliot which exist, but Mr. Cross possesses a very interesting black silhouette, cut with scissors, when she was sixteen. In this profile, the characteristics of the mature face are seen in the

course of development. There is also a photograph, the only one ever taken, dating from about 1850, the eyes of which are said to be exceedingly fine. As an impression of later life, there should be mentioned a profile drawn in pencil by Mrs. Alma Tadema, in March, 1877. Of all the portraits here alluded to, the one we engrave is the only one at present destined for publication. It may be added that there exist one or two other profile sketches, which, however, are not approved by the friends of George Eliot.

TO A MISSAL OF THE THIRTEENTH CENTURY.

MISSAL of the Gothic age,
Missal with the blazoned page,
Whence, O Missal, hither come,
From what dim *scriptorium*?

Whose the name that wrought thee thus,
Ambrose or *Theophilus*,
Bending, through the waning light,
O'er thy vellum scraped and white;

Weaving 'twixt thy rubric lines
Sprays and leaves and quaint designs;
Setting round thy border scrolled
Buds of purple and of gold?

Ah!—a wondering brotherhood,
Doubtless, round that artist stood,
Strewing o'er his careful ways
Little choruses of praise;

Glad when his deft hand would paint
Strife of *Sathanas* and Saint,
Or in secret coign entwist
Jest of cloister humorist.

Well the worker earned his wage,
Bending o'er the blazoned page!
Tired the hand and tired the wit
Ere the final *Explicit*!

Not as ours the books of old—
Things that steam can stamp and fold;
Not as ours the books of yore—
Rows of type, and nothing more.

Then a book was still a Book,
Where a wistful man might look,
Finding something through the whole,
Beating—like a human soul.

In that growth of day by day,
When to labor was to pray,
Surely something vital passed
To the patient page at last;

Something that one still perceives
Vaguely present in the leaves;
Something from the worker lent;
Something mute—but eloquent!

AROUND CAPE ANN.

ANNISQUAM TO MARBLEHEAD.

FISH-HOUSES AT ROCKY NECK.

It would seem that Nature, when at work upon the Massachusetts coast, intended to make an island of the larger part of Cape Ann, but for some reason left it hanging to the continent by a narrow ribbon of sand. The colonial government discovered this in 1638, but put no hand to the finishing touch. Rev. Mr. Blynman, a person "of a sweet, humble, heavenly carriage," the first minister of the town, was authorized by it, "26th, 5 mo., 1643, to cut the beach through, and to maintain it, and to have the benefit of it to himself and his forever, giving the inhabitants of the town free passage." Thus the waters of Massachusetts and Ipswich bays, after a courtship of perhaps thousands of years, were joined in the bonds of matrimony by the Rev. Richard Blynman. Since that date these bays have been married and divorced many times, according to the humor of the sea or the people controlling town-meeting.

If we start from this point by water, we follow the channel down Annisquam River by Frynall Cove, up and down Mill River, in and out of Goose and Lobster coves, by beacon and light-house, in and out of Hogskin, Plum, Lane's, Folly, and Loblolly coves, by Haliout and Andrew's points to Pigeon Cove, by the harbor of Rockport and Bearskin Neck, Long and Gap coves, Straitsmouth, Thatcher's, Milk and Salt islands, into Starknought and

Little Good harbors, and along their beaches, by Bass Rocks, Brace's Cove, and Eastern Point; rounding this into Gloucester harbor, the water-line still keeping its eccentric windings, hugging Ten Pound Island here, and there (once) Peter Mud's (now) Rocky Neck; by the old fort point, along Pavilion Beach, coming again to where the waters of the two bays mingle.

Sea coves are ever delightful, and the Cape is full of them. It always seems as if the sea went peering up into them to spy out the land, to seek a fortune, or a quiet dreaming-place, more or less succeeding in the search. It must often lose a nap, though, at Folly Cove, for this lies open to the fiercest gales.

Long before, in 1602, Captain Gosnold, in his ship the *Concord*, sailed by the Cape, pressing his weak little bark with all the sail he dared, to Cape Cod. Next year Martin Pring went sailing by, landing perhaps. Three years later, De Monts and Champlain sailed into what is now Gloucester harbor, naming it Le Beau Port. Again, a few years, and the "admiral of New England," John Smith, flitted by. (If he landed there is no record. The hotel registers of 1614 are notably incomplete.) With a few men in a small boat he ranged the coast, sounded harbors, made maps, and named everything his eyes lit on. One fair headland became Tragabigzanda,

ANNISQUAM.

but a prince renamed it Cape Ann, thereby rescuing the writer and innumerable other babies from being born Tragabigzanda-ans!

Now came the attempt to plant a colony. "Compassion towards the fisherman and partly some expectation of gain," raised in England three thousand pounds for the purpose. Fish were to be caught; some were to go across the sea to sell them, while others remained the winter through. Fourteen men, names unknown, were thus left in 1623-4, to await the return of their ship in the spring. When the departing vessel rounded the harbor-point, did they fail to go to the high rocky hill yonder and yearn after her until hull and sail sank from sight? Was ever spring looked for with more longing than by those fourteen? Hark! is that the clangor of wild geese? See! is it a sail or a cloud? Ah, a sail!—the same ship and master returned. These were the first flitting occupants of our soil,—forerunners of that multitude of watchers which this coast hath borne from that day to this!

Any history is sad, but the history of a sea-coast is the saddest of all records. Not a mile of Cape Ann shore but has a tale of wreck or memorable disaster. How frequent, too, the record is "They sailed and were never heard from!" On a coast, the landmarks in men's memories are the dates of some loss. It is the storms and wrecks that are recorded; the safe returns, the dropping anchors, the furling sails, are a thousand to one, yet the sunny memories of them lengthen no human history.

The loss of no single sail from this port ever equaled that of the brig *Gloucester*, which more than a hundred years ago entered the silent fleet of the "never heard from," making sixty widows. To their ears was borne the

dismal tale that, on the night when the ship was supposed to have been lost, a ball of light (a corposant) was seen to move about the town, and stay briefly over the roof of each of the missing crew! So, we are told, the silent fleet signals the shore from its invisible decks.

Our dwellers in early days had to arm themselves against native witches and foreign ghostly marauders. One story has it that at Louisburg, in 1745, a Cape Ann soldier shot a crow with his silver sleeve-buttons, which brought down Peg Wesson, a witch here, with a broken leg, the soldier's buttons being found in the wound. Other cunning spirits would allow themselves to fall beautifully, when shot at by good powder and shot, but when the marksman, proud of his aim and happy, went to pick them up, they would vanish.

Those were the days of pirates, too. In April, 1724, the new sloop *Squirrel*, captain Andrew Harraden, came sailing into Annisquam harbor, whence only a short time before she had departed on a fishing voyage. Why this unlooked-for arrival? What is that at the mast-head—a bucket? Young eyes, what is it? The spy-glass, daughter; let me lean it on your shoulder; be spry! My God, a man's head! Ay, work fit only for a man-of-war, the deck of that simple fishing-sloop had seen. At sea, April 14th, had come John Phillips, the pirate, and taken possession of her. The *Squirrel* had caught Phillips's eye—she was a new craft, and needed only a few finishing touches. So the next day he transferred his company to her, and set skipper Harraden to work about the unfinished sloop. Here was sharp need of wit, will, and weapons; but the captured crew had the first

A "BIT" NEAR BAY VIEW.

and the second, and the third soon came with the occasion. At noon on the fourth day, while the *Squirrel* was speeding merrily on her way, Edward Cheeseman, a captured man, suddenly tossed John Nott overboard,—the agreed-on signal. Down went Phillips by the hands of Harraden; Burrell, the boatswain, was quieted by a broad-ax, and overboard, to join John Nott, went Jimmy Sparks, the gunner, whereupon the others surrendered. This gang of Phillips's had, within nine months, taken thirty-four vessels, and if the head of the leader hung as a trophy mast-high on the *Squirrel*, the thirty-fifth—why, perhaps skipper Harraden had no ensign.

The General Court of Massachusetts granted Harraden, Cheeseman, and Philmore (who laid the plan) £42 each, and Giles, Ivernay, Butman, and Lassen £32 each, for their day's deed. There is a low, dark, woody isle in

Annisquam River, named Hangman's Island, which seems to have got a dark name from its gloomy look alone, as the pirates were not hanged there, though tradition connects it in some way with this event.

Another story has for years been told by Cape Ann firesides, of another sloop, and another Andrew—this time Andrew Robinson, a Cape Ann man, whose equal it never had. Once, far from home in a harbor, he, with his two men and sloop, was captured by Indians. His men were speedily dispatched, but Robinson was reserved for a death-feast. That night he was guarded by the only sober Indian. When the others were asleep, the captain killed him, and, miles away, boarded his sloop and set sail. At daylight the Indians discovered their loss and gave pursuit. A sailing craft, in a light wind, with a helmsman only,—how easy for canoes to capture! As

they neared him, Robinson dropped his gun; the Indians bounded on deck one after another, only to fall and be thrown overboard, tomahawked by the captain—seeing which, the others wavered and withdrew, convinced that his life was charmed. His salvation was due to scupper nails which he had scattered over the deck where the enemy

named Le Beau Port, and sincerely. Harbors differ as men do. Harbors are human and something like women; they have their own times for dainty and delicate attire. To know them, you must study them, under daylight, under twilight; at sunrise and sunset; under the full harvest moon; at low tide and high tide; in a storm and after it is over; then

GLOUCESTER HARBOR—SUNSET.

would alight,—the short, sharp heads and points of which gave to naked feet no foothold, but only terror and pain.

Cape Ann seems to make good report of its ministers. One, dying at thirty-three, is pictured as "of a pleasant aspect and mien; of a sweet temper, inoffensive in his whole behavior; pious and peaceable in his conversation; his ministerial gifts superior, and his fidelity, diligence, and success answerable." His salary was sixty pounds per annum as long as he could live comfortably by it. Perhaps he lived as long as he could by it and then died, thus adding to the list of his virtues that of dying rather than ask for more salary. Of another minister it is stated that "on all proper occasions he always strove to excite childhood to laughter, youth to mirth, and mature age to cheerfulness." Another came to a divided parish, and for fifty years won the hearts of his hearers by "simplicity, sincerity, and meekness." Another, zealous, faithful, and excellent, died in the eighty-third year of his age and the fifty-eighth of his ministry. Still another, becoming aged and infirm, accepted a pension of *twenty shillings a month* from the parish, after a service of forty years.

In 1606, we have seen, our harbor was

will you find some mood to admire, new beauty come to sight. Our harbor, like every other, sulks sometimes, one must allow. A dog-day's fog has hung over it, or wrung itself dry into it, to-day. Open as the highway to all farers, many kinds of craft share its favor. The deeply laden collier with its sober mien; the lumber-coaster with her deck-load suggesting the heart of pine forests in Maine; the stranger ship with salt from Spain; the sloop or schooner yacht with every grace a marvel and every line a picture,—those lilies of the sea, which toil not, neither do they spin; the tug-boat eying every sail for a summons; the fisherman with her seine-boat ready for action, idle after toil; the ferry-boat going her way so often as to have it by heart; the light, clumsy wood-coaster from the provinces, sturdily maintaining her look of indifference to the finer company around her; a single skiff shooting among the dories and boats; all pointing different ways; some with sails partly set, expectant; some with minds made up, their anchors resolutely down, and all either grieving or sulking over the uncertain weather. One hint of farewell from the setting sun, and what a change! The somber collier and coaster look careless and happy, and the yachts share the gold that falls upon them with every

GLOUCESTER HARBOR—EARLY MORNING.

homely sister, till twilight creeps and creeps
up every mast, like a miser, for every glint of
it. The woods along the western shore grow
like a deepening mystery. The tide is down,
and the weed-hung rocks seem darkly to desire
the night. One gleam is in the western sky,
the light of which little pools of tide among
the rocks sue for and obtain, by some bridge
unseen.

Seldom seems a sky so bright
As the sunset sky to-night;
Yet it lieth far away,
While I walk in twilight gray!

Lo! but here a bit of tide,
Hemmed by rock on either side,
Gleams, and in itself content
With a gleam yon sky hath sent.

Bit of sky so far and bright,
Why doth thy forgetful light,

While the day is leaving me,
Think to bless that bit of sea?

Tide, thy wall of rock about
Cannot keep that gleam without!
Sky, couldst thou withhold thy mite
From that lonely pool to-night?

Golden sky, thou seem'st to be
Some illumined memory!
Bit of sea, thou seem'st some heart
From that memory apart!

By a bridge I cannot see
Comes that far-off memory;
Heart, that memory is thine!
Heart, thy memories are mine!

To see the summer day come into the har-
bor, one must rise early. The early evening
most men know; but the early morning—
what is it? How many of us know it? How

OLD FISH-HOUSE—GLOUCESTER.

many love it? One star is skipper and crew of the whole heavens, and, weary with its watch, "turns in," not curious to see what the day is like. The wind is sleeping. A boat here and there puts off to some vessel. "Schooner ahoy!" says a voice from the shore, and she *ahoy*s. Sail and hull and rope and block are duplicated in the tide below. That was a yawn of the awaking wind. Notes of preparation deepen. Sail after sail is swayed up. Anchors break their hold; then comes the quickened clink, clink, of the windlass; the jib is hoisted, and the south-west wind, no longer napping, fills it and a hundred other sails that make their way out of the harbor in the morning sunlight, to and fro.

The first schooner-rigged craft that ever swam, it is claimed, was built by Andrew

posed the Cape Ann fleet in 1693; now it has nearly five hundred sail, of almost twenty-eight thousand tons, and Gloucester is the largest fishing port in the land. Its fleet is manned by men of every clime. A tide of young men, mainly from the Provinces, sets steadily toward this port. Many have the characteristic recklessness of the sailor, and earnings of weeks are spent between sunset and sunrise. There is among them no sailor cut of clothes, and ashore they follow the prevailing fashions, down to lager beer. All haunts are prepared for Jack, and he is prepared for all haunts. As in all other callings, thrift follows prudence and industry, though he seem to lie open to the changes and chances of luck. You will see his cottage commanding the finest sea view, for on the heights lie the

EAST GLOUCESTER.

Robinson at East Gloucester, in 1713, and named the *Schooner*. It was a handy craft for rig, but, even down to fifty years ago, a clumsy body. Cape Ann vessels are mostly built at Essex, a few miles from Gloucester; up a river or crooked creek, the builders construct and launch their faithful work for all sorts of seas to mock at and all sorts of weather to try. So they were building thirty years ago, when one, more venturesome, suddenly departed from the models of the day, sharpening the bow and hollowing the run. What talk among the fishermen! Who would go in her? What a — of a rake! What a sheer! She was manned, though; became successful, and very soon others were on the stocks modeled after the *Romp*, the pet of the fleet.

Six sloops, one boat, and one shallow com-

cheapest lots. Alas! that the waiting wife can also look harborward on every coming sail, often to see the flag "half-mast"—for whom?

Here are no labor strikes. The sailor brings in a fare of fish, perhaps all he has caught, by themselves. They are weighed off, the vessel is put to rights, and he goes up to the counting-room for his check. The whole value of the fish is reckoned by the vessel-owner or his clerk; then is deducted cost of ice and bait bought; then, one-quarter of one per cent. for the Widows' and Orphans' Fund; one half the remainder belongs to the owner, the other to him. From his part is then deducted charges for wood-sawing and splitting, for water, medicine-chest, condensed milk, and any charge for labor on the vessel which

belonged to him to do, but which has been hired done. His check is then handed him, and he presents it in person, or it finds its devious way to the bank by other—perhaps not cleaner—hands.

One of the most exciting scenes imaginable is that of a fleet of hundreds making the port in a storm. In a north-east gale they must beat in. All day long, by twos and threes, they come. It is luff, bear away, or tack ship to avoid a smash. Crack, snap, goes a jib-boom off. Crack, snap, there is one main-boom the less. Hoarse voices of the skippers howl in entreaty or command above the howling gale, and the shore is lined with listening lookers-on.

A visit to Cape Ann is hardly a visit unless one has driven around it. Almost every

named the "Poles." On an unguarded side it may be climbed. At the western base a rocky pasture rolls up hill and down, to the river.

Toward sunrise, across the creek, up beyond the green meadows, lies a bit of old brown road over a hill, leading only to the hearth-stones of a "vanished settlement," to what in old time was the town. If you sit down there, it will be to wonder what the dwellers fed on, and how babies ever grew to men on this uncertain soil. The multitude of stones seem like flocks and herds, held by some spell of enchantment, and one waits half expectant to see if haply they may not resume their wonted ways, and fall to grazing the little grass there is.

Now we descend from the "Poles" to the highway again, cross the bridge by the old mill,

MARBLEHEAD FROM THE HARBOR.

variety of scenery is met with and enjoyed during the fifteen miles' drive—miniature forests and mountains, and mimic seas. Out of the city we follow the highway northward. Many a by-way with its legend will entreat us to turn into it. The house on the left, with the upper story projecting over the lower, was in old times a tavern. Here the five select-men of 1740 met to be sworn in, on which occasion the bill against the town for their entertainment, including "licker," was £3 18s. 2d.

Now to the right lie orchard and meadow, with a salt-water creek winding between. On the left stands an old mansion, on whose walls hangs a portrait of a lady by Copley. Farther on, also to the left, a mass of gray rock lifts itself high above the way like a battlement,

by the church of Riverdale, rising as the road rises, until we catch again glimpses of river creeks and coves, making, as has been said, "the scenery bewildering in beauty." Now a quick turn of the road, and to the left, we look down a rocky vale to a river creek, and ahead into a vista of overarching willows; under them by an old mill and over Goose Cove bridge; then in a few minutes we are on the bridge that spans Lobster Cove. Our eyes rest on the rocky ridge where the first settlers of Cape Ann lived, and where they now lie with scarcely earth enough to cover them. One side of the cove is bordered by a hill-side of pine-woods. Along the other lies all the quaintness there is left in 'Squam. Olden buildings face divers ways, with their bits of land and ledge. One looking broadly to the southern sun,

THE TOWN OF MARBLEHEAD.

with a face partly dark and partly light, confesses to a divided ownership. Old wharves remain, which commerce has forsaken and forgotten, whereon the grass has only half a mind to grow, and the soil scarcely any mind to let it live. Only a decrepit boat or two abandoned to die, or dismantled just enough to show that the owner has in mind for them yet a voyage or two more—only these are left to tell of her sea-faring life. The days when the sloop *Squirrel*, to the old wives' wonder, sails in and drops anchor in Annisquam harbor, with a pirate's head for an ensign, are departed.

Farther on we hear the clink of the quarrymen's hammers: miles and miles of stone have been carried away from the heart of Cape Ann. Across the bay looms the eastern shore. Sea-coves invite the road down, or the road invites the sea alongside. One little nook—a cove of a cove—we look into from the road, or a bit of bridge that goes over it. From this nook, these two hundred years, the fisherman's encounter with the sea and fate has been hand to hand. His craft a dory, he wins his bread by hook and line, or sets his net and lobster-trap for luck. A mossy fish-house flanks one side; on the other, the home of the fisher-folk stands, almost within reach of the tide, with a tree or two to ward off the gaze of the curious passer-by.

On again, and we are at the end of the Cape, Pigeon Cove, where, it is said, in 1692, two young men built the first house as a refuge for their mother, who was denounced at Salem as a witch. Since that day, Pigeon Cove has had many a lover of its sea gleams

and glooms, its crags, its forest-paths and pastures of fern and sweet-scented bayberry-bushes, its bird-songs, its tinkling tides, and the sea-flavored talk of its old fisher-folk. Dana, the poet, discovered its charms forty years ago. Then another poet, Bryant, gave to woods, and fields, and shores the added charms of his presence. Then came artists, authors, and divines, and after the few, the multitude. The old gambrel-roofed inn and cozy quietude was obliged to make way for the Mansard and the summer throng.

One thing the loungeer and all his throng cannot take away—the old, old blue sea. Here it is, blue as far as the eye can go, and blue beyond. The many-handed sea! common carrier for all faring kind! Twice a day it fills, with the royal wine of its favor, the goblets it has hollowed out of the rock. Upon it east and west bound fleets come and go their silent way, all the more weird when they pass the silver wake of the moon. Happy vision if we chance to see a fleet of a hundred sail hover in the near offing!

Under the light of the full moon we ride on the remaining five or six miles to complete the tour, through the town of Rockport, and the farming suburbs of the city.

Vater and Gattin, whom these pages know, one summer day planned a row in their boat, the *Idler*, from Le Beau Port along the shore to Magnolia, a few miles. A fine thing to do at the best, but at the worst, not fine enough to tempt one twice. As they started, the wavelets, thinking it very jolly, no doubt, put little white feathers in their green caps and danced away to the shore. Vater rowed past Fisher-

men's Field, where Roger Conant and Miles Standish met, and the fourteen watchers waited; past Norman's Woe, where Longfellow wrecked the *Hesperus*—the wind rising, the little waves growing wilder with delight, or something which seems like it, and Gattin seated in the bottom of the boat. Higher the waves rise, higher the wind rises. "The rude and broken coast-line white with breakers" there to leeward gave no comfort to Vater at the oars, who headed the boat almost bayward, to keep out of the trough of the sea. Once or twice there came a little cry from Gattin, as a threatening wave higher than her head seemed about to break into the *Idler*. They took little thought of Whittier's lines:

"Of the marvellous valley hidden in the depths of
Gloucester woods,
Full of plants that love the summer—blossoms of
warmer latitudes;
Where the Arctic birch is braided by the Tropics's
flowery vines,
And the white magnolia-blossoms star the twilight
of the pines."

However, they landed safely at Magnolia, and from the windows of the *Hesperus* house looked out upon the waves, which, now that the rowers were out of their reach, seemed to soften down.

There were boats and coast-scenery in Vater's dreams that night, and in them, after a perilous row in a dory, he found himself snug and safe climbing a stair-way in the harbor of Marblehead.

Marblehead!—it is no dream-land. Name it, and what stories of heroism, trial, and trouble throng to mind! Its old look is wearing away. Last summer a visitor found in the harbor but one old schooner; a coal-vessel was running in, and a few yachts were sunning themselves idly in its waters. The fish-houses and flakes are falling down; new houses look out from old places; but you look for the name of the street you are in, and it is that of a hero, or is historic in itself. Marblehead streets are crooked, but their names will wear.

GEORGE ELIOT.

It is no easy task to write for the public eye an account of a deeply venerated friend, whom death has newly taken. It is a task on which one might well shrink from entering, save at the wish of those whose desire in such a matter carries the force of a command. He who makes the attempt can scarcely avoid two opposite perils. Strangers will be apt to think his admiration excessive. Friends more intimate than himself, on the other hand, will find a disappointing incompleteness in any estimate formed by one less close than they,—one who, seeing only what his own nature allowed him to see, must needs leave so much unseen, untold. Between these conflicting dangers the only tenable course is one of absolute candor. To fail in candor, indeed, would be to fail in respect. "Obedience is the courtesy due to kings," and to the sovereigns of the world of mind the courtesy due is truth.

The world has already been made acquainted with most of the external facts of George Eliot's life. Mary Ann Evans, youngest child of Robert Evans, land agent, was born at Arbury, near Nuneaton, in Warwickshire, on November 22, 1820. Her birthplace was thus only some twenty miles from Shakspeare's, and the "rookery elms" of her childish memories, survivors of the Forest of Arden, may have cast their shadow also on the poet of *Jaques* and *Rosalind*. Arbury

Hall, the seat of Sir Roger Newdigate, her father's principal employer, is reproduced as the Cheverel Manor of "Mr. Gilfil's Love-story." So, also, does Chilvers Coton Church appear as Shepperton, Astley Church—"The Lanthorn of Arden"—as Knebley, and Nuneaton as Milby, while many of the inhabitants of that quiet region are painted in "Scenes of Clerical Life," as they were, or as they might have been.

Her education was mainly self-acquired. For a short time—before she was ten years old—she was at school in Nuneaton, afterward at the Miss Franklins' in Coventry. "I began at sixteen," she says, in a letter which lies before me, "to be acquainted with the unspeakable grief of a last parting, in the death of my mother." After this loss, and the marriage of her brothers and sisters, she lived alone with her father, and in 1841 they removed from Griff House to Foleshill, near Coventry.

During all these early years, as, indeed, during all the years which followed them, religious and moral ponderings made the basis of George Eliot's life. To her, as to most of the more serious spirits of her generation, religion came first after the Evangelical—for a time even after the Calvinistic—pattern. The figure of Dinah Morris is partially taken from her aunt, Elizabeth Evans, whose

simple goodness had much attraction for the earnest, self-questioning girl. And in other well-known characters she has shown her deep realization of those forms of faith and piety which rest, not on outward ceremonies, but on the direct communion of the heart with God. The story of the spiritual growth of Maggie Tulliver—in great part, no doubt, autobiographical—has been felt by many readers to be almost unique in its delineation of passionate search, of an eager, self-renouncing soul. But there are those who seek and cannot find, who knock, and to whom it is not opened. There are those, the very intensity of whose gaze seems to dim the great hope on which it rests; who, while the kingdom of heaven fulfills itself within them, cease to discern it before them and afar.

Such was the case with George Eliot. After a few years spent at Foleshill in close study, aided by the Charles Brays and other intelligent friends at Coventry, we find her coming first before the world, though anonymously, in 1846, with a translation of Strauss's "Life of Jesus." This was followed by a translation of Feuerbach's "Essence of Christianity," and a translation, as yet unpublished, of Spinoza's "Ethics." Her mind had taken its ply, and while her nature, eminently constant and conservative, retained always a deep reverence and affection for whatever names itself by the name of Christ, she never sought again the old means of grace, nor felt the old hope of glory.

Her father died in 1849, and for some time before his death she was mainly absorbed in attendance on him. She told me once that for the last year of his life she had read Scott's novels aloud to him for many hours almost daily; and thus, we may suppose, amid her severer studies, she was imbibing something of the method of one to whom she always looked up as a master. After her father's death she went abroad with the Brays, and remained for some eight months *en pension* near Geneva, and afterward at M. d'Albert's house in the town. This was to her a time of intense delight in the external world. The shock of bereavement had left her spirit open to those consolations with which Nature is ever ready to soothe a generous pain.

She returned to England in 1850, and in 1851 she became sub-editor of the "Westminster Review," a periodical which has often been the first to welcome the contributions of writers who have afterward risen to fame. She lodged with the editor, Dr. Chapman, and his wife, in a large house in the Strand, which was the center of a literary group, penetrated for the most part with strongly scientific tendencies; and especially with the phi-

losophy of the Comtist school. Among the articles in the "Review" which have since been pointed out as hers, that on "Worldliness and Other-Worldliness" (Jan., 1857) is especially characteristic and noteworthy.

This course of placid self-culture was interrupted by personal events which increased the perplexity, deepened the significance, of life. A long tragedy unrolled itself before her; her pity, affection, gratitude were subjected to a strong appeal; a path was chosen over which, amidst much of happiness, a certain shadow hung. It is enough to say here that if ever her intimate history is made more fully known to the world, it will be found to contain nothing at variance with her own unselfish teaching; no postponement of principle to passion; no personal happiness based upon others' pain.

In 1854, Mr. and Mrs. Lewes went to Germany, and spent a year mainly at Weimar and Berlin. They saw much of the most intellectual society of Germany, and it was, perhaps, in this stimulating companionship that the earnest student first became strongly conscious of original power. It was, at any rate, soon afterward that she discovered the means of self-expression by which she was best able to move mankind, in a form of literature whose freedom of plan renders it specially fitted to reflect the complexity of modern life and thought. She preluded with one or two short tales, which indicate that her power was only just ripening. Then "Scenes of Clerical Life" appeared, in 1857, "Adam Bede" in 1859, and "The Mill on the Floss" in 1860.

The author's identity was soon discovered under her *nom de plume* of "George Eliot," and the publication of these first books made a sudden change in her life and surroundings. She awoke and found herself famous. From an obscure sub-editor of an unfashionable review, she rose at a bound to the first place among the imaginative prose writers of her time.

Her remaining twenty years of life were such as the spirit conscious of a message to deliver might most desire. Her mind was fed by strenuous and constant study,—scientific, linguistic, literary,—by frequent travel in those historic lands whose air quickens spirit as well as body, and by habitual intercourse with many of the foremost minds of the age. She never had much connection with the political—still less, of course, with the merely fashionable—world, but nearly all who were most eminent in art, science, literature, philanthropy might be met from time to time at her Sunday afternoon receptions. There were many women, too, drawn often from among

very different traditions of thought and belief by the unfeigned goodness which they recognized in Mrs. Lewes's look and speech, and sometimes illumining with some fair young face a *salon* whose grave talk needed the grace which they could bestow. And there was sure to be a considerable admixture of men not as yet famous—probably never to be so—but whom some indication of studies earnestly pursued, of sincere effort for the good of their fellow-men, had recommended to "that hopeful interest which"—I quote the generous words of a letter which lies before me—"the elder mind, dissatisfied with itself, delights to entertain with regard to the younger, whose years and powers hold a larger measure of unspoiled life."

It was Mr. Lewes who, on these occasions, contributed the cheerful *bonhomie*, the observant readiness, which are necessary for the fusing together of any social group. Mrs. Lewes's manner had a grave simplicity which rose in closer converse into an almost pathetic anxiety to give of her best—to establish a genuine human relation between herself and her interlocutor—to utter words which should remain as an active influence for good in the hearts of those who heard them. To some of her literary admirers, this serious tone was distasteful; they were inclined to resent, as many critics in print have resented, the prominence given to moral ideas in a quarter from which they preferred to look merely for intellectual refreshment.

Mrs. Lewes's humor, though fed from a deep perception of the incongruities of human fates, had not, except in intimate moments, any buoyant or contagious quality, and in all her talk,—full of matter and wisdom and exquisitely worded as it was,—there was the same pervading air of strenuous seriousness which was more welcome to those whose object was distinctly to *learn* from her than to those who merely wished to pass an idle and brilliant hour. To her, these mixed receptions were a great effort. Her mind did not move easily from one individuality to another, and when she afterward thought that she had failed to understand some difficulty which had been laid before her,—had spoken the wrong word to some expectant heart,—she would suffer from almost morbid accesses of self-reproach. Perhaps to no imaginative writer—to no writer, at any rate, of what is commonly called "light literature"—has fame ever presented itself so unmingledly as responsibility. Each step that she gained in popular favor drove her into a more sedulous conscientiousness,—a conscientiousness which probably injured her later books, by the over-elaboration to which it led. Aware

of this danger of a too sedulous and sensitive care, she abstained almost wholly from reading reviews of her works. She had no appetite for indiscriminate eulogy.

"Vague praise," she writes to a friend, "or praise with false notes in its singing, is something to be endured with difficult resignation." And censure, or criticism which called on her for what she could not give, would, she felt, only serve to embarrass and depress her. In this matter, as in all, Mr. Lewes stood between her and the world without, with the loyal care with which he repaid the priceless benefit which his character drew from hers.

Thus passed a score of years. Then came his sudden death; her heavy sorrow; her faithful effort to preserve forever the memory which she held so dear. She edited his last book with scrupulous care, and founded the "George Henry Lewes Studentship" in Physiology; providing, with a loving minuteness, that his full name should be forever associated with a wisely planned scheme for the fostering of his chosen study. And then, beyond expectation, it came about that fate reserved for her yet seven months of a new happiness; and she reached unawares the term of earthly life in the midst of unslackening intellectual activities, of ever-deepening loves.

Nothing, indeed, was more remarkable in this last period of her life than her intense mental vitality, which failing health did not seem in the least to impair. She possessed in an eminent degree that power which has led to success in so many directions—which is ascribed both to Newton and to Napoleon—of keeping her mind unceasingly at the stretch without conscious fatigue. She would cease to read or to ponder when other duties called her, but never (as it seemed) because she herself felt tired. Even in so complex an effort as a visit to a picture-gallery implies, she could continue for hours at the same pitch of earnest interest, and outweary strong men. Nor was this a mere habit of passive receptivity. In the intervals between her successive compositions her mind was always fusing and combining its fresh stores, and had her life been prolonged, it is probable that she would have produced work at least equal in merit to anything which she had already achieved. I may perhaps be allowed to illustrate what has here been said by a few words as to the occupations of her last days on earth.

On the Friday night before her death, Mrs. Cross witnessed a representation of the "Agamemnon," in Greek, by Oxford undergraduates, and came back fired with the old

words, thus heard anew, and planning to read through the Greek dramatists again with her husband. On Saturday, she went as usual to the concert of classical music, and there, as it seems, she played the fatal chill. That evening she played through on the piano much of the music which had been performed in the afternoon; for she was an admirable executant, and rendered especially her favorite Schubert with rare delicacy of touch and feeling. And thus, as her malady deepened, her mind could still respond to the old trains of thought and emotion, till, all unexpectedly to herself and those who loved her, she passed into the state of unconsciousness from which she woke on earth no more.

The story of George Eliot's life, it will be seen, is a simple and unsuggestive one. It is merely the record of the steady development of a strong and serious mind. There is not much in her which we can trace as inherited; not much which we can ascribe to the influences of any unusual circumstances in her journey through life. Yet, from her father,—the carpenter who rose to be forester, the forester who rose to be land-agent,—whose modified portrait appears both in Caleb Garth and in Adam Bede,—she derived, no doubt, that spirit of thoroughness, that disdain of all pretentious or dishonest work, that respect for conscientious effort, however mistaken and clumsy, which were so distinctive of her in later life. And it must also be considered as a most fortunate thing,—more important, perhaps, for a female novelist in England than for an author of any other type,—that the position of her family, while sufficiently comfortable to allow of her being liberally educated, was humble enough to bring her into close and natural contact with the quaint types of rural life,—as much superior in picturesqueness to the *habitués* of literary drawing-rooms as Mrs. Poyser is to Theophrastus Such. At the time when impressions sink deepest, it was among the Tullivers, the Silas Marners, the Bartle Masseys of this world that George Eliot's lot was cast. And thus in the shy and quaint, but affectionate and observant child, grew up the habit of discerning worth and wisdom beneath rugged envelopes, of feeling that "keen experience with pity blent" of which she speaks in one of her poems:

"The pathos exquisite of lovely minds
Hid in harsh forms—not penetrating them
Like fire divine within a common bush
Which glows transfigured by the heavenly guest
So that men put their shoes off; but encaged
Like a sweet child within some thick-walled cell,
Who leaps and fails to hold the window-bars,
But having shown a little dimpled hand,
Is visited thenceforth by tender hearts,
Whose eyes keep watch about the prison walls."

This sympathy with imperfection, this skill in interpreting the signs by which dumb and baffled creatures seek to show their love and need, was at the root of much both of her humor and her pathos. Her gaze did not invest the world around her with "the light that never was on sea or land," but seeing men and women without idealization, she still could love them as they were. This gave to her sympathy a peculiar quality which made it less flattering to the recipient, though in one sense of greater value. It was full and penetrating, but it seemed rather to be bestowed on principle, and as to a human being in difficulty or distress, than to be prompted by any such momentary glow as could induce her to forget what she calls

"The twists and cracks in our poor earthenware,
That touch me to more conscious fellowship
(I am not myself the finest Parian)
With my coevals."

She contemplated, indeed, her own powers and character with a gaze of the same impartial scrutiny. Her natural candor of self-judgment had perhaps been fostered by the tardiness of her success, which had worked in her the best effect which long obscurity can produce on strong and humble natures. It had accustomed her to conceive of herself as of one who must still strive, who sees his work before him, whose ideal is not yet attained. And it was noticeable that in any casual allusion to her own faulty tendencies she seemed to have felt less need to guard against those which go with success than against those which go with failure.

Mr. Lewes and she were one day good-humoredly recounting the mistaken effusiveness of a too-sympathizing friend, who insisted on assuming that Mr. Casaubon was a portrait of Mr. Lewes, and on condoling with the sad experience which had taught the gifted authoress of "Middlemarch" to depict that gloomy man. And there was indeed something ludicrous in the contrast between the dreary pedant of the novel and the gay self-content of the living *savant* who stood acting his vivid anecdotes before our eyes. "But from whom, then," said a friend, turning to Mrs. Lewes, "did you draw Casaubon?" With a humorous solemnity, which was quite in earnest, nevertheless, she pointed to her own heart. She went on to say—and this one could well believe—that there was one other character—that of Rosamond Vincy—which she had found it hard to sustain; such complacency of egoism being alien to her own habits of mind. But she laid no claim to any such natural magnanimity as could avert Casaubon's temptations of jealous vanity, of

bitter resentment. No trace of these faults was ever manifest in her conversation. But much of her moral weight was derived from the impression which her friends received that she had not been by any means without her full share of faulty tendencies to begin with, but that she had upbuilt with strenuous pains a resolute virtue,—what Plato calls *an iron sense of truth and right*,—to which others, also, however faulty, by effort might attain.

A few months since, there were still living in England three prophets: for by what other name, as distinguished from our poets and statesmen, can we so fitly call them? Two have passed away; the third still lives to complete his mission. Carlyle's was the most awakening personality. To Ruskin is given the most of revelation. But for the lessons most imperatively needed by the mass of men, the lessons of deliberate kindness, of careful truth, of unwavering endeavor,—for these plain themes one could not ask a more convincing teacher than she whom we are commemorating now. Everything in her aspect and presence was in keeping with the bent of her soul. The deeply lined face, the too marked and massive features, were united with an air of delicate refinement, which in one way was the more impressive because it seemed to proceed so entirely from within. Nay, the inward beauty would sometimes quite transform the external harshness; there would be moments when the thin hands that entwined themselves in their eagerness, the earnest figure that bowed forward to speak and hear, the deep gaze moving from one face to another with a grave appeal,—all these seemed the transparent symbols that showed the presence of a wise, benignant soul. But it was the voice which best revealed her, a voice whose subdued intensity and tremulous richness seemed to environ her uttered words with the mystery of a world of feeling that must remain untold. "Speech," says her Don Silva to Fedalma, in "The Spanish Gypsy,"

"Speech is but broken light upon the depth
Of the unspoken: even your loved words
Float in the larger meaning of your voice
As something dimmer."

And then again, when in moments of more intimate converse some current of emotion would set strongly through her soul, when she would raise her head in unconscious absorption and look out into the unseen, her expression was not one to be soon forgotten. It had not, indeed, the serene felicity of souls to whose child-like confidence all heaven and earth are fair. Rather it was the look (if I may use a Platonic phrase) of a strenuous Demiurge, of a soul on which high tasks are

laid, and which finds in their accomplishment its only imagination of joy.

"It was her thought she saw: the presence fair
Of unachieved achievement, the high task,
The mighty unborn spirit that doth ask
With irresistible cry for blood and breath
Till feeding its great life we sink in death."

I do not wish to exaggerate. The subject of these pages would not tolerate any words which seemed to present her as an ideal type. For, as her aspect had greatness, but not beauty, so too her spirit had moral dignity but not saintly holiness. A loftier potency may sometimes have been given to some highly favored woman in whom the graces of heaven and earth have met; moving through all life's seasons with a majesty which can feel no decay; affording by her very presence and benediction an earnest of the supernatural world. And so, too, on that thought-worn brow there was visible the authority of sorrow, but scarcely its consecration. A deeper pathos may sometimes have breathed from the unconscious heroism of some child-like soul.

It is perhaps by thus dwelling on the last touches which this high nature was dimly felt to lack—some aroma of hope, some felicity of virtue—that we can best recognize the greatness of her actual achievement, of her practical working-out of the fundamental dogma of the so-called Religion of Humanity—the expansion, namely, of the sense of human fellowship into an impulse strong enough to compel us to live for others, even though it be beneath the on-coming shadow of an endless night. For she held that there was so little chance of man's immortality that it was a grievous error to flatter him with such a belief; a grievous error at least to distract him by promises of future recompense from the urgent and obvious motives of well-doing,—our love and pity for our fellow-men. She repelled "that impiety toward the present and the visible, which flies for its motives, its sanctities, and its religion to the remote, the vague, and the unknown," as contrasted with "that genuine love which cherishes things in proportion to their nearness, and feels its reverence grow in proportion to the intimacy of its knowledge." These words are from the essay on "Worldliness and Other-Worldliness," which has been alluded to, and which contains a forcible condemnation of the view—advanced by the poet Young in its utmost crudity—according to which the reason for virtue is simply the prospect of being rewarded for it hereafter. So far as moral action is dependent on that belief, so far, she urges, "the emotion which prompts it is not

truly moral—is still in the stage of egoism, and has not yet attained the higher development of sympathy." And she adds to this a moving argument, which in after life was often on her lips and in her heart. "It is conceivable," she says, "that in some minds the deep pathos lying in the thought of human mortality—that we are here for a little while and then vanish away, that this earthly life is all that is given to our loved ones and to our many suffering fellow-men—lies nearer the fountains of moral emotion than the conception of extended existence."

It was, indeed, above all things, this sadness with which she contemplated the lot of dying men which gave to her convictions an air of reality far more impressive than the rhetorical satisfaction which is sometimes expressed at the prospect of individual annihilation. George Eliot recognized the terrible probability that, for creatures with no future to look to, advance in spirituality may oftenest be but advance in pain; she saw the somber reason of that grim plan which suggests that the world's life-long struggle might best be ended—not, indeed, by individual desertions, but by the moving off of the whole great army from the field of its unequal war—by the simultaneous suicide of all the race of man. But since this could not be; since that race was a united army only in metaphor—was, in truth, a never-ending host

"Whose rear lay wrapt in night, while breaking dawn
Roused the broad front, and called the battle on,"

she held that it befits us neither to praise the sum of things nor to rebel in vain, but to take care only that our brothers' lot may be less grievous to them in that we have lived. Even so, to borrow a simile from M. Renan, the emperor who summed up his view of life in the words *Nil expedit*, gave none the less to his legions as his last night's watch-word, *Laboremus*.

This stoic lesson she would enforce in tones which covered a wide range of feeling, from the grave exhortation which disdained to appeal to aught save an answering sense of right, to the tender words which offered the blessedness of self-forgetting fellowship as the guerdon won by the mourner's pain.

I remember how, at Cambridge, I walked with her once in the Fellows' Garden of Trinity, on an evening of rainy May; and she, stirred somewhat beyond her wont, and taking as her text the three words which have been used so often as the inspiring trumpet-calls of men,—the words *God*, *Immortality*, *Duty*,—pronounced, with terrible earnestness, how inconceivable was the *first*,

how unbelievable the *second*, and yet how peremptory and absolute the *third*. Never, perhaps, have sterner accents affirmed the sovereignty of impersonal and unrecompensing Law. I listened, and night fell; her grave, majestic countenance turned toward me like a sibyl's in the gloom; it was as though she withdrew from my grasp, one by one, the two scrolls of promise, and left me the third scroll only, awful with inevitable fates. And when we stood at length and parted, amid that columnar circuit of the forest-trees, beneath the last twilight of starless skies, I seemed to be gazing, like Titus at Jerusalem, on vacant seats and empty halls,—on a sanctuary with no Presence to hallow it, and heaven left lonely of a God.

This was the severer aspect of her teaching. How gentle, how inspiring a tone it could assume when it was called upon to convey not impulse only but consolation, I must quote a few words to show. Writing to a friend who was feeling the first anguish of bereavement, she approaches with tender delicacy the themes with which she would sustain his spirit. "For the first sharp pangs," she says, "there is no comfort;—whatever goodness may surround us, darkness and silence still hang about our pain. But slowly the clinging companionship with the dead is linked with our living affections and duties, and we begin to feel our sorrow as a solemn initiation preparing us for that sense of loving, pitying fellowship with the fullest human lot which, I must think, no one who has tasted it will deny to be the chief blessedness of our life. And especially to know what the last parting is seems needful to give the utmost sanctity of tenderness to our relations with each other. It is that above all which gives us new sensibilities to 'the web of human things, Birth and the grave, that are not as they were.' And by that path we come to find for ourselves the truth of the old declaration, that there is a difference between the ease of pleasure, and blessedness, or the fullest good possible to us wondrously mixed mortals. * * * All the experience that makes my communion with your grief is summed up in a 'God bless you,' which represents the swelling of my heart now as I write, thinking of you and your sense of what was and is not."

It is on reading words like these that one's thoughts recall the apothegm of old Cæcilius:

"If each for each be all he can,
A very God is man to man."

Every one of George Eliot's works might be read as a commentary on that text. In each there is a moral crisis, which depends on

some strong efflux of the feeling of human fellowship—sometimes pouring forth unchecked, but with unwonted energy, and sometimes overcoming the counter impulses of egoistic pleasure or pain; some selfish craving, some angered pride, some wounded and bleeding love. I need not recall each individual instance. Throughout the earlier novels, where there is less of visible purpose and more of mere humorous portraiture than in the later ones, this lesson nevertheless is always recurring. “Romola,” the most laboriously executed of all her works,—the book which, as she said, “she began a young woman, and ended an old one,”—is almost from first to last one strain of grave insistence on the human bond. Or consider, especially, her poems; for these, though often failing in that instinctive melody which is the indispensable birth-gift of poets, are yet the most concentrated expression of herself which she has left behind her. The poems move through more ideal scenes, but they enforce the self-same lesson; they teach that as the mounting spirit becomes more conscious of its own being, it becomes more conscious also of the bonds which unite it to its kin; that thus the higher a man is, the closer he is drawn to the lowest, and greatness is not an exemption, but a debt the more.

“The Legend of Jubal” is, as it were, the sublimation of all she had to say. It is in that mythic tale that the benefit conferred is most far-reaching, the self-effacement most absolute, the absorption into the universal good most satisfying and sacred.

“Wouldst thou have asked aught else from any god—
Whether with gleaming feet on earth he trod
Or thundered through the skies—ought else for share
Of mortal good, than in thy soul to bear
The growth of song, and feel the sweet unrest
Of the world’s spring-tide in thy conscious breast?
No, thou hadst grasped thy lot with all its pain,
Nor loosed it any painless lot to gain
Where music’s voice was silent; for thy fate
Was human music’s self incorporate:
Thy senses’ keenness and thy passionate strife
Were flesh of *her* flesh and her womb of life.”

Few passages could so completely lift us into the region where Art melts into Virtue; where they are discerned as twin aspects of the spirit’s unselfish earnestness, which would fain lose itself in a larger joy. The visible Jubal perishes forsaken and alone, but he lives on in the life of Music, his deathless gift to mankind.

In the well-known lines which begin, “O may I join the choir invisible,” the ardent writer has given voice to her own aspirations. This poem received its fittest commentary when it was read above her grave:

“May I reach
That purest heaven, be to other souls
The cup of strength in some great agony,
Enkindle generous ardor, feed pure love,
Beget the smiles that have no cruelty.”

To those who knew her, these words are her very self. Language has never expressed with more directness the innermost of a noble soul.

Yet, in this realm of high speculation, to admire is not necessarily to feel complete agreement. There were some to whom these consolations seemed all too shadowy, this resignation premature; some whose impulsion to a personal life beyond the grave was so pre-occupying and dominant that they could not readily acquiesce in her negations, nor range themselves unreservedly as the fellow-workers of her brave despair. Those, especially, to whom life’s most impressive experience had been the spectacle of some tragedy without an issue, of some unmerited anguish driven in storms upon an innocent soul,—such men might well have scarcely heart enough to work for the future, with thoughts forever turning to an irredeemable injustice in the past. Rather they would still recur to the ancient hopes of men; they would urge that great discoveries follow on great needs; that problems which have resisted a hundred keys may yield to yet one key more: that in some field of knowledge there may yet be that to know which shall not, indeed, diminish life’s effort, but shall establish its felicity,—shall not relax duty but add hope. To one who thus, amid great sorrow, could not abandon this anchor of the soul, she used words some of which I quote, since they may serve to bring her nearer to some minds, which may have shrunk at times from the despondency discernible beneath her bravest speech. She wrote:

“I have no controversy with the faith that cries out and clings from the depths of man’s need. I only long, if it were possible to me, to help in satisfying the need of those who want a reason for living in the absence of what has been called consolatory belief. But all the while I gather a sort of strength from the certainty that there must be limits or negations in my own moral powers and life-experience which may screen from me many possibilities of blessedness for our suffering human nature. The most melancholy thought surely would be that we in our own persons had measured and exhausted the sources of spiritual good. But we know how the poor help the poor.”

Those whose own faith is most assured can, I think, “have no controversy” with such a temper as this. The faithful servant,—we may reverently suppose,—will not be met with condemnation because, like her own Fedalma, *she would not count on aught but being faithful*. Nor can it be ours to

blame her because, in the presence of solemn issues, she was resolved to keep within the limits of what she did certainly feel and know, and—a sterner Prometheus—at least to omit "vain hopes" from the gifts which she brought to men. She gave us of her best; she gave us all her best; she had no wish, no pleasure, but to give.

"This was thy lot, to feel, create, bestow,
And that immeasurable life to know
From which the fleshly self falls shrivelled, dead;
A seed primeval that has forests bred.

* * * * *

Thy gifts to give was thine of men alone:
'Twas but in giving that thou couldst atone
For too much wealth amid their poverty."

For what she gave to the world, the world has not been slow to thank her. But what she gave of private amity;—of companionship which never knew that it was conde-

scending, of sympathy the more salutary for its sternness, of encouragement which pointed to duty only as the goal:—the thought of these things can come to few without some self-condemning tinge in their regret. Who is there that has drawn from an ennobling friendship all the blessing which he might have won? Wisdom is everlasting; early or late we apprehend her still the same. But "Wisdom herself," as Plato says, "we cannot see, or terrible had been the loves she had inspired." And the living forms in which she is in some wise embodied, the eyes through which there looks some parcel of her eternal fire,—these pass suddenly from our sight, and we have hardly recognized them, hardly known. For those who thus lament, there is a stern consolation. Let them draw near by faith; what they missed in presence, let them recover by contemplation; what is wanting to memory let them reserve for hope.

"WHEN THE TRUE POET COMES."

I.

WHEN the true poet comes, how shall we know him—
By what clear token,—manners, language, dress?
Or shall a voice from Heaven speak and show him:
Him the swift healer of the Earth's distress!
Tell us that when the long-expected comes
At last, with mirth and melody and singing,
We him may greet with banners, beat of drums,
Welcome of men and maids, and joy-bells ringing;
And, for this poet of ours,
Laurels and flowers.

II.

Thus shall ye know him—this shall be his token:
Manners like other men, an unstrange gear;
His speech not musical, but harsh and broken
Shall sound at first, each line a driven spear;
For he shall sing as in the centuries olden,
Before mankind its earliest fire forgot;
Yet whoso listens long hears music golden.
How shall ye know him? Ye shall know him not
Till, ended hate and scorn,
To the grave he's borne.

ΟΙΔΙΠΟΥΣ ΤΥΡΑΝΝΟΣ

The Harvard Cast.

ŒDIPUS.....	George Riddle.
PRIEST OF JUPITER.....	William Hobbs Manning.
CREON.....	Henry Norman.
TEIRESIAS.....	Curtis Guild, Jr.
JOCASTA.....	Leonard Eckstein Opdycke.
MESSENGER FROM CORINTH.....	Arthur Wellington Roberts.
SHEPHERD.....	Gardiner Martin Lane.
EXAGGELOS (Messenger from Within).....	Owen Wister.

Argument of the Play.

The oracle of Apollo had declared to Laius, the king of Thebes, that he was to be killed by his own son. The king therefore ordered his queen, Jocasta, to destroy her child as soon as it was born. She gave the babe to a servant, with orders to leave it to perish in the mountains. The infant was, however, given to a shepherd of Polybus, the childless king of Corinth, and was brought by him to the palace, where he was adopted and educated by the king and queen. When he became of age, Œdipus went to consult the oracle of Apollo, and learned to his horror that he was destined to slay his own father and marry his mother. In the hope of averting the prophecy, he fled from Corinth, and while on the road fell into a dispute with a traveler, whom he slew, not knowing him to be King Laius. Œdipus had heard of the sufferings of the people of Thebes on account of the Sphinx, and went thither. He found the king was dead, and the queen and her people in mourning. He guessed the riddle of the Sphinx and was, in consequence, raised to the throne and given the hand of Queen Jocasta in marriage. Soon Thebes was afflicted with a new plague, which the oracle declared should not cease until the murderer of King Laius was banished from the territory. The action of the play is confined to the working out of the fulfillment of the prophecy. In trying to discover the murderer, Œdipus starts a chain of evidence which soon proves that he himself is the regicide, and that the terrible prophecy is completely fulfilled. Jocasta, crazed by the discovery, kills herself, and Œdipus, seizing the gold clasps from her wedding garment, puts out his eyes, and is afterward banished at his own request by Creon, the brother of Jocasta, now the king of Thebes.

COSTUMES IN THE GREEK PLAY AT HARVARD.

THE production of the "Œdipus Tyrannus" of Sophocles, at Cambridge, last spring, was a greater success than the most sanguine enthusiast at the Greek department of Harvard University would have ventured to predict, even at the last rehearsal. It is true that the representation of a classic tragedy would have attracted an interested audience from the vicinity of the colleges, even had it been produced without any serious attempt to give more than a rhetorical declamation of the text. But it is equally true that, although it was previously announced that the setting of the play would harmonize, as far as possible, with the conditions under which the old tragedies were represented, and that the choruses would be sung to appropriate music, a large majority of those who looked forward to attending the performances expected to be more or less bored. Some proposed to be present, actuated by a desire to do honor to their favorite branch of education and to see in actual operation the Greek stage, which, though familiar to them in classic studies,

was yet a total stranger to their eyes. Some anticipated pleasure in the excitement of the tragedy itself and in the emotion produced by the music. Few or none expected to enjoy through their eyes anything like as agreeable sensations as they supposed would be awakened through the sense of hearing alone. Enough has been written in the public press to show to what extent accurate scholarship and faithful study made the tragedy a literary success, and to indicate the satisfaction the performance gave to all capable of judging the play from the point of view of a classical scholar. Besides this, the testimony of the critics never failed to be in favor of the artistic effect of the tragedy as a spectacle. The analysis of this element of success was naturally meager because it demanded an acquaintance with the general subject of costume—a branch of training which in this country has not yet been considered necessary to the dramatic critic. Then, too, exhaustive criticism on the spectacle presupposed more or less æsthetic taste and appreciation on the part of the writer. If, as may be the case, full justice has been done to the artistic as well as to the literary merits of the representation, it still remains to analyze the artistic part and to point out the details of the scheme of dressing the characters, and in this way to call attention to the particular beauties of the spectacle. For those who formed the large majority of the audiences in Sanders's Theater and enjoyed as much with their eyes as with their ears, it is hoped this analysis may serve to fix in the mind the already fleeting souvenirs of the event. If to the rest of the readers some idea may be conveyed of the unique charm of the tragedy as produced in Cambridge, the purpose of this article will be accomplished.

It was necessary, of course, to depart from the traditions of the Greek theater in so far as they might shock our modern notions of propriety or be out of place on our stage. In laying aside the conventionalities of the old Greek tragedy there was but one thing to do. If the masks and uncouth costumes were to be discarded, it was, of course, perfectly proper to present the characters, as far as possible, in the dress of the place and period indicated in the plot of the tragedy. The spectacle of hideous masks, shapeless garments, and clumsy foot-gear did not promise to be agreeable. On the other hand, the Doric costume of Pericles's time included many of the most graceful articles of Greek dress. But in adopting the dress of the period, a new difficulty was met. The pure Doric costume admitted of so little variety that half the charm of the

spectacle would be lost if this style of dress were rigidly adopted. Various changes had already been considered necessary in adapting the play to modern representation, such as the employment of an orchestra, the use of a scene and foot-lights, and considerable modification of the movements of the chorus. There was then some excuse for departing from accuracy in the costumes, and accordingly various articles of Attic attire were substituted for simpler and less picturesque Doric garments, a greater range of color was fixed upon than was probably in perfect keeping with the costume of Pericles's time, and artistic license was taken with textiles and minor details of ornament. In general respects, however, the costume was chronologically correct.

In order to produce anything like satisfactory results, it was necessary that the dresses should be carefully watched in the process of manufacture. They were accordingly all made in the writer's studio, and the difficulties of shape and arrangement were overcome as they were met. The manufacture of the sandals demanded, however, a different class of skilled labor from that of the seamstress, and a venerable shoe-maker in a little country town in Massachusetts was persuaded to lend his talents to the reproduction of the classic foot-gear. Carefully cut patterns were furnished him, and, after the first dash into the unknown field, he brought to the work an intelligently directed enthusiasm which secured the best possible imitation of the ancient sandals.

Without discussing the superiority of the modern theater so far as the realistic representation of a play is concerned, it may be well to call attention to the simplicity of the accessories and surroundings which was characteristic of the old Greek theater, and to show how satisfactory this simplicity proved to be in a modern attempt at reproduction. On the Greek stage there were no tawdry, inharmonious scenes with their too evident unreality, no creaking stage machinery, nor noisy imitation of nature's music. Neither was there the distraction of artificial effects of light, nor the conventional, mournful strain of the orchestra to interrupt the play of the feelings in the pathetic passages. The sole endeavor was to convey to the audience the full meaning of the text, leaving each spectator free to enjoy the drama with the help of his imagination. It needs no argument to prove how much more vivid are the pictures of the imagination than the hasty brushings of the scene-painter. The elimination of everything that would distract the attention of the listener from the words of the drama would, in this unimaginative age, be making too radical a

reform in the theater, but certainly much might be safely undertaken in this direction. The enjoyment of the "Œdipus Tyrannus" was heightened immensely by the comparative simplicity of its setting. The same play enacted between dingy wings, with all the conventional accessories, even of the best appointed theaters, would have been commonplace beside the representation in Sanders's Theater, and would fail to be impressive in just the proportion that it hampered the imagination by the accuracy of its realism. Every one who attended the performance in Cambridge must have felt, if he were moved at all, a sense of relief at being free to surround the actors with the landscape that his imagination painted. Even the minor unavoidable breaks in the harmony received an energetic criticism which much greater inaccuracies in a modern play would never have inspired. Such was the strength of the feeling which the play excited.

The "Œdipus Tyrannus" was a spectacle of the highest order. To modern theater-goers the term spectacle would convey the idea of an army of tinsel-clad supernumeraries, a wealth of Dutch metal on the scenery, and a superabundance of calcium light and colored fires. In none of these respects would the tragedy of Sophocles have satisfied the *habitué* of the numbered seat, much less the frequenter of the pit. It was a spectacle, in that it presented a series of highly attractive and interesting pictures. The remarkable beauty of these tableaux, and their unvarying harmony with the sentiment of the tragedy, raised the spectacle to a high order of æsthetic entertainment.

The costumes were, as has been stated above, in large part of a Doric pattern. In this style of Greek dress, the simple rectangular piece of cloth, as it comes from the loom, is made to play a very important part. This simple piece of cloth is not shaped in any way to the body, but depends for its fit on its arrangement in folds. The natural but perhaps unexpected consequence of this primitive method of covering the human figure is to give the clothing a new significance. The drapery is frequently found to indicate the state of mind of the wearer. A well known artist in Munich once amused himself by making

sketches of his bed-clothing as he left it each morning. He ordered his bed to remain untouched until after breakfast, and before beginning each day's painting made a sketch of the bed, writing on the back of the paper a few notes indicating graphically the state of mind he was in when he arose. This series of sketches he put away until he forgot how they looked, then he completed his study by trying to find from the sketch the tenor of the notes on the back. He was generally successful in placing accurately a limited range of emotions, as were most of his friends who tried to read the character of his lines. This artist was unconsciously studying Greek drapery.

The Greek *himation* is nothing more nor less than a large sheet. It is about twice the length of the wearer's height, and once his height in width. It is thrown around the body in a variety of ways, according to the taste of the wearer or his occupation. The unconscious movements of the limbs induced by a strong emotion would naturally affect the fall of drapery, which depends for its flow on the support of the arms and shoulders. Long unbroken lines and regular folds could only be kept, of course, when the wearer was in a tranquil frame of mind or had perfect control over his feelings. In cases of complete indifference or unconsciousness, the drapery might fall off altogether. Between these two extremes is found a range of simple emotions quite accurately indicated by the flow of the drapery. Of course, this statement applies mainly to the Greek *himation* or to the Roman *toga*, the noblest form of garment ever worn by man. All undergarments or shaped dresses of any kind give little or no effect of the sort described. A gentleman in a dress suit might go wild with grief or horror, and his shirt-front remain unruffled and his trowsers still preserve their stove-funnel correctness of contour.

The *himation* of the Greeks was always of wool, and being largely of domestic manufacture, was correspondingly varied in texture and color. The poorer classes, when they wore an outside wrap, made use of stuffs roughly woven of the natural wool or dyed of dull color, to keep from showing the dirt.

DRAPING THE CHORUS.

THE PROCESSION OF SUPPLIANTS.

Fineness of texture and purity of color were, of course, found only in the garments of the rich. The *himation* was worn in a variety of ways; the manner of throwing it is by no means difficult to learn, and the art of wearing it with some degree of grace requires but little study.

The experience of the Harvard students proved how easy it is to master the use of this apparently complicated and troublesome article of attire. The wearer first takes up the rectangular cloth, seizing it with his left hand near one end, and throws the short part over his left shoulder from behind, so that the weight on the upper corner may just touch the ground. The long part is then brought by the right hand around under the right arm, and thrown over the left shoulder from the front, backward. The left arm is now raised, gathering the folds of both ends in such a manner as to leave two of the four corners on each side the arm. This throw may be exactly reversed by bringing the left end to the front over the left shoulder, above the right end, which is thrown over backward. The middle of the upper edge of the *himation* may be brought over instead of under the right arm, as in the statue of Sophocles, or the right end may be brought around the body under both arms and then thrown to the front over the right shoulder. Other interesting varieties in the throw of the *himation* are practicable, but the above are those which were found to be most easily managed. After a few trials the students, or most of them at least, made up their minds which throw they preferred, and the variety was left to their choice. Many of them, after a very little practice, wore their costumes

with ease and satisfaction, and learned to arrange them without assistance. From the first it was decided to be an exceedingly comfortable dress, and much less troublesome than had been supposed. Under these circumstances, the wearers of the strange garb made the best of models, for they moved naturally and made a genuine practical use of the garments, varying the throw according to the temperature or the freedom of motion desired.

In dressing the characters of the "Œdipus Tyrannus" the general scheme of color contrasts was largely based on the possibilities of varying the color of the *himatia*. The play opened with a procession of suppliants composed of children and chosen youths, and led by an aged priest. These were, from the character of their mission, appropriately dressed in white, the larger youths wearing *himatia* of soft-toned wool and short tunics or *chitones* reaching nearly to the knee. These *chitones* were made of a simple length of cloth about two yards and a half long, sewn together at the ends. By joining the top of this sack-like *chiton* with two clasps, placed at proper distances apart, and gathering the fullness of the drapery at those points, holes were thus left for arms and neck, and the garment was simply put on like a sleeveless shirt, and girded at the waist. The suppliant boys wore a similar *chiton*, but in place of the *himation* a *chlamys* or cloak of rectangular form, and about two yards in length by three-quarters of a yard in breadth. This was clasped on the right shoulder by a bronze *fibula* or pin, which caught the upper edge of the *chlamys* at two points about half a yard from the ends, thus leaving a place for the head, and bringing the two ends together so they fell off the

THE PROCESSION OF SUPPLIANTS.

right shoulder. A simple *chiton*, like the one described above, was worn under the *chlamys*, and also formed the sole garment of the children who led the procession of the suppliants following the priest. The latter wrapped around his body, over a full *chiton* reaching to the instep, a *himation* of a single piece of soft flannel without a seam. This, like indeed all the outside wraps worn, was weighted at the corners. Sandals of white buckskin, copied in shape from the statue of Sophocles, distinguished the foot-gear of the priest from that of the suppliants, which was of brown leather and of simpler cut.

The procession of suppliants, as it moved across the parquet and mounted the stage on the opposite side, was sufficiently impressive to prepare the spectator for what was to follow. The slow, measured march, the unconscious, attentive look on all the faces, the pure, soft white masses of drapery, unbroken except by the wool-twined branches of olive carried by all, made a moving tableau of strange and surprising beauty. The figure of the old priest of Zeus leading the procession was venerable dignity itself, and recalled vividly the draped figures of classic art, giving a realization of the source of inspiration which prompted some of the noblest efforts of the ancient sculptors.

Edipus, coming from the palace, meets the suppliants, and the scene closes after the appearance of *Creon*, the brother of *Queen Jocasta*. The simple dresses of the suppliants made an excellent foil for the rich royal robes of the king, and heightened by contrast the vividness of the gold-shot red of his *himation*. The material of this robe was a peculiar rich reddish-purple silken stuff, with a satin texture,

and having a warp of gold thread which gave it a marvelous sheen, mingling the gloss of the red with the glitter of the gold. A heavy gold passementerie bordered the whole, thus imitating a rich embroidery, or a running Greek figure, made of small gold *plaques*. A silken *chiton*, clasped by heavy *fibule* on the shoulders, harmonized in color with the brightest lights in the *himation*, and a broad, plain border, imitating laminated gold, decorated the hems of the garment. A crown of burnished *repoussé* brass, copied from the small one found at Mycenæ by Dr. Schliemann, and sandals of gold-embroidered white buckskin, cut after the pattern of those of the Olympian *Hermes*, completed the richness of the dress.

I have already hinted at the excuse for the adoption of any textile which might best convey the idea of a royal robe, and will not, therefore, attempt to prove that the use of silk was chronologically accurate. In regard to the color of the king's robe, it was, perhaps, a simple chance in finding a desirable material, more than any desire to make a concession to the popular idea of royal purple, which led to the choice of a red approaching the purple hue. It seemed best to confine red as far as possible to the few members of the royal family, thus distinguishing them from the rest, and preventing the too frequent recurrence of a color which would cheapen the general effect if used with too great freedom. The quality of red was varied as far as possible in such a manner as to convey the idea of richness of material appropriate to the rank of the wearer. Thus *Creon*, who entered first in a traveling dress, wore a *chiton* of salmon gray with red embroidered border, and a woollen

THE PROCESSION OF THE CHORUS.

chlamys of dull red, sufficiently rich to indicate the traveler's social position.

The chorus, being to some extent subordinate to the actual cast in the play, and having a position in the orchestra several feet lower than the stage, it became necessary, in order to give full effect to the dresses behind the foot-lights, to adopt a simple harmony of quiet colors for the sixteen singers. A quiet colored dress was also more characteristic of aged Thebans, whom the singers were supposed to represent. Consequently a great deal of pains was taken to select from different woolen dress goods in the market a variety of tints,

such as might have been produced either by the combination of different colored natural wools, or by the use of primitive and simple domestic dyes. The cloth known to the trade as Kyber cloth satisfied largely the conditions of flexibility, texture, width, and color, and several of the chorus *himatia* were made of this material. A soft, bunting-like stuff served to vary the character of the garments, and this in turn gave way to a fuller and thicker variety of simple woolen dress goods not unlike flannel in texture. The *chitones* should have been of wool, but, both for the sake of comfort and economy, cheese-cloth of three

FIRST APPEARANCE OF OEDIPUS.

THE PROCESSION OF THE CHORUS.

different qualities was substituted, and the whole of this was dyed of plain colors, to contrast slightly and yet perfectly harmonize with the *himatia*. Each of the *chitones* was dyed separately, and the common domestic dyes sold in the shops in small packages were largely used. To give the cheese-cloth the appearance of wool or crêpe, it was dipped in hot water and allowed to dry hung up loosely by one end. The *chitones* were straight sacks reaching to the instep, sometimes gathered on the shoulder by a string to imitate the drapery of certain rather archaic figures found in Greek art. White fillets, bound tightly around the heads, assisted to give them the proper character. The sandals were all of the same pattern, and were copied from those of the statue of Demosthenes.

The entrance of the chorus after the suppliants retired struck a different but not less impressive note in the gamut of color. As they moved with stately deliberation from behind the curtain which served as common entrance and exit for all minor characters, they appeared not like masqueraders or supernumeraries, but like real flesh-and-blood characters of ancient times. The dust of centuries seemed to have gathered in their garments, and age seemed to have grizzled their curly locks. There was a decided individuality about the falling of each *himation*, and the whole costume had the appearance of having been in long and constant use—a quality rarely found in new draperies. When they reached their position around the altar, they formed a mass composed of delicate variations of grays and soft warm hues that was at once grateful to the eye and kept its place

almost as part of the architecture of the theater, thus supporting rather than diminishing the effect of the costumes on the stage above them.

The towering form of the blind seer *Teiresias* as he denounced *Edipus*, in the following scene, marked the first point in the play where violent action seemed to be heightened in effect by the character of the drapery. The figure in repose was full of impressive dignity. The long lines of the creamy white *himation* were accentuated and relieved by the folds of the soft *chiton*, and the white beard and hair framed in an expressive face well suited to the part.

In proportion as the old man approached the climax of his emotion, the folds seemed to grow sharper and the turns more angular, until, at the moment when he denounced the king, the rigidity of his limbs found a corresponding inflexibility in the lines of the drapery, and the whole figure expressed the energy of the uttered words. Later in the play, when *Creon*, in his princely robes of gold-ornamented red, had a long dialogue with *Edipus*, the contrast of the color of the two costumes was odd, but not disagreeable. The one of soft wool clung gracefully to the body, the other, stiff with ornament, gave massive folds and seemed to forbid any unseemly haste of gesture or undignified action. The king's costume first especially justified its selection as official robes when *Edipus* was telling *Jocasta* the story of the death of *Laius*. It is a significant fact that just in this scene Mr. Riddle, who took the part of *Edipus*, was commonly adjudged to force the action and to give undue importance to

TEIRESIAS.

the dramatic effect of the tale. His costume made all violent gestures seem undignified and unworthy a king. *Jocasta* (Mr. Opdycke), who entered in this scene for the first time, introduced a new and vigorous chord of color, supported as she was by her two female attendants in blue and salmon *diploidia*. Her own dress was a *diploidion* of this silver-shot muslin trimmed heavily with passementerie, and so weighted that it kept regular folds around the limbs. An *himation* of thin, crimped

silk, delicate yellow in color, diaphanous and cloud-like in texture, contrasted with the under-garment. Her diadem was ornamented with two Sphinxes in relief; bracelets and necklace of Greek pattern clasped wrists and neck, and delicate sandals similar to those worn by the king disclosed the beauties of the feet.

In the use of the *diploidion* no departure was made from the Doric dress, for this article is but the development of the straight, sack-like *chiton*. The *chiton* is lengthened until it is a foot or more longer than the wearer's height. Then the top is doubled over, so that the overfall may reach from the shoulder nearly to the waist. Clasps gathering the fullness upon each shoulder have apertures for the two arms and the head like the *chiton*, only double. The part which hangs below the waist is belted in, and then pulled out over the belt until the hem just clears the instep. This graceful garment, seen in its best form on the Caryatides, is one of the most effective of the list. A few trials will show how easily the folds of a properly made *diploidion* give the graceful lines which are found in the statues.

The attendants of both *Œdipus* and *Creon*, likewise the *Exaggelos*, who made an effective entrance and delivered vigorous lines toward the end of the play, all wore short tunics with half-sleeves. The men who filled these parts were selected athletes, and their bare brown limbs, far from suggesting an impropriety, gave a point to the costume, and raised the pictures in which they figured far above the level of those composed with ordinary stage supernumeraries.

It was part of the original scheme that in each group the most prominent character should as far as possible be the focus, not only of interest in the text, but from the point of view of costume. Let us see how the first complex group fulfilled this condition. On the stage right stood *Œdipus*, in rich but deep-toned red; on the left *Creon*, also in red, but of a color entirely different in scale; the attendants of the king, in lavender tunics bordered with gold-embroidered white, flanked the door-way, and the two attendants of *Jocasta*, in delicate blue and salmon, brought the eye by a pleasing graduation in intensity of color and strength of tone up to the figure of the queen, clothed in lustrous and ample drapery.

After the interview between the king and the queen the action of the tragedy rapidly increased, and the introduction of the messenger from Corinth announcing the death of King Polybus, and at the same time partially solving the mystery of *Œdipus's* birth, was

JOCASTA ENTERS.

but the beginning of the series of rapidly succeeding dramatic situations. The queen now appeared in a different dress, having substituted a clinging creamy woolen *chiton* for the *diploidion*, and a deep red *himation* for the silken wrap. *Edipus* also laid aside the formal robes of state, and appeared in a simple but rich white *chiton* and *himation*, delicately ornamented with gold. The excuse for this change of dress was not at first evident except on the score of increased picturesqueness, but, as the tragedy continued, it was found that both the dresses gave a special accent to the groups, and brought about the change from the quiet movement of the first part of the play to the

violent action of the climax. Now the pictures became more broken, more tormented, so to speak, and *Jocasta's himation* made a violent contrast to the quiet tone of the attendants' *diploidia*. *Edipus* in white came out, making a strong accent against every background. For some time no white had been seen, and the value of this simple mass of drapery was consequently more apparent.

Jocasta's by-play, when she first became conscious of the fulfillment of the evil prophecy, gave one of the most interesting and moving pieces of acting of the whole tragedy. The clinging drapery made every motion of the limbs significant as she writhed in the tortures

JOCASTA'S OFFERING.

THE STORY OF THE EXAGGELOS—THE MESSENGER FROM WITHIN.

of mental agony, and when at last she turned and rushed off the stage, vanishing into the dark entrance of the palace with a gesture of supreme despair, the mantle enveloped her darkly like a pall.

A few moments of quiet on the stage while the chorus was singing would have been, under other circumstances, quite as trying to the audience as to the actor. But Mr. Riddle, who wore his dress with an ease and grace worthy study by all who don the classic garb, always gave a series of unconsciously charming poses, which displayed to advantage the great beauties of the simple drapery. Thus the spectacular interest, though changed in a degree, was not wholly interrupted. As the violence of the action increased so did the contrasts of costume multiply. The messenger from Corinth, clad in sober brown, and the rough old shepherd with his cloak of undressed sheepskins, showed by contrast with the king and his attendants the extremes of the social scale, and the king's figure was preëminently the focus of the picture. At last, *Œdipus*, hearing the truth of the story of his birth, and the accomplishment of the prophecy, uttered his final wail of despair, and, seizing the folds of the *himation* hanging across his back, drew them with a quick gesture over his head and face and dashed into the palace. There could be no mistake as to the meaning of that last throw of the drapery, for the flying figure in full silhouette against the

open door was the embodiment of despair.

Now, the dramatic climax passed, the human interest was still strongly kept up in the re-appearance of *Œdipus* blind and his interview with his children. Half lying in the arms of his attendants, the king, with disheveled hair and disordered drapery, entered from the palace, the picture of misery. The garments which a few moments before were full of classic grace now hung in confusion from his shoulders. No long lines gave height and dignity to the form, but, repeating the character of the bent and crushed figure, short broken and irregular folds hung limp

from the limbs. A more complete transformation could not be imagined, and the effect was strengthened by the entrance of *Creon*, who, though still wearing the same princely dress, had assumed the crown of the king and was accompanied by attendants. He now looked every inch a ruler, and the unfortunate *Œdipus* was changed to a weak and miserable wretch.

JOCASTA AND ŒDIPUS GO WITHIN.

CEDIPUS IN DESPAIR.

The two children in simple *diploidia* assisted to form the final tableau, which was marvelous in its picturesqueness. On one side the little *genre* group composed admirably, and balanced that of the new king and his attendants. The white *himation* of *Cædipus* was still the focus,

while, scarcely less prominent, the deep *himation* of *Creon*, with its glittering decoration, came strongly out against the background. The characters left the stage and the play closed without any dramatic *finale*, but the last tableau left a vivid impression on the

JOCASTA. (AWARE OF THE FULFILLMENT OF THE PROPHECY.)

mind, and thus rounded the ending and made it appear complete.

In briefly reviewing the chief tableaux of the play, I have called attention little enough to the expression of the drapery, because of the difficulty of making this expression

comprehensible. Even the most skillful illustrator can give little idea of the character of the lines which the motion of the human figure produces in the flowing Greek dress. Only a suggestion of the multiform beauties of the costume, which, than any other

THE LAMENT OF ŒDIPUS, BLIND: "OH, MISERABLE AM I!"

ever worn, is more agreeable to the eye, can therefore be given through the medium of illustration. Its first and greatest element of beauty is its perfect simplicity. In order to make it fully intelligible how a rectangular piece of cloth may imitate the magical charm of the drapery of Greek statues I should, perhaps, need the aid of intricate diagrams, and should certainly far transgress the limits of a magazine article. Still the few suggestions given above are ample hints for any one who desires to make the experiment of draping the figure in the Greek fashion. Indeed, they are quite as full and intelligible as those found in the recognized sources of investigation in this study.

The so-called Greek dresses found in the costumes are Greek only in name and in a certain conventional approach to the general form of Greek drapery, which is the result of only a superficial study of the antiques. It is certain that there was a great variety of shaped garments in use among the Greeks, but the most characteristic and beautiful drapery was, without exception, produced by the arrangement of the unshaped cloth. In

some of the long, pointed, mantle-like garments that which appears to be the result of a complex cut is, in reality, only a studied arrangement of the folds of a garment of simple form with straight sides. In all studies of Greek costume, the best sources of information are the statues themselves. From the plaster an accurate idea may be gained not only of the dimensions and construction of the various dresses, but of the texture of the cloth employed. The great and constantly increasing variety of modern fabrics gives, of course, a great range of textures of silk, cotton, linen, and wool. The latter will be found the material best adapted to copy the classic drapery, even in the diaphanous clinging tunics. An excellent way to imitate the peculiar crinkle of the *chitones* is to twist the garment lengthways into a rope, after having carefully dampened it. When it is to be employed, it must be shaken out of the twist, when it will be found to have beautiful longitudinal crêpe-like folds, sharp and broken, similar to the drapery of certain statues. This is the method in common use in the studios.

The "Œdipus Tyrannus" was an experi-

ment on a sufficiently large scale to prove what must always have been apparent to the student of ancient literature,—the intensity of the human passion, which found expression in the poetry of the period. To the large mass of those present at Sanders's Theater this was, however, a revelation and a surprise. Another result of this experiment, and the one especially interesting to artists and actors, was the realization of the practical convenience of the classic dress. The stage traditions in regard to the shape and use of any historical dresses have not been more correct than the public notion of what was proper in this respect. The traditional

clumsy garments have rarely been criticised, and hence, with few exceptions, the members of the profession have been satisfied with what their costumer gave them, without caring, or at least without venturing to make, any original investigations on that subject. In Europe, some of the principal actors do dress on the stage very much as they would have done if they had lived in the period which they represent on the boards, but in this country there are few followers of that school. Most artists, and sculptors, too, trust implicitly in the costumer, often enough taking for granted that which a moment's inspection of a picture or a statue would prove to be totally incorrect. Both on the stage and in the studio it has been generally considered necessary largely to modify classic costumes in order to adapt them to the convenience of the wearer. In the "Cedipus Tyrannus" a few safety-pins, hidden in the folds of the garments, were alone needed to keep them from being disarranged. Even this assistance was not found to be strictly necessary after two or three performances, notwithstanding the fact that the students did not have the benefit of rehearsing in costume previous to the public performance.

Although not of the most vital importance in the production of works of art, a knowledge of costume is certainly quite as desirable as the mastery of other sciences which are considered necessary to the practice of the profession. Any exhibition will show on its walls scores of so-called classical figures in which nothing is less classical than the drapery. There is no reasonable excuse for ignorance of a subject so easy to approach and so interesting on acquaintance. The artist, much more than the actor, has peculiar facilities for this study. From the time he begins the rudiments of his profession by copying, perhaps, classic feet and hands, he has constantly before his eyes examples of the costume of different periods, illustrated in the art of past ages. He has simply to observe, and his subject is mastered.

There are various institutions in Europe besides the art museums where the subject may be studied to advantage. Of these, the Musée d'Artillerie at Paris is the most important. Here are found careful reproductions of best authenticated originals, or imitations made from selected data, gathered from early literature and art. The only attempt yet made in this country to furnish any permanent facilities for this study may be credited to the Museum of Fine Arts in Boston. The trustees of this institution voted last season to make an exhibition as soon as practicable of the historical costumes of this country, with

the intention of adding to the museum, sooner and that at no distant date there will be at or later, a new department covering the general subject. There is every reason to believe that this effort will meet with public favor, least one collection of costume in America to which the actor, painter, or sculptor may make a profitable pilgrimage.

SUNSHINE IN MARCH.

WHERE are you, Sylvia, where?
For our own bird, the woodpecker, is here,
Calling on you with cheerful tappings loud!
The breathing heavens are full of liquid light;
The dew is on the meadow like a cloud;
The earth is moving in her green delight—
Her spiritual crocuses shoot through,
And rathe hepaticas in rose and blue;
But snow-drops that awaited you so long
Died at the thrush's song.

"Adieu, adieu!" they said.
"We saw the skirts of glory, and we fade;
We were the hopeless lovers of the Spring,
Too young, as yet, for any love of hours;
She is harsh, not having heard the white-throats sing;
She is cold, not knowing the tender April showers;
Yet have we felt her, as the buried grain
May feel the rustle of the unfallen rain;
We have known her, as the star that sets too soon
Bows to the unseen moon."

DELAY.

Thou dear, misunderstood, maligned Delay,
What gentler hand than thine can any know!
How dost thou soften Death's unkindly blow,
And halt his messenger upon the way!
How dost thou unto Shame's swift herald say,
"Linger a little with thy weight of woe!"
How art thou, unto those whose joys o'erflow,
A stern highwayman, bidding passion stay,
Robbing the lover's pulses of their heat
Within the lonesome shelter of thy wood!
Of all Life's varied accidents we meet
Where can we find so great an offered good?
Even the longed-for heaven might seem less sweet
Could we but hurry to it when we would.

THROUGH ONE ADMINISTRATION.*

BY FRANCES HODGSON BURNETT,

Author of "That Lass o' Lowrie's," "Haworth's," "Louisiana," "A Fair Barbarian," etc., etc.

CHAPTER I.

EIGHT years before the Administration rendered important by the series of events and incidents which form the present story, there had come to Washington, on a farewell visit to a distant relative with whom he was rather a favorite, a young officer who was on the point of leaving the civilized world for a far-away Western military station. The name of the young officer was Philip Tredennis. His relative and entertainer was a certain well-known entomologist, whom it will be safe to call Professor Herrick. At the Smithsonian and in all scientific circles, Professor Herrick's name was a familiar one. He was considered an enviable as well as an able man. He had established himself in Washington because he found men there whose tastes and pursuits were congenial with his own, and because the softness of the climate suited him; he was rich enough to be free from all anxiety and to enjoy the delightful liberty of pursuing his scientific labors because they were his pleasure, and not because he was dependent upon their results. He had a quiet and charming home, an excellent matter-of-fact wife, and one daughter, who was being educated in a Northern city, and who was said to be as bright and attractive as one could wish a young creature to be.

Of this daughter Tredennis had known very little, except that she enjoyed an existence and came home at long intervals for the holidays, when it did not happen that she was sent to the sea or the mountains with her mother instead.

The professor himself seemed to know but little of her. He was a quiet and intensely studious person, taking small interest in the ordinary world and appearing always slightly surprised when his wife spoke to him; still, his manner toward her was as gentle and painstaking as if she had been the rarest possible beetle and the only one of her species to be found in any known collection, though perhaps the interest she awakened in him was not so great as it might have been under such exceptionally favorable circumstances. She was not a brilliant or far-seeing woman, and her opinions of entomology and, indeed,

of science in general, were vague, and obscured by objections to small boxes, glass cases, long pins, and chloroform, and specimens of all orders.

So, observing this, Tredennis felt it not at all unnatural that he should not hear much of his daughter from the professor. Why his relative liked him, the young man was not at all sure, though at times he had felt the only solution of the mystery to be that he liked him because his tendency was toward silence and books and research of all kinds. He thought he was certain that the professor did like him. He had invited him to visit him in Washington, and had taken him to the Smithsonian and rambled from room to room with him, bestowing upon him tomes of information in the simplest and most natural manner; filled with the quietest interest himself and entirely prepared to find his feeling shared by his charge. He had given into his hands the most treasured volumes in his library, and had even seemed pleased to have him seated near him when he sat at work. At all events, it was an established fact that a friendly feeling existed between them, and that if it had been his habit to refer to his daughter, he would have spoken of her to Tredennis. But Tredennis heard nothing of her until he had been some days in Washington, and then it was Mrs. Herrick who spoke of her.

"Nathan," she said one evening at dinner, "Bertha will be home on Tuesday."

The professor laid his spoon down as if he had rather unexpectedly discovered that he had had enough soup.

"Bertha," he said. "Indeed! Next Tuesday. Well, of course, we must be ready for her. Do you want any money, my dear? But of course you will want money when she comes, if she has finished school, as I think you said she had."

"I shall want money to pay her bills," answered Mrs. Herrick. "She will bring them with her. Her aunt has had her things made in New York."

"Yes," said the professor, "I dare say they will be more satisfactory. What kind of things, for instance, Catherine?"

"Dresses," replied Mrs. Herrick, "and

things of that sort. You know she is to come out this season."

"To come out," remarked the professor, carefully giving the matter his undivided attention. "I hope she will enjoy it. What sort of a ceremony is it? And after a young person has 'come out' does she ever go in, and is there any particular pageant attached to such a—a contingency?"

"When she comes out," answered Mrs. Herrick, taking a purely practical view of the affair, "she begins to go to parties, to balls, and receptions, and lunches, which she does not do when she is going to school. It isn't considered proper, and it wouldn't give her any time for her studies. Bertha hasn't been allowed to go out at all. Her aunt Maria has been very particular about it, and she will enjoy things all the more because they are quite new to her. I dare say she will be very gay this winter. Washington is a very good place for a girl to come out in."

After dinner, when they retired to the library together, it occurred to Tredennis that the professor was bestowing some thought upon his paternal position, and his first observation proved that this was the case.

"It is a most wonderful thing that a few brief years should make such changes," he said. "It seems impossible that so short a time should change a small and exceedingly red infant into a young person returned from school in the most complete condition, and ready to 'come out.' She was not interesting as an infant. I tried to find her so, but failed, though it was insisted that she was an unusually intelligent baby, and I have not seen much of her of late years. When she was growing, it was thought that the climate of Washington was not good for her. I am really a little curious about her. My views of girls are extremely undefined. I have always been a bookworm. I have not known girls. They have not come within my radius. I remember one I once knew years ago, but that is all. It was when I was a younger man. I think she was a year or so older than Bertha. She was very interesting—as a study. She used to bewilder me."

He walked over to the table and began to turn over some papers.

"She had gray eyes," he said, in a rather lower voice,— "gray eyes."

He was so quiet for some time that Tredennis thought he had forgotten what he had been talking about; but after a pause of at least three minutes, he spoke again.

"I would not be at all sorry," he said, "if Bertha was a little like her. I suppose," he added, referring seriously to Tredennis, "I suppose they are all more or less alike."

"I think——" faltered Tredennis, "perhaps so."

He did not feel himself an authority. The professor stood still a moment, regarding the fire abstractedly.

"She had gray eyes," he said again,— "gray eyes!" and immediately afterward returned to his table, seated himself, and fell to work.

The next week Bertha arrived, and to her distant relative her arrival was a revelation. She descended upon the quiet household—with her trunks, her delight in their contents, her anticipation of her first season, her fresh and rather surprised exultation in her own small powers and charms, which were just revealing themselves to her—like a young whirlwind. Her mother awakened to a most maternal interest in the gayeties into which she was to be drawn; the very servants were absorbed in the all-pervading excitement, which at length penetrated to the professor's study itself, and aroused him from his entomological reveries.

After she had been in the house a week, he began to examine the girl through his spectacles with great care and deliberation, and, having cheerfully submitted to this inspection through several meals, one day at dinner its object expressed herself with charming directness concerning it.

"I do hope you'll like me, papa," she said, "when you have classified me."

"Classified you!" said the professor, in some bewilderment.

"Yes," answered Bertha. "You know I always feel as if you might turn me over gently with your finger at any moment, and watch me carefully while I struggled until you knew all about me, and then chloroform me and stick a pin through me with a label on it. I shouldn't like the chloroform and the pin, but I should take an interest in the label. Couldn't I have the label without the pin, papa?"

"I don't know," said the professor, examining her more carefully than ever. "I am afraid not."

After that it became his custom to encourage her to reveal herself in conversation, which it was very easy to do, as she was a recklessly candid young person, given to the most delightfully illogical partisanship, an endless variety of romantic fancies, and a vivid representation of all facts in which she felt interest. It must be confessed that, for the sake of hearing her talk, the professor somewhat neglected, for the time being, both *Coleoptera* and *Lepidoptera*, and, drifting into the sitting-room upon many sunny mornings, allowed himself to be surrounded by innocent frivolities in the way of personal adornments.

And it must also be added that he fell into the habit of talking of the girl to Tredennis, as they sat together by the study fire at night.

"She is an attractive girl," he said once, seriously. "I find myself quite absorbed in her at times. She is chaotic, illogical, impractical—oftener than not she does not know anything of what she is talking about, but her very absurdities have a kind of cleverness in them. And wit—there is wit in her nonsense, though she is scarcely conscious of it. I cannot help thinking of her future, and what its needs will develop in her. It all depends upon the needs. You never know what will be developed, but you know it depends upon the needs."

"I—hope there will be no painful needs," said Tredennis, looking at the fire. "She is very happy. I never saw any one so happy."

"Yes, she's very happy," admitted the professor. "At present she is not much more than a joyous, perfectly healthy young animal. She sings and laughs because she can't help it, and she adorns herself from instinct. She'll be different in a year or two. She'll be less happy, but more interesting."

"More interesting!" said Tredennis, in a low voice.

"Yes, more interesting," answered the professor, looking at the fire himself, with an air of abstractedly following a train of thought. "She will have made discoveries about herself. It is a pity she can't make them without being less happy—but then, none of us are happy." He paused, rubbed his forehead a second, and then turned suddenly on Tredennis.

"Are *you* happy?" he demanded. Tredennis started and hesitated.

"Y-yes—N-no," he answered, unsteadily. He would have said yes unreservedly a short time ago, but within the last few days he had been less sure of himself, and now, being confronted with the question unexpectedly, he found that he must answer with a reservation—though he could not at all have given a reason for the feeling that he must do so.

"Perhaps it is not my way to look at life brightly," he added.

"It is her way," said the professor. "She believes in everything in a persistent, childish fashion that is touching to older persons like myself. If you contest her points of belief with her, she is simply obstinate. You can't move her."

"Why should any one try?" said Tredennis, warmly.

"There is no need to try," responded the professor. "She will find out for herself."

"Why should she?" said Tredennis, warmer still. "I hope she won't."

The professor took off his spectacles and began to polish them carefully with a corner of his large white handkerchief.

"She is going to be a clever woman," he said. "For her sake I am sorry to see it. She is going to be the kind of clever woman who has nine chances out of ten of being a desperate pain to herself while she is a pleasure to her friends. She hasn't the nature to find safety in cleverness. She has a conscience and emotions, and they will go against her."

"Against her?" cried Tredennis.

"She will make mistakes and suffer for them—instead of letting others suffer. She won't be a saint, but she might be a martyr. It always struck me that it took faults and follies to make a martyr."

He bent forward and poked the fire as carefully as he had rubbed his spectacles; then he turned to Tredennis again—slowly this time, instead of suddenly.

"You resent it all, I suppose," he said. "Of course you do. It makes you angry, I've no doubt. It would have made me angry, I dare say, at your age, to hear an elderly scientist dissect a pretty young creature and take the bloom off her life for her. It's natural."

"I don't like to think of her as—as being anything but happy—and—and good," said Tredennis, with some secret resentment.

"She'll not be bad," said the professor, critically. "It isn't in her. She might be happy, perhaps—if one thing happened to her."

"What one thing?" asked Tredennis.

"If she married a fine fellow, whom she was deeply and passionately in love with—which happens to very few women."

In the shadow of his corner, Tredennis felt the hot blood mount steadily to his forehead, and was glad of the dim light, for the professor was still regarding him fixedly, though as if in abstraction.

"She will be—likely to marry the man she loves, sir," he said, in a voice neither clear nor steady.

"Yes," said the professor; "unless she makes the mistake of merely marrying the man who loves *her*. She will meet him often enough. And if he chances some day to be a fascinating fellow, her fate will be sealed. That goes along with the rest of her strengths and weaknesses."

And he gave the fire a vigorous poke which cast a glow of light upon them both; then, leaving his chair, he stood for a moment polishing his glasses,—staring absently at Tredennis before he put them on and wandered back to his table and his specimens.

Tredennis's own acquaintance with his

young relative was not a very intimate one. Too many interests presented themselves on every side to allow of her devoting herself specially to any one, and her father's favorite scarcely took the form of an interest. She had not the leisure to discover that he was fully worth the discovering. She regarded him simply as a large and rather serious young man, who, without seeming stupid, listened rather than talked; and yet was not actually a brilliant listener, since he only listened with an air of observing quietly, and keeping the result of his observations to himself.

"I dare say it will suit him to be out among the Indians," she said to her mother upon one occasion. "And I should think it would suit the Indians. He won't find them frivolous and given up to vanity. I believe he thinks I am frivolous. It struck me that he did the other day, when I was talking about that new dress being made. Do you think I talk about my clothes too much, mamma? Well, at all events," with much frankness, "I don't talk about them half as much as I think about them. I am always thinking about them just now. It seems as if I should die if they weren't becoming, after they were made. But don't you suppose it's natural, mamma, and that I shall get over it in time?"

She was brushing out her hair before the glass, and turned round, brush in hand, with an expression of rather alarmed interest, and repeated the question.

"Don't you think I shall get over it," she said. "It seems just now as if everything had *begun* all at once, and anything might happen, and I had rather lost my breath a little in the rush of it. And I *do* so want to have a good time, and I care about everything connected with it—clothes, and people, and parties, and everything—but I *don't* want to be any more frivolous than I need be,—I mean I don't want to be a stupid."

She gave the pretty red-brown mane embowering her a little shake back, and fixed her large clear eyes on her mother's.

"I suppose all girls are frivolous just at first," she said. "Don't you?"

"I don't call it frivolous," said her mother, who was a simple, excellent creature, not troubled with intellectual pangs, and who, while she admired her, frequently found her daughter as far beyond her mild, limited comprehension as her husband was, and she was not at all disposed to complain thereof, either.

The one fact she was best able to grasp at this moment, was that the girl looked her best, and that the circumstance might be utilized as a hint for the future.

"That way of wearing your hair is very becoming to you, Bertha," she said. "I wish

there was some way of managing it so as to get the same effect."

"But I can't wear it down after I'm 'out,'" said Bertha, reflectively. "I've got beyond that—as I suppose I shall get beyond the frivolity."

And she turned to the glass and looked at herself quite simply, and with a soft little air of seriousness which was very bewitching.

She regarded herself in this manner for several seconds, and then began slowly to dress her hair, plaiting it into soft thick plaits, which she fastened closely and simply at the nape of her pretty neck.

"I believe I'll try not to be *quite* so, frivolous," she said.

Perhaps she was making an effort at the accomplishment of this desirable end when she came down to dinner, an hour or so later. Tredennis thought he had never seen her so lovely.

He was standing alone in the fire-light, looking doubtfully at something he held in his hand, and she entered so quietly that he started on becoming conscious of her presence. She wore a dress he had not seen before, a pale gray, soft in material and very simply made, with a little lace kerchief knotted at her throat.

She came forward, and laid her hand on the back of a chair.

"Papa has not come in —?" she began, then stopped suddenly, with a quick, graceful little turn of her head.

"Oh, where is the heliotrope?" she exclaimed.

For the room was full of the subtle fragrance of it.

He made a rather headlong step forward.

"It is here," he said. "I have been out, and I saw a lot of it in a florist's window. I don't know whether it's a flower to wear—and that sort of thing—but I always liked the odor of it. So I brought this home."

And he held it out to her.

She took it and buried her face in it delightedly. It was a sumptuous handful, and had been cut with unsparing lavishness. He had, in fact, stood by and seen it done.

"Ah, I like it so," she cried. "I do like it—it's lovely."

Then she lifted her face, hesitating a second as a new thought occurred to her. She looked up at him with pretty uncertainty, the color rising in her cheeks simply because she was uncertain.

"They—I don't know —" she said. "You didn't—they are not for —"

"For you," Tredennis ended for her, hurriedly. "Yes. I don't know why, but I thought of you when I saw them. It's an idea, I suppose. They are for you, if you'll have them."

"Ah!" she said, "it was so kind of you! I'm so glad to have them. I have always liked them."

She almost hid her bright face in them again, while he stood and watched her, wondering why he felt suddenly tremulous and unreasonably happy.

At last she looked up at him again.

"I wish this was my 'coming out' night," she said. "I would wear these. You have given me my first bouquet. I am glad of that."

"If I am here on the night of your first party," he answered, "I will give you another, if you will let me."

"If you are here?" she said. "Are you going away?"

And there was an innocent, unconsciously expressed touch of disappointment in her tone, which was a sharp pleasure to him, though he was in too chaotic a mental condition to call it either pleasure or pain.

"I may be ordered away at any moment," he said.

He could never exactly remember afterward how it came about, that in a few moments more he was sitting in the professor's arm-chair, and she had taken a seat on a hassock near him, with some of his heliotrope in the knot of her hair, some fastened against her pale gray dress, and some loosely clasped in the hand which rested on her lap. He did not know how it happened, but she was there, and the scent of the heliotrope floated about her in the warmth of the fire, and she was talking in the bright, fanciful way which entertained the professor, and he knew that this brief moment he came for the first time within the charmed, bright circle of her girlish life and pleasures, and though he was conscious that his nearness moved her no more than the professor's would have done, he was content.

There was a softness in her manner which was new to him, and which had the effect of giving him courage. It was a result partly of the pleasure he had given her and partly of the good resolution she had made, of which he knew nothing. He only saw the result, and enjoyed it. She even showed a pretty interest in his future.

"She is what the Italians call *simpatica*," had been one of her father's observations concerning her, and Tredennis thought of it as he listened and watched her.

It was her gift to say well all she had to say. Her simplest speech produced its little effect, because all her heart was with her hearer. Just now she thought only of Tredennis, and that she wished to show her innocent interest in him.

So she sat with her flowers upon her knee and talked, and it was an enchanted hour for Tredennis, who felt like a creature slowly awakening to the light of day.

"I suppose we may not see you again for several years," she said. "I do not like to think of that, and I am sure papa won't, but"—and she turned, smiling into his eyes, her chin resting in the hollow of her palm, her elbow on her knee—"when we *do* see you, of course you will be a most distinguished person, entirely covered with stars and ribbons and—scalps!"

"And you," he said; "I wonder what will have happened to you?"

"Oh, a great many things, of course," she answered, "but only the unimportant things that happen to all girls—though they will be important enough to me. I dare say I shall have had a lovely time, and have been very happy."

And she turned her little smile upon the fire and brooded for a few seconds—still in her pretty attitude.

It was such a pretty attitude and her look was so sweet that both together wrought upon Tredennis strongly, and he felt himself awakening a little more.

"I wish," he said, breaking the brief silence in a low voice, "I wish that I could insure the—happiness for you."

She turned, with a slight start, and some vague trouble in her face.

"Oh!" she said, "don't you think I shall be sure to be happy. There seems to be no reason why I should not. Oh, I hope I shall be happy; I—I don't know what I should do if I wasn't happy! I can't imagine it."

"Everybody is not happy," he said, his voice almost tremulous.

"But," she faltered, "but I—I have always been happy——" She stopped, her eyes appealing to him piteously. "I suppose, after all, that is a poor reason," she added, "but it almost seems like one."

"I wish it were one!" he said. "Don't look like that. It—it hurts me. If any sacrifice of mine—any suffering——"

She stirred a little, moved in some vague way by the intensity of his tone, and as she did so, the odor of the heliotrope floated toward him.

"Bertha——!" he said, "Bertha——"

He did not know what he would have said—and the words were never spoken—for at that moment the enchanted hour was ended. It was the professor himself who broke in upon it—the professor who opened the door and entered, hungry and absent-minded, the fire-light striking upon his spectacles and seeming to enlarge them tremen-

dously as he turned his head from side to side, inhaling the air of the room with evident delight.

"Flowers, eh?" he said. "What kind of flowers? The air seems full of them."

Bertha rose and went to him, Tredennis watching her girlish pale-gray figure, as it moved across the room, with a pained and bewildered sense of having lost something which he might never regain.

"They are heliotropes," she said; "Philip brought them to me. It is my first bouquet, so I shall keep it until I am an old woman."

A WEEK later, Tredennis left Washington. It so chanced that he took his departure on the night rendered eventful by the first party. In the excitement attendant upon the preparations for this festivity, and for his own journey, he saw even less of Bertha than usual. When she appeared at the table, she was in such bright, high spirits that the professor found her—for some private reason of his own—more absorbing than ever. His spectacles followed her with an air of deep interest, he professed an untrained anxiety concerning the dress she was to wear, appearing to regard it as a scientific object worthy of attention.

"She's very happy!" he would say to Tredennis again and again. "She's very happy!" And having said it, he invariably rubbed his forehead abstractedly and pushed his spectacles a trifle awry, without appearing conscious of it.

When the carriage Tredennis had ordered came to the door at ten o'clock, the coupé which was to convey Bertha to the scene of her first triumphs had just driven up.

A few seconds later, Bertha turned from her mirror and took up her bouquet of white rose-buds and heliotrope, as a servant knocked at the door.

"The carriage is here, Miss," he said. "And Mr. Tredennis is going away, and says would you come and let him say good-bye?"

In a few seconds more, Tredennis, who was standing in the hall, looked up from the carpet and saw her coming down the staircase with a little run, her white dress a cloud about her, her eyes shining like stars, the rose and heliotrope bouquet he had sent her in her hand.

"Thank you for it," she said, as soon as she reached him. "I shall keep this, too; and see what I have done." And she pushed a leaf aside and showed him a faded sprig of heliotrope hidden among the fresh flowers. "I thought I would like to have a little piece of it among the rest," she said. And she

gave him her hand, with a smile both soft and bright.

"And you really kept it?" he said.

"Oh, yes," she answered, simply. "You know I am going to keep it as long as I live. I wish we could keep you. I wish you were going with us."

"I am going in a different direction," he said. "And ——" suddenly, "I have not a minute to spare. Good-bye."

A little shadow fell on the brightness of her face.

"I wish there was no such word as 'good-bye,'" she said.

There was a silence of a few seconds, in which her hand lay in his and their eyes rested on each other. Then Mrs. Herrick and the professor appeared.

"I believe," said Tredennis, "if you are going now, I will let you set out on your journey first. I should like to see—the last of you."

"But it isn't the last of me," said Bertha, "it is the first of me—the very first. And my heart is beating quite fast."

And she put her hand to the side of her slender white bodice, laughing a gay, sweet laugh with a thrill of excitement in it. And then they went out to the carriage, and when Mrs. Herrick had been assisted in, Bertha stood for a moment on the pavement—a bright, pure white figure, her flowers in her hand, the hall light shining upon her.

"Papa!" she called to the professor, who stood on the threshold. "I never asked you if you liked it—the dress, you know."

"Yes, child," said the professor. "Yes, child, I like—I like it."

And his voice shook a little, and he said nothing more. And then Bertha got into the carriage and it drove away into the darkness. And almost immediately after, Tredennis found himself in his carriage, which drove away into the darkness, too—only, as he laid his head against the cushions and closed his eyes, he saw, just as he had seen a moment before, a bright, pure white figure standing upon the pavement, the night behind it, the great bouquet of white roses in its hand, and the light from the house streaming upon the radiant girl's face.

CHAPTER II.

THE eight years that followed were full of event for Tredennis. After the first two, his name began to be well known in military circles as that of a man bold, cool, and remarkable for a just clear-sightedness which set him somewhat apart from most men of his class and age. Stationed as he was in the

midst of a hostile Indian country, full of perilous adventure, a twofold career opened itself before him. His nerve, courage, and physical endurance rendered him invaluable in time of danger, while his tendency to constant study of the problems surrounding him gave him in time of peace the distinction of being a thinking man, whose logically deduced and clearly stated opinions were continually of use to those whose positions were more responsible than his own. He never fell into the ordinary idle routine of a frontier camp life. In his plain, soldierly quarters he worked hard, lived simply, and read much. During the first year he was rather desolate and unhappy. The weeks he had spent with the Herricks had been by no means the best preparation for his frontier experience, since they had revealed to him possibilities of existence such as he had given no thought to before. His youth had been rather rigorous and lonely and his misfortune of reserve had prevented his forming any intimate friendships. His boyhood had been spent at boarding-school, his early manhood at West Point, and after that his life had settled itself into the usual wandering, homeless groove which must be the lot of an unmarried military man. The warm atmosphere of a long-established home, its agreeably unobtrusive routine which made the changes of morning, noon, and night all something pleasant to anticipate—the presence of the women who could not be separated in one's mind from the household itself—all these things were a sort of revelation to him. He had enjoyed them, and would have felt some slight sadness in leaving them, even if he had not left something else also. It was a mere shadow he had left, but it was a shadow whose memory haunted him through many a long and lonely hour, and was all the more a trouble through its very vagueness. He was not the man likely to become the victim of a hopeless passion in three weeks. His was a nature to awaken slowly, but to awaken to such strength of feeling and to such power to suffer, at last, as would leave no alternative between happiness and stolidly borne despair. If fate decreed that the despair and not the happiness was to be his portion, it would be borne silently and with stern patience, but it would be despair nevertheless. As it was, he had been gradually aroused to a vague tenderness of feeling for the brightness and sweetness which had been before him day after day. Sometimes, during this first year of his loneliness, he wondered why he had not gone farther and reached the point of giving some expression to what he had felt, but he never did so without being convinced by his after

reflections that such an effort would only have told against him.

"It wasn't the time," he said aloud to himself, as he sat in his lonely room one night. "It wasn't the time."

He had been thinking of how she looked as she came to him that night, in her simple pale-gray dress, with the little lace kerchief tied round her throat. That, and his memory of the bright figure at the carriage-door, were pictures which had a habit of starting up before him now and again, though chiefly at such times as he was alone and rather feeling his isolation.

He remembered his own feeling at her girlish pleasure in his gift, the tone of her voice, her pretty attitude as she sat afterward on the low seat near him, her chin resting in her hollowed palm, her smiling eyes uplifted to his. Her pretty, unstudied attitudes had often struck him, and this one lingered in his fancy as somehow belonging naturally to a man's dreams of a fireside.

"If the room and fireside were your own," he said, abstractedly, "you'd like ——"

He stopped, and, rising to his feet, suddenly began to pace the room.

"But it wasn't the time," he said. "She would not have understood—I scarcely understood myself—and if we should ever meet again, in all probability the time will have gone by."

After such thoughts he always betook himself to his books again with quite a fierce vigor, and in the rebound accomplished a great deal.

He gave a great deal of studious attention to the Indian question, and, in his determination to achieve practical knowledge, undertook more than one dangerous adventure. With those among the tribes whom it was possible to approach openly he made friends, studying their languages and establishing a reputation among them for honor and good faith which was a useful element in matters of negotiation and treaty.

So it came about that his name was frequently mentioned in "the Department," and drifted into the newspapers, his opinions being quoted as opinions carrying weight, and, in an indirect way, the Herricks heard of him oftener than he heard of them, since there had been no regular exchange of letters between them, the professor being the poorest of correspondents. Occasionally, when he fell upon a newspaper paragraph commenting upon Tredennis's work and explaining some of his theories, he was roused to writing him a letter of approval or argument, and at the close of such epistles he usually mentioned his daughter in a fashion peculiarly his own.

"Bertha is happier than ever," he said, the first winter. "Bertha is well, and is said to dance, in the most astonishingly attractive manner, an astonishing number of times every evening. This I gather not only from her mother, but from certain elaborately ornamented cards they call programmes, which I sometimes find and study in private." This came the second winter; the third he said: "It dawns upon Bertha that she is certainly cleverer than the majority of her acquaintance. This at once charms and surprises her. She is careful not to obtrude the fact upon public notice, but it has been observed; and I find she has quite a little reputation 'in society' as an unusually bright and ready young creature, with a habit of being delightfully equal to any occasion. I gradually discover her to be full of subtleties, of which she is entirely unconscious."

Tredennis read this a number of times, and found food for reflection in it. He thought it over frequently during the winter, and out of his pondering upon it grew a plan which began to unfold itself in his mind, rather vaguely at first, but afterward more definitely. This plan was his intention to obtain leave of absence, and, having obtained it, to make his way at once to Washington.

He had thought at first of applying for it in the spring, but fate was against him. Difficulties which broke out between the settlers and certain hostile tribes called him into active service, and it was not until the severities of the next winter aided in quelling the disturbance by driving the Indians into shelter that he found himself free again.

It was late on New Year's Eve that he went to his quarters to write his application for furlough. He had been hard at work all day, and came in cold and tired, and pleased to find the room made cheerful by a great fire of logs, whose leaping flames brightened and warmed every corner. The mail had come in during his absence, and two or three letters lay upon the table with the Eastern papers, but he pushed them aside without opening them.

"I will look at them afterward," he said. "This shall be done first—before the clock strikes twelve. When the New Year comes in —"

He paused, pen in hand, accidentally catching a glimpse of his face in the by no means flattering shaving-glass, which hung on the wall opposite. He saw himself brown with exposure, bearing marks of thought and responsibility his age did not warrant, and wearing even at this moment the rather stern and rigid expression which he had always felt vaguely to be his misfortune. Recognizing it, his face relaxed into a half-smile.

"What a severe-looking fellow!" he said. "*That* must be improved upon. No one could stand that. It is against a man at the outset."

And the smile remained upon his face for at least ten seconds—at all events until he had drawn his paper before him and begun to write. His task was soon completed. The letter written, he folded it, placed it in its envelope, and directed it, looking as immovable as ever, and yet conscious of being inwardly more moved than he had ever been before.

"Perhaps," he said, half-aloud, "*this* is the time, and it is well I waited."

And then he turned to the letters and papers awaiting him.

The papers he merely glanced over and laid aside; the letters he opened and read. There were four of them, three of them business epistles, soon disposed of; the sight of the handwriting upon the fourth made his heart bound suddenly—it was the clear, space-saving caligraphy of Professor Herrick, who labeled his envelopes as economically as if they had been entomological specimens.

"It's curious that it should have come now," Tredennis said, as he tore it open.

It was a characteristic letter, written, it appeared, with the object of convincing Tredennis that he had been guilty of a slight error in one of his statements concerning the sign-language of a certain tribe. It devoted five pages of closely written paper to proofs and researches into the subject, and scientific reasons for the truth of all assertions made. It was clear, and by no means uninteresting. The professor never was uninteresting, and he was generally correct. Tredennis read his arguments carefully and with respect, even with an occasional thrill, as he remembered how his communications usually terminated.

But this was an exception to the general rule. At the bottom of the fifth page he signed himself, "Your sincere friend, Nathan Herrick." And he had said nothing about Bertha.

"Not a word," said Tredennis. "He never did so before. What does it mean? Not a word!"

And he had scarcely finished speaking before he saw that on the back of the last page a postscript was written—a brief one, three words, without comment, these: "Bertha is married."

For a few moments Tredennis sat still and stared at them. The glass across the room reflected very little change in his face. The immovable look became a trifle more immovable, if anything. There was scarcely the stirring of a muscle.

At length he moved slowly, folding the letter carefully and returning it to its envel-

ope in exactly the folds it had lain in when he took it out. After that, he rose and began to pace the floor with a slow and heavy tread. Once he stopped and spoke, looking down at the boards beneath his feet.

"Bertha is married," he said, in a low, hard voice. And the clock beginning to strike at the moment, he listened until it ended its stroke of twelve, and then spoke again:

"The New Year," he said, "and Bertha is married."

And he walked to the table where his letter of application lay, and, taking it up, tore it in two and tossed it into the fire.

FOUR years elapsed before he saw Washington, and in the four years he worked harder than before, added to his reputation year by year, and led the unsettled and wandering existence which his profession entailed. At rare intervals he heard from the professor, and once or twice, in the course of his wanderings, he met with Washingtonians who knew the family and gave him news of them. On one occasion, while in Chicago, he encountered at the house of an acquaintance a pretty and charming woman who had lived in Washington before her marriage, and, in the course of conversation, the fact that she had known the Herricks revealed itself. She appeared not only to have known but to have liked them, and really brightened and warmed when they were mentioned.

"I was very fond of Bertha," she said, "and we knew each other as well as girls can know each other in the rush of a Washington winter. I was one of her brides-maids when she was married. Did you know her well?"

And she regarded him with an additional touch of interest in her very lovely eyes.

"Not very well," Tredennis answered. "We are distantly related to each other, and I spent several weeks in her father's house just after her return from school; but I did not know her so well as I knew the professor."

"And you did not meet Mr. Amory?"

"There was no Mr. Amory then," was Tredennis's reply.

"Of course not," said Mrs. Sylvestre. "I might have known that if I had thought for a moment. He only appeared upon the scene the winter before they were married. She met him at a ball at the Mexican minister's, and his fate was sealed."

Tredennis was silent a moment. Then he asked a question.

"Did you know him well?" he said.

She reflected an instant, and then replied, smiling:

"He was too much in love for one's acquaintance with him to progress to any great extent. His condition was something like David Copperfield's when he said that he was 'saturated with Dora.' He was saturated with Bertha."

"They must be very happy," remarked Tredennis, and he did not know that he spoke in a hard and unresponsive tone, and that his face was more stern than was at all necessary.

"Naturally," responded Mrs. Sylvestre, calmly. "They have money, their children are charming, and their social position is unassailable. Bertha is very clever, and Mr. Amory admires her and is very indulgent. But he could scarcely help that. She is that kind of person."

"She?" repeated Tredennis.

Mrs. Sylvestre smiled again.

"Bertha," she replied. "People are always indulgent with her. She is one of those fortunate persons who are born without any tendency to demand, and who consequently have everything given to them without the trouble of having a struggle. She has a pretty, soft sort of way, and people stand aside before it. Before I knew her well, I used to think it was simply cleverness."

"Wasn't it?" said Tredennis.

"Not quite. It escapes that by being constitutional amiability and grace—but if it wasn't constitutional amiability and grace it would be cleverness, and you would resent it. As it is, you like her for it. She is pretty and charming, and has her little world at her feet, and yet her manner is such that you find yourself wondering if she even suspects it."

"Does she?" asked Tredennis.

Mrs. Sylvestre turned her attention to the other side of the room.

"There is Mr. Sylvestre," she said, serenely. "He is coming to us. You must know each other."

And then Mr. Sylvestre sauntered up. He was a very handsome man, with a rather languid air, which remotely suggested that if he took off his manners and folded them away he would reveal the unadorned fact that he was bored. But even he bestirred himself a little when Tredennis's relationship to the Herricks was mentioned.

"What!" he said. "You are Mrs. Amory's cousin?"

"Only third or fourth," responded Tredennis.

"By Jove! You're in luck!" his new acquaintance returned. "Third or fourth is near enough. I wouldn't object to sixth, myself. Do you see her often?"

"I have not seen her for seven years."

Mr. Sylvestre bestowed a critical glance upon him.

"What's the matter with you?" he inquired, languidly. "There's something radically wrong about a man who neglects his opportunities in that way." He paused and smiled, showing his white teeth through his mustache. "Oh, she's a clever little dev——" He pulled himself up with remarkable adroitness. "She's very clever," he said. "She's delightfully clever."

"She must be," commented Tredennis, unenthusiastically. "I never hear her mentioned without its being added that she is very clever."

"You would be likely to find the thing out for yourself when you met her—even if you hadn't heard it," said Mr. Sylvestre.

When Tredennis returned to his room that night, he sat down to read, deliberately choosing a complicated work which demanded the undivided attention of the peruser. He sat before it for half an hour, with bent brow and unyielding demeanor, but at the end of that time he pushed it aside, left his seat, and began to pace the floor, and so walked with a gloomy face until it was long past midnight when he put out the light and went to bed.

CHAPTER III.

TWO YEARS later, he found himself, one evening in March, driving down Pennsylvania Avenue in a musty hack, which might have been the very one which had borne him to the depot the night he had seen the last of Bertha and her white roses. But the streets were gayer now than they had been then. He had arrived only a day or so after the occurrence of an event of no less national importance than the inauguration of a newly elected President, and there still remained traces of the festivities attendant upon this ceremony, in the shape of unremoved decorations fluttering from windows, draping doors, and swaying in lines across the streets. Groups of people, wearing a rather fatigued air of having remained after the feast for the purpose of more extended sight-seeing, gave the sidewalks a well-filled look, and here and there among them was to be seen a belated uniform which had figured effectively in the procession to the Capitol two days before.

Having taken note of these things, Tredennis leaned back upon his musty cushions with a half-sigh of weariness.

"I come in with the Administration," he said. "I wonder if I shall go out with it, and what will have happened in the interval."

He was thinking of his past and what it had paid him. He had set out in his early manhood with the fixed intention of making for himself a place in the world in which he might feel a reasonable amount of pride. He had attained every object he had aimed at, with the knowledge that he had given for every such object its due value in labor, persistent effort, and steadiness of purpose. No man of his age stood higher in his profession than he did—very few as high. He had earned distinction, honor, and not a little applause. He had found himself "a lion" on more than one occasion, and though he had not particularly enjoyed the experience, had not undervalued it as an experience. The world had used him well, and if he had been given to forming intimacies, he might have had many friends. His natural tendency to silence and reserve had worked against him in this, but as it was, he had no enemies and many well-wishers. It was not his habit to bemoan even in secret his rather isolated life; there were times when he told himself that no other would suit him so well, but there were also times when he recognized that it *was* isolated, and the recognition was one which at such moments he roused all the force of his nature to shut out of his mind as soon as possible. He had, perhaps, never fully known the influence his one vague dream had had upon his life. When it ended, he made a steady effort to adjust himself to the new condition of existing without it, and had learned much of the strength of its power over him by the strength of the endeavor it had cost him. His inward thought was that if there had been a little more to remember the memory might have been less sad. As it was, the forgetting was a slow, vague pain which he felt indefinitely long after he thought that it had died away. He put the old drifting fancies out of his mind, and having no leaning toward self-indulgence, believed at last that they were done with because they returned but seldom, but he never heard of Bertha, either through the professor or through others, without being conscious for days afterward of an unrest he called by no name.

He rested under the influence of this feeling as he was driven through the lighted streets toward his hotel, and his recollection of his last drive through these same streets made it stronger.

"Eight years," he said. "She has been to many parties since then. Let us hope she has enjoyed them all."

He made his first visit to the professor the same evening, after he had established himself in his room and dined. The professor was always at home in the evening, and, irregular

as their correspondence had been, Tredennis felt that he was sure of a welcome from him.

He was not mistaken in this. He found his welcome.

The professor was seated in his dressing-gown, before his study table, as if he had not stirred during the eight years. He had even the appearance of being upon the point of impaling the same corpulent beetle upon the same attenuated pin, and of engaging in the occupation with the same scientific interest Tredennis remembered so well.

On hearing his visitor's name announced, he started slightly, laid his beetle aside with care, and rising from his seat, came forward with warm pleasure in his face.

"What!" he exclaimed. "What! *You*, Tredennis! Well, well! I'm very glad, my dear fellow! I'm very glad."

He shook his hand affectionately, at the same time holding him by the shoulder, as if to make more sure of him.

"I am very glad myself," said Tredennis. "It is a great pleasure to see you again."

"And it took you eight years to get round to us," said the professor, looking at him thoughtfully, and turning him round a trifle more to the light. "Eight years! That's a slice out of a man's life, too."

"But you are no older, professor," said Tredennis. "I am older, but not you."

The professor nodded acquiescence.

"Yes, yes, I know all about that," he said. "You're an old fellow, now; I was an old fellow myself forty years ago. There, sit down, and tell me all about it. That is the chair you sat in when you were here last. You sat in it the night—the night we talked about Bertha."

(To be continued.)

PHŒBE.

ERE pales in Heaven the morning star,
A bird, the loneliest of its kind,
Hears Dawn's faint footfall from afar
While all its mates are dumb and blind.

It is a wee sad-colored thing,
As shy and secret as a maid,
That, ere in choir the robins ring,
Pipes its own name like one afraid.

It seems pain-prompted to repeat
The story of some ancient ill,
But *Phæbe! Phæbe!* sadly sweet
Is all it says, and then is still.

It calls and listens: Earth and sky,
Hushed by the pathos of its fate,
Listen: no whisper of reply
Comes from its doom-dissevered mate.

Phæbe! it calls and calls again,
And Ovid, could he but have heard,
Had hung a legendary pain
About the memory of the bird;

A pain articulate so long
In penance of some moldered crime
Whose ghost still flies the Furies' thong
Down the waste solitudes of Time;

Waif of the young World's wonder-hour,
When gods found mortal maidens fair,
And will malign was joined with power
Love's kindly laws to overbear,

Like Progne, did it feel the stress
 And coil of the prevailing words
 Close round its being and compress
 Man's ampler nature to a bird's?

One only memory left of all
 The motley crowd of vanished scenes,
 Her's,—and vain impulse to recall
 By repetition what it means.

Phæbe! is all it has to say
 In plaintive cadence o'er and o'er,
 Like children that have lost their way
 And know their names, but nothing more.

Is it a type, since Nature's lyre
 Vibrates to every note in man,
 Of that insatiable desire,
 Meant to be so, since life began?

I, in strange lands at gray of dawn,
 Wakeful, have heard that fruitless plaint
 Through Memory's chambers deep withdrawn
 Renew its iterations faint.

So nigh! yet from remotest years
 It seems to draw its magic, rife
 With longings unappeased and tears
 Drawn from the very source of life.

COMPULSORY LANE ROUTES ON THE NORTH ATLANTIC.

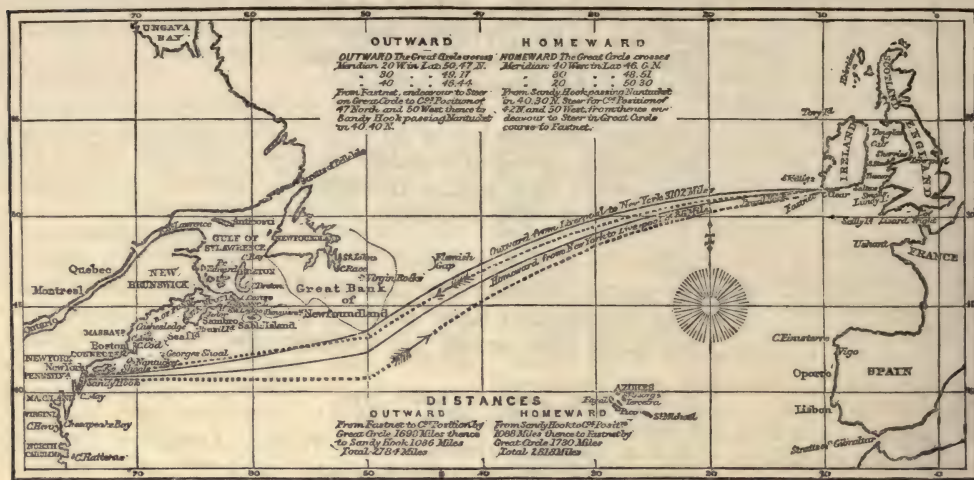

THE revolution in the ocean carrying trade from sailing to steam vessels, like all other revolutions, involves many unforeseen changes in the order of things. The necessity for such changes is first felt by the classes that happen to be most heavily pressed in their life affairs under the new conditions brought into play. I consider it the duty of those classes to enlighten that part of the public who have not the same means of observation and experience, but who are more or less interested in the results of such changes.

Little more than forty years have elapsed since the transatlantic trade between Europe and America was conducted entirely by sailing vessels, which usually occupied many weeks, and occasionally some months, in making the passage, which was then dependent entirely upon the weather encountered on this stormiest of seas. Steam has, however, changed all this, and reduced the passage between the coasts of Ireland and America to a matter of days instead of weeks.

Remarkable as has been the progress of

steam navigation within these forty years,—in the supplanting of the paddle by the screw as the means of propulsion in Atlantic steamers, in their constantly increasing speed and capacity, and in the number of steamers that now traverse the great ocean highway,—the present year promises to be distinguished in the history of steam navigation by the advent of four new steamers, belonging to four of the great ocean lines, viz., the *Servia*, the *City of Rome*, the *Alaska*, and the *Parisian*, which it is intended shall eclipse in size, speed, and carrying capacity for both passengers and cargo all steamers that have hitherto been built—the *Great Eastern* alone excepted as regards size and capacity.

Even to the thoughtful passenger who happens to be afloat in one of these great steamships, the sense of danger from collision, in fog or darkness, with icebergs or vessels sailing in opposite directions, is often present; but to the master, upon whom the responsibility rests of seeing that all reasonable vigilance is exercised whereby danger may

MAP SHOWING PRESENT CUNARD TRACK, ALSO PROPOSED NEW "LANE ROUTES."

perhaps be avoided, the consciousness that no amount of vigilance can insure absolute safety makes his foggy days and dark nights at sea the burden of his perilous vocation. He may look with interest upon the increasing size and speed of the latest-built steamer, and note that she is to carry more passengers and a larger cargo than her predecessors; and he may see, from time to time, that new lines of steamers are projected to engage in the business in which he is himself occupied. But all these feelings are qualified to him by the reflection that every new steamer or line of steamers that is added to the list of competitors running on the Atlantic course increases the danger of collision.

Can anything be done that has not yet been done to avert or lessen this formidable danger? I am one of those who think there can, and it is in that hopeful spirit that I now offer the following reflections:

To two men the enduring gratitude of Atlantic navigators, in this connection, is due—to Lieutenant Maury, of the United States Navy, who first published the idea of defined tracks or lanes for Atlantic steamers while on their eastward or westward courses, and to Charles MacIver, Sr., of Liverpool, who, while executive manager of the British North American Royal Mail Steam-Packet Company, reduced it to practice and laid down the "lanes" which the Cunard vessels of to-day follow. I am sanguine enough to hope that my humble contribution may forward the good work thus auspiciously begun; and it is now offered, with "all its imperfections on its head," in the earnest hope that it may stimulate discussion or accelerate action upon a topic that is ever present in the minds of Atlantic navigators. Happily, the subject I

propose to discuss could be held in a nutshell. It is so simple and obvious that the dullest understanding can hardly fail to comprehend it in all its bearings.

The time has now come when laws should regulate the navigation of steamers on the North Atlantic. Hitherto the rule has been, "Go and come as you please." Some years ago, several of the large steam-ship lines adopted certain tracks to and from the United States for different seasons of the year. Notably, Mr. C. MacIver, of the Cunard line, took a deep personal interest in this matter. He consulted and elicited from captains and others their opinions regarding the best lines to lay out and to be followed invariably all the year round. After collecting much evidence, the existing routes were marked upon the charts, and, if not the shortest, they are still considered the safest of Atlantic routes. These tracks are now familiarly known as the "lane routes," and for some time were in great favor with Atlantic navigators, as a decided improvement on the old system of crossing the whole width of the Newfoundland Banks and scraping the American shore. However, with the formation of new lines of steamers and the rapid increase of a class of steamers jocularly named "outsiders," "casuals," "tramps," the so-called "lane routes" are now practically obliterated.

It is a fact that steamers are constantly meeting each other while crossing the Atlantic. I may mention that, a few days before this article was written, while a dense fog shrouded the coast from the Banks of Newfoundland to New York, a large number of collisions were reported, one of these resulting in the sinking of one of the two colliding steamers (report says she sank within five minutes after she

was struck). Fortunately she carried no passengers, or, in her case, we might have had to deplore the loss of life as well as of property. During the same fog (which prevailed for about two weeks) no one can tell the number of narrow escapes there were. Incidentally I have heard of four, one of which was between two large passenger steamers. When it is known that one of those steamers carried upward of a thousand souls, the very thought of their coming into contact with each other is enough to take one's breath away. It is admitted that the existing state of things, as regards steamers plying on the North Atlantic, gives serious cause for apprehension, and we may be startled any day by the awful intelligence of an unprecedented loss of life at sea. The question arises, Is there any feasible method of escape from the dilemma? What I mean is this: Can trade still go on increasing between Europe and America without a proportionate increase of risk to life and property by collisions at sea?

In my humble opinion, there is a solution to the vexed problem, and one full of hope; at least, it is so to me. I venture to affirm that it is one which will find ready recognition from sailors.

In brief, let us have a westward and an eastward track or lane, laid down for and enforced upon all steamers sailing between the United States and Great Britain.

The westward track crossing the meridian 50° west at 42" 40' north. The eastward track crossing the meridian of 50° west at 40" 40' north; thus making the maximum distance apart of the tracks or lanes one hundred and twenty miles.

Steamers from the St. Lawrence via the North Channel to keep north of the westward track to the United States.

Steamers from the United States, by way of the North Channel, to keep north of the westward track.

It will be seen that the English Channel westerly and the St. George's Channel easterly tracks cross each other; again, the easterly track from Boston crosses the westerly tracks to the more southern ports, while the Philadelphia and Baltimore westerly tracks cross the New York easterly track.

There has been, and is, no practical way of escape from these crossings, but with the knowledge of almost the exact place of crossing, we may hope that the present risk will be somewhat lessened. It is in the neighborhood of the Banks, and thence toward New York, where fogs are so generally prevalent, that we dread the meeting of steamers; and I maintain that, by adopting the proposed tracks, the chances of such meetings would

seldom occur. Eastward of the Banks, in the winter season, steamers would, as heretofore, occasionally get considerably out of their tracks by hauling to, or running before the wind during a heavy gale.

I should not wish to see any such hard and fast lines drawn as to put any impediment in the way of making a good passage, or imperil the safety of ships by improper handling. Of course, my proposition falls far short of being a panacea for the difficulties encountered on the North Atlantic, nor do I expect that any less vigilance and caution on the part of commanders would be shown. I will not occupy space by detailing the minor benefits that must accrue from the working of the "two-lane" system; let it suffice briefly to mention that disabled steamers would readily be picked up by steamers bound the same way; and that sailing vessels, when practicable, would avoid steamer lanes. The farther south the track lies, the smaller chance, of course, there is of fogs.

The aim of the present article is to call attention, and to set action on foot among those who, from their position, are the most desirous and best qualified to call a conference of the shipping interest, and select members best capable of pronouncing an opinion upon the subject.

Such a conference, I venture to maintain, should be held in Liverpool. Not only is it the head-quarters of more than two-thirds of the North Atlantic steam trade, but it also possesses the advantage of having as its head of the Board of Trade there Captain Moody, himself an old commander in the Cunard service, and one, therefore, well acquainted with the North Atlantic route. Few could be found better fitted than Captain Moody to be chairman and president of such a conference.* There are, no doubt, many others, both among the managers of the great lines of steamers, the ship-owners, the underwriters, and the former ship-masters resident in Liverpool, who are, in an especial manner, qualified to take part and action in such a meeting as I would fain see assembled.

I am personally acquainted, and in one case intimately, with two gentlemen, heads of their respective firms, and those two of the large steam-ship companies, who, from their scientific knowledge, and from their professional connection with the North Atlantic steam traffic, are both most thoroughly fitted to assist at such a conference as the one I propose, as well as, from their position, most deeply interested in the welfare and the safety of the lines they are connected with. These

* Since the above was written, Captain Moody's death has been announced.

two gentlemen are, I am pretty sure, themselves extremely desirous of furthering, as far as is in their power, any movement likely to lessen the risk of North Atlantic navigation, and it is impossible to doubt that there are many others equally well qualified with them, and quite as anxious as they can be to forward so desirable an object.

Parliament has usually more work on hand than it can conveniently overtake, and it would be well if by intelligent local action we could settle this business of the lane routes outside the walls of St. Stephen's—at least, make it a matter of plain sailing for legislation to deal with; besides, to my simple understanding, the voyage through Parliament of the last shipping bill was rather a

stormy one, the bill having reached port in a very battered condition indeed.

But I am drifting from my subject into rather troubled waters. The misfortune is, that no ordinary warning can disturb our sense of security; it is only on the occasion of some unlooked-for calamity, attended with loss of life, that we can be awakened from our lethargic indifference. The rude shock to our feelings has a grain of remorse in it, in so far that we cannot help reflecting that, if we had only directed our attention to the weakness a little earlier in the day, a catastrophe might have been averted.

The foregoing reflections are harvested from many wearisome and anxious hours spent on a steamer's bridge, while steaming through a fog.

THE SO-CALLED VENUS OF MELOS.

IN the year 1820, before the struggle between the Hellenic population of the Turkish empire and the Porte had begun, and when all that attracted the notice of the civilized world to modern Greece was the little preserved to us of her art,—occasionally and fragmentarily found in the ruins of her great communities,—a peasant, whose name was Theodore Kondros Botoni, working in his field to enlarge it by clearing away the *débris* of the walls and structures of ancient Melos (which had been built on a steep hill-side, on a series of terraces, more or less natural or artificial, so that the ruins of one terrace fell down upon and encumbered that below it), saw, to his great bewilderment, the heap of rubbish which he was digging away at the bottom suddenly crumble down and display the upper part of an antique statue. The peasant hastened to the French consul to inform him of the discovery, and the latter negotiated the purchase of it for five hundred piasters and a complete dress of the fashion of the country. This was the statue known as the Venus of Melos.

So far, there are no variations of the history, but one account says that the first or upper part was found several days before the lower, and the other, that they were found together; but the inexactitude of the documentary contemporary evidence is clear from the examination of the ground to-day, and from the contradictions contained in it. Dumont d'Urville, the commander of the *Chevrete*, a French man-of-war which visited Melos after

the statue was found, alluding to the discovery of the theater, says: "All the ground is covered with drums of columns and fragments of statues. One finds here and there great pieces of wall of a very solid construction, and many important tombs have been opened through the curiosity of strangers, and the cupidity of the inhabitants." But neither the wall nor the tombs, nor any drum of column or fragment of statue (if any was found), could have had anything to do with the theater. The theater is very late work, and was never nearly finished, so could have possessed neither columns nor statues. This shows that the idea the commandant carried away was confused and untrustworthy as to details. He goes on to say: "Three weeks before our arrival at Melos, a Greek peasant, digging in his field inclosed in this circuit, struck some pieces of cut stone. As these stones, employed by the inhabitants, have a certain value, this induced him to dig farther, and he thus happened to uncover a species of niche, in which he found a marble statue, *two Hermes*, and some other marble fragments. The statue *was in two pieces, joined by two strong iron clamps*. The Greek, fearing to lose the fruit of his labor, had carried the upper part to a stable. The other was still in the niche. * * It represented a naked woman, *whose left hand raised an apple and the right held a drapery*, well composed and falling negligently from the hips to the feet. For the rest, they are both mutilated, and actually detached from the body."

I note by italics the points which are to be contrasted with other evidence.

M. Dauriac, captain of the frigate *La Bonté*, writes from Melos, date 11th of April, 1820: "There has been found, three days ago, by a peasant who was digging in his field, a marble statue of *Venus receiving the apple from Paris*. It is larger than life; *they have at this moment only the bust as far as the waist. I have been to see it.*" Mr. Brest again writes, 12th of April: "A peasant has found in a field which belonged to him three marble statues, representing, one Venus holding the apple of discord in one hand, the other represents the god *Hermes*, and the third a young child." The correspondence shows that Mr. Brest was entirely ignorant of everything connected with the matter. He probably heard one of the officers say that one of the objects was a *Hermes*, and he changes it into a statue of the god *Hermes*, but we see that there was only one *Hermes*. November 26th, Brest again writes: "His Excellency has left me orders to make researches in order to find the arms and other *débris* of the statue, but to do that it is necessary to obtain a *bouyouroul-don* which will permit us to make excavations at our own expense, *because in the same niche where it was found there is reason to hope that we might find other objects.*"

The contradictions are so palpable that it is clear that these documents are only of value as secondary archæological evidence. No one seems to have made an observation with exactitude.

We have the whole statue found, in one, bound together by iron clamps; in another, only half had yet been found; in one, the statue is found holding the apple of discord in one hand; in another, receiving it from Paris; and in another still, we are told that search has been ordered for the arms, etc.

About 1862 I visited Melos, and having made the acquaintance of Mr. Brest, son and successor of the consul who secured the statue for the Louvre, he politely offered to guide me through the ruins of the ancient city. Among other things, we visited the locality where the statue was found, and he showed me the niche still standing as when the discovery was made.

It was a rudely built work, of the height, *as near as I can remember*, of ten or at most twelve feet, and about eight wide. It formed a part of an old boundary-wall of the field on which it opened, and above it the ground was level with the crown of the arch of the niche. It had, as Brest then remarked to me, apparently been made for the purpose of concealing the statue. It had no suite or connection with any other structure, and there

were no evidences of ruin or of foundation of antique buildings about it. The opening had been closed with rubbish, not with masonry, as was evident from the face of the side walls, which were of smooth, if not carefully laid, masonry. If not built for the concealment of the statue, it had been made for some unimportant purpose; perhaps the protection from the weather of the poor *Hermes* which is said to have been found with it. C. Doupault, architect, has published a *brochure* with what he supposed important evidence on the question, in which, from data given him by old Brest twenty-seven years after the discovery, he reconstructs the apse of a seventh-century church, in which he places the statue. The whole study has no value whatever, as the sketch does not correspond with the ruins which I saw, and looking back to the correspondence quoted, it is clear that Brest, knowing nothing of archæology or art, caught at certain suggestions of the officers who saw the statue, and affirmed what they surmised. As to the fragments found, to which constant reference is made, there is not the slightest evidence that they were found in any connection with the statue, as none of the early evidence indicates that they were known when the statue was first taken under notice—on the contrary, it is said explicitly by Brest that he had orders to make researches to find the arms and other portions of the statue; indicating clearly that the arms alluded to had not been found with the statue, and that the connection of them and it was an after-thought, either of the peasant, who wished to increase the value of the statue by connecting with it fragments which he had found in other parts, or of the archæologists, who, seeking to restore the statue to what they judged to be its true action, connected the arm found, no one knows where, except at Melos, with the statue. It is undeniable that when the letters before quoted were written, there had been only conjecture as to the arms. Dauriac, writing on the 11th of April, says that they have only found the bust. Brest, November 26th, says that there is reason to hope that they might find other objects *in the same niche*—proof that it had not even then been cleared out. In fact, all we have of documentary evidence goes for nothing beyond showing that the statue was found at a certain place on a certain date; and if the two halves of the statue did not fit exactly we could not be certain that they were found at the same time and place. The hypothesis of the apple of discord is based on a conjecture of some of the officers, and on no further ground than that an arm and hand, with what may be an apple or a cup, seem to have been found somewhere in the

island about the same time; but they evidently are not of the statue, nor even of the same epoch.

Over the niche an inscription was said to have been found which records the dedication of an *exedra* by a gymnasiarch to Hercules and Hermes. The date of this inscription, according to conjecture based on the inscription itself, is about a century before Christ, *i. e.*, long after any possibility of such a work being produced had gone by.

These are all the positive data we have to work on. They suffice, however, for about twenty monographs in French, German, and English; and a late German work, by Dr. Goeler von Ravensburg, exhausts all the possible and impossible conjectures to establish its character in accordance with the original attribution of a Venus receiving the apple.

In the year 1880, I made another visit to Melos, on commission from this magazine, to photograph whatever might remain which had any connection with the statue; but found the niche gone, and no trace of foundations of any kind, or walls, city or other, very near the spot which was again pointed out to me as that where the Venus was found.

It would seem that in the energetic excavation that followed the last great archaeological revival, everything that was suspected to conceal works of art had been dug away.

I found an old man, a pilot well known in our navy, Kypriotis, who had seen the statue when it was brought out, being a boy of about fourteen. At that time Mr. Brest was a child, and retained no recollection at first-hand of the event; but it was evident that he, like his father in 1847, had mingled in his impressions conjecture of others and his own, with facts perverted, and details conceived without sufficient basis. Nothing new was to be got.

The old Melos is utterly deserted, and the modern town is built on a pinnacle above it, which does not seem ever to have been included in the range of the city. The port is changed from the ancient site, where now a breakwater would be needed, as the land seems to have sunk greatly, and the old basin of the port is filled up to a point at the bottom of the bay, where a comparatively modern village has grown up, called Castro.

The magnificent harbor used to make of the island an important station before telegraphs were established, and might again, if the telegraph were laid to it; but now a man-of-war rarely calls, except to take a pilot for the Archipelago, and a Greek steamer stops once in a fortnight. But in heavy weather, any ship caught near runs for Melos. This keeps the

place alive, but it has dwindled to a mere island village, where the vast labyrinths of tombs which perforate the hills show more human industry than the dwellings of the living. Earthquakes and malaria have desolated and almost depopulated it.

We had left Cerigo for Crete, and intended to take Melos on our return to Peiræus, but when within an hour of land we were caught by a terrific south-wester, the most to be dreaded of all the winds of the Ægean, and in spite of all we could do we were obliged to give up and run before the gale where it would send us. It was late in the evening when its fury came down on us, and taking in all sail except a small storm-sail at the foot of the mast to keep from coming up into the wind, we ran into the black night. I knew that there were no rocks ahead before Melos, and if we only made the island by daylight, we could easily enter the port; but if not, and the yacht ran at night into the little archipelago of which Melos is part, it would be next to impossible to choose where our bones should be laid, for there are no lights, and many islands and rocks. The sea was for our little twelve-ton craft something fearful, and we thumped and hammered till the little thing quivered, when a wave struck her, almost as if we had come to the rocks. Sleep was out of the question—to sit or stand, equally so, and we kept to our berths, as the only way to avoid being pitched about like blocks. How long that night was! and in the middle of it I attempted to get up, and when I put my foot on the cabin-floor, found myself stepping into the water. We had sprung a leak with the straining.

But day came and cheerfulness. We ran in between the huge cliffs which form the portal of Melos harbor, with the wild surges beating against them till the spray flew high enough to have buried a larger craft than ours. Tired, aching, and hungry, for nothing could we get to eat till we arrived in port, we cast anchor in the welcome harbor late in the afternoon. Even then, the sea ran so high that we could not land until the next day.

Castro is a pile of white houses, rising in terraces from the shore; the streets mostly stair-ways, and the houses all whitewashed till they blind one in that rarely broken sunlight.

I landed, and, as usual, went to the little café, where the magnates of the village were discussing the arrival and the storm—the worst, they said, for many years. I called, of course, on Brest, who, to my surprise, remembered me after eighteen years; and we made an appointment to revisit together the sites I knew, and to see those I had

THE SO-CALLED VENUS OF MELOS. (DRAWN BY BIRCH FROM A PHOTOGRAPH.)

not known before,—important excavations having been made since my former visit.

We went first to the new port, where some

admirable statues, now in Athens, had been lately found. The owner of the little field by

the water, which occupies the site of the inner

port, having occasion to sink a well, struck the ruins of a temple of Neptune, and three statues were found, one of Neptune, a female goddess draped, but lacking the head, and a mounted warrior, apparently Perseus.

The Greek Government, according to their laws, forbade the exportation of them by any foreign government, and finally purchased them for thirty thousand francs—certainly a very small price. I succeeded in seeing them later, still in their boxes at Athens, and though not equal to the Venus, or of the same epoch, they are very fine works.

But there the excavations stop; the owner had no means to pump out the water that flooded his diggings, the Government had no more, and as no one is allowed to dig unless for the Greek museum, whatever remains under ground and water is likely to remain there another generation.

We then climbed up the zigzag road to the theater. It is, as I have said, of late times, probably Roman, and was never complete. Fragments of unfinished ornament lie still where the scene should have been, but it had clearly never been carried up above the seven ranges of seats now existing. It was just outside the wall of the inner city, on the brow of the hill, and overlooked the spacious harbor and looked out to sea. There is no record of any sculpture having been found there. It was purchased and excavated by the King of Bavaria.

Less than half a mile beyond, going with the sea at our backs, was the field where the statue was found. The Greeks have enter-

tained a great deal of indignation at the rape, which they affect to call robbery; but the civilized world may thank the French captain who, coming to get it, and finding it already half-embarked on board a Turkish vessel, destined for Constantinople, made the most legitimate use that was ever made of *force majeure*, and took it away from the Turk to transfer it to the hold of his own ship. Otherwise, no one knows what vile uses it might have gone to, or what oblivion and destruction. All the world knows it now, but Greek genius would have forever lacked one of its greatest triumphs in our modern times if it had disappeared in the slums of Stamboul.

As I have said, there is now no trace of any construction of any kind to be seen at the locality. The wall in which was the niche was gone, and the field of the present owner has encroached considerably on the space beyond, the *débris* being piled up in huge masses like walls, and two or three terraces above runs the citadel wall, a mass of Hellenic masonry built of blocks of lava. The Pelasgic walls, of which some authors speak, do not exist anywhere about the site. Brest took up a stone and, as we stood on the wall of *débris* above, cast it into the field, and said, "There stood the Venus!" In the illustration I have put a white cross on the spot.

There cannot remain the slightest doubt that the statue had been concealed, and to my mind, the circumstances indicated for its concealment are these: The niche, judging from its character, had been built in Roman times; as the nibbly nature of the masonry indicated, probably covered with stucco, as it would have been if intended for ornament, and was designed as an exedra, or as a shelter for an altar, or for the statue of some divinity—Terminus, Hermes, Pan, or Faunus, the more Roman companion of him. Here the inscription and the Hermes found furnish a plausible clew, and agree with the indication of the masonry in pointing out the epoch of this conjunction of circumstances as subsequent to the second century before Christ; how long after we cannot in any wise indicate.

Now, as to the epoch of the statue there can be no doubt that it was of the immediately post-Phidian epoch; and all the most authoritative opinions attribute it to the Attic school, and probably of the time and school of Scopas—and some of the weightiest authorities have accepted Scopas himself as the author.

Anything more definite than this it is impossible to establish by any now known evidence. The concealment of the statue, then, was several centuries later than the execution of it.

STREET IN CASTRO.

THE SITE OF OLD MELOS, FROM THE PORT. (WHITE CROSS SHOWS WHERE THE "VENUS" WAS FOUND.)

The Greeks of the classical epoch, even down to the first century after Christ, retained, amidst all the degradation of their contemporary art, a distinct recognition of the excellence of the elder work, as the enormous artistic as well as pecuniary value of some of the masters' *chefs d'œuvre* prove. That this was one of them, and of one of the chief masters, all civilization agrees, and, although we have lost the name of the author, the people who hid it must have known it well. The availing themselves of the niche, ready-made to their hands, indicates that the possessors of the statue worked in haste, piling up stones in front of the niche, instead of walling it up.

This indicates the haste of impending attack, or work done in secret. In either case, if the statue had a temple in that locality, it would be concealed near it, or near the place where it was accustomed to stand. We may remember the contrast with the colossal and magnificent Hercules found in a drain at Rome, carefully covered over with good masonry. Concealment was the object in both cases, and the greater haste and furtiveness with the Melian statue indicate rather that it was brought from a distance than that it could be a divinity of the island.

Conjecture as to the origin of the statue, if my hypothesis is true, points to Athens, not only because the work is Attic, but because we know by the coins of Melos, which in all the latest coinages still bear the owl of Athens, that Melos belonged to that

city as late as she had any Greek allegiance, which must have been some time into the Empire, as the Romans long made it a policy to preserve a certain kind of autonomy in the Greek states, even when their subjection was complete. That it is Attic, no one can doubt in face of the evidence I shall show. That Athens was the only city likely to send to Melos a treasure of this kind, concealment of which was impossible in Athens, is, by all the circumstances, made most probable.

I conclude that it was one of the most highly valued statues of Athens, sent to Melos in time of great danger, to be concealed

FIELD WHERE THE "VENUS" WAS FOUND.

MEDICEAN VENUS.

VENUS URANIA.

valuable of them *in situ*, as, for instance, the Diana Brauronia of Praxiteles, the Perseus of Myron, with others of great fame. The above conclusion, considering all the known and reasonably conjecturable details of the discovery and concealment, seems to me justifiable,—as well as that it was concealed at some time between the century or two centuries before Christ and the first century after. The reason for this later limitation I shall give farther on.

Now, what was the statue? We have so long been in the habit of accepting all female statues, not distinguished by well-known symbols of their divinity, as Venuses, that we make no distinction even in cases where the type demands it. And yet the dominant characteristic of Greek sculpture is this close adherence to established types. We are never at a loss to distinguish Diana, Minerva, Juno, or even Ceres and the lesser deities. Venus, it is true, came into vogue as subject for the sculptors of sacred statues later than some of the others; but all that we know of the Venus of the artists indicates that it was *par excellence* the womanly type. The treatment of the head

CAPITOLINE VENUS.

in Greek sculpture was a point apparently of doctrine, as it was in Byzantine and in the later ecclesiastical art of Greece. It is always in a conventional type, utterly separated from the individual.

This unquestionable fact should have taught us to reject from the Venus category many statues which are now included in it, as, for instance, the Callipyge, and all in which a trace of portraiture is to be found, besides diminishing that category by all the statues of the heroic type, as in none of the legends or beliefs of the Greek faith was Venus ever endowed with a heroic quality. The preconceived notion that the Melian statue was a Venus has been a continual cause of confusion.

This was, as I have shown, the first hypothesis of the French officers, none of whom appear to have been possessed of any archæological knowledge, and who had the commonly prevailing notion that any nude statue must be a Venus. I have taken the pains to collect a number of representations of the various so-called Venuses, and most of which the type, or symbols, justify us in so classifying; and a comparison of their character will show what is the Venus type,—making this proviso, however, that we have no other than internal evidence for denominating most of them Venuses. The chief of these in what we seek for most, *i. e.*, the impersonal type, which was inseparable from the Greek deities down to the decline of art, which began in the time of Alexander, are: the Medici, a distinctly marked Attic work, later, however, than the Melian statue; the Capitoline, apparently a still later reminiscence of the Medici; and the "Venus coming out of the bath," at Naples, a better work than the last, but still already widely separated from the purely conventional type of the Medicean, which we may authoritatively accept as the Venus type of the best period

VENUS OF THE VATICAN.

of the Venus sculpture. The close comparison of the heads and details of the flesh will give those who do not know the originals an invaluable lesson in the treatment of the figure in Greek art. The so-called "Venus Urania," at Florence, marks, to my mind, a distinct departure from the Venus type,—so marked, indeed, as to make me decline to accept it as a Venus, while the still typical character of the face is one which must place it in a good period of art, before ideality of treatment had given way to individuality. The art is of too good an epoch to have departed so far from the type of Venus, if intended for her, and indicates rather a nymph, or some inferior deity. The Venus of the Vatican is too late and too low down in the scale of art to be an authoritative witness in the matter; while the Venus Anadyomene, while still reserving the ideal character, resembles the Urania rather, in a separation of the type from the Venus. Later still, and perhaps at the end of that period which may be called the ideal period of antique sculpture, most probably of Græco-Roman art, is the Venus Victrix of the Louvre; unquestionably a Venus, for she bears in her hand the apple—symbol of fruitfulness.

VENUS VICTRIX OF THE LOUVRE.

VENUS ANADYOMENE.

But how far from the type of our Melian treasure! There is the most distinct approach to the Athena type—a purely heroic ideal. I cannot believe that its sculptor intended it for a Venus.

The patient German admirer of our statue, which Von Ravensburg is, has gone through all the literature and all the conjectures which it has given rise to, as to the chief problem which gives interest to any investigation, *i. e.*, the restoration of the statue. No attempt will satisfy all the investigators; but that which Von Ravens-

burg accepts with approval—*viz.*, the restoration of Mr. Tarral (an Englishman residing in Paris for many years, who has given his chief attention to this problem)—shows so entire a want of appreciation of the character of antique design, which is, after all, our only clew, that I shall not hesitate to put aside, not only the solution proposed, but the judgment that could accept as satisfactory such a solution of one of the most interesting of artistic problems. I give the figure which

Von Ravensburg publishes as Tarral's restoration of the statue, that one may see how absolutely its inanity is at variance with the spirit of Greek design. The mere completion of the statue, in this sense, destroys the dignity and unity of the work so completely that to look at it is enough for a cultivated judgment to decide that, whatever it may have been, this it was *not*. The author gives, also, photographs of the fragments found—fragments so imperfect and corroded that we can only say that they appear to be from a very low period of art, and are utterly worthless as data for measure or opinion, from their extremely fragmentary state.

Besides, I have shown, from the records of discovery, that there is no further reason to

RESTORATION OF THE STATUE AS PROPOSED BY MR. TARRAL.

FRAGMENTS FOUND AT MELOS ATTRIBUTED TO THE STATUE.

VENUS OF CAPUA.

my mind, only that this was not the solution.

The various suggestions, more or less authoritative, made as to the restoration, and thence as to the determination of the attributes of the statue, are to be summed up briefly. The Count de Clarac, the then curator of the antiques of the Louvre, adopted

connect them with the statue than that they were also found at Melos.

In following the whole course of the demonstration which Von Ravensburg attempts of this solution of the problem, I arrive at the conclusion that, with all his patience and research, his judgment is utterly untrustworthy on a problem which requires not only freedom from preconception, but long cultivation of artistic perception and general critical ability. Mr. Tarral's attempt proves, to

the Venus with the apple hypothesis, but afterward abandoned it in favor of one put forward by Millingen, that it was a Victory. This is one of the theories of the restoration which has found the greatest number of adherents. Several restorations have been proposed, which make the statue part of a group, all which, though defended or proposed by many *dilettanti*, I reject, for what to me seem sufficient reasons, viz.: *First*. We have in the statue no evidence whatever that it formed part of a group, and without some such the hypothesis is gratuitous. *Secondly*. We have—with one exception, which I shall presently note, and which gives no countenance to such a theory—no statue or parts of statues which agree with it in artistic quality, or even none which lend themselves to a group, if such were made up by various sculptors. *Thirdly*. That, at the epoch in which the statue was produced, any group which has been suggested would have been out of accordance with the aims of art, as practiced by the Greeks. The only evidence in favor of such a theory is that in some antique fragments or coins are indications of such a figure as the Melian in combination. But, as this statue must have been in its own time nearly as celebrated, relatively, as in ours, it must have given rise to many imitations and adaptations. It has given rise to some which support the

VICTORY OF BRESCIA—FRONT.

VICTORY OF BRESCIA—SIDE.

group theory, but to more which support an opposing theory.

Von Ravensburg goes over, in detail, all the group theories, and easily finds fatal objections to all. What most surprises me is, that any one ever tried to put it into a group, so completely by itself does it stand in every sense of the word.

Millingen, in 1826, started his theory that it was a Victory holding a shield in both hands. I am quite convinced that many who have started other theories would have adopted this if they had not been anticipated in proposing it. The vanity of archæological research and eagerness to propose something new is so dominant in most archæologists that they exercise more ingenuity to advance some new theory than would be requisite to show the validity of an old one. And the statue of Melos has been preëminent in fruitfulness of theories of all qualities and grades of improbability. Millingen, however, supported his theory by a similar statue known as the Capuan Venus, a reproduction, I believe, in Roman times, of the Melian statue, probably through some other intermediate copy or reproduction, as the sculptors of the Capuan statue could not have seen the Melian. We have only to note the awkwardness of the arms to be assured that these are either a modern restoration or, if antique, that they do not agree with the pose of the original. I believe them to be entirely modern restoration, but I am unable to refer to the statue, which is at Naples. If so, they tell nothing; if the contrary, the statue gives its weight against the apple theory. And here, again, I must protest in passing against the attribution to the Venus type of all nude or semi-nude statues. There is nothing in the Capuan which indicates that it was intended as a Venus. Millingen quotes Appollonius of Rhodes as describing a statue of Venus looking at herself in the shield of Mars, which she herself is holding, but this is no evidence of the type correspondence, and the gravamen of the matter lies precisely in the diversity of the type from the recognizable Venuses. But the Capuan is too far in type and treatment from the Melian to serve as definite argument. Such as it is, an item in the discussion, I will not exaggerate its importance.

"The Victory of Brescia" is another of the recollections, rather than reproductions, of the type of which I believe the Melian statue to be the original. It is in bronze, is later, and has the wings, but the type is unmistakable, and the action of the torso and head is sufficiently different from our statue to show that it was only an emulation, and not a plagiarism, that was intended.

VICTORY RAISING AN OFFERING (TEMPLE OF NIKÉ APTEROS, THE ACROPOLIS, ATHENS).

The drapery differs in the arrangement, being of bronze and agreeing with some undisputed Victories at Athens, but the action of the left leg holding the shield is the same, and that of the arms corresponds very nearly as far as the arms remain in the Melian work. As a whole, it reminds one more of the latter than does any other of the statues of its class.

The case is one in which archæological knowledge is of very little value, unless it be aided by thorough artistic study and a knowledge of the requirements of art proper. The archæologist, like other scientists, must have positive evidence to work on; and the testimony of pure taste, the intuitions of an artistic education, are of no use to him except as confirmatory. The intuition of the artist, whose taste has been educated by long study of the works he has to deal with, arrives at opinions by a kind of inspiration to which science often lacks all means of access. In the case of this statue, archæology has no evidence to weigh, and the ponderous

VICTORY UNTYING HER SANDAL (TEMPLE OF NIKÉ APTEROS, THE ACROPOLIS, ATHENS).

erudition which Overbeck, Müller, Jahn, Welcker, and others have piled on the question has no foundation. We can determine with comparative certainty that the statue belongs to the epoch between Phidias and Praxiteles, because we have the work of

VICTORIES LEADING A BULL TO SACRIFICE (TEMPLE OF NIKÉ APTEROS, THE ACROPOLIS, ATHENS).

Phidias, and sufficient comparative data for that of Praxiteles, and now, since the discovery of the Hermes at Olympia, positive data to judge from; and we have a right to say that the Melian statue came between these, but beyond this nothing—no clew except what lies in the design and the unities attendant on it, of which *per se* the professed archæologist is no judge.

In working about the Acropolis of Athens some years ago, I photographed, amongst other sculptures, the mutilated Victories in the Temple of Niké Apteros, the "Wingless Victory," the little Ionic temple in which stood that statue of Victory of which it is said that "*the Athenians made her without wings that she might never leave Athens*"; and looking at the photographs afterward, when the impression of the comparatively diminutive size had passed, I was struck with the close resemblance of the type to that of the "Venus" of Melos. There are the same large, heroic proportions, the same amplexness in the development of the nude parts, the same art in the management of the draperies.

They are little high reliefs, part of a balustrade which surrounded the corbel of the

Temple of Niké Apteros, hardly three feet high in their perfect state, and now without heads or hands or feet. There are four of them: one apparently untying her sandal; another,—that which shows best the type of the figure,—raising an offering or crown, and two others leading a bull to sacrifice. I give the series. Note the exquisite composition of the drapery below the knee of the Victory raising the offering, and the superb flow of the entire draperies in the sandal-tying figure, but, above all, the Victory type in the whole assemblage. How absolutely it agrees with that of the Melian statue, and how utterly alone in all antique art that is but for these!

Since I have begun this study, it has twice happened that artist friends trained in the French school (*i. e.*, in the only school which cultivates the perception of style in design, and the only one that emulates the Greek in its characteristics), both trained draughtsmen, came into my room, and without any remark I showed them the photographs of the Victories at Athens. They were new to both, but in one case as in the other the first expression was: "How like the Venus of Melos!" And the similarity runs through the

THE SO-CALLED VENUS OF MELOS—SIDE.

THE "VENUS" RESTORED—SIDE. (TRACED FROM A PHOTOGRAPH OF A LIVING MODEL.)

treatment of every part—the management of drapery to express the action of the limbs, the firm, heroic mold of the figure, and the modeling of the round contours. Compare the right shoulder of the Venus in the side view with that in the stooping Victory. The slight differences which exist are just what might be expected between a figure which stands as principal, isolated, and to be seen from all sides, and one which was secondary, subordinate, of partial decorative use, and to be seen only in one view. My illustrations will hardly convey the strikingness of the similarity, but I defy any one to compare side by side the series of Victories and the Melian statue in casts and not admit that the type, the treatment, the ideal, are the same, as sisters may be the same, or at least as mother and daughter.

The little Temple of Niké Apteros had once, we know, a statue of Victory without wings, and we know the *bon mot*, which I have given above, which it suggested. The decorations of the temple are attributed to Scopas and his school, and Victory was unique so far as we know in being wingless. We may well conceive, with the symbolical meaning—talismanic, rather—implied in what

we know of it by this witticism, that the Athenians would have a special anxiety to keep it from becoming a trophy in the hands of an enemy, even one who might not be disposed to desecrate the temples of the greater gods. Niké was rather an attribute or variation of Athena than a distinct goddess, and was as such both of great value to the Athenians, being the *alter ego* of their patroness, and of less care to the enemy, as not Minerva herself. At all events, when Pausanias visited Athens the Niké Apteros had gone. Her temple still stood there, and near it on the Acropolis hill stood some of the greatest art-treasures of the antique world untouched.

My theory, open to the grave objection that it is one in which hypothesis bears an undue proportion to proven fact (yet not so great as any of the group theories, and hardly more than any other theory, for all are constructed out of the same ærial substance), is that the Melian statue is the original Niké Apteros from the little temple on the Acropolis of Athens. If so, one can understand the whole of my theory of concealment, attribution, and type; and the restoration becomes that of the Victory in some attitude connected with regarding, or recording, on the shield or a tab-

THE SO-CALLED VENUS OF MELOS—FRONT.

THE "VENUS" RESTORED—FRONT. (TRACED FROM A PHOTOGRAPH OF A LIVING MODEL.)

let the names of the Attic heroes, or possibly holding out wreaths to the victors. I incline to the former as accordant with all traditional antique treatment and the emulation we have. The minutæ of description of many antique works of art which we owe to Pausanias and Pliny was plainly impossible with this. Neither ever saw it, but its memory existed in artistic tradition and has been repeated in the statues we have seen, probably only a few of those which once existed.

Von Ravensburg sums up the objections to the shield-bearing Victory and to the theory of Millingen as follows: The theory would indicate that she leaned back to balance the weight of the shield, but the objections urged are that if the shield were larger it would hide too much (yet in an earlier part of the book the statement is made that a part of the figure, and just that part covered by the shield, is comparatively unfinished, which has given rise to the theory of a group in which one side of the statue was hidden), if it were small, the weight would not be enough to account for the attitude. And, in the next breath, he urges that the grand heroic character *is an objection to her struggling with a burden*. But if a goddess, and of this robust type, the

burden ought not to oppress her, however great, humanly speaking. But in point of fact there is no noteworthy degree of backward inclination. To test the question, I photographed a model in the attitude required to hold a shield on her left knee and write on it.

The result was very slightly different from that of the statue. A part of the backward action of the model was due to the necessity of a support to enable her to remain in the pose necessary to be photographed, but the action of writing is better expressed by the statue.

The action of the statue is that of a figure which stands nearly balanced and in repose, with the first movement in a forward action, like one who reaches out to give, take, or write, or any similar action. The particular shade we cannot determine without the possession of the fore-arms. Von Ravensburg goes on to say that he does not mean to affirm that the holding of a shield does not suit the action of the upper part of the body, but maintains that it does not explain it *particularly well*. But after the inane restoration given forth with his high approval, we may be permitted to doubt that his artistic taste has been as carefully developed as his archæolog-

ical acumen. He quotes Overbeck as objecting, to the shield resting on the left knee, that there are no traces on the left thigh which the hand holding the shield must have left; but Wittig and Von Lützow seem to have recognized these very marks. But they are both wrong, for there are no such recognizable marks, nor are they to be expected, for the shield, if there was one, was in all probability of bronze, held well out from the body, and resting on the knee raised for that purpose, and supported on a helmet lying on the ground. But, further, he says these considerations are quite superfluous, for the position of the left leg of the Melian statue contradicts the shield-supporting, and he quotes in support Valentin, that the left thigh would incline outward to secure a balance, and that the supporting of a heavy object on the thigh thrown in would violate the laws of equilibrium. That this is not true is shown by the "Victory of Brescia," in which the action is precisely this, and the action of the thigh is the same as that of the Melian statue. Moreover, I tried a model again in this view, and the result is given in the illustration.

The knee took quite readily the action indicated, and, indeed, would be compelled to by the pressure of the shield if the weight rested partly on the left hand, as it must to have left the right free for any action whatever. Both nature and the antique assert precisely the contrary to that which Valentin assumes. The length to which the argument against this restoration is carried by him may be judged from the assertion that the action of the "Victory of Brescia" is that of an outward push of the left thigh, to make it agree with that of the theory Von Ravensburg lays down. But the assertion is purely gratuitous. If the Brescian bronze is an argument, as far as it goes it obviates every difficulty in the interpretation of the Melian statue by taking, so far as the action of the limbs is concerned, the very action I attribute to the latter.

There is but one objection to the restoration theory I propose which deserves serious consideration—that of the goddess looking off or above the point at which she would be writing. Half the ingenuity displayed in many of the proposed restorations, or half the sophistry employed by Von Ravensburg to combat this, would carry us over much greater difficulties. In later Greek work, when art was sought for its own sake, and consistency continually sacrificed to the grace of a pose and harmony of the lines, we should not be surprised at the goddess looking at one point and writing at another; but at this period the dramatic unities were sacred alike in poetry as in art. But if we suppose that, unlike the Brescian statue,

she is not at the moment engaged in writing, but pausing as having just finished, and, looking out from her pedestal in the little temple, gazes out toward Marathon, in which direction the temple opens, there is no difficulty in the restoration. A little of that kind of imagination so much abused in modern art-criticism, which consists in attributing to the artist all the fancies which arise in our minds in the contemplation of his work, all the far-fetched and poetic visions our own eyes have conjured up, would supply all deficiencies in our theory.

But while I maintain that my theory has more accordances with the known facts and actual qualities of the statue than any other, and presents fewer gaps in the demonstration, I am unwilling to lay down any theory not sustainable by what we know of Greek art, and I admit the difficulty as frankly as I state those of other theories. Doing so, however, I still maintain that not only is there the means of reconciliation of my hypothesis of an actual shield-writing Victory with the statue as it is, but even in case I am compelled to abandon this particular point, and advocate the modification of Millingen that she holds the shield with both hands and looks at it, my main hypothesis—that the statue is a Victory and no Venus, and the particular wingless Victory of Athens—is untouched. We do not know what the Niké Apteros was doing. What we can see is that this statue was more probably holding a shield, either contemplatively or writing on it, or pausing, just having written, than taking any other action.

If we may accept the analogy of the Apollo Belvidere, which also looks off in the same

inexplicable way, it would illustrate my hypothesis still further, but the Apollo is later and less dramatic. If we hold to the strict dramatic quality of the best Greek art, we must suppose that the goddess has just finished writing, and looks up and out toward the field where her heroes died. Or even if the shield was a high one, such as the Spartan wounded used to be brought home on, she might still be looking at the shield, if not at the words she has just written. In fact, several suggestions offer

VICTORY OF CONSANI.

TEMPLE OF NIKÉ APTEROS.

themselves, and none open to accusation of such flagrant inconsistencies as those involved in Tarral's restoration, which shocks the dramatic sense beyond endurance.

The objection that the shield would hide so large a part of the figure goes for absolutely nothing. We continually find Greek work completely, or nearly so, finished in positions where by necessity much of it must have been hidden. As the pediments of the Parthenon were originally placed, they would never have been half seen, and how the Panathenaic frieze could have been adequately seen, once the building scaffolds were taken down, we can much less easily conjecture than how the Victory could have been seen behind her shield. The Brescian, a later and more realistic work, is seen behind hers. Consani has made a very happy emulation of the motive in his Victory. It is amongst the best of the modern Italian works of its class, and illustrates the manner of avoiding the difficulties we have seen adduced.

The little Temple of Niké Apteros has had a destiny unique amongst its kind. Like the Parthenon, it was standing little more than two hundred years ago, but during the Turkish occupation it was razed, and its stones all

built into the great bastion which covered the front of the Acropolis and blocked up the staircase to the Propylæa. It was dug out and restored, nearly every stone in its place, by two German architects during the reign of Otho, and it stands again, as Pausanias describes it, on the spot where old Ægeas watched for the return of Theseus from Crete, and seeing the black sails of his son's ship returning, token of failure (for Theseus had forgotten to raise the white sail, the signal of success), threw himself from the precipice, and was dashed into black death on the rocks below. Off in the distance is Salamis and Ægina, and the straits through which the ships came from Melos and Crete, and off to the south is Hy-mettus, beyond which is Marathon and the road by which the Persians came, and the Turks after them; and below the rocks still offer sudden death. How little has really changed in these two thousand and more years since the temple was built!

There certainly was the spot, and this the occasion, if ever, that an Attic sculptor should rise to that spiritual enthusiasm below which Greek art stopped and lost the clew which, in later centuries, the Florentine found again and followed to new, if not higher, heights.

COIN OF ATHENS (SIXTH CENTURY B. C.).

TOMMASO SALVINI.*

SALVINI AS OTHELLO.

TOMMASO SALVINI, the "Prince of the Stage," was born in Milan, January 1st, 1829. His father (the son of a Papal officer who had been banished from Rome on account of his liberalism) was professor of literature at Livorno, and had founded in that town a scientific institute, when he fell in love with the young actress who became his wife. For her sake Salvini's father abandoned his own career

and adopted the dramatic profession, but she died two years after the birth of Tommaso. The boy's genius manifesting itself at a very early age, his father intrusted his dramatic education to the celebrated Gustavo Modena. He soon attracted the attention of artists and public, and Modena was in the habit of saying, "Salvini is the only pupil of whom I can be proud." His reputation, however, was still

* For the brief biography of the Italian tragedian which I subjoin, I beg to acknowledge my indebtedness to a French pamphlet published by the firm of Tresse, of Paris, which has been furnished me by the kindness of Signor Salvini himself. I have also taken the liberty to incorporate, in my review of his rôles, a criticism of his *Hamlet*, which I wrote and published in a comparatively little known journal on the occasion of his first appearance in New York, in 1873.

confined to Italy when, in 1849, the revolution broke out, and Salvini's theatrical career was suddenly interrupted by his patriotism. He took an active part in the war of Italian independence, became the friend of Mazzini, Garibaldi, and Saffi, and together with them was taken prisoner at Genoa. He was rewarded for his courage and disinterestedness by a gold medal and the title of officer, and in the diploma given him by General Avezzana, received honorable mention for his patriotic zeal and valiant conduct. Retiring to Florence, he devoted a year to classic studies, preparing among others the rôles of *Othello*, *Saul*, *Hamlet*, and *Orosmane*. Having mastered these parts, he returned to the stage, and with the best troupes made the tour of Italy, Spain, and Portugal. His theatrical journeys were a series of ovations. He was presented by Victor Emmanuel with a ring from off the royal finger, the brevet of Officer of the Crown, and the title of Commander. In Spain the most illustrious men of Barcelona gave a *fête* in his honor, and requested from him an "Essay on Dramatic Art." Salvini wrote a masterly treatise on the subject, and was prevailed upon to leave the manuscript in the Library of the Athenians. In Portugal, King Luiz, who was always present at his performances, bestowed on him in person the insignia of a Commander of San Iago, together with his royal portrait and autograph. In 1872, Salvini visited South America, where he was hailed with equal enthusiasm; and when he left Buenos Ayres, the foreign ambassadors and most distinguished men of the country united with the people in escorting him to the harbor, where the ships of all nations were decked with flags, and he was saluted with cannon like a sovereign. From the Emperor of Brazil he received the decoration of Knight of the Rose. A pleasing incident is recorded of his visit to Montevideo, which evinces his popularity with all classes. Happening to lose the ring given him by the King of Italy, the citizens immediately procured him by general subscription a similar one in its place. After a short stay in his own country, Salvini returned to America in 1873, this time making his first tour in the United States. Notwithstanding the fact that it was a season of almost unexampled commercial depression, which very materially diminished the numbers of his audiences, he yet felt himself sufficiently appreciated to wish to repeat his visit under kindlier auspices. The accuracy of his discernment is proved by the *furor* which his recent tour has excited among press and public, despite every disadvantage occasioned by a grotesquely bad support from an English-speaking company. Since his former visit, he

has acted in England, Scotland, Ireland, Germany, Austria, and Hungary, producing everywhere the same overpowering impression, and has in the course of these few years been married and widowed. During his stay in London, in 1875, he met the young English-woman who became his wife. After but three years of domestic happiness, she died, and the great and gentle-hearted artist feels so keenly her loss, that he says of himself: "With her the larger part of my inspiration has vanished, and I fear that I must now always remain as I am, without the hope of improving in my art." This fear, touchingly as he expresses it, will not be shared as such by the world. His art leaves nothing to be desired; in its present phase of consummate development, one can only be grateful for the privilege of living in the same generation and being ennobled by its influence.

Among all the tributes he has received, whether from prince or people, perhaps the one which has afforded him the deepest satisfaction has been that of his fellow-artists. Both in London and New York he has responded to the unanimous request of the members of the theatrical profession to give them a special matinee performance. Their duties prevented their presence in the evening, and they would not willingly forego the opportunity of seeing their master, "the greatest actor of the age."

In social life, a great simplicity and gentleness of manner characterize this extraordinary artist. Genial and affable as he is with all, it is difficult to realize from the modest cordiality with which he receives the slightest word of sympathy or appreciation of his genius, that he has been the hero of a thousand *fêtes*, and has been applauded to the echo by every great city of both hemispheres.

No man could be more perfectly equipped by nature for the tragic stage than Tommaso Salvini. His physical gifts are a frame of massive and harmonious proportions, uniting an incomparable majesty of bearing with the utmost grace of movement, a handsome and singularly mobile face, and, most memorable of all, a voice of such depth and volume of tone, and such exquisite and infinitely varied modulations, that having been once heard, it haunts the sense like noble music. So extraordinary, indeed, is this organ, that some critics have ascribed to it alone the magnetic spell which he casts over his audience. The very word criticism implies to the popular mind a judicious discrimination of defects. People expect the critic to tell them not so much what to admire, as where and how to modify, in accordance with abstract

SALVINI AS MACBETH.

canons of taste, their own less educated appreciation. In this sense, criticism of Salvini is an impossibility. His genius is so transcendent, his art so perfect in detail and so unparalleled in scope, that the critic's only duty, in considering him, is to indicate the splendid beauties and overwhelming effects of his impersonations.

In every branch of Art there have been one or two supreme names which shine out beyond and above criticism—names of men who represent the incarnate Genius of their vocation, and supply later ages with a standard of excellence. "Others abide our question—they are free, outtopping knowledge."

While bearing in mind the vast gulf that separates creative from interpreting art, I cannot but think that in the same way the Genius of Tragedy has taken up its abode in the person of Salvini. Once before, within the memory of our own generation, did Tragedy visit the earth—but it was the muse, not the god; and consuming prematurely with her intolerable flame the fragile woman-frame she had chosen for her dwelling-place, she vanished like a lightning flash in the very fullness of her glory. Upon one and the same dazzling pinnacle stand these alone—Rachel and Salvini; but the latter has over the former all the immense advantages of a physique perfectly proportioned to his intellectual endowments, of a maturity and virile energy of mind, together with an apparently unlimited scope and variety of power, altogether beyond the woman's range of equally intense passions.*

The difference between Salvini and other exponents of his own art is not a difference of degree, but of kind; the distinction in a given part between him and other actors may best be expressed by saying that he *is* *Othello*, *Hamlet*, the *Gladiator*, or whatever personage he represent, while others merely simulate them. He enthalls his audience, carrying them with sudden electric transitions through every phase of emotion. And he is not one who has what the French call *de beaux moments*, separated and made more conspicuous, as were Kean's, by scenes of comparative weakness; each of his characterizations is a complete and flawless whole, maintaining a level of highest art between the bursts of passionate inspiration. But let us submit him to another test; let us study the text of his parts in the quiet of our own chamber, uninfluenced by the irresistible force of his personality; let us see whether his *Hamlet*, his *Othello*, his *Macbeth*, be justified by the language and spirit of Shakspeare.

The answer is, to my mind, no less clear and emphatic in its acquiescence. Logical, scholarly, intellectual, his interpretation of each part is borne out to the letter by the poet himself. Incredible as it sounds, his critics have accused him of being in *Othello* "brutal, coarse, and *un-Shakspearean*," for the very reason that he has had the audacity to retain Shakspeare's own words and explicit directions,—as, for instance, in the scene before the Venetian ambassadors where he strikes *Desdemona*. I find, on the contrary, that where he has in any degree modified the text, he has softened it in accordance with the refinements of modern taste. Thus he omits, among others, the scene with *Iago* which opens the fourth act, where *Othello* is made to speak in broken, hysterical sentences of half-articulate frenzy, and which concludes by his falling into a trance. Salvini represents to us, at the outset of this play, a loyal, fiery nature, reveals the fierce conflict of insane pride, jealousy, and vengeance, in which the noble qualities seem for a time completely extinguished, and ends by showing us "him that *was Othello*," broken by remorse, shattered with grief, but substantially the very same as at the beginning of the tragedy! He whose whole frame has just been quivering with affliction, who has been "shedding tears as fast as the Arabian tree her medicinal gum," suddenly nerves himself anew, starts up with the old majesty of carriage and commanding trumpet-tones, and, by the concluding six lines of the play, connects the *Othello* of *Desdemona's* love with the *Othello* who assassinated her. In divining and developing the central master-passion of a personage, he at the same time ignores none of the complex minor characteristics, but maintains throughout so perfect a sense of fitness and proportion that he is apt to make us think his conception an extremely simple one. Thus his *Othello* is not merely an embodiment of a single furious passion, but a rounded, many-sided human being, who anon compels our love, our admiration, our pity, our horror, and in the end our aching sympathy. After witnessing again and again this performance, the only impression that remained with me the same on every occasion was that of the artist's colossal power; each time a different phase of *Othello's* character stood out in fullest relief and flashed upon me like a new revelation. From the moment of his entrance upon the scene, with the effect of his bronzed and turbaned face and towering figure heightened by the long white *burnous* which falls in ample folds to his feet, in their curving Moorish shoes, the superb picturesqueness of his appearance and the

* Salvini's repertory includes two hundred rôles.

dignity of his gestures and movements fully bear out the magniloquent description which Shakspeare places in his mouth :

"I fetch my life and being
From men of royal siege, and my demerits
May speak, unbonneted, to as proud a fortune
As this that I have reach'd."

The key-note of his character is struck without delay :

"For know, Iago,
But that I love the gentle Desdemona,
I would not my unhoused, free condition
Put into circumscription and confine
For the sea's worth."

In this opening speech, illuminated, as it is, by his frank and loyal smile, we have the noble Moor complete before us, with his pride, his heroism, and his profound passion. The indescribable accent with which he utters the very name of the "*divina Desdemona*" is in itself a revelation, and after the lurid horror of the final catastrophe the music of that first tone comes back to us with unforgettable pathos. "I do not wonder," said one of the gentlest of women, apropos of Salvini's *Othello*,—"I do not wonder that *Desdemona* forgave his killing her, when she had his perfect love for a little while."

Throughout the whole of the first act, he gives us a striking example of repose in art. It is well to insist upon this, because the frenzy of his awakened wrath in the last three acts overpowers, for some of his critics, the impression of his subtle art and grandeur of style in the earlier portions of the drama. His address to the Senate is a matchless masterpiece of elocution and a superb picture of oriental grace and majesty. Its effect may be surpassed by later moments of fiery impulse, but beyond this absolute command of voice and accent, this apparently unstudied simplicity of thrilling and unanswerable eloquence, combined with this dignity and expressiveness of gesture, Art cannot reach. The "*Gazette de France*" publishes an interesting comparison between Salvini's version of this scene and that of Rossi: "Salvini advances quietly, nobly; respecting the father's grief, but sure of the justice of his own claim, he pleads the cause of his love. He pleads it without moving a step, standing a short distance from the council. His hand scarcely emphasizes, from time to time, by an oratorical movement, his speech, which is imbued with the serenity of a proud conscience. To his face, his eyes, his lips, is intrusted the task of forcing conviction upon the mind of his judges, or rather it is these features which finish and complete the work of his words. To attain such a dramatic result with such a

studied sobriety of means, is a marvel to which we had long been unaccustomed. M. Rossi, who is, nevertheless, very fine, played this scene in exactly the opposite manner; while he argued, his gestures added the force of pantomime to his words; whilst he went on talking, he walked to and fro; there was no lack of nobility in his *Othello*, but there was also dexterity and subtlety; the Moor, although commander-in-chief and first soldier of the Republic of Venice, does not lose sight of the fact that he stands before a council of inflexible patricians, and that these patricians may easily refuse to admit the defense of love by divine right. Thus his *Othello* deemed it necessary at moments to summon to his aid a smile, irony, familiarity, affected simplicity. *Othello*, as enacted by Rossi, conquered as much by his cleverness as by his heart. *Othello*, as enacted by Salvini, disdains these subtleties; he does not even think of such fears, which he doubtless would consider unworthy of him."

The growth in *Othello* of the fatal flower of jealousy from the seed implanted by *Iago*, rapid, gigantic, and luxuriant as the poisoned weeds of his own tropic soil, is delineated by Salvini with such nice and subtle gradations that it would be impossible to say at what particular moment the root has taken fixed hold upon his heart. In the first great scene with *Iago*, the peculiar merit of his acting may best be described by a painter's term—it is in the values of the picture that the artist's genius is revealed. After the charming interview with *Desdemona*, wherein the infinite tenderness of his half-amused, unsuspecting manner proves to us that he only delays the granting of her request for *Cassio's* reinstatement in order to enjoy the luxury of hearing her sue, he seats himself at the table and begins to write his official documents. Then enters the tempter, hissing the fiendish lie in his ear, and from here to the end of the act Salvini sweeps the whole gamut of passion, from the frankest loyalty and simplicity of affection, through doubt, anguish, livid wrath, insensate jealousy, and blood-thirsty revenge to a sublime despair.

Step by step we trace the degradation of his nature under the devilish goadings of the tempter; rather, it is not so much a degradation as a necessary development of everything that is evil and brutal within him, by the crushing out of all that is good in an appeal to his worst passions. It is as if we were witnessing the laying of a torch to a superb edifice; no less natural, no less inevitable, no less rapid, no less horribly beautiful is the flaming ruin that ensues. Every one has noted the marvelous *tour de force* with which, in the height of his fury, Salvini turns upon

Iago, flings him to the ground, and is about to crush him under foot. This stroke of genius, which could never be attempted by an actor of less colossal physique and inimitable grace than Salvini, is invariably a turning-point for the enthusiasm of the audience, who break out into extravagant plaudits at the audacity, the spontaneity, and the terrific reality of the feat. But that after this climax he should rise without pause or respite to the still grander height of the passage beginning "Like to the Pontic sea,"—where he kneels and takes his vow of revenge to the marble heaven,—this is an achievement which not only defies criticism, but makes even praise seem impertinent.

A characteristic anecdote, reported by M. Jules Claretie, throws an interesting side-light upon Salvini's conception of *Othello*:

"One evening, among a party of friends, he was asked to recite the last monologue of *Othello*. He rose, meditated for a few moments, and began in his magnificent, resonant voice. Then suddenly stopping in the middle of a line, he exclaimed, with an impatient gesture: 'No, it is impossible. I am not in the situation. I am not prepared for this supreme anguish. In order to render the frantic despair of *Othello*, I need to have passed through all his tortures, I need to have played the whole part. But to enter thus the soul of a character, without having gradually penetrated into it—I cannot—it is impossible!' All this was said without any affectation, with the air of a man who reveals the secret of his power. Salvini moves because he is moved. He is in turn *Othello*, *Hamlet*, *Romeo*. He is no longer Salvini when he comes upon the stage."

The part of *Hamlet* reveals the purely intellectual and poetic side of Salvini's genius, and is therefore, to my mind, among all his creations, the noblest and loftiest. "Salvini possesses," says the "Figaro," "the supreme qualities without which any actor who presumes to play *Hamlet* succumbs, miserably crushed under the weight of his own audacity. His grand and subtle elocution, and the profound intelligence which enables him to discern and fathom every feature of this colossal rôle, carry him to the loftiest regions of his art." *Hamlet*, as we all know, is the thinker, as distinguished from the man of action. Salvini makes him a thinker in the highest and rarest sense of the word—not a philosopher, but a poet. His delivery of the great soliloquy—"To be or not to be," is that of a poet who thinks aloud; he neither recites nor declaims the words—he is apparently sincerely contemplating suicide, and deliberately weighing its promises and its terrors. Nothing could be more spontaneous, more natural, and more exquisitely beautiful. The delicacy and truth of his conception are perhaps most conspicuous in the scene where he bids *Ophelia* go to a nunnery, which is usually rendered by other actors with every variety of violent and ex-

travagant declamation. Salvini's manner is here marked by the most pathetic sadness and the utmost gentleness; the idea which he seizes and makes the central one of the scene is found in the words:

"Why wouldst thou be a breeder of sinners? I myself am indifferent honest, and yet I could accuse me of such things that it were better my mother had not borne me. What should such fellows as I do, crawling between earth and heaven. We are arrant knaves all—believe none of us—get thy ways to a nunnery."

The words "*Al chiostro!*" are whispered, almost sighed forth, with unexampled tenderness and compassion. By his sincerity of belief in his own unworthiness he excites our sympathy for himself scarcely less than for her.

Salvini has a peculiar manner of repeating a simile, as when he says, "Like Niobe, all tears,"—or, "Swift as meditation or the thoughts of love, I'll sweep to my revenge." He pauses for an instant upon the conjunction, as if seeking the image exactly to correspond with the idea, and then delivers it with all the vivacity of a fresh inspiration. The airy grace of his action, which interprets his words to those who cannot understand his language, is strikingly apparent throughout the play. When *Horatio* relates the visitation of the ghost, Salvini's gesture with which he accompanies the word "*Armato?*"—waving his hands from head to feet—is as eloquently descriptive of the mailed figure as Shakspeare's lines. On the platform, when he first beholds his father's spirit, while his countenance is illumined with an awe-struck joy, he spontaneously, and one would almost say unconsciously, uncovers his head, exclaiming, neither loudly nor vehemently, but in the subdued, reverent tones of passionate prayer, "Angels and ministers of grace defend us!"

No one who has seen his *Hamlet* has failed to appreciate the genius with which he illustrates the passage, "Look here upon this picture and on this." Contrary to all tradition, he makes use of neither miniature nor portrait, but, kneeling at his mother's feet, he conjures up in imagination the figures of the two kings. Thus the extravagant epithets, "Hyperion's curls, the front of Jove himself," etc., seem merely the natural imagery of an exalted enthusiasm, and present a picture of ideal perfection, unmarred by the introduction of anything material or prosaic. In the remainder of this scene, he gradually reaches his highest eloquence of delivery, expression, and action. The climax of passion seems to be reached at the words, "A king of shreds and patches," but at that moment he beholds the apparition of his father, and we see that the

climax had been yet to come. The sudden break in his voice as he appeals to the "heavenly guards" to save and shield him, the attitude of awe and adoration which he instantaneously assumes, combine to produce an ineffaceable and utterly indescribable effect. Space forbids more than a suggestion of the princely dignity and classic repose of Salvini's bearing in the last act—most conspicuous when he receives the challenge from *Laertes*; the chivalrous courtesy with which, in fencing, he offers his own sword to his opponent, and thus converts what has hitherto been a clumsy device into a characteristic touch of refinement and poetry; and, lastly, the mournful resignation and majesty of his death.

Macbeth, the latest of Salvini's Shakspearean impersonations, is in every respect worthy to rank beside the companion portraits of *Othello* and *Hamlet*. Perhaps its most striking feature is its magnificent picturesqueness. Nothing of the Italian is visible in this tawny-bearded, tawny-haired, gigantic Thane. Salvini depicts *Macbeth* from beginning to end as absolutely devoid of conscience and incapable of remorse, with a consistency of blind selfishness and brutal force which leaves no trait nor deed unexplained. No tool is he of a stronger and more fiendishly cruel nature,—he is the mate, not the creature, of *Lady Macbeth*. It is difficult to decide which to dwell upon with most emphasis of praise,—the colossal proportions of his presentment of this character, or the minute beauties of detail with which every scene, every passage, every single word is illustrated. To such as have not heard him, it is impossible faintly to suggest the magic of his elocution in narrating the murder, and above all the piteous anguish of his voice at the words :

"I could not say 'Amen,'
When they did say, 'God bless us.'
I had most need of blessing, and 'Amen'
Stuck in my throat."

The variety of gesture, of vocal and facial expression, with which he illuminates the soliloquy, "If 'twere done, when 'tis done," etc., the terrible reality of the dagger scene, the overpowering effect of the banquet scene, unite to produce an artistic impression of horror and sublimity which can neither be effaced nor repeated in a life-time. One of the most striking minor points is his reception of the news of *Lady Macbeth's* death; there is a sincerity of grief in his delivery of the words, "She should have died hereafter," with which he drops into his chair and buries his face for a moment in his hands; then, with a sudden sense of the monotony and weariness

of his hateful career, he exclaims, "To-morrow and to-morrow and to-morrow," etc.—with the fretful disgust of an insatiably selfish man, rather than the melancholy of an afflicted one. Perhaps the strongest idea of Salvini's versatility may be gained by seeing him appear, as he did on two successive evenings in New York, as *Macbeth* and the *Gladadiator*. In Soumet's tragedy, the same man who had been on the previous night an embodiment of Saxon royalty, of imperious, grandiose power, revealed himself in every gesture, every inflection of his voice, the coarse Italian slave, brutalized by his terrible profession as well as by the extraordinary development of his physical strength, and yet elevated to tragic heights by the intensity of his sufferings and passion. The abundant and elaborate gesticulation, the vivacity of movement, the ever-present consciousness of his physical superiority and of his desperate, enslaved condition, left nothing lacking to complete the illusion of the Roman gladiator. His description of his wife's murder cannot be excelled as a piece of elocution. Contrast his manner throughout this long narrative with his delivery of the address to the Signory in "*Othello*," and one may form an idea of the vitality which he imparts to every rôle. There he scarcely made a gesture—here each word is illustrated by pantomime so eloquent as to convey the full passion and import of his speech even to those who do not understand his language. Who can fail to appreciate the anguish of the words:

"They bound me to a pillar,
Which in my struggles fell upon my head,
But did not break my chain?"

("Sul mio corpo crollò, ma non si franse la mia catena.") The spontaneous burst of applause which interrupted him at this point sufficiently proved the impossibility of misconceiving or remaining deaf to that superhuman despair. And after apparently exhausting every intonation and expression of mortal suffering, he concludes with an indescribable irony which forms the most astonishing and thrilling climax. "The heavens did not fall, they did not fall—and you talk to me of God!" ("*Non cadde, non cadde il cielo, e tu di Dio mi parli!*") The scene in the arena gives full scope to Salvini's most extraordinary powers: tenderness, ferocity, anguish, and despair, culminating in reckless and most pathetic joy, alternate without an instant's pause, and carry the audience from mood to mood with the force of absolute reality.

After his Shakspearean interpretations, the rôle in which Salvini has made the greatest sensation is perhaps that of *Conrad* in *Gia-*

commetti's drama, "Civil Death," which has gained eloquent appreciation from the press of America, England, Germany, and France. M. Silvestre, in "L'Estafette," writes:

"M. Salvini is here simply sublime. After his last scene, we leave the theater literally exhausted with emotion. In *Hamlet* and *Macbeth* he appeared to us a tragedian sure of his art; now we must recognize in him a temperament unprecedented for power and tenderness, an unparalleled gift of sensitiveness, a pathetic intensity which we have never before seen attained. We can only regret that he is not our compatriot. 'Nothing is lacking to his glory—he is lacking to ours.'"

It is no slight triumph for Salvini, the loftiest exponent of the idealism of Shakspeare, that, after having won the suffrages of the poets of all nations, he has been crowned in this rôle with the praise of the champion of modern realism—M. Zola. Such art as Salvini's belongs to no school, and is hampered by no theories; it is not realism; but truth; it is not romanticism, but beauty. Upon the question of naturalism and idealism he expressed himself very clearly in a recent conversation. "I consider it a mistake," he said, "and one which many artists make at the outset of their career, to adopt the standard of a party. It leads to a constantly increasing tendency toward exaggeration in the direction of their idea, at the expense of truth and real art. I belong neither to the '*veristi*' nor to

the '*idealisti*'; my aim is simply to unite truth with beauty. To succeed in such an aim would be the dream of a god!" (*il pensier d'un dio.*)

To some one who asked him what was his favorite rôle, he replied: "I love them all with equal passion; they have all cost me so many pains, and caused me such noble joys." On other occasions, however, he has expressed certain preferences. He considers himself best suited physically to the part of the *Gladiator*; he enjoys playing *Hamlet* because he has been very severely criticised in it, and having devoted to its study infinite care and research, his ambition makes him all the more anxious to enforce its success. He takes pleasure in *Macbeth*, because, being a recently adopted rôle, it has still the charm of freshness for him; and, strange as it may appear, he eagerly looks forward to the time, which he does not consider far distant, when the fatigues and excitements of his career will have sufficiently broken his robust physique to enable him to enact the part of *King Lear*. However magnificent and original this impersonation might prove, his world of admirers cannot on these terms share his impatience. They can only hope his present period of ripe, artistic perfection may be prolonged to its utmost limits, knowing well how many generations must elapse before the highest genius will again be united with the highest art.

IMPRESSIONS OF SOME SHAKSPEREAN CHARACTERS.

INTRODUCTORY REMARKS.

If all men were alike and of the same mode of thinking, the world would be too monotonous and existence a burden. It is the variety we find everywhere in nature that gives to it interest and beauty. The same object observed by different minds affords new interest and pleasure by a comparison of these various opinions, many of which, however erroneous, may be justified by a particular form of character in the observer; others, more abstruse, may be verified by a finer process of reasoning or mode of feeling. Happy those who are favored by nature with that keen insight, that delicate and high perception, that enables them to perceive the truth in every object that presents itself to their view.

The man above all others who has called forth many and various opinions on his works

—on their literary merits as well as on the right interpretation of the different characters which he so wonderfully painted and sculptured—is William Shakspeare, a name at which my pen trembles in my hand, awed as I am by the reverence I feel for such transcendent genius. But I am encouraged by my great love for him, and for the sake of this I may be pardoned if I dare to make him the interpreter of my thoughts who is the inexhaustible analyst of the human heart, and the most complete illustrator of man, the noblest work of God.

The erroneous opinion is often expressed that foreigners, unacquainted with the English language, cannot rightly interpret the works of Shakspeare. Translations, doubtless, are always inferior to the originals; but at the same time they are generally sufficiently exact to afford the means of fully comprehending

the writer's thoughts, and of adequately interpreting and personating his characters. By laying the scenes of his dramas in Italy, Denmark, Scotland, and elsewhere, it would seem to have been the intention of Shakspeare to render himself cosmopolitan, as, indeed, he proves himself to be, and thus to afford freedom to his illustrators in every nation to interpret his personages in accordance with the different customs and sentiments of the various peoples painted by him in such splendid colors. Indeed, had the English poet known the different languages of Europe, he would, doubtless, have used the appropriate idioms of each character, and thus have given his compositions the true local coloring.

If the dramatists of ancient Greece were too severe in the observance of the Aristotelian rules in regard to the unities of time, place, and action, Shakspeare was forced by the age in which he wrote to free himself entirely from them. In his time, the theater in England was as yet in a primitive state; the audiences were not accustomed to philosophic representations, and it was not the custom of cultivated society to enter the public resorts then known as theaters. Up to the time when Queen Elizabeth condescended to have "Henry VIII." represented at Windsor Castle, the works of Shakspeare were appreciated but by few. Had he lived in our time, he would, doubtless, have changed the form of many of his dramas, and would not have failed to see that many things would be better entirely omitted or left to the imagination of intelligent spectators. For instance, in the first scene in "Hamlet," the *Ghost* appears to *Horatio*, *Marcellus*, and *Bernardo*; and in the second scene these three personages relate to the Prince of Denmark all that they had witnessed in the first. Now, suppose actors able truthfully to represent the surprise and awe they experienced in seeing that unexpected apparition; suppose an audience highly intelligent and educated in dramatic art; can it be denied that leaving this episode entirely to the imagination would prove far more effective and grand than the actual appearance of the *Ghost*? It may be added, too, that for the advantage of dramatic art, it would be highly desirable to exclude the *Ghost* altogether. The illusion would be greater, if, feigning to listen to the words addressed to him, *Hamlet*, impelled by the force of his impressions, should repeat them to himself; and if all the actors should imagine the apparition before them, although invisible to the audience. We should not then hear the heavy and measured tread of the *Ghost* on

the floor of the stage, nor would we see a body, neither transparent nor aerial, but of sound flesh and blood, covered with a canvas of fish-scales, with helmet and armor of pasteboard, moving, walking, and gesticulating like a mortal, living man: nor would we see the calcium light, always flickering and noisy, apparently thrown on this artistic fiction for the special purpose of producing the most complete disillusion.

It may be said by the devoted Shakspearean, that the author designed it to be so, and that so it must be. But it must be remembered that he was trammelled by the conditions of the age and by the imperfect receptivity of his audiences. Now all that has changed: the public taste has improved, the spectators have become more cultivated and intelligent, and it is well to free ourselves from these impediments to the fictions of dramatic art. It is not proposed to exclude entirely all these features from the works of the great poet, for in some cases such an exclusion would destroy the fundamental idea of the tragedy; but it seems desirable that certain modifications of form should be introduced, more in accordance with the exigencies of our time.

What has been said thus far refers to the improbable and supernatural elements in the works of Shakspeare. The same remarks may apply to other scenes in which the realistic form tends to impair the ideal, as evolved from the composition; as, for instance, the strangling of *Desdemona*, which, in my opinion, the actor should veil from the eyes of the audience. Art cannot render truly that atrocious struggle. To do this it would be necessary to strangle an actress every time "Othello" is represented, and very few actresses, however great their love for the art and their veneration for the poet, would submit to such a rendering of the play. The violent contortions of the executioner and the victim are more powerful if left to the imagination. Committed in the seclusion of an inner chamber, the strangling of *Desdemona* loses nothing of its coloring, but, on the contrary, is intensified when hidden from the actual gaze, while at the same time the horror and disgust of the scene are in great part done away with.

Another scene of this drama, entirely omitted in my representation, seems to have been written for audiences composed of rude and coarse natures, and is not at all in harmony with the character of *Othello*. I refer to the scene in which, instigated by *Iago*, *Cassio* relates the particulars of his interview with *Bianca*, and how he obtained from her the famous handkerchief. In this scene, *Othello*

is hidden and is made to believe that the words of *Cassio* refer to *Desdemona*. There could be no doubt of the significance of those words, and he sees in the hands of *Cassio* the handkerchief, the trophy of his conquest. To suppose that an ardent and violent character like *Othello*, thus listening to the story of his dishonor from the lips of the man whom he believes to be the author of it, could restrain his wrath, that he would not at once spring upon *Cassio* like a tiger and rend him in pieces, is to suppose an impossibility. But then *Cassio* would have time to justify himself and explain the mistake, and in this case the tragedy would be at an end; hence we must either retain this scene entirely, out of harmony with the character of *Othello*, or we must eliminate it altogether. This scene does not appear in the legend of Cinzio Giraldi, from which it seems that Shakspeare took the subject of his tragedy. In it *Othello* is represented as being led by his ensign-bearer to the house of *Cassio*, where from the street he shows him, through the open window, the handkerchief which *Bianca* had imitated from that of *Desdemona* and presented to *Cassio*.

Another liberty is taken, namely in the play of "Macbeth," where, after having committed the murder, he comes to relate to *Lady Macbeth* his impressions before and after the crime. It is not to the castle of Inverness that *Macbeth* should have gone to relate the story of his deed—there where at any moment he could be discovered with his blood-stained hands and garments, and where his tale could probably be heard by others. The first instinct of him who commits a crime is to seek concealment, and to hide every trace of it; yet no such thought appears in *Macbeth*, and it is only through the force of will in *Lady Macbeth* that he at last, though too late, leaves the fatal locality.

Other anachronisms and improbabilities of time and place in the works of Shakspeare may be pointed out, but it is not proposed to enter into a detailed criticism of them; the writer wishing merely to show that his love of accuracy in the interpretation of Shakspeare is equal to the devotion and admiration with which he regards him. All such criticisms, even if they find adherents, are only spots upon the sun.

It may be added that before undertaking any philosophic study of Shakspeare's characters, the legends from which the poet took his subjects were carefully examined; and that the various commentaries and criticisms which, from time to time, have appeared in different countries, were attentively studied and compared. The works on Shakspeare published in England and Germany appear to afford very

little insight into the conceptions of the poet; those of Italy seem pretentious and dogmatic, those of France superficial and vague, and colored with the usual Gallic imagination, while those of Spain, though more satisfactory, are incomplete, and not always well defined. But the commentator of Shakspeare most to be trusted is Shakspeare himself, and the dramatic artist who would worthily represent the great poet should not allow his mind to be distracted by any theories or criticisms concerning his characters. It is only by studying his works directly that the desired knowledge can be acquired. Let the student drink at that natural, pure, and healthful fountain, and his mind will penetrate easily what at first may seem to be occult and mysterious. When the subject of the drama is once comprehended, he should diligently and patiently study every phrase, fix the images of the poet in his mind in their true relation to one another and to the whole, meditate deeply on the characters, and place himself in imagination in the time and place of the action; moreover, he should study the costumes and the passions of the age; and thus identifying himself with his characters, he will be enabled to form a true idea of the type he is called to represent. He should never tire, and when he begins to think that his study is completed, he must remember that it has just begun. It is in this view, and with this conscientious persuasion, that I propose to attempt a brief analysis of two or three of the most important characters in Shakspeare.

HAMLET.

THE father of Hamlet dies suddenly, and his mother, after two months of widowhood, marries the brother of her former husband. These two events, following so closely upon each other, are thorns which lacerate the heart and torture the brain of the poor Prince of Denmark, whose reflective and philosophic nature meditates and broods over the mystery until he becomes almost sure that his uncle is guilty of the murder. He is certain that his mother has not shown that respect due to the memory of her husband and his father, and while the one in his eyes becomes a fratricide, the other appears an adulteress, in thought at least. This guilty levity of his mother, and the presumed crime of his uncle, render him morose and revengeful. The conduct of the one destroys in his mind every delicate and virtuous sentiment for woman, and that of the other awakens contempt and hatred for men. This troubled and disillusioned soul, so eager to confirm its terrible suspicions, is con-

tained within a delicate body, dominated by a lymphatic-nervous temperament; hence his hesitation, his fears, his permanent condition of doubt and uncertainty; hence, notwithstanding the evidence of the crime, his delay in avenging it, and his continual seeking for motives or excuses for this delay. Highly educated, possessed of a vivid imagination, his intellect is continually at war with his heart; and, while the latter impels him to action, the stronger influence of his mind controls him, and he remains inert. He is doubtful of his friends, of his beloved *Ophelia*, of his mother, of his father's ghost, of himself, and of "the unknown future beyond the grave." With him it is thought that produces doubt, and the idea of Shakspeare as represented in "*Hamlet*" seems to be "the prevalence of thought over the faculty of action." *Hamlet*, indeed, is an idea more than a real character; an actual *Hamlet* has never existed, and probably could not exist. It is not uncommon to meet persons possessed of many of the characteristics of *Hamlet*; but they are only pale and feeble parodies of the complete personification described by the poet.

Even admitting the possibility of a character like that of *Hamlet*, the opinions concerning its nature would be diverse as the modes in which it is interpreted. It affords occasion for many variations and many ideas for which Shakspeare is in no way responsible. While by some *Hamlet* is represented as in reality a madman, it is believed by others that he only feigns insanity in order better to accomplish his purpose. Others, again, see in him only the embodiment of a cold, calculating nature, or the enthusiastic investigator of the mysteries of nature. Some regard him as too severe, others as too mild, toward his mother; others believe him full of poetic feeling; by some he is looked upon as a skeptic in religion, and by others as a devotee. In a word, he is a chameleon, changing his color according to the light cast upon him.

Now let us turn to Shakspeare. The *Ghost* enjoins upon *Hamlet*, as an act of filial duty, the punishment of the crime of his uncle. He receives the command, and swears to banish from his mind everything else,—all images of the past, his books, and his studies,—that he may more entirely obey that command; and to conceal from others this all-absorbing thought, he causes his friends to swear not to reveal what they have witnessed, and to make no remark, either of surprise or incredulity, upon whatever he may say or do. It is clear that he proposes to feign madness; and, to render this fiction more plausible, he affects a monomania which shows itself partly in allusions and double

meanings, which to *Polonius* seem folly, but which have real significance, and by which he may test and watch the minds of those who surround him. In the third act, he himself says to his mother :

"Let the bloat king tempt you again to bed :

Make you to ravel all this matter out,
That I essentially am not in madness,
But mad in craft."

After this confession, how can it for a moment be supposed that *Hamlet* was really a madman? His purpose to solve the mystery sometimes induces such tension of mind that he strives in every way to divert or rest his too active thought; he ridicules the subserviency of *Polonius*; he ironically exposes the dissimulation of his false friends, and he invites the actors to declaim before him the significant scene from an improvised drama. He cannot be merely a cold and calculating thinker. Dominated as he is by the sole purpose of revenging the death of his father, he is eager to know the truth, and restless because he would and he cannot.

With all his provocation, *Hamlet* does not show undue severity toward his mother; he paints in vivid colors the two characters of his father and his uncle, and contrasts them in such strong and bitter phrases that the *Queen* fears for her life. Then, remembering his father's command, *Hamlet*, with filial tenderness, advises her, implores her, to repent, to abandon her present life and to live only in the memory of the dead king. Believing, as he does, in the efficacy of *Ophelia's* prayers for him, he cannot be counted a skeptic; he adores the memory of his father, and he is devoted in his friendship to *Horatio*, in whose companionship his perturbed soul finds rest. It is somewhat singular that *Hamlet* should be constantly represented as a student, and only of a suitable age to return to his studies in Wittenberg. In northern climates mental development does not always correspond with that of the body, and is often more slow; thus *Hamlet* was unable to remember the gibes and songs of poor *Yorick*, who, according to the grave-digger, had died twenty-two years before, when the prince, whom he had "borne on his back a thousand times," must have been six or seven years old; therefore he must have been not less than thirty at the time when the action of the play occurs; and at that age he could scarcely have been a student; but being fond of travel, he was probably abroad on a foreign tour when recalled by the death of his father. Shakspeare has represented him as a mature youth doubtless in order to give him more robustness

of thought and a greater depth of reflection. Indeed, he reflects and reasons with mature intelligence; he is vigorous in understanding as he is feeble in his decision. His imagination is more exuberant and his blood less hot. The leaden weight of his thought renders his body weak and vacillating; remove the weight and he would at once rush into action. In fact, he decides to kill the murderer of his father only when he fears that his own possible death might baffle his revenge.

It is not easy to the actor to represent vividly this philosophic conception of *Hamlet*. I confess that seldom have I been able to render it clear and intelligible. To do this, certain qualifications are necessary, such as the harmonious relation of the senses with the physical appearance,—qualities not often found combined; it is equally necessary to have an audience of quick comprehension, and critics possessed of insight and appreciation. It is not encouraging to the artist to hear, as he often does, "This is not the *Hamlet* of Shakspeare," while yet the key of the interpretation is not given. To me this consists in the predominance of thought over the power of action.

MACBETH.

THE character of *Macbeth* is the antithesis of that of *Hamlet*. It is in these contrasts, elaborated in such a wonderful manner, that the extraordinary genius of Shakspeare reveals itself. If the play of "Hamlet" expresses the force of thought over action, that of "Macbeth" may be considered as illustrating the predominance of action over thought. This idea is expressed by Shakspeare himself; who causes the protagonist to say, in the second act:

"Words to the heat of deeds too cold breath gives.
I go, and it is done."

And in the third act, *Macbeth* adds:

"Strange things I have in head, that will to hand;
Which must be acted, ere they may be scann'd."

And finally, in the fourth act:

"The flighty purpose never is o'ertook,
Unless the deed go with it * * *
To crown my thoughts with acts, be it thought and done."

Macbeth lived in a half-savage period, when politics and settled customs yielded to force and personal valor—the qualities that commanded the highest consideration. Yet the age was not without its virtues, such as the strict observance of personal obligations,

the recognition of services rendered, and admiration for heroic deeds and magnanimous and generous actions. The belief in the supernatural, in apparitions of good and bad spirits, was universal, and in Scotland this belief was greatly promoted by the nomadic habits of the people and the geographical conditions of the country. This belief, in common with his countrymen, was held by *Macbeth*, a valiant and victorious warrior. Returning from battle, he meets on a lonely heath a company of witches, who hail him as one who shall be king hereafter. Hitherto, action with him had kept pace with his fortunes, but now his warlike courage is changed to unlawful aspiration, and he pauses and hesitates to act. When the idea of assassination, of shedding innocent blood, presents itself to his mind, and when he considers what he has at stake,—his position, his rank, and the honors he has received at the hands of the very king who stands in the way of his promotion,—these thoughts restrain him. But not long: accustomed to defy danger, he stops at no difficulty, and impelled by his indomitable ambition, he commits the crime and becomes a regicide. Could he have achieved his purpose otherwise he doubtless would have done so; but the shedding of blood was necessary to place him on the throne, and he yielded to this necessity. He goes on from one murder to another, and over these slain corpses he gains the object of his ambition. These crimes are followed by no remorse or fear. He would doubtless rather sleep with the murdered *Duncan* than be haunted through sleepless nights by the specters of his slain victims; he is affected by those apparitions, but he has no fear of them. The ghosts of *Banquo* and his sons alone move him to madness. But while he desires repose, he has no thought of expiation for his crimes. When the *Doctor*, alluding to the health of *Lady Macbeth*, says to him:

"Therein the patient
Must minister unto himself,"

he reproaches him, and says:

"Throw physic to the dogs; I'll none of it."

That is to say, he has no thought of repenting for his evil deeds.

But this ambitious, blood-stained man, brave as he is, has yet his weakness, and, Achilles-like, his vulnerable point. The apparition bids him:

"Be bloody, bold, and resolute; laugh to scorn
The power of man, for none of woman born
Shall harm Macbeth."

Again it is promised that

"Macbeth shall never vanquish'd be, until
Great Birnam wood to high Dunsinane hill
Shall come against him."

But when the forces of *Macduff* approach under cover of the forest boughs, and his unnatural birth is explained, *Macbeth* is overmastered by his superstition, and exclaims:

"And be these juggling fiends no more believ'd,
That palter with us in a double sense;
That keep the word of promise to our ear,
And break it to our hope."

Like a lion in the toils of the hunter, he struggles with tremendous effort to overmaster his inexorable destiny; but he is conquered, and dies as he has lived. His character may be compared to that of Cæsar Borgia. Like that prince, *Macbeth* gained and perpetuated his power by the foulest means; but the usurper of the throne of Scotland, even in his guilt, preserves a majesty which is wholly wanting in the character of the Borgia.

On first reading this grand tragedy, it was a matter of surprise to me that the sleep-walking scene was assigned by the poet to *Lady Macbeth* rather than to *Macbeth* himself. It occurs in the beginning of the fifth act, and up to that time when the lady-in-waiting and the *Doctor* speak of it, there is no suspicion of her suffering from this malady. In the opening of the tragedy, when she reads her husband's letter informing her of the prediction of his coming greatness, she conceives the idea of the crime that is to insure it; she implores him to return, so that with all the force of her powerful nature she may infuse into his mind the determination to do the deed; she inspires, she persuades, and shows him how easily it can be accomplished. She does not do the deed; but she proves herself capable of it. She shows her hands stained with the blood of *Duncan*, and how easily they can be made white; and she is reproachful and contemptuous when *Macbeth* appears moved by the apprehension of his hallucinations. We hear from her no word of remorse or repentance; we see in her no sign of fear or dread of future expiation. How then can this woman, so resolute and so firm of purpose, lose at once all heart, and present an entirely different character? It is remarkable that Shakspeare, who, in all his personifications, so strictly maintains the individuality of their character, should have made an exception in that of *Lady Macbeth*—the woman who, as she herself says, could brain her nursing child to maintain her oath, and who

nowhere manifests any disposition to yield to those influences and emotions which produce somnambulism, though illness may have rendered her weak and delirious. To me it appears that the scene was originally composed for *Macbeth*, and afterward for some reason given to *Lady Macbeth*. Had the play been written in our time, the presumption would be that the change was made at the caprice of some charming actress who did not find the part assigned to her sufficiently important. As it now stands, the already too heavy part of *Macbeth* is lightened not a little.

Lady Macbeth, though capable of such crimes, was greatly loved by her husband. He strives to conceal from her the murder of *Banquo*, that of this crime at least she may be innocent; he does not reveal to her his intention of killing *Macduff*, and to this withdrawal of confidence in her he probably owed his ruin; for had Shakspeare caused the protagonist to unfold his purpose to his wife, he would have been compelled by her strong will to hasten the murder he had conceived, and thus would have saved himself from *Macduff's* revenge. But then the tragedy would have lost its climax, and *Macbeth* would not stand before the world as a terrible example of a great criminal powerless to escape the penalty of his crimes.

This drama, so eminently tragic in its subject, and in the characters and passions it portrays, is rightly considered the masterpiece of the great poet of England.

OTHELLO.

BUT let us change this scene of crime to romantic and enchanting Venice, the Queen of the Adriatic. Let us pass through that labyrinth of palaces and canals where is enshrined the memory of much passionate love, and transport ourselves to the age in which that republic was at the summit of her power, and when she enlisted under her banner warriors of every nation distinguished for skill and valor. Among these, *Othello* was renowned for his wisdom and military bravery, and to him was intrusted the important mission of protecting the island of Cyprus, then belonging to Venice, from invasion by the Turks.

Although a soldier of fortune, *Othello* was descended from a royal race, of which honor, however, he never boasted. Devoted to a military life, he grew up amidst "the pomp and circumstance of glorious war," and without experience in evil himself, he had no idea of dissimulation in others. Skilled as he was

in the art of war, he was simple and ingenuous in other relations, believing everybody honest who appeared so. Beloved and esteemed by all, *Desdemona*, the daughter of a patrician, enchanted by the stories of his adventures and by his earnest and winning manners, becomes enamored of him. This passion he returns, but is restrained from expressing it by the impediments of difference in race and in position. *Desdemona*, who admires him more for his noble qualities, sees beneath his dark complexion the whiteness of his soul, and declares her love. They escape and are wedded. Confident in the love of *Desdemona*, he justifies his act with a sincerity and simplicity that persuades and convinces his judges, who unanimously absolve him.

But the triumph of *Othello* is disturbed by the hint which the father of *Desdemona* throws out when he says:

"Look to her, Moor, if thou hast eyes to see;
She has deceived her father, and may thee."

This falls like blasphemy on the ears of *Othello*, yet it leaves its impression. However, happy in his love and content in the success of his plans, he prepares to depart with *Desdemona* for the island of Cyprus. She is to *Othello* the joy of the present, the sweetness and charm of the future: the rainbow of his troubled and tempestuous career. His is not a sensual love; it is the pure affection of a soul which unites itself to another, and without which he could no longer exist,—a sentiment so profound, so intensified, and so wide that it embraces the affection of a friend, of a brother, of a son, and of a father. It has become to him as the air he breathes, an ever-present paradise.

But Shakspeare always loves contrasts, and by the side of this paradise is hell, which he represents by *Iago*. To depict this character truly requires the pen of Shakspeare himself. *Iago* is the quintessence of evil with the appearance of ingenuousness and simplicity. The personification of all deception, he is the crucible in which all deceptions are fused together; he is the very ideal of perfidy and treachery. It is not necessary to examine the motives of this embodiment of evil, who is yet believed to be honest by everybody, and who has the confidence and esteem of *Othello*, whose companion in battle he had been, and who did full justice to his courage and skill.

It has been said that *Othello* is too credulous; but how could he do otherwise than listen to the insinuations with which *Iago* seeks to poison his mind against *Desdemona*, and which he makes with that assumed air of reserve, as if fearing to do her injustice? With what malignant art

he infuses the poison of suspicion into the pure and loyal soul of *Othello*! With what insidious semblance of affection for his general does he seem to be compelled to communicate to him his fears and suspicions! With what an apparent attempt to repress his conscience does he report to him the relations of *Desdemona* and *Cassio*! *Othello* has no reason to doubt the veracity of *Iago*. And yet he refuses to hear the first insinuations of doubt as to the fidelity of his wife, so beloved and so revered; and it is only when *Iago* reminds him of the prediction of *Brabantio*, and bids him remember the difference of color and of customs between her and himself, that he gives any thought to those revelations, and becomes suspicious almost by force. His serenity of mind is now gone forever; he bids farewell to the memory of his past glory, to his happy future, to all the sweet illusions of life.

Othello is often quoted as the personification of jealousy; but he is no more jealous than any other man in the same circumstances would be. The insinuations that have been poured into his ear would have caused doubt in the mind of any one, and this is further justified by the supposed fact in the tale *Iago* tells him that he heard *Cassio* say in his dream:

"Sweet Desdemona,
Let us be wary, let us hide our loves!"

Cursed fate! that gave thee to the Moor!"

Another fact which confirms his doubt is the assertion of *Iago* that he saw the handkerchief in the hands of *Cassio* which he had given to *Desdemona*. And this is confirmed by the manner in which *Desdemona* endeavors to conceal its loss when *Othello* demands it, and also when, impelled by kindness, she urges *Othello* to receive *Cassio* again into his immediate service. Although the scene in which *Cassio* holds the handkerchief in his hand is omitted from my representation, yet the words which the poet puts into the mouth of *Othello*, and which I repeat—

"By Heaven! I saw my handkerchief in his hand!"

seem to offer sufficient evidence of the guilt of *Desdemona*. On this evidence *Othello* decides to kill her. If seeing the handkerchief through the window in the house of *Cassio* was sufficient evidence for Cinzio Giraldis to justify *Othello's* jealousy, seeing it in the hands of *Cassio* himself was still stronger evidence for Shakspeare, as it is for you, my kind readers, and for me. The advice of *Iago* to strangle her, *Othello* approves; for to shed her blood

and deface her beautiful form would be to him sacrilege. He accomplishes the deed, yet after that she is heard to speak. It has been said that, probably, seeing that she suffered too much by this form of death, he stabs her in the breast; but this is not probable from the context. He says:

"I would not have thee linger in thy pain:
So, so."

But these words seem to indicate only his effort to accelerate her death and end her suffering; and yet she continues to speak, and when *Emilia* asks who has done the deed, she replies:

"Nobody; I myself. Farewell:
Commend me to my kind lord."

Shakspeare, even at the peril of admitting an improbable prolongation of life in *Desdemona*, wished to express her touching generosity by causing her to accuse herself of suicide, rather than permit her cruel yet beloved husband to suffer the imputation of having murdered her.

Iago is the antithesis of *Othello*. While the latter never suspects the malevolence of his ensign-bearer, the former well knows the nature of his general. He knows how loyal he is, and yet how vehement and terrible he can be when his wrath is awakened, and that an act, a word of his, may bring upon him a fearful revenge. The actor who represents this character must show himself so truthful and sincere in the suspicions he would infuse into the Moor as to leave his audience in doubt of their truth or falsehood. He must represent both faith and treachery, the saint and the demon, and the contrasts must be presented quickly and suddenly in order to produce the greatest effect. The personification of *Othello* is rendered much more powerful and brought into higher relief by the proper interpretation of *Iago*. If he be represented as a traitor and as Mephistopheles, *Othello's* acuteness becomes stupidity; and if, on the other hand, he be represented as indifferent to the result of his insinuations, he will make the mistake of showing too little regard for his general; he must, therefore, express his sorrow at the offense which is inflicted on his chief, his regret that he did not himself discover it, his painful irresolution, while he shows himself honestly convinced of his suspicions, without betraying, either by gesture or word, his deception. In his monologues, he has ample occasion to manifest these qualities. He would produce an immense effect if it were possible to surprise his hearers with the declaration of his perfidious scheme, after having

caused them to admire his friendly interest and his good-nature. To infuse such a sentiment into an audience would be difficult under any circumstances, and impossible by any other conception of the character of *Iago*.

But to return to *Othello*: the opinion of the nature of his love for *Desdemona* has already been stated. It was an entirely poetical love, without any element of sensuality. He himself describes his passion when he says:

"But there, where I have garner'd up my heart;
Where either I must live, or bear no life:
The fountain from the which my current runs,
Or else dries up."

Such being the nature of his love, his jealousy is of no ordinary stamp,—not the pangs which a man suffers when he is aware that another possesses the woman of his heart, but the anguish he feels when the fountain of his life is dried up, and the treasure of his heart is lost. The supposed guilt of *Desdemona* is also an offense to his loyalty; and, honorable as he is, he cannot bear that she who betrayed her father and then her husband should be allowed to live and to betray others. He, therefore, becomes judge and executioner; her death is a sacrifice which he owes to society; he has the right to inflict this punishment and has no thought of concealment. In this regard Shakspeare's *Othello* differs from that of Cinzio Giraldis, who, after having killed his wife with a blow, causes the ceiling of the room to fall on her that her death may be attributed to accident, thus concealing his crime. Shakspeare's *Othello*, on the contrary, far from concealing the deed, believes at first that he has accomplished an act of justice; and when he becomes aware of his fatal error, with more care for his honor than for his life, he desires that his deed should be narrated in all its horrid details; then, making himself at once judge and executioner, he sacrifices himself as he has sacrificed *Desdemona*. This last act reveals his true character, the basis of which is his perfect loyalty.

If it should be asked why I represent the suicide of *Othello* in the way I do, rather than by stabbing, in accordance with the general custom on the stage, I reply that, in the first place, this manner is more in accordance with the custom of the people of Africa, who usually execute their criminals and enemies in this way; then the arms used by these people are of a curved form, and, as such, are more adapted to this mode than to any other; moreover, we have the authority of Shakspeare himself, who puts into the mouth of *Othello*, in the act of committing suicide, these words:

"I took by the throat the circumcised dog,
And smote him—thus."

It would seem more natural that the act should follow the idea, and thus the blow be given at the throat. It may be objected, too, that a man who has cut his throat would not be able to speak, as Othello does after the blow. But, in order to cause death, it is not necessary to sever the carotid artery entirely; it suffices to wound it. This form of suicide may indeed be opposed to tradition, but while I respect this authority, I cannot submit to

it. I must, therefore, insist upon dying in my own way; and, meantime, taking leave of my indulgent readers, I beg to assure them that they will render the agony less painful by forgiving the writer for having thus wearied them with the expression of these rambling thoughts; and to my fair friends who have followed me through them, I would offer the prize of my gratitude—not, like Paris, to the most beautiful, but to the most patient.

ENFOLDINGS.

The snowflake that softly, all night, is whitening tree-top and pathway;
The avalanche suddenly rushing with darkness and death to the hamlet.

The ray stealing in through the lattice to waken the day-loving baby;
The pitiless horror of light in the sun-smitten reach of the desert.

The seed with its pregnant surprise of welcome young leaflet and blossom;
The despair of the wilderness tangle, and treacherous thicket of forest.

The happy west wind as it startles some noon-laden flower from its dreaming;
The hurricane crashing its way through the homes and the life of the valley.

The play of the jetlets of flame when the children laugh out on the hearth-stone;
The town or the prairie consumed in a terrible, hissing combustion.

The glide of a wave on the sands with its myriad sparkle in breaking;
The roar and the fury of ocean, a limitless maelstrom of ruin.

The leaping of heart unto heart with bliss that can never be spoken;
The passion that maddens, and shows how God may be thrust from His creatures.

For this do I tremble and start when the rose on the vine taps my shoulder,
For this when the storm beats me down my soul groweth bolder and bolder.

MY ESCAPE FROM SLAVERY.

IN the first narrative of my experience in slavery, written nearly forty years ago, and in various writings since, I have given the public what I considered very good reasons for withholding the manner of my escape. In substance these reasons were, first, that such publication at any time during the existence of slavery might be used by the master against the slave, and prevent the future escape of any who might adopt the same means that I did. The second reason was, if possi-

ble, still more binding to silence: the publication of details would certainly have put in peril the persons and property of those who assisted. Murder itself was not more sternly and certainly punished in the State of Maryland than that of aiding and abetting the escape of a slave. Many colored men, for no other crime than that of giving aid to a fugitive slave, have, like Charles T. Torrey, perished in prison. The abolition of slavery in my native State and throughout the coun-

try, and the lapse of time, render the caution hitherto observed no longer necessary. But even since the abolition of slavery, I have sometimes thought it well enough to baffle curiosity by saying that while slavery existed there were good reasons for not telling the manner of my escape, and since slavery had ceased to exist, there was no reason for telling it. I shall now, however, cease to avail myself of this formula, and, as far as I can, endeavor to satisfy this very natural curiosity. I should, perhaps, have yielded to that feeling sooner, had there been anything very heroic or thrilling in the incidents connected with my escape, for I am sorry to say I have nothing of that sort to tell; and yet the courage that could risk betrayal and the bravery which was ready to encounter death, if need be, in pursuit of freedom, were essential features in the undertaking. My success was due to address rather than courage, to good luck rather than bravery. My means of escape were provided for me by the very men who were making laws to hold and bind me more securely in slavery.

It was the custom in the State of Maryland to require the free colored people to have what were called free papers. These instruments they were required to renew very often, and by charging a fee for this writing, considerable sums from time to time were collected by the State. In these papers the name, age, color, height, and form of the free-man were described, together with any scars or other marks upon his person which could assist in his identification. This device in some measure defeated itself—since more than one man could be found to answer the same general description. Hence many slaves could escape by personating the owner of one set of papers; and this was often done as follows: A slave, nearly or sufficiently answering the description set forth in the papers, would borrow or hire them till by means of them he could escape to a free State, and then, by mail or otherwise, would return them to the owner. The operation was a hazardous one for the lender as well as for the borrower. A failure on the part of the fugitive to send back the papers would imperil his benefactor, and the discovery of the papers in possession of the wrong man would imperil both the fugitive and his friend. It was, therefore, an act of supreme trust on the part of a freeman of color thus to put in jeopardy his own liberty that another might be free. It was, however, not unfrequently bravely done, and was seldom discovered. I was not so fortunate as to resemble any of my free acquaintances sufficiently to answer the description of their papers. But I had one friend—a sailor—who owned a sailor's

protection, which answered somewhat the purpose of free papers—describing his person, and certifying to the fact that he was a free American sailor. The instrument had at its head the American eagle, which gave it the appearance at once of an authorized document. This protection, when in my hands, did not describe its bearer very accurately. Indeed, it called for a man much darker than myself, and close examination of it would have caused my arrest at the start.

In order to avoid this fatal scrutiny on the part of railroad officials, I arranged with Isaac Rolls, a Baltimore hackman, to bring my baggage to the Philadelphia train just on the moment of starting, and jumped upon the car myself when the train was in motion. Had I gone into the station and offered to purchase a ticket, I should have been instantly and carefully examined, and undoubtedly arrested. In choosing this plan I considered the jostle of the train, and the natural haste of the conductor, in a train crowded with passengers, and relied upon my skill and address in playing the sailor, as described in my protection, to do the rest. One element in my favor was the kind feeling which prevailed in Baltimore and other sea-ports at the time, toward "those who go down to the sea in ships." "Free trade and sailors' rights" just then expressed the sentiment of the country. In my clothing I was rigged out in sailor style. I had on a red shirt and a tarpaulin hat, and a black cravat tied in sailor fashion carelessly and loosely about my neck. My knowledge of ships and sailor's talk came much to my assistance, for I knew a ship from stem to stern, and from keelson to cross-trees, and could talk sailor like an "old salt." I was well on the way to Havre de Grace before the conductor came into the negro car to collect tickets and examine the papers of his black passengers. This was a critical moment in the drama. My whole future depended upon the decision of this conductor. Agitated though I was while this ceremony was proceeding, still, externally, at least, I was apparently calm and self-possessed. He went on with his duty—examining several colored passengers before reaching me. He was somewhat harsh in tone and peremptory in manner until he reached me, when, strange enough, and to my surprise and relief, his whole manner changed. Seeing that I did not readily produce my free papers, as the other colored persons in the car had done, he said to me, in friendly contrast with his bearing toward the others:

"I suppose you have your free papers?"

To which I answered:

"No, sir; I never carry my free papers to sea with me."

"But you have something to show that you are a freeman, haven't you?"

"Yes, sir," I answered; "I have a paper with the American eagle on it, and that will carry me around the world."

With this I drew from my deep sailor's pocket my seaman's protection, as before described. The merest glance at the paper satisfied him, and he took my fare and went on about his business. This moment of time was one of the most anxious I ever experienced. Had the conductor looked closely at the paper, he could not have failed to discover that it called for a very different-looking person from myself, and in that case it would have been his duty to arrest me on the instant, and send me back to Baltimore from the first station. When he left me with the assurance that I was all right, though much relieved, I realized that I was still in great danger: I was still in Maryland, and subject to arrest at any moment. I saw on the train several persons who would have known me in any other clothes, and I feared they might recognize me, even in my sailor "rig," and report me to the conductor, who would then subject me to a closer examination, which I knew well would be fatal to me.

Though I was not a murderer fleeing from justice, I felt perhaps quite as miserable as such a criminal. The train was moving at a very high rate of speed for that epoch of railroad travel, but to my anxious mind it was moving far too slowly. Minutes were hours, and hours were days during this part of my flight. After Maryland, I was to pass through Delaware—another slave State, where slave-catchers generally awaited their prey, for it was not in the interior of the State, but on its borders, that these human hounds were most vigilant and active. The border lines between slavery and freedom were the dangerous ones for the fugitives. The heart of no fox or deer, with hungry hounds on his trail in full chase, could have beaten more anxiously or noisily than did mine from the time I left Baltimore till I reached Philadelphia. The passage of the Susquehanna River at Havre de Grace was at that time made by ferry-boat, on board of which I met a young colored man by the name of Nichols, who came very near betraying me. He was a "hand" on the boat, but, instead of minding his business, he insisted upon knowing me, and asking me dangerous questions as to where I was going, when I was coming back, etc. I got away from my old and inconvenient acquaintance as soon as I could decently do so, and went to another part of the boat. Once across the river, I encountered a new danger. Only a few days before, I had been at work on a

revenue cutter, in Mr. Price's ship-yard in Baltimore, under the care of Captain McGowan. On the meeting at this point of the two trains, the one going south stopped on the track just opposite to the one going north, and it so happened that this Captain McGowan sat at a window where he could see me very distinctly, and would certainly have recognized me had he looked at me but for a second. Fortunately, in the hurry of the moment, he did not see me; and the trains soon passed each other on their respective ways. But this was not my only hair-breadth escape. A German blacksmith whom I knew well was on the train with me, and looked at me very intently, as if he thought he had seen me somewhere before in his travels. I really believe he knew me, but had no heart to betray me. At any rate, he saw me escaping and held his peace.

The last point of imminent danger, and the one I dreaded most, was Wilmington. Here we left the train and took the steam-boat for Philadelphia. In making the change here I again apprehended arrest, but no one disturbed me, and I was soon on the broad and beautiful Delaware, speeding away to the Quaker City. On reaching Philadelphia in the afternoon, I inquired of a colored man how I could get on to New York. He directed me to the William-street depot, and thither I went, taking the train that night. I reached New York Tuesday morning, having completed the journey in less than twenty-four hours.

My free life began on the third of September, 1838. On the morning of the fourth of that month, after an anxious and most perilous but safe journey, I found myself in the big city of New York, a *free man*—one more added to the mighty throng which, like the confused waves of the troubled sea, surged to and fro between the lofty walls of Broadway. Though dazzled with the wonders which met me on every hand, my thoughts could not be much withdrawn from my strange situation. For the moment, the dreams of my youth and the hopes of my manhood were completely fulfilled. The bonds that had held me to "old master" were broken. No man now had a right to call me his slave or assert mastery over me. I was in the rough and tumble of an outdoor world, to take my chance with the rest of its busy number. I have often been asked how I felt when first I found myself on free soil. There is scarcely anything in my experience about which I could not give a more satisfactory answer. A new world had opened upon me. If life is more than breath and the "quick round of blood," I lived more in that one day than

in a year of my slave life. It was a time of joyous excitement which words can but tamely describe. In a letter written to a friend soon after reaching New York, I said: "I felt as one might feel upon escape from a den of hungry lions." Anguish and grief, like darkness and rain, may be depicted; but gladness and joy, like the rainbow, defy the skill of pen or pencil. During ten or fifteen years I had been, as it were, dragging a heavy chain which no strength of mine could break; I was not only a slave, but a slave for life. I might become a husband, a father, an aged man, but through all, from birth to death, from the cradle to the grave, I had felt myself doomed. All efforts I had previously made to secure my freedom had not only failed, but had seemed only to rivet my fetters the more firmly, and to render my escape more difficult. Baffled, entangled, and discouraged, I had at times asked myself the question, May not my condition after all be God's work, and ordered for a wise purpose, and if so, Is not submission my duty? A contest had in fact been going on in my mind for a long time, between the clear consciousness of right and the plausible make-shifts of theology and superstition. The one held me an abject slave—a prisoner for life, punished for some transgression in which I had no lot nor part; and the other counseled me to manly endeavor to secure my freedom. This contest was now ended; my chains were broken, and the victory brought me unspeakable joy.

But my gladness was short-lived, for I was not yet out of the reach and power of the slave-holders. I soon found that New York was not quite so free or so safe a refuge as I had supposed, and a sense of loneliness and insecurity again oppressed me most sadly. I chanced to meet on the street, a few hours after my landing, a fugitive slave whom I had once known well in slavery. The information received from him alarmed me. The fugitive in question was known in Baltimore as "Allender's Jake," but in New York he wore the more respectable name of "William Dixon." Jake, in law, was the property of Doctor Allender, and Tolly Allender, the son of the doctor, had once made an effort to recapture *Mr. Dixon*, but had failed for want of evidence to support his claim. Jake told me the circumstances of this attempt, and how narrowly he escaped being sent back to slavery and torture. He told me that New York was then full of Southerners returning from the Northern watering-places; that the colored people of New York were not to be trusted; that there were hired men of my own color who would betray me for a

few dollars; that there were hired men ever on the lookout for fugitives; that I must trust no man with my secret; that I must not think of going either upon the wharves or into any colored boarding-house, for all such places were closely watched; that he was himself unable to help me; and, in fact, he seemed while speaking to me to fear lest I myself might be a spy and a betrayer. Under this apprehension, as I suppose, he showed signs of wishing to be rid of me, and with whitewash brush in hand, in search of work, he soon disappeared.

This picture, given by poor "Jake," of New York, was a damper to my enthusiasm. My little store of money would soon be exhausted, and since it would be unsafe for me to go on the wharves for work, and I had no introductions elsewhere, the prospect for me was far from cheerful. I saw the wisdom of keeping away from the ship-yards, for, if pursued, as I felt certain I should be, Mr. Auld, my "master," would naturally seek me there among the calkers. Every door seemed closed against me. I was in the midst of an ocean of my fellow-men, and yet a perfect stranger to every one. I was without home, without acquaintance, without money, without credit, without work, and without any definite knowledge as to what course to take, or where to look for succor. In such an extremity, a man had something besides his new-born freedom to think of. While wandering about the streets of New York, and lodging at least one night among the barrels on one of the wharves, I was indeed free—from slavery, but free from food and shelter as well. I kept my secret to myself as long as I could, but I was compelled at last to seek some one who would befriend me without taking advantage of my destitution to betray me. Such a person I found in a sailor named Stuart, a warm-hearted and generous fellow, who, from his humble home on Centre street, saw me standing on the opposite sidewalk, near the Tombs prison. As he approached me, I ventured a remark to him which at once enlisted his interest in me. He took me to his home to spend the night, and in the morning went with me to Mr. David Ruggles, the secretary of the New York Vigilance Committee, a co-worker with Isaac T. Hopper, Lewis and Arthur Tappan, Theodore S. Wright, Samuel Cornish, Thomas Downing, Philip A. Bell, and other true men of their time. All these (save Mr. Bell, who still lives, and is editor and publisher of a paper called the "Elevator," in San Francisco) have finished their work on earth. Once in the hands of these brave and wise men, I felt comparatively safe. With Mr. Ruggles, on the corner

of Lispenard and Church streets, I was hidden several days, during which time my intended wife came on from Baltimore at my call, to share the burdens of life with me. She was a free woman, and came at once on getting the good news of my safety. We were married by Rev. J. W. C. Pennington, then a well-known and respected Presbyterian minister. I had no money with which to pay the marriage fee, but he seemed well pleased with our thanks.

Mr. Ruggles was the first officer on the "Underground Railroad" whom I met after coming North, and was, indeed, the only one with whom I had anything to do till I became such an officer myself. Learning that my trade was that of a calker, he promptly decided that the best place for me was in New Bedford, Mass. He told me that many ships for whaling voyages were fitted out there, and that I might there find work at my trade and make a good living. So, on the day of the marriage ceremony, we took our little luggage to the steamer *John W. Richmond*, which, at that time, was one of the line running between New York and Newport, R. I. Forty-three years ago colored travelers were not permitted in the cabin, nor allowed abaft the paddle-wheels of a steam vessel. They were compelled, whatever the weather might be,—whether cold or hot, wet or dry,—to spend the night on deck. Unjust as this regulation was, it did not trouble us much; we had fared much harder before. We arrived at Newport the next morning, and soon after an old fashioned stage-coach, with "New Bedford" in large yellow letters on its sides, came down to the wharf. I had not money enough to pay our fare, and stood hesitating what to do. Fortunately for us, there were two Quaker gentlemen who were about to take passage on the stage,—Friends William C. Taber and Joseph Ricketson,—who at once discerned our true situation, and, in a peculiarly quiet way, addressing me, Mr. Taber said: "Thee get in." I never obeyed an order with more alacrity, and we were soon on our way to our new home. When we reached "Stone Bridge" the passengers alighted for breakfast, and paid their fares to the driver. We took no breakfast, and, when asked for our fares, I told the driver I would make it right with him when we reached New Bedford. I expected some objection to this on his part, but he made none. When, however, we reached New Bedford, he took our baggage, including three music-books,—two of them collections by Dyer, and one by Shaw,—and held them until I was able to redeem them by paying to him the amount due for our rides. This was soon done, for Mr. Nathan Johnson not only

received me kindly and hospitably, but, on being informed about our baggage, at once loaned me the two dollars with which to square accounts with the stage-driver. Mr. and Mrs. Nathan Johnson reached a good old age, and now rest from their labors. I am under many grateful obligations to them. They not only "took me in when a stranger" and "fed me when hungry," but taught me how to make an honest living. Thus, in a fortnight after my flight from Maryland, I was safe in New Bedford, a citizen of the grand old commonwealth of Massachusetts.

Once initiated into my new life of freedom and assured by Mr. Johnson that I need not fear recapture in that city, a comparatively unimportant question arose as to the name by which I should be known thereafter in my new relation as a free man. The name given me by my dear mother was no less pretentious and long than Frederick Augustus Washington Bailey. I had, however, while living in Maryland, dispensed with the Augustus Washington, and retained only Frederick Bailey. Between Baltimore and New Bedford, the better to conceal myself from the slave-hunters, I had parted with Bailey and called myself Johnson; but in New Bedford I found that the Johnson family was already so numerous as to cause some confusion in distinguishing them, hence a change in this name seemed desirable. Nathan Johnson, mine host, placed great emphasis upon this necessity, and wished me to allow him to select a name for me. I consented, and he called me by my present name—the one by which I have been known for three and forty years—Frederick Douglass. Mr. Johnson had just been reading the "Lady of the Lake," and so pleased was he with its great character that he wished me to bear his name. Since reading that charming poem myself, I have often thought that, considering the noble hospitality and manly character of Nathan Johnson—black man though he was—he, far more than I, illustrated the virtues of the Douglas of Scotland. Sure am I that, if any slave-catcher had entered his domicile with a view to my recapture, Johnson would have shown himself like him of the "stalwart hand."

The reader may be surprised at the impressions I had in some way conceived of the social and material condition of the people at the North. I had no proper idea of the wealth, refinement, enterprise, and high civilization of this section of the country. My "Columbian Orator," almost my only book, had done nothing to enlighten me concerning Northern society. I had been taught that slavery was the bottom fact of all wealth. With this foundation idea, I came naturally to the conclusion

that poverty must be the general condition of the people of the free States. In the country from which I came, a white man holding no slaves was usually an ignorant and poverty-stricken man, and men of this class were contemptuously called "poor white trash." Hence I supposed that, since the non-slaveholders at the South were ignorant, poor, and degraded as a class, the non-slaveholders at the North must be in a similar condition. I could have landed in no part of the United States where I should have found a more striking and gratifying contrast, not only to life generally in the South, but in the condition of the colored people there, than in New Bedford. I was amazed when Mr. Johnson told me that there was nothing in the laws or constitution of Massachusetts that would prevent a colored man from being governor of the State, if the people should see fit to elect him. There, too, the black man's children attended the public schools with the white man's children, and apparently without objection from any quarter. To impress me with my security from recapture and return to slavery, Mr. Johnson assured me that no slaveholder could take a slave out of New Bedford; that there were men there who would lay down their lives to save me from such a fate.

The fifth day after my arrival, I put on the clothes of a common laborer, and went upon the wharves in search of work. On my way down Union street I saw a large pile of coal in front of the house of Rev. Ephraim Peabody, the Unitarian minister. I went to the kitchen door and asked the privilege of bringing in and putting away this coal. "What will you charge?" said the lady. "I will leave that to you, madam." "You may put it away," she said. I was not long in accomplishing the job, when the dear lady put into my hand *two silver half-dollars*. To understand the emotion which swelled my heart as I clasped this money, realizing that I had no master who could take it from me,—*that it was mine—that my hands were my own*, and could earn more of the precious coin,—one must have been in some sense himself a slave. My next job was stowing a sloop at Uncle Gid. Howland's wharf with a cargo of oil for New York. I was not only a free-man, but a free working-man, and no "master" stood ready at the end of the week to seize my hard earnings.

The season was growing late and work was plenty. Ships were being fitted out for whaling, and much wood was used in storing them. The sawing this wood was considered a good job. With the help of old Friend Johnson (blessings on his memory)

I got a saw and "buck," and went at it. When I went into a store to buy a cord with which to brace up my saw in the frame, I asked for a "fip's" worth of cord. The man behind the counter looked rather sharply at me, and said with equal sharpness, "You don't belong about here." I was alarmed, and thought I had betrayed myself. A fip in Maryland was six and a quarter cents, called fourpence in Massachusetts. But no harm came from the "fi'penny-bit" blunder, and I confidently and cheerfully went to work with my saw and buck. It was new business to me, but I never did better work, or more of it, in the same space of time on the plantation for Covey, the negro-breaker, than I did for myself in these earliest years of my freedom.

Notwithstanding the just and humane sentiment of New Bedford three and forty years ago, the place was not entirely free from race and color prejudice. The good influence of the Roaches, Rodmans, Arnolds, Grinnells, and Robesons did not pervade all classes of its people. The test of the real civilization of the community came when I applied for work at my trade, and then my repulse was emphatic and decisive. It so happened that Mr. Rodney French, a wealthy and enterprising citizen, distinguished as an anti-slavery man, was fitting out a vessel for a whaling voyage, upon which there was a heavy job of calking and coppering to be done. I had some skill in both branches, and applied to Mr. French for work. He, generous man that he was, told me he would employ me, and I might go at once to the vessel. I obeyed him, but upon reaching the float-stage, where others calkers were at work, I was told that every white man would leave the ship, in her unfinished condition, if I struck a blow at my trade upon her. This uncivil, inhuman, and selfish treatment was not so shocking and scandalous in my eyes at the time as it now appears to me. Slavery had inured me to hardships that made ordinary trouble sit lightly upon me. Could I have worked at my trade I could have earned two dollars a day, but as a common laborer I received but one dollar. The difference was of great importance to me, but if I could not get two dollars, I was glad to get one; and so I went to work for Mr. French as a common laborer. The consciousness that I was free—no longer a slave—kept me cheerful under this, and many similar proscriptions, which I was destined to meet in New Bedford and elsewhere on the free soil of Massachusetts. For instance, though colored children attended the schools, and were treated kindly by their

teachers, the New Bedford Lyceum refused, till several years after my residence in that city, to allow any colored person to attend the lectures delivered in its hall. Not until such men as Charles Sumner, Theodore Parker, Ralph Waldo Emerson, and Horace Mann refused to lecture in their course while there was such a restriction, was it abandoned.

Becoming satisfied that I could not rely on my trade in New Bedford to give me a living, I prepared myself to do any kind of work that came to hand. I sawed wood, shoveled coal, dug cellars, moved rubbish from back yards, worked on the wharves, loaded and unloaded vessels, and scoured their cabins.

I afterward got steady work at the brass-foundry owned by Mr. Richmond. My duty here was to blow the bellows, swing the crane, and empty the flasks in which castings were made; and at times this was hot and heavy work. The articles produced here were mostly for ship work, and in the busy season the foundry was in operation night and day. I have often worked two nights and every working day of the week. My foreman, Mr. Cobb, was a good man, and more than once protected me

from abuse that one or more of the hands was disposed to throw upon me. While in this situation I had little time for mental improvement. Hard work, night and day, over a furnace hot enough to keep the metal running like water, was more favorable to action than thought; yet here I often nailed a newspaper to the post near my bellows, and read while I was performing the up and down motion of the heavy beam by which the bellows was inflated and discharged. It was the pursuit of knowledge under difficulties, and I look back to it now, after so many years, with some complacency and a little wonder that I could have been so earnest and persevering in any pursuit other than for my daily bread. I certainly saw nothing in the conduct of those around to inspire me with such interest: they were all devoted exclusively to what their hands found to do. I am glad to be able to say that, during my engagement in this foundry, no complaint was ever made against me that I did not do my work, and do it well. The bellows which I worked by main strength was, after I left, moved by a steam-engine.

ELI.

I.

UNDER a boat, high and dry, at low tide, on the beach, John Wood was seated in the sand, sheltered from the sun in the boat's shadow, absorbed in the laying on of verdigris. The dull, worn color was rapidly giving place to a brilliant, shining green. Occasionally a scraper, which lay by, was taken up to remove the last trace of a barnacle.

It was Wood's boat, but he was not a boatman; he painted cleverly, but he was not a painter. He kept the brown store under the elms of the main street, now hot and still, where at this moment his blushing sister was captivating the heart of an awkward farmer's boy, as she sold him a pair of striped suspenders.

As the church-clock struck the last of twelve decided blows, three children came rushing out of the house on the bank above the beach. It was one of those deceptive New England cottages, weather-worn without, but bright and bountifully home-like within—with its trim parlor, proud of a cabinet organ; with its front hall, now cooled by the light sea-breeze drifting through the blind-door, where a tall clock issued its monotonous call to a siesta

on the rattan lounge; with its spare room, open now, opposite the parlor, and now, too, drawing in the salt air through close-shut blinds, in anticipation of the joyful arrival this evening of Sister Sarah, with her little brood, from the city.

The children scampered across the road, and then the eldest hushed the others and sent a little brother ahead to steal, barefoot, along the shining sea-weed to his father.

The plotted surprise appeared to succeed completely. The painter was seized by the ears from behind, and captured.

"Guess who's here, or you can't get up," said the infant captor.

"It's Napoleon Bonaparte; don't joggle," said his father, running a brush steadily along the water-line.

"No! no! no!" with shouts of laughter from the whole attacking party.

"Then it's Captain Ezekiel?"

This excited great merriment: Captain Ezekiel was an aged, purblind man, who leaned on a cane.

After attempts to identify the invader,—with the tax-collector come for taxes, then with the elderly minister making a pastoral call, with the formal school-master, and with

Samuel J. Tilden,—the victim reached over his shoulder, and, seizing the assailant by a handful of calico jacket, brought him around, squirming, before him.

"Now," he said, "I'll give you a coat of verdigris."

(Great applause from the reserve force behind.)

"I suppose Mother sent you to say dinner's ready," said the father, rising and surveying the green bottom of the boat. "I must eat quick, so as to do the other side before half-flood."

And with a child on each shoulder, and the third pushing him from behind with her head, he marched toward the vine-covered kitchen, where, between two opposite netted doors, the table was trimly set.

"Father, you look like a mermaid, with your green hands," said his wife, laughing, as she handed him the spirits of turpentine. "A woman could paint that boat, in a light dress, and not get a spot on her."

He smiled good-naturedly: he never spoke much.

"I guess Louise wont have much trade to-day," said his wife, as they all sat down; "it's so hot in the sun that everybody'll wait till night. But she has her tatting-work to do, and she's got a book, too, that she wanted to finish."

Her husband nodded, and ate away.

"Oh, can't we go up street and see her, this afternoon?" said one of the children.

"Who can that be?" said the mother, as an elderly, half-official-looking man stopped his horse at the front gate and alighted. The man left the horse unchecked to browse by the road-side, and came to the door.

"Oh, it's you, Captain Nourse," said Wood, rising to open the netting door, and holding out his hand. "Come to summons me as a witness in something about the bank case, I suppose. Let me introduce Captain Nourse, Mary," he said, "deputy sheriff. Sit down, Captain, and have some dinner with us."

"No, I guess I wont set," said the captain. "I cal'lated not to eat till I got home, in the middle o' the a'ternoon. No, I'll set down in eye-shot of the mare, and read the paper while you eat."

"I hope they don't want me to testify anywhere to-day," said Wood; "because my boat's half verdigris'd, and I want to finish her this afternoon."

"No testimony to-day," said the captain. —"Hi! hi! Kitty!" he called to the mare, as she began to meander across the road; and he went out to a tree by the front fence, and sat down on a green bench, beside a work-basket and a half-finished child's dress, and

read the country paper which he had taken from the office as he came along.

After dinner Wood went out bare-headed, and leaned on the fence by the captain. His wife stood just inside the door, looking out at them.

The "bank case" was the great sensation of the town, and Wood was one of the main witnesses, for he had been taking the place of the absent cashier when the safe was broken open and rifled, to the wide-spread distress of depositors and stockholders and the ruin of Hon. Edward Clark, the president. Wood had locked the safe on the afternoon before the eventful night, and had carried home the key with him, and he was to testify to the contents of the safe as he had left it.

"I guess they're glad they've got such a witness as John," said his wife to herself, as she looked at him fondly, "and I guess they think there wont be much doubt about what he says."

"Well, Captain," said Wood, jocosely, breaking a spear of grass to bits in his fingers, "I didn't know but you'd come to arrest me."

The captain calmly smiled as only a man can smile who has been accosted with the same humorous remark a dozen times a day for twenty years. He folded his paper carefully, put it in his pocket, took off his spectacles and put them in their silver case, took a red silk handkerchief from his hat, wiped his face, and put the handkerchief back. Then he said, shortly:

"That's what I *have* come for."

Wood, still leaning on the fence, looked at him, and said nothing.

"That's just what I've come for," said Captain Nourse. "I've got to arrest you; here's the warrant." And he handed it to him.

"What does this mean?" said Wood. "I can't make head nor tail of this."

"Well," said the captain, "the long and short is: these high-toned detectives that they've had down from town, seen' as our own force wasn't good enough, allow that the safe was unlocked with a key, in due form, and then the lock was broke afterward, to look as if it had been forced open. They've had the foreman of the safe-men down, too, and he says the same thing. Naturally, the argument is: there were only two keys in existence; one was safe with the president of the bank, and is about all he's got to show out of forty years' savings; the only other one you had: consequently it heaves it on to you."

"I see," said Wood. "I will go with you. Do you want to come into the house with me while I get my coat?"

"Well, I suppose I must keep you in sight,—now, you know."

And they went into the house.

"Mary," said her husband, "the folks that lost by Clark when the bank broke have been at somebody, and he's pitched on me; and Captain Nourse has come to arrest me. I shall get bail before long."

She said nothing, and did not shed a tear till he was gone.

But then ——

II.

WIDE wastes of salt marsh to the right, imprisoning the upland with a vain promise of infinite liberty, and, between low, distant sand-hills, a rim of sea. Stretches of pine woods behind, shutting in from the great outer world, and soon to darken into evening gloom. Plowed fields and elm-dotted pastures to the left, and birch-lined roads leading by white farm-houses to the village, all speaking of cheer and freedom to the prosperous and the happy, but to the unfortunate and the indebted, of meshes invisible but strong as steel. But, before, no lonesome marshes, no desolate forest, no farm or village street, but the free blue ocean, rolling and tumbling still from the force of an expended gale.

In the open door-way of a little cottage, warmed by the soft slanting rays of the September sun, a rough man, burnt and freckled, was sitting, at his feet a net, engaged upon some handiwork which two little girls were watching. Close by him lay a setter, his nose between his paws. Occasionally the man raised his eyes to scan the sea.

"There's Joel," he said, "comin' in around the Bar. Not much air stirrin' now!"

Then he turned to his work again.

"First, you go *so fash*," he said to the children, as he drew a thread; "then you go *so fash*."

And as he worked he made a great show of labor, much to their diversion.

But the sight of Joel's broad white sail had not brought pleasant thoughts to his mind. For Joel had hailed him, off the Shoal, the afternoon before, and had obligingly offered to buy his fish, right there, and so let him go directly home, omitting to mention that sudden jump of price due to an empty market.

"Wonder what poor man he's took a dollar out of to-day! Well, I s'pose it's all right: those that's got money, want money."

"What be you, Eli—ganging on hooks?" said Aunt Patience, as she tip-toed into the kitchen behind him, from his wife's sick-room, and softly closed the door after her.

"No," said the elder of the children: "he's mending our stockings, and showing me how."

"Well, you do have a hard time, don't you?" said Aunt Patience, looking down over his shoulder; "to slave and tug and scrape to get a house over your head, and then to have to turn square 'round, and stay to home with a sick woman, and eat all into it with mortgages!"

"Oh, well," he said, "we'll fetch, somehow."

Aunt Patience went to the glass, and holding a black pin in her mouth; carefully tied the strings of her sun-bonnet.

"Anyway," she said, "you take it good-natured. Though if there is one thing that's harder than another, it is to be good-natured all the time, without being aggravating. I have known men that was so awfully good-natured that they was harder to live with than if they was cross!"

And without specifying further, she opened her plaid parasol, and stepped out at the porch.

THOUGH, on this quiet afternoon of Saturday, the peace of the approaching Sabbath seemed already brooding over the little dwelling, peace had not lent her hand to the building of the home. Every foot of land, every shingle, every nail, had been wrung from the reluctant sea. Every voyage had contributed something. It was a great day when Eli was able to buy the land. Then, between two voyages, he dug a cellar and laid a foundation; then he saved enough to build the main part of the cottage and to finish the front room, lending his own hand to the work. Then he used to get letters at every port, telling of progress—how Lizzie, his wife, had adorned the front room with a bright nine-penny paper, of which a little piece was inclosed, which he kept as a sort of charm about him and exhibited to his friends; how she and her little brother had lathed the entry and the kitchen, and how they had set out blackberry vines from the woods. Then another letter told of a surprise awaiting him on his return; and, in due time, coming home as third mate from Hong Kong to a seaman's tumultuous welcome, he had found that a great, good-natured mason, with whose sick child his wife had watched, night after night, had appeared one day with lime and hair and sand, and in white raiment, and had plastered the entry and the kitchen, and finished a room upstairs.

And so, for years, at home and on the sea, at New York, and at Valparaiso, and in the Straits of Malacca, the little house and the

little family within it had grown into the fiber of Eli's heart. Nothing had given him more delight than to meet, in the strange streets of Calcutta or before the Mosque of Omar, some practical Yankee from Stonington or Machias, and, whittling, to discuss with him, among the turbans of the Orient, the comparative value of shaved and of sawed shingles, or the economy of "Swedes-iron" nails, and to go over with him the estimates and plans which he had worked out in his head under all the constellations of the skies.

THE supper things were cleared away. The children had said good-night and gone to bed, and Eli had been sitting for an hour by his wife's bedside. He had had to tax his patience and ingenuity heavily during the long months that she had lain there to entertain her for a little while in the evening, after his hard, wet day's work. He had been talking now of the coming week, when he was to serve upon the jury in the adjoining county-town.

"I cal'late I can come home about every night," he said, "and it'll be quite a change, at any rate."

"But you don't seem so cheerful about it as I counted you would be," said his wife. "Are you afraid you'll have to be on the bank case?"

"Not much!" he answered. "No trouble 'n that case! Jury wont leave their seats. These city fellers'll find they've bit off more'n they can chew when they try to figure out John Wood done that. I only hope I'll have the luck to be on that case—all hands on the jury whisper together a minute, and then clear him, right on the spot, and then shake hands with him all 'round!"

"But something is worrying you," she said. "What is it? You have looked it since noon."

"Oh, nothin'," he replied,—"only George Cahoon came up to-noon to say that he was goin' West next week, and that he would have to have that money he let me have a while ago. And where to get it—I don't know."

III.

THE court-room was packed. John Wood's trial was drawing to its close. Eli was on the jury. Some one had advised the prosecuting attorney, in a whisper, to challenge him, but he had shaken his head and said:

"Oh, I couldn't afford to challenge him for that: it would only leak out, and set the jury against me. I'll risk his standing out against this evidence."

The trial had been short. It had been shown how the little building of the bank had been entered. Skilled locksmiths from the city had testified that the safe was opened with a key, and that the lock was broken afterward, from the inside—plainly to raise the theory of a forcible entry by strangers.

It had been proved that the only key in existence, not counting that kept by the president, was in the possession of Wood, who was filling, for a few days, the place of the cashier—the president's brother—in his absence. It had been shown that Wood was met, at one o'clock of the night in question, crossing the fields toward his home, from the direction of the bank, with a large wicker basket slung over his shoulders, returning, as he had said, from eel-spearing in Harlow's Creek; and there was other circumstantial evidence.

Mr. Clark, the president of the bank, had won the sympathy of every one by the modest way in which, with eye-glasses in hand, he had testified to the particulars of the loss which had left him penniless, and had ruined others whose little all was in his hands. And then, in reply to the formal question, he had testified, amid roars of laughter from the court-room, that it was not he who robbed the safe. At this, even the judge and Wood's lawyer had not restrained a smile.

This had left the guilt with Wood. His lawyer, an inexperienced young attorney—who had done more or less business for the bank, and would hardly have ventured to defend this case but that the president had kindly expressed his entire willingness that he should do so—had, of course, not thought it worth while to cross-examine Mr. Clark, and had directed his whole argument against the theory that the safe had been opened with a key, and not by strangers. But he had felt all through that, as a man politely remarked to him when he finished, he was only butting his "head ag'in a stone wall."

And while he was arguing, a jolly-looking old lawyer had written, in the fly-leaf of a law-book on his knee, and passed with a wink to a young man near him who had that very morning been admitted to the bar, these lines:

"When callow Blackstones soar too high,
Quit common-sense, and reckless fly,
Soon, Icarus-like, they headlong fall,
And down come client, case, and all."

The district-attorney had not thought it worth while to expend much strength upon his closing argument; but being a jovial stump-speaker, of a wide reputation within narrow limits, he had not been able to refrain from making merry over Wood's statement that the

basket which he had been seen bearing home, on the eventful night, was a basket of eels.

"Fine eels those, gentlemen! We have seen gold-fish and silver-fish, but golden eels are first discovered by this defendant. The apostle, in Holy Writ, caught a fish with a coin in its mouth; but this man leaves the apostle in the dim distance when he finds eels that are all money. No storied fisherman of Bagdad, catching enchanted princes disguised as fishes in the sea, ever hooked such a treasure as this defendant hooked when he hooked that basket of eels! [Rustling appreciation of the pun among the jury.] If a squirming, twisting, winding, wriggling eel, gentlemen, can be said at any given moment to have a back, we may distinguish this new-found species as the green-back eel. It is a common saying that no man can hold an eel and remain a Christian. I should like to have viewed the pious equanimity of this church-member when he laid his hands on that whole bed of eels. In happy, barefoot boyhood, gentlemen, we used to find mud-turtles marked with initials or devices cut in their shells; but what must have been our friend's surprise to find, in the muddy bed of Harlow's Creek, eels marked with a steel-engraving of the landing of Columbus, and the signature of the Register of the Treasury! I hear that a corporation is now being formed by the title of The Harlow's Creek Greenback National Bank-bill Eel-fishing Company, to follow up, with seines and spears, our worthy friend's discovery! I learn that the news of this rich placer has spread to the golden mountains of the West, and that the exhausted intellects which have been reduced to such names for their mines as 'The Tombstone,' 'The Red Dog,' the 'Mrs. E. J. Parkhurst,' are likely now to flood us with prospectuses of the 'Eel Mine,' 'The Flat Eel,' 'The Double Eel,' and then, when they get ready to burst upon confiding friends, 'The Consolidated Eels.'"

It takes but little to make a school or a court-room laugh, and the speech had appeared to give a good deal of amusement to the listeners.

To all?

Did it amuse that man who sat, with folded arms, harsh and rigid, at the dock? Did it divert that white-faced woman, cowering in a corner, listening as in a dream?

THE judge now charged the jury briefly. It was unnecessary for him, he said, to recapitulate evidence of so simple a character. The chief question for the jury was as to the credibility of the witnesses. If the witnesses for the prosecution were truthful and were not mistaken, the inference of guilt seemed

inevitable; this the defendant's counsel had conceded. The defendant had proved a good reputation; upon that point there was only this to be said: that, while such evidence was entitled to weight, yet, on the other hand, crimes involving a breach of trust could, from their very nature, be committed only by persons whose good reputations secured them positions of trust.

THE jury-room had evidently not been furnished by a ring. There was a long table for debate, twelve hard chairs for repose, twelve spittoons for luxury, and a clock.

The jury sat in silence for a few moments, as old Captain Nourse, who had them in his keeping, and eyed them as if he was afraid that he might lose one of them in a crack and be held accountable on his bond, rattled away at the unruly lock. Looking at them then, you would have seen faces all of a New England cast but one. There was a tall, powerful negro called George Washington, a man well known in this county town, to which he had come, as driftwood from the storm of war, in '65. Some of the "boys" had heard him, in a great prayer-meeting in Washington,—a city which he always spoke of as his "namesake,"—at the time of the great review, say, in his strong voice, with that pathetic quaver in it: "Like as de parched an' weary traveler hangs his harp upon de winder, an' sighs for oysters in de desert, so I longs to res' my soul an' my foot in Mass'chusetts"; and they were so delighted with him that they invited him on the spot to go home with them, and took up a collection to pay his fare, and so he was a public character. As for his occupation,—when the census-taker, with a wink to the boys in the store, had asked him what it was, he had said, in that same odd tone: "Putties up glass a little—whitewashes a little—" and, when the man had made a show of writing all that down, "preaches a little." He might have said "preaches a big," for you could hear him half a mile away.

The foreman was a retired sea-captain. "Good cap'n—Cap'n Thomas," one of his neighbors had said of him. "Allers gits good ships—never hez to go huntin' 'round for a vessel. But it is astonishin' what differences they is! Now there's Cap'n A. K. P. Bassett, down to the West Harbor. You let it git 'round that Cap'n A. K. P. is goin' off on a Chiny voyage, and you'll see half a dozen old shays to onct, hitched all along his fence of an artemnoon, and wimmen inside the house, to git Cap'n A. K. P. to take their boys. But you let Cap'n Thomas give out that he wants boys, and he hez to glean 'em,—

from the poor-house, and from step-mothers, and where he can: the wimmen knows! Still," he added, "Cap'n Thomas 's a good cap'n. I've nothin' to say ag'in him. He's smart!"

"GENTLEMEN," said the foreman, when the officer, at last, had securely locked them in, "shall we go through the formality of a ballot? If the case were a less serious one, we might have rendered a verdict in our seats."

"What's the use foolin' 'round ballotin'?" said a thick-set butcher. "Aint we all o' one mind?"

"It is for you to say, gentlemen," said the foreman. "I shouldn't want to have it go abroad that we had not acted formally, if there was any one disposed to cavil."

"Mr. Speaker," said George Washington, rising and standing in the attitude of Webster, "I rises to appoint to order. We took ballast in de prior cases, and why make flesh of one man an' a fowl of another?"

"Very well," said the foreman, a trifle sharply. "'The longest way round is the shortest way home.'"

Twelve slips of paper were handed out, to be indorsed guilty, "for form." They were collected in a hat and the foreman told them over—"just for form." "'Guilty,' 'guilty,' 'guilty,' 'guilty';—wait a minute," he said, "here is a mistake. Here is one 'not guilty'—whose is this?"

There was a pause.

"Whose is it?" said the foreman, sharply.

Eli turned a little red.

"It's mine," he said.

"Do you mean it?" said the foreman.

"Of course I mean it," he answered.

"Whew!" whistled the foreman. "Very well, sir; we'll have an understanding, then. This case is proved to the satisfaction of every man who heard it, I may safely say, but one. Will that one please state the grounds of his opinion?"

"I aint no talker," said Eli, "but I aint satisfied he's guilty—that's all."

"Don't you believe the witnesses?"

"Mostly."

"Which one don't you believe?"

"I can't say. I don't believe he's guilty."

"Is there one that you think lied?"

No answer.

"Now it seems to me——" said a third jurymen.

"One thing at a time, gentlemen," said the foreman. "Let us wait for an answer from Mr. Smith. Is there any one that you think lied? We will wait, gentlemen, for an answer."

There was a long pause. The trial seemed to Eli Smith to have shifted from the court

to this shabby room; and he was now the culprit.

All waited for him; all eyes were fixed upon him.

The clock ticked loud! Eli counted the seconds. He knew the determination of the foreman.

The silence became intense.

"I want to say my say," said a short man in a pea-jacket—a retired San Francisco pilot, named Eldridge. "I entertain no doubt the man is guilty. At the same time, I allow for differences of opinion. I don't know this man that's voted 'not guilty,' but he seems to be a well-meaning man. I don't know his reasons; probably he don't understand the case. I should like to have the foreman tell the evidence over, so as if he don't see it clear, he can ask questions, and we can explain."

"I second de motion," said George Washington.

There was a general rustle of approval.

"I move it," said the pilot, encouraged.

"Very well, Mr. Eldridge," said the foreman. "If there is no objection, I will state the evidence, and if there is any loop-hole, I will trouble Mr. Smith to suggest it as I go along," and he proceeded to give a summary of the testimony, with homely force.

"Now, sir?" he said, when he had finished.

"I move for another ballot," said Mr. Eldridge.

The result was the same. Eli had voted "not guilty."

"Mr. Smith," said the foreman, "this must be settled in some way. This is no child's play. You can't keep eleven men here, trifling with them, giving no pretence of a reason."

"I haven't any reasons, only that I don't believe he's guilty," said Eli. "I'm not goin' to vote a man into states-prison, when I don't believe he done it," and he rose and walked to the window, and looked out. It was low tide. There was a broad stretch of mud in the distance, covered with boats lying over disconsolate. A driving storm had emptied the streets. He beat upon the rain-dashed glass a moment with his fingers, and then he sat down again.

"Well, sir," said the foreman, "this is singular conduct. What do you propose to do?"

Silence.

"I suppose you realize that the rest of us are pretty rapidly forming a conclusion on this matter," said the foreman.

"Come! come!" said Mr. Eldridge; "don't be quite so hard on him, Captain. Now, Mr. Smith," he said, standing up with his hands in his coat-pockets, and looking at Eli, "we know that there often is crooked sticks on

juries, that hold out alone—that's to be expected; but they always argue, and stand to it the rest are fools, and all that. Now, all is, we don't see why you don't sort of argue, if you've got reasons satisfactory to you. Come, now," he added, walking up to Eli, and resting one foot on the seat of his chair, "why don't you tell it over? and if we're wrong, I'm ready to join you."

Eli looked up at him.

"Didn't you ever know," he said, "of a man's takin' a cat off, to lose, that his little girl didn't want drowned, and leavin' him ashore, twenty or thirty miles, bee-line, from home, and that cat's bein' back again the next day, purrin' 'round 's if nothin' had happened?"

"Yes," said Mr. Eldridge—"knew of just such a case."

"Very well," said Eli; "how does he find his way home?"

"Don't know," said Mr. Eldridge; "always has been a standing mystery to me."

"Well," said Eli, "mark my words. There's such a thing as arguin', and there's such a thing as knowin' outright; and when you'll tell me how that cat inquires his way home, I'll tell you how I know John Wood aint guilty."

This made a certain sensation, and Eli's stock went up.

An old, withered man rapped on the table.

"That's so!" he said; "and there's other sing'lar things! How is it that a sea-farin' man, that's dyin' to home, will allers die on the ebb-tide? It never fails, but how does it happen? Tell me that! And there's more ways than one of knowin' things, too!"

"I know that man aint guilty," said Eli.

"Hark ye!" said a dark old man with a troubled face, rising and pointing his finger toward Eli. "*Know*, you say? I *knew*, wunst. I *knew* that my girl, my only child, was good. One night she went off with a married man that worked in my store, and stole my money—and where is she now?" And then he added, "What I *know* is, that every man hevs his price. I hev mine, and you hev yours!"

The impugment of Eli's motives was evident to all.

"'Xcuse me, Mr. Speaker," said George Washington, rising with his hand in his bosom; "as de question is befo' us, I wish to say that de las' bro' mus' have spoken under 'xcitement. Every man *don'* have his price! An' I hope de bro' will recant—like as de Psalmist goes out o' his way to say: '*In my haste* I said, All men are liars.' He was a very busy man, de Psalmist—writin' down hymns all day, sharpen'n' his lead-pencil,

bossin' 'roun' de choir—callin' Selah! Well, bro'n an' sisters,"—both arms going out, and his voice going up,—“one day, seems like, he was in gret haste—got to finish a psalm for a monthly concert, or such—and some man incorrupted him, and lied; and bein' in gret haste,—and a little old Adam in him,—he says, right off, quick: '*All men are liars!*' But see,—when he gets a little time to set back and mediate, he says: '*Dis won't do—dere's Moses, an' Job, an' Paul—dey aint liars!*' An' den he don' sneak out, and 'low he said, '*All men is lions,*' or such. No! de Psalmist aint no such man; but he owns up, an' 'xplains: '*In my haste,*' he says, '*I said it.*'

The foreman rose and rapped.

"I await a motion," said he, "if our friend will allow me the privilege of speaking."

Mr. Washington calmly bowed.

Then the foreman, when nobody seemed disposed to move, speaking slowly, at first, and piecemeal, alternating language with smoke, gradually edged into the current of the evidence, and ended by going all over it again, with fresh force and point. His cigar glowed and chilled in the darkening room as he talked.

"Now," he said, when he had drawn all the threads together to the point of guilt, "what are we going to do upon this evidence?"

"I'll tell you something," said Eli. "I didn't want to say it because I know what you'll all think, but I'll tell you, all the same."

"Ah!" said the foreman.

Eli stood up and faced the others.

"'Most all o' you know what our Bar is in a south-east gale. They aint a man here that 'uld dare to try and cross it when the sea's breakin' on it. The man that says he would, lies!" And he looked at the foreman, and waited a moment.

"When my wife took sick, and I stopped goin' to sea, two year ago, and took up boat-fishin', I didn't know half as much about the coast as the young boys do, and one afternoon it was blowin' a gale, and we was all hands comin' in, and passin' along the Bar to go sheer 'round it to the west'ard, and Captain Fred Cook—he's short-sighted—got on to the Bar before he knew it, and then he had to go ahead, whether or no; and I was right after him, and I s'posed he knew, and I followed him. Well, he was floated over, as luck was, all right; but when I'd just got on the Bar, a roller dropped back and let my bowsprit down into the sand, and then come up quicker'n lightnin' and shouldered the boat over, t'other end first, and slung me into the water; and when I come up, I see somethin'

black, and there was John Wood's boat runnin' by me before the wind with a rush—and 'fore I knew an'thing he had me by the hair by one hand and in his boat, and we was over the Bar. Now, I tell you, a man that looks the way I saw him look when I come over the gunwale, face up, don't go 'round breakin' in and hookin' things. He hadn't one chance in five, and he was a married man, too, with small children. And what's more," he added, incautiously, "he didn't stop there. When he found out, this last spring, that I was goin' to lose my place, he lent me money enough to pay the interest that was overdue on the mortgage, of his own accord."

And he stopped suddenly.

"You have certainly explained yourself," said the foreman. "I think we understand you distinctly."

"There isn't one word of truth in that idea," said Eli, flushing up, "and you know it. I've paid him back every cent. I know him better'n any of you, that's all, and when I know he aint guilty, I wont say he is; and I can set here as long as any other man."

"Lively times some folks'll hev, when they go home," said a spare tin-peddler, stroking his long yellow goatee. "Go into the store: nobody speak to you; go to cattle-show: everybody follow you 'round; go to the wharf: nobody weigh your fish; go to buy seed-cakes at the cart: baker wont give no tick."

"How much does it cost, Mr. Foreman," said the butcher, "for a man 't's obliged to leave town, to move a family out West? I only ask for information. I have known a case where a man had to leave—couldn't live there no longer—wa'n't wanted."

There was a knock. An officer, sent by the judge, inquired whether the jury were likely soon to agree.

"It rests with you, sir," said the foreman, looking at Eli.

But Eli sat doggedly with his hands in his pockets, and did not look up or speak.

"Say to the judge that I cannot tell," said the foreman.

It was eight o'clock when the officer returned, with orders to take the jury across the street to the hotel, to supper. They went out in pairs, except that the juryman who was left to fall in with Eli made three with the file ahead, and left Eli to walk alone. This was noticed by the by-standers. At the hotel, Eli could not eat a mouthful. He was seated at one end of the table, and was left entirely out of the conversation. When the jury were escorted back to the court-house,

rumors had evidently begun to arise from his having walked alone, for there was quite a little crowd at the hotel-door, to see them. They went as before: four pairs, a file of three, and Eli alone. Then the spectators understood it.

WHEN the jury were locked into their room again for the night, Mr. Eldridge sat down by Eli, and lit his pipe.

"I understand," he said, "just how you feel. Now, between you and me, there was a good-hearted fellow that kept me out of a bad mess once. I've never told anybody just what it was, and I don't mean to tell you now, but it brought my blood up standing, to find how near I'd come to putting a fine steamer and two hundred and forty passengers under water. Well, one day, a year or so after that, this man had a chance to get a good ship, only there was some talk against him, that he drank a little. Well, the owners told him they wanted to see me, and he come to me, and says he, 'Mr. Eldridge, I hope you'll speak a good word for me; if you do, I'll get the ship, but if they refuse me this one, I'm dished everywhere.' Well, the owners put me the square question, and I had to tell 'em. Well, I met him that afternoon on Sacramento street, as white as a sheet, and he wouldn't speak to me, but passed right by, and that night he went and shipped before the mast. That's the last I ever heard of him. But I had to do it.

"Now," he added, "this man's been good to you; but the case is proved, and you ought to vote with the rest of us."

"It aint proved," said Eli. "The judge said that if any man had a reasonable doubt, he ought to hold out. Now, I aint convinced."

"Well, that's easy said," replied Mr. Eldridge, a little hotly, and he arose, and left him.

The jurymen broke up into little knots, tilted their chairs back, and settled into the easiest positions that their cramped quarters allowed. Most of them lit their pipes; the captain, and one or two whom he honored, smoked fragrant cigars, and the room was soon filled with a dense cloud.

Eli sat alone by the window.

"Sometimes sell two at one house," said a lank book-agent, arousing himself from a reverie; "once sold three."

"I think the Early Rose is about as profitable as any," said a little farmer, with a large circular beard. "I used to favor Jacobs's Seedling, but they haven't done so well with me of late years."

"Sometimes," said the book-agent, picking his teeth with a quill, "you'll go to a

house, and they'll say they can't be induced to buy a book of any kind, historical, fictitious, or religious; but you just keep on talking, and show the pictures—'Grant in Boyhood,' 'Grant a Tanner,' 'Grant at Head-quarters,' 'Grant in the White House,' 'Grant before Queen Victoria,' and they warm up, I tell you, and not infrequently buy."

"Do you sell de 'Illustrated Bible,'" asked Washington, "wid de Hypocrypha?"

"No; I have a more popular treatise—the 'Illustrated History of the Bible.' Greater variety. Brings in the surrounding nations, in costume. Cloth, three dollars; sheep, three-fifty; half calf, five-seventy-five, full morocco, gilt edges, seven-fifty. Six hundred and seven illustrations on wood and steel. Three different engravings of Abraham alone. Four of Noah—'Noah before the Flood,' 'Noah Building the Ark,' 'Noah Welcoming the Dove,' 'Noah on Ararat.' Steel engraving of Ezekiel's Wheel, explaining prophecy. Jonah under the gourd, Nineveh in the distance."

Mr. Eldridge and Captain Thomas had drifted into a discussion of harbors, and the captain had drawn his chair up to the table, and, with a cigar in his mouth, was explaining an ingeniously constructed foreign harbor. He was making a rough sketch, with a pen.

"Here is north," he said; "here is the coast-line; here are the flats; here are the sluice-gates; they store the water here, in ———"

Some of the younger men had their heads together, in a corner, about the tin-peddler, who was telling stories of people he had met in his journeys, which brought out repeated bursts of laughter.

In the corner farthest from Eli, a delicate-looking man began to tell the butcher about Eli's wife.

"Twelve years ago this fall," he said, "I taught district-school in the parish where she lived. She was about fourteen then. Her father was a poor farmer, without any faculty. Her mother was dead, and she kept house. I staid there one week, boarding 'round."

"Prob'ly didn't git not much of any fresh meat that week," suggested the butcher.

"She never said much, but it used to divert me to see her order around her big brothers, just as if she was their mother. She and I got to be great friends; but she was a queer piece. One day at school, the girls in her row were communicating, and annoying me, while the third class was reciting in 'First Steps in Numbers,' and I was so incensed that I called Lizzie—that's her name—right out, and had her stand up for twenty minutes.

She was a shy little thing, and set great store by perfect marks. I saw that she was troubled a good deal, to have all of them looking and laughing at her. But she stood there, with her hands folded behind her, and not a smile or a word."

"Look out for a sullen cow," said the butcher.

"I felt afraid I had been too hasty with her, and I was rather sorry I had been so decided—although, to be sure, she didn't pretend to deny that she had been communicating."

"Of course," said the butcher: "no use lyin' when you're caught in the act."

"Well, after school, she staid at her desk, fixing her dinner-pail, and putting her books in a strap, and all that, till all the rest had gone, and then she came up to my desk, where I was correcting compositions."

"Now for music!" said the butcher.

"She had been crying a little. Well, she looked straight in my face, and said she, Mr. Pollard, I just wanted to say to you that I wasn't doing anything at all when you called me up; and off she went. Now, that was just like her—too proud to say a word before the school."

But here his listener's attention was diverted by the voice of the book-agent:

"The very best Bible for teachers, of course, is the limp-cover, protected edges, full Levant morocco, Oxford, silk-sewed, kid-lined, Bishop's Divinity Circuit, with concordance, maps of the Holy Land, weights, measures, and money-tables of the Jews. Nothing like having a really ———"

"And so," said the captain, moving back his chair, "they let on the whole head of water, and scour out the channel to a T."

And then he rapped upon the table.

"Gentlemen," he said, "please draw your chairs up, and let us take another ballot."

The count resulted as before. The foreman muttered something which had a scriptural sound.

In a few moments, he drew Mr. Eldridge and two others aside. "Gentlemen," he said to them, "I shall quietly divide the jury into watches, under your charge: ten can sleep, while one wakes to keep Mr. Smith discussing the question. I don't propose to have the night wasted."

And, by one man or another, Eli was kept awake.

"I DON'T see," said the book-agent, "why you should feel obliged to stick it out any longer. Of course, you are under obligations. But you've done more than enough already, so as that he can't complain of you, and if

you give in now, everybody'll give you credit for trying to save your friend, on the one hand, and, on the other hand, for giving in to the evidence. So you'll get credit both ways."

An hour later, the tin-peddler came on duty. He had not followed closely the story about John Wood's loan, and had got it a little awry.

"Now, how foolish you be," he said, in a confidential tone. "Can't you see that if you cave in now, after stan'n' out nine hours,"—and he looked at a silver watch with a brass chain, and stroked his goatee,—“nine hours and twenty-seven minutes,—that you've made jest rumpus enough so as't he wont dare to foreclose on you, for fear they'll say you went back on a trade. On t'other hand, if you hold clear out, he'll turn you out-o'-doors to-morrow, for a blind, so 's to look as if there wa'n't no trade between you. Once he gits off, he wont know Joseph, you bet! That's what I'd do," he added, with a sly laugh. "Take your uncle's advice."

"The only trouble with that," said Eli, shortly, "is that I don't owe him anything."

"Oh," said the peddler; "that makes a difference. I understood you did."

Three o'clock came, and brought Mr. Eldridge. He found Eli worn out with excitement.

"Now I don't judge you the way the others do," said Mr. Eldridge, in a low tone, with his hand on Eli's knee. "I know, as I told you, just the way you feel. But we can't help such things. Suppose, now, that I had kept dark, and allowed to the owners that that man was always sober, and I had heard, six months after, of thirty or forty men going to the bottom because the captain was a little off his base; and then to think of their wives and children at home. We have to do some hard things; but I say, do the square thing, and let her slide."

"But I can't believe he's guilty," said Eli.

"But don't you allow," said Mr. Eldridge, "that eleven men are more sure to hit it right than one man?"

"Yes," said Eli, reluctantly, "as a general thing."

"Well, there's always got to be some give to a jury, just as in everything else, and you ought to lay right down on the rest of us. It isn't as if we were at all squirmish. Now, you know that if you hold out, he'll be tried again."

"Yes, I suppose so."

"Got to be—no other way," said Mr. Eldridge. "Now, the next time, there wont be anybody like you to stand out, and the

judge'll know of this scrape, and he'll just sock it to him."

Eli turned uneasily in his chair.

"And then it wont be understood in your place, and folks'll turn against you every way, and, what's worse, let you alone."

"I can stand it," said Eli, angrily. "Let 'em do as they like. They can't kill me."

"They can kill your wife and break down your children," said Mr. Eldridge. "Women and children can't stand it. Now there's that man they were speaking of; he lived down my way. He sued a poor, shiftless fellow that had come from Pennsylvania to his daughter's funeral, and had him arrested and taken off, crying, just before the funeral begun—after they'd even set the flowers on the coffin; and nobody'd speak to him after that—they just let him alone; and after a while his wife took sick of it,—she was a nice, kindly woman,—and she had sort of hysterics, and, finally, he moved off West. And 'twasn't long before the woman died. Now, you can't undertake to do different from everybody else."

"Well," said Eli; "I know I wish it was done with."

Mr. Eldridge stretched his arms and yawned. Then he began to walk up and down, and hum, out of tune. Then he stopped at Captain Thomas's chair.

"Suppose we try a ballot," he said. "He seems to give a little."

In a moment the foreman rapped.

"It is time we were taking another ballot, gentlemen," he said.

The sleepers rose, grumbling, from uneasy dreams.

"I will write 'guilty' on twelve ballots," said the foreman, "and if any one desires to write in 'not,' of course he can."

When the hat came to Eli, he took one of the ballots and held it in his hand a moment; and then he laid it on the table. There was a general murmur. The picture which Mr. Eldridge had drawn loomed up before him. But with a hasty hand he wrote in "not," dropped in the ballot, and going back to his chair by the window, sat down.

There was a cold wave of silence.

Then Eli suddenly walked up to the foreman and faced him.

"Now," he said, "we'll stop. The very next turn breaks ground. If you, or any other man that you set on, tries to talk to me when I don't want to hear, to worry me to death—look out!"

How the long hours wore on! How easy, sometimes, to resist an open pressure, and how hard, with the resistance gone, to fight, as one that beats the air! How the pros-

pect of a whole hostile town loomed up, in a mirage, before Eli! And then the picture rose before him of a long, stately bark, now building, whose owner had asked him yesterday to be first mate. And if his wife were only well, and he were only free from this night's trouble, how soon, upon the long, green waves, he could begin to redeem his little home!

And then came Mr. Eldridge, kind and friendly, to have another little chat.

MORNING came, cold and drizzly. An officer knocked at the door, and called out, "Breakfast." And, in a moment, unwashed, and all uncombed, except the tin-peddler, who always carried a beard-comb in his pocket, they were marched across the street to the hotel.

There were a number of men on the piazza waiting to see them—jurymen, witnesses, and the accused himself, for he was on bail. He had seen the procession the night before, and, like the others, had read its meaning.

"Eli knows I wouldn't do it," he had said to himself, "and he's going to hang out, sure."

The jury began to turn from the courthouse door. Everybody looked. A file of two men, another file, another, another; would there come three men, and then one? No; Eli no longer walked alone.

Everybody looked at Wood; he turned sharply away.

But this time the order of march in fact showed nothing, one way or the other. It only meant that the judge, who had happened to see the jury the night before returning from their supper, had sent for the high sheriff in some temper,—for judges are human,—and had vigorously intimated that if that statesman did not look after his fool of a deputy, who let a jury parade secrets to the public view, he would —!

THE jury were in their room again. At nine o'clock came a rap, and a summons from the court.

The prosecuting attorney was speaking with the judge when they went in. In a moment he took his seat.

"John Wood!" called out the clerk, and the defendant arose. His attorney was not there.

"Mr. Foreman!" said the judge, rising. The jury arose. The silence of the crowded court-room was intense.

"Before the clerk asks you for a verdict, gentlemen," said the judge, "I have something of the first importance to say to you,

which has but this moment come to my knowledge."

Eli changed color, and the whole courtroom looked at him.

"There were some most singular rumors, after the case was given to you, gentlemen, to the effect that there had been in this cause a criminal abuse of justice. It is painful to suspect, and shocking to know, that courts and juries are liable ever to suffer by such unprincipled practices. After ten years upon the bench, I never witness a conviction of crime without pain; but that pain is light, compared with the distress of knowing of a willful perversion of justice. It is a relief to me to be able to say to you that such instances are, in my judgment, exceedingly rare, and—so keen is the awful searching power of truth—are almost invariably discovered."

The foreman touched his neighbor with his elbow. Eli folded his arms.

"As I said," continued the judge, "there were most singular rumors. During the evening and the night, rumor, as is often the case, led to evidence, and evidence has led to confession and to certainty. And the district attorney now desires me to say to you that the chief officer of the bank—who held the second key to the safe—is now under arrest for a heavy defalcation, which a sham robbery was to conceal, and that you may find the prisoner at the bar—not guilty. I congratulate you, gentlemen, that you had not rendered an adverse verdict."

"Your Honor!" said Eli; and he cleared his throat; "I desire it to be known that, even as the case stood last night, this jury had not agreed to convict, and never would have!"

There was a hush, while a loud scratching pen indorsed the record of acquittal. Then Wood walked down to the jury-box and took Eli's hand.

"Just what I told my wife all through," he said. "I knew you'd hang out!"

ELI's jury was excused for the rest of the day, and by noon he was in his own village, relieved, too, of his most pressing burden: for George Cahoon had met him on the road, and told him that he was not going to the West, after all, for the present, and should not need his money. But, as he turned the bend of the road and neared his house, he felt a rising fear that some disturbing rumor might have reached his wife about his action on the jury. And, to his distress and amazement, there she was, sitting in a chair at the door.

"Lizzie!" he said, "what does this mean? Are you crazy?"

"I'll tell you what it means," she said, as

she stood up with a little smile and clasped her hands behind her. "This morning, it got around and came to me that you was standing out all alone for John Wood, and that the talk was that they'd be down on you, and drive you out of town, and that everybody

pitied *me*—*pitied me*! And when I heard that, I thought I'd see! And my strength seemed to come all back, and I got right up, and dressed myself. And what's more, I'm going to get well now!"

And she did.

BACKWOODS VISIONS.

(NOVA SCOTIA.)

I.

FROM the strange, spruce-surrounded, bird-frequented,
 Sassafras scented
 Forest hut you know of, where the trees
 Stand to the knees
 In ferns and juniper and dwarf wild cherries,
 And whortleberries,—
 Where, on warm days, light rains and odorous steam
 Alternate, and I dream
 That yonder I will find the impress sweet
 Of your small feet,
 In moss and May-flower leaves, that jealous hold
 The secret mold,
 As air, so shaped, were unto them a treasure
 And year-long pleasure,—
 At evening, when the hyacinthine bars
 And perfume-smothered stars
 Suggest your hair, your eyes, your face,
 your breath,—
 When beckoneth
 The grass, the branch, the cloud, when e'en
 the road,
 As though it flowed,
 Heaves itself forward toward the distant town
 To which all motion tends, all thoughts go
 down,—

II.

I walk and walk, and find the weary miles
 By fancy's wiles
 Are crushed. But on the hill the dark night
 stands,
 And lays soft hands
 Upon me, gently turning me aside
 To where the waters wide
 Boast a far-off acquaintance with the curves

Of shaky wharves,
 And with the lines of lamps and roaring streets,
 And old-world fleets,—
 All which, the crowds, remembered faces too,
 Are appanage of you.
 The city is your dress, which could I touch
 Even that were much.
 And whatsoe'er recalls it you recalls.
 Therefore it falls
 I go where sails and smoke-wreaths may be
 seen,
 That city-ward have been,
 And night by night I reach the rocky shore,
 Where tides flow out that left you hours
 before.

III.

But there my fancy cheats me. When I think
 I'm on the brink
 Of miracle—that it will bring me you
 Real and true,
 Instead, I see along a little beach,
 Just out of reach
 Of the great, gathering, booming, surfy shocks
 Sustained by outpost rocks,
 A crowd of little people,—“span-long elves,”
 Divest themselves
 Of that same filmy drapery that one finds
 Cast to the winds,
 Floating for miles on the soft summer air
 When days are fair.
 Then, no less clothed in mystery than before,
 Down to the shore,
 Hands clasped, and with a universal shout
 Come the whole rout—
 Jove! what a jolly, splashing, plunging crew;
 Deft swimmers, too,
 As ever wet a cheek, and divers bold

As any tempted down for Eastern pearls or gold.

IV.

Creeping upon them over stones and weed,
(Rough road indeed!)

I see how bright their eyes, their black hair shine,

Their forms how fine,

Well-built as antique bronzes, every limb

Polished and slim,

And hard as smooth-worn granite off which slide

Spray, wave, and tide.

But when one sees me, straight they all desist—

Up like a mist

They rise, and (drifted in on grassy shelves)

The mocking elves

Laugh as, in cracks and crannies finger-wide,

Secure they hide.

And thence by devious routes and dark they fare

To headlands bare,

Where met again, in denser troops they throng

The ways along,

And one, the last, your form and face assumes

As morning blooms,

Growing upon me as the morning grows;

But ere the sun has risen she, too, goes.

TOPICS OF THE TIME.

The Century Magazine.

"A ROSE by any other name would smell as sweet."

SCRIBNER'S MONTHLY by any other name would be just as good. Names do not make magazines, but magazines give significance to names. That which the reading world has come to regard with affection as SCRIBNER, is what the name represents to them in literature and art. We wholly sympathize with them in this sentimental regard for the name, and wish it were never to be dropped, for it means more to us than it ever could mean to a subscriber and reader; but the reasons for the change are imperative, and we do not propose to indulge in weak regrets over the inevitable. We propose, instead, to give the new name a hearty welcome, and to determine that it shall mean more to the public than the old one ever did.

It becomes us just here—and we do it with great heartiness—to acknowledge the universal and long-continued kindness of both the American and the British press toward our enterprise. They have from the beginning recognized the earnestness of our purpose, and the genuineness of our achievements, both in literary and pictorial art. The reception of our work in America was not so much to be wondered at, perhaps, but the practical recognition of the merits of the magazine in Great Britain has been as surprising as it has been gratifying. We have received from the English the most generous treatment—from the press, the publishers, the book-sellers, and the people, and it is a great pleasure to greet them as a constituent part of the audience which we address in this article.

THE CENTURY MAGAZINE begins its career from a high vantage-ground. SCRIBNER'S MONTHLY started eleven years ago without a subscriber. THE CENTURY starts with virtually one hundred and twenty-five thousand subscribers. The former was begun without experience, and with everything to learn; the latter lifts its

fresh ensign upon a field of conquest. The former was obliged to go out among the men and women of letters and ask for contributions, which, in many instances, were doubtfully or questioningly rendered; the latter is overwhelmed with voluntary offers of the best material from the best pens. The former sought in vain among artists and engravers for such illustrations as would satisfy its wants and realize its ideal; the latter begins with all the talent at its command which SCRIBNER'S MONTHLY helped to discover and develop. It is not boasting to assert our belief that in every department of the work of an illustrated popular magazine there never existed so skillful, accomplished, and effective a corps of artistic and literary workers as are grouped around THE CENTURY MAGAZINE to-day as it starts out upon its most promising career. It has the men and women and it has the capital it needs for the success it desires and fully intends to deserve and achieve.

We raise a new flag to-day, but it represents the same things and practically the same men that the old one represented. The same business manager is at the front, and the same editorial force controls and directs the pages of the magazine that has been upon them from the beginning. The same man directs the art department who made SCRIBNER'S MONTHLY famous as a reformer in the arts of designing and wood-engraving. SCRIBNER'S MONTHLY was the child of experiment; THE CENTURY is the offspring of experience.

We emphasize the new step by beginning what we call a new series. We mean by this phrase simply the embodiment of a fresh effort for excellence. We intend that THE CENTURY shall be a better magazine than SCRIBNER'S MONTHLY ever was, and that the new series shall present so marked an improvement over that which preceded it that the new name shall not shine in a reflected glory, but shall acquire a sig-

nificance entirely its own. It was many years, for instance, before SCRIBNER'S MONTHLY thoroughly grasped and adopted the scheme for presenting, as the best of all magazine material, the elaborate discussion of living practical questions. This kind of discussion will have special prominence in the new series. It is a new business for a popular literary magazine, and one in which there is great promise for the country. Another feature of the new series will be popular studies of history. We made only one attempt at this in the first series, and we know better how to manage it now. There is nothing that opens before us now more attractive than this field of illustrated historical research and representation. These two features of themselves would warrant us in denominating the future numbers of the magazine a new series, but we aim to make every department so fresh and excellent as to deserve the distinction.

We trust our readers will pardon us if we indulge in a little sentiment to-day. The men who devise and carry on the important enterprises of the world grow weary after a time, and die. We look back upon the work and the achievements of the past eleven years, that have been so full of interest and so fruitful of results, and rejoice that we and our companions have had the privilege of establishing an agency so powerful in the molding of public opinion, and the elevation of public sentiment, as a widely circulated magazine. It has been a great privilege to meet monthly a million men and women in these pages, and to speak to them of morals, religion, politics, literature, and life, and to present to them some of the choicest offerings of prose and verse that the genius of the country can produce. For many years we hope to meet the readers of THE CENTURY in a constantly increasing circle, with better gifts in our hands, but we know that the time must come when we must cease from labor, and relinquish our work to other and younger hands. We envy these coming men their great and interesting future. It is not likely that this magazine will ever change its name again. Its life, which is the product of a great multitude of lives, is likely to go on for years, perhaps for centuries, so that those who are now children will both produce and read the magazine which receives to-day what will doubtless be its final name. So we are able to give to it a persistence of life which we cannot retain for ourselves. If we fail to do this, it will not be for lack of effort to that end. May THE CENTURY MAGAZINE "live long and prosper," and may it be met with the hearty good-will with which it greets the public to-day!

The Contingency of "Inability."

WHILE President Garfield's life was trembling in the balance, there were, of course, strong considerations which made against the assumption of presidential duty by the Vice-President,—but there can be no question that the contingency which the Constitution names as the basis of such an assumption existed during this whole period. It was a genuine case of "inability." Why was not the Vice-President engaged in the performance of his duty during this period? We suppose, in the first place, that such an assumption of duty might have had a depressing effect upon the President, and so might have hindered his recovery. There would have been abundant pop-

ular sympathy with this view, and there is doubtless a great multitude of people who would have regarded this assumption of a plain duty as indelicate and inconsiderate, under the circumstances. The real difficulty, however, was farther back than this, and it is time it were fully discussed and understood.

The American people have regarded the Vice-President as one who formed no part of an administration, but only as one chosen to take a dead President's place, and to have no important function except in the contingency of death. In all respects he is regarded as a possible President, and not as one who forms any part of any administration, except when, by the death of the President, he comes into an administration of his own. For instance, or illustration, we saw Vice-President Arthur operating at Albany in the interest of an enemy of the administration, so little did he regard himself as having any identification with the interests of the President elected with him on the same ticket, by the same votes. If Vice-President Arthur had been a member of the Government, with a seat in the Cabinet, he could not possibly have made this signal blunder. And here is the difficulty. We have made the Vice-President the President of the Senate, so as to give him something to do, but there is not the slightest natural relation between his office of Vice-President and the Senate. Where he belongs is in the Cabinet. We know of no way in which he can be identified with the Government, except by giving him a voice in its counsels, and were this done, it would be easy for him to preside in the absence or inability of the President. We do not have any trouble of this kind with the Lieutenant-Governor of a State, or with the vice-president of a corporation. The latter would not think of electing a new board of directors as a preliminary to his engaging in presidential duties, in case of the absence or sickness of the president. Then why must our vice-presidential function be so clumsy a matter?

If our Vice-Presidents, upon assuming presidential duties, had not taken on the idea that they must revolutionize everything, and have a cabinet of their own choosing, and if the politicians and the people did not expect them to do it, we should have less difficulty. We elect a President, and he chooses his advisers and organizes a government. This is exactly what the people have elected him to do. He is the prime favorite and the trusted leader of his party, and it is this government of which the Vice-President should be a member, and over which he should be called upon to preside whenever his superior may be disabled. On the death of Mr. Lincoln, Andrew Johnson declared that he "did not propose to administer upon the estate of Abraham Lincoln." It was his way of saying that he was not, and had never been, a part of the Government under Lincoln—that he did not approve his policy, and did not propose to continue it. We all know how little he won to his own reputation by his changes, and how little the country had reason to rejoice in them.

Now it seems to us that there ought not to have been any formal meeting of the Cabinet after the President was shot, without Vice-President Arthur in the chair. If there were no formal meetings, on account of the absence of the President, then there undoubtedly ought to have been. It ought to be easy

for a Vice-President to take the President's place. We do not know how it ever can be, unless in some way the Vice-President is identified with the Government, and we do not see how he can be identified with the Government unless he has a seat in its deliberations. It has been a great mistake to separate the Vice-President from all administrative functions. We see no reason why it is not just as proper to give him a vote in the Cabinet as a casting vote in the Senate. One is certainly no more arbitrary than the other, while the reasons for attaching him to, and identifying him with, the Government, far outweigh all that can be urged for retaining him as President of the Senate. It has always been a curse to the country—this maintenance of separate interests and separate ambitions on the part of those holding the vice-presidential office. Hitherto, those who, through the death of the President, have come into the presidential office, have been, without an exception, failures. They have undertaken to institute a policy and government of their own, and to make their administrations widely different from those of their predecessors. What John Tyler, Millard Fillmore, and Andrew Johnson did, the country is only too familiar with. They disgraced themselves, and damaged the country. If they had all simply undertaken to "administer upon the estates" of their predecessors, they would have achieved a sweet renown, but they set themselves up as wiser men, of a divergent or opposing policy, and miserably failed.

By making our Vice-Presidents members of the Government, they would not only be ready to assume presidential functions without a jar, in case of "inability" on the part of the President, but they would find themselves so thoroughly *en rapport* with the Government, in case of the President's death, that they would not be tempted to make fools of themselves by establishing a new government. There ought to be some way devised for securing an end so devoutly to be desired, and now is the time to devise and enact it. Wise men and good legislators ought to find some way of identifying the Vice-President with the administration of his own party and time. It would save the country from infinite trouble and loss. If President Garfield could have trustfully and confidently laid all his responsibilities upon Mr. Arthur's shoulders, from the time he was shot, it would have done more for his recovery than anything else we can think of.

Public Spirit.

THERE is no point at which personal meanness betrays itself so strongly and surely as it does when brought into relation to schemes of public improvement. Set a subscription paper going through a community, to raise money for some public object, and it will usually sift out the mean men as certainly as a screen will sift the dust from a bushel of coal. We have a great many men who are not stingy with their families, who are by no means parsimonious, yet who have insuperable objections to giving away anything that does not minister directly to their personal comfort or gratification. A church is wanted, or a public library, or a park, or something else for the common benefit, and the want and the effort to meet it furnish a very reliable test of the character of those appealed to. We have rich men

in every community so notoriously stingy, and so unfriendly to all schemes of public improvement, that they are not even approached for a contribution. On the other hand, we have men in every community who have what we call "public spirit." Nothing that can minister to the general good ever receives a cold welcome from them, or a niggardly response to its appeal.

Very few men are so stolidly selfish that they cannot see that membership in a family involves certain duties toward the family—support, protection, mutual assistance. The head of a family—no matter how selfish and stingy he may be—recognizes the fact that he owes to that family shelter, sustenance, clothing, education, etc. Very few, too, fail to see that, as citizens, they owe certain duties to the town they live in, to the state, to the nation. They pay their taxes, and expect to pay them. It cannot be said that they always do this willingly or honestly, but they know that they must pay something for the laws that protect them, for the roads that give them passage across the country, and for the support of the Government. As heads of families and citizens of the state, they apprehend the fact that they owe duties whose fulfillment costs money. What is necessary beyond this is that they should see that membership in a social community involves duties just as really and distinctly as family ties or citizenship. No man can belong to a social community—as all men do who are not hermits—without having imposed upon him a great many duties. He owes it to that community to make it, so far as he can, intelligent, comfortable, respectable. There is no wise scheme of improvement to which he does not owe his support and encouragement; and he cannot turn his back upon any such scheme without a failure in the offices of good neighborhood, or without convicting himself of a mean selfishness that is disgraceful to him, and to the family and town to which he belongs.

There is another aspect of this matter which goes to intensify the meanness of treating niggardly the various schemes of public improvement. As there are some who will not do their duties, there are others who, in consequence of this delinquency, are compelled to do more than their duty, and often more than they can afford to do. With a profound sense of the public need and a warm desire to fill that need, they are impelled to do more than their part, and are thus made, through the failure of others, to suffer hardship. There are such men as these, thank heaven! in every community, else civilization would suffer or stand still. Now, the meanness of making these large-hearted and free-handed men carry more than their share of social duty, and bear more than their share of the public burden, is utterly disgraceful to those who are selfish and inconsiderate enough to indulge in it. It is of the same character as covering up one's property to avoid taxation, thus forcing honest men to pay more than their share for the support of the state. A man who can be guilty of it could hardly be trusted alone in the room with the coppers that close the lids of his dead mother's eyes. This shirking one's part in the burdens of society, and virtually forcing what one owes out of other pockets, is about as un-

manly a thing as can be conceived. How much better than thieving it is, we leave those guilty of it to ascertain.

If we could reach the young men of the land just starting out in life, we would adjure them to assume from the first every public burden, and carry it manfully to the end. The dodging of public burdens cannot be indulged in without introducing dry-rot into character, or without damaging reputation. To fail in his social obligations injures a man's self-respect, and reduces fearfully the respect in which he is held by the community. Of course it injures his influence, and it ought to do so. A man who cannot be relied upon to do his part in a community, can have no voice in shaping the life of that community. He can only carry the force of a mean example, and be a drag and a disgrace instead of an uplifting influence. One of the first things a young man should do in entering actively upon life is to ascertain what he can do to make things better around him. It is not necessary for him to wait to be invited. If the people see that he is helpful and ready to work, room will quickly be made for him. At least, let him never consent to be a beneficiary, or take and use what others have given without adding anything to the common stock. Occupying a free pew in church and paying nothing for what costs somebody something, by those who are not helplessly and hopelessly poor, is disgraceful and demoralizing to the last degree.

Communication.

A WORD TO THE FRIENDS OF AMERICA ABROAD.

TO THE EDITOR OF THE CENTURY.

SIR: I should like to say a word, through your columns, to the friends of America abroad. Recent events have brought shame to our own citizens and discouragement to those in England and elsewhere

who watch with interest and sympathy the course of affairs in the United States. But, in point of fact, the Conkling scandal, with its ghastly companion—the assassination,—these events are not evidences of decadence, but rather the incidents of reform; just as, twenty years ago, our civil war and its companion tragedy of assassination were not, as some supposed, the evidences of retrogression and downfall, but rather the incidents of progress.

Within our first century we have established a free state, and, at enormous cost, have cured the community of its deadliest elements of disintegration—namely, slavery and the spirit of sectionalism. After this work was accomplished, the minds of all thinking men were fixed upon the necessity of purifying and in some ways remodeling the Government itself. If this new reform can be brought about at any time within our second century, the United States may then be said to have amply fulfilled the just expectations of those who are interested in the experiment of a free republican government in the New World.

Our first reform, when the evil itself was blacker and apparently more hopeless of cure, cost us a civil war and the life of a President. In our second and less difficult reform a President has been sacrificed, while the war has been one only of "politics," therefore more ignoble and narrow in its methods and its field.

Nearly a hundred years had to go by before slavery was abolished; but so rapid is now the march of events that the spoils-system gives promise of perishing within a few decades from the beginning of the agitation against it.

Even after this reform is accomplished, much will remain to be done to make our political and social life all that could be wished. Meanwhile, we can truly say to our "kin beyond sea" that this is not the time to despair of the Republic. Very truly yours,

G.

HOME AND SOCIETY.

Hints to Horseback Riders.

NOT a little of the comfort and safety of the rider depends on the excellence of the paraphernalia of his turn-out. To secure a good saddle, one should deal only with a first-class maker. The trees of saddles have to be thoroughly seasoned, as in riding a great strain is on the horn of the saddle. Twenty years is the usual length of time necessary for seasoning. London houses keep their stock labeled with the date of placing in store, so that the trees made in 1861 are now going into use. There is no saddle safer for horse and rider than a perfectly plain, well-built English hunting-saddle. When we say rider, we mean men and women, boys and girls. A saddle, to be safe, must fit horse and rider; a tall person should ride in a long, narrow saddle, to enable the grip of the knees to be firm; a short and stout person requires a rather square, short-seated saddle. Without a feeling of comfort there can

be no grace in the saddle, and an ungraceful rider had better walk. Every saddle should be fitted for three-buckled girths. Those known as the "Fitz William" girth are the proper sort. A pair consists of one wide girth furnished with two buckles on either end, and a second, narrower girth, provided with one buckle on either end. These three buckles take three stout straps firmly nailed to the tree of the saddle. A lady's saddle, to be safe, should be fitted with a hunting stirrup. This make of stirrup is unique; it is an ordinary burnished steel stirrup, in the eye of which is sewn the stirrup-leather; the leather passes over an iron runner on the near side of the saddle and is buckled into another leather strap about two inches wide, and long enough to pass under the horse, directly over the girths, and buckle on the off side to another short strap sewn on an iron runner. This adjustment enables a horsewoman to shorten or lengthen her own stirrup, even at a fair rate of speed.

The safest bridle that ever rested in a horse's mouth is a snaffle; for hunting and park-riding it ought to have a double rein, as no woman's hands are strong enough to steady a horse's head with a single rein, and few men care to take the trouble to do so. The horse that goes smoothly and kindly in a snaffle bridle is invaluable; still, many a good snaffle horse for park work and summer riding goes better in a Pelham. Many objects attract the attention of a roadster or park-hack which as a field horse in winter he would not look at, and the action of the hand on a Pelham is more quickly felt on the mouth of a horse than is that of a snaffle.

The practiced rider, before mounting, takes a rapid survey of his horse, saddle, and bridle, to see that all is right. For a woman to mount with ease, she, and the man who aids her, must know exactly what to do. A woman, desiring to mount, places her right hand firmly on the center crutch of her saddle, then places her left foot on the joined hands of her escort or attendant, who affords her a steady support as she springs lightly to her seat; before placing her right knee across the crutch of the saddle, it is well to draw down the habit-skirt and place the left foot in the stirrup. The attendant should gather up the reins and the rider take them from him. An agile boy, after a lesson or two, will vault clean into the saddle. Later on, standing on the near side of his horse, he will take a lock of the mane in his left hand, wind it around his two middle fingers, then, holding the reins quite loosely in the same hand, place his right hand on the cantle of the saddle, his left foot in the stirrup, and rise easily and quickly to his seat. Want of practice in this mode of mounting cost the life of his Royal Highness, the late Prince Imperial. Although he had been-taught to ride in England, he fumbled in the act of mounting, his charger became unmanageable, and the assegais of the Zulus had time to do their deadly work.

A lady's toilet on horseback, to be in good taste, must be severely plain. A close-fitting habit with a short skirt, and a bodice fitting to perfection, is all that should be seen, save a small linen collar closed at the throat with a dark neck-tie. For full dress, a tall hat is *de rigueur*, but for hunting or country-road riding, a low hat can be worn. A woman's inside riding-clothes should be few in number, yet of warm, light material. No jewelry is in place save the mounting of the cutting whip.

The selection of a horse for the saddle is a common source of trouble to those wishing to commence riding. In the United States, at the present time, there is no lack of horses that, with careful breaking, could be made first-class saddle-horses. The racing stables of America furnish every year a number of horses not good enough to keep on in training, yet excellent for park-hacks or for light-weight hunters. These animals can always be bought at low rates, and when properly broken are safer and far more lasting than common-bred horses. Central America possesses a breed of ponies of rare beauty and docility—charming household pets for children. These little animals are not always to be found in the United States, and when here they are costly. For larger boys and girls, the mustang of the plains ought to be a favorite mount. Their many good qualities are not as yet fully

recognized. The mustang is believed by many to be vicious, unruly, and, in consequence, unsafe for children; on the contrary, it is an intelligent, sturdy little creature, full of affection for a kind owner. Drovers of mustangs are from time to time brought to New York by the great cattle-shippers, and in their wild state they are snapped up by city dealers at prices ranging from eight to forty dollars per head.

Every horse should be taught to leap, and every boy and girl should know how to sit a jump. An easy, graceful seat is so admirable that we would recall to our fair riders the words of the great Irish novelist: "Ride, Miss Olivia, as though the whole world were looking at you."

MIDY MORGAN.

Five and Fourteen.

THERE are two periods in the moral and intellectual development of a girl which cause the profoundest anxiety to a mother. At five years old, or thereabouts, the period of babyhood is past, while the period of girlhood is not yet reached, and, between the two, comes a time of anarchy and chaos. The little soul is now bursting its shackles and trying to readjust itself to new conditions. The child is ceasing to be a mere pet and plaything, and is beginning to live an individual life. Nothing is more common than to see a docile, well-trained child suddenly develop, without any apparent reason, a willfulness and insubordination entirely at variance with its previous habits. The mother, who has been dreaming of a sweet daughter who is to walk beside her all her days, making life fragrant and beautiful to her by sharing with her all her youthful hopes, and joys, and trusts, turns heart-sick at the naughtiness of the half-fledged termagant. For it is the good, cherubic little girl who usually manifests the change; a spoiled child is so thoroughly disagreeable all the while that any accession of badness is not noticeable. A great deal of self-condemnation and unhappy foreboding would be spared the mother if she would only recognize that much of what is so very unlovely is not essentially wrong—that it is merely what is good in a state of unripeness. The fragrant blossom has withered and fallen away, leaving in its place the hard and acid embryo fruit. A wise mother will be very careful to distinguish between those qualities which promise evil in their developed form and those which are mere crudities, and her aim will be to foster all the unfolded possibilities in her child's nature, and help to bring them to a beautiful maturity.

Every one knows how tiresome and unattractive a little girl usually is when she has outgrown her infantile sweetness. The little impertinences, the saucy retorts and unflattering personalities which have won for her smiles and caresses, or, at worst, an admiring reproof, all at once become intolerable, and are rebuked with acerbity. The very ways which she has been taught to consider charming become subjects for displeasure when the baby roundness and dimples are gone. Her sense of justice is outraged, and the unwarpd sense of justice in a child is often very strong. She becomes a little Ishmael, her hand against every man's, and every man's hand against her. In a certain sense this can scarcely be avoided, but, if the

mother's love be unfailing, and her sympathy always ready, she can keep sweet the fountain of love and trust which, without that refuge, might become very bitter. Just when this new life is unfolding, a mother's wise care is most earnestly needed. The soul which has seemed to draw its life from hers is beginning to lead an individual existence. It is to the perfect development of this individuality that the mother should bend all her strength. Each human soul contains within itself the germ of its own life. To make of it all that may be made, the mother should only guide the growth, leaving it free within the limits of moral probity to grow into its fullest possibility. She cannot lop it off here and there, or suppress its growth yonder, without maiming and stultifying the whole nature.

The dangerous quicksands of this period safely past, the mother begins to breathe freely again. She again begins to see visions, and to dream dreams, till the second and more serious season of anarchy comes to try her faith. Childhood is over, and womanhood is yet far away. The whole being, moral, intellectual, and physical, is in a state of ferment. New motives, new principles, new emotions, are battling for predominance, and, until these relative claims are adjusted, no peace can be hoped for. This second chaotic period—which comes at about fourteen years of age—lasts longer, and brings a more hopeless and radical overturning of that which had seemed so firmly established. If a mother's care were needed in the earlier change, it is infinitely more needed now. New traits seem to be starting into life, new developments are manifested. Changes not only in purposes and ideas are taking place, but changes in temperament, in disposition, in tone are manifesting themselves. There is need of a wise hand which shall guide without galling, a tender heart which shall sustain without compromising with evil. To aid in the conflict and insure victory, nothing will help a mother more surely, nor direct her more easily in this difficult

task, than the recognition that this, also, is merely a stage of growth necessary to a full and perfect development of her child's nature, and that to her is intrusted the privilege of fostering the growth, while she shall be looking to the end with the prophetic eye of love.

S. B. H.

Two Visions.

WHERE close the curving mountains drew
To clasp the stream in their embrace,
With every outline, curve, and hue
Reflected in its placid face,

The plowman stopped his team to watch
The train, as swift it thundered by;
Some distant glimpse of life to catch,
He strains his eager, wistful eye.

The morning freshness lies on him,
Just wakened from his balmy dreams;
The travelers, begrimed and dim,
Think longingly of mountain streams.

Oh, for the joyous mountain air,
The fresh, delightful autumn day
Among the hills! The plowman there
Must have perpetual holiday!

And he, as all day long he guides
His steady plow, with patient hand,
Thinks of the flying train that glides
Into some new, enchanted land,

Where, day by day, no plodding round
Wearies the frame and dulls the mind—
Where life thrills keen to sight and sound,
With plows and furrows left behind.

Even so, to each, the untrod ways
Of life are touched by fancy's glow,
That ever sheds its brightest rays
Upon the path we do not know!

AGNES M. MACHAR.

LITERATURE.

Sayce's New Edition of George Smith's "Chaldean Account of Genesis."*

GEORGE SMITH'S "Chaldean Account of Genesis," published in 1875, was the most important single contribution of material ever made to the study of the book of Genesis. It did not claim or attempt to be this. It merely offered to gather all the information known to the author about the beliefs of the early Chaldeans as to the origin of the gods, the creation of the world, and the mythical stories of its prehistoric heroes and demi-gods,—a subject first studied by George

Smith, who had unique opportunities for these investigations from his position in charge of the Assyrian antiquities of the British Museum, and who possessed extraordinary aptitude for divining the sense of the cuneiform inscriptions. It happens that the early chapters of Genesis are drawn, not from Egyptian, but from Babylonian sources, and George Smith was the first to find those sources, and bring them to light so that they could be compared with the Mosaic story. That the sources of the first chapters of Genesis were Babylonian could have been gathered from the book itself. Eden is in Mesopotamia; the story of the tower of Babel is one of the chief episodes; Abraham came from Ur of the Chaldees; and while not one of the irruptions into Palestine made by the Egyptians is reported, we do have the story of the conquest of the five cities by the King of Shinar and his associates. George Smith was first able to tell us, from the Chaldean side, the story of the creation of the world, the

* The Chaldean Account of Genesis. Containing the description of the Creation, the Deluge, the Tower of Babel, the destruction of Sodom, the times of the Patriarchs and Nimrod; Babylonian fables and legends of the gods; from the cuneiform inscriptions. By George Smith, formerly of the department of Oriental Antiquities, British Museum, Author of "Assyrian Discoveries," etc., etc. A new edition, thoroughly revised and corrected (with additions) by A. H. Sayce, Deputy Professor of Comparative Philology in the University of Oxford. With illustrations. New York: Charles Scribner's Sons. London: Sampson Low, Marston & Co.

Deluge, the Confusion of Tongues, and the exploits of Nimrod, and thus to bring to our knowledge those legends of Chaldea which are parallel to the Genesis accounts, and which must have come from the same source. He did not attempt to show very fully the relation between the two, nor to draw the conclusions which must have suggested themselves to his mind. It was enough for him that he provided the material which later scholars would improve and use for critical purposes.

Professor A. H. Sayce, who has prepared the new edition of Smith's "*Chaldean Account of Genesis*," is a very different kind of a scholar from Mr. Smith. Mr. Smith was not at all given to speculating. He had a marvelous gift for divining the meaning of an inscription, and his wonderful feat of discovering the clew to the Cypriote writing is a memorable proof of it; but he was conservative in his methods and results. He did not apply criticism—at least not destructive criticism—to the contents of his texts. When the *Izdubar* (or *Nimrod*) epic was discovered in twelve books, he took the story of *Izdubar* to be based on actual history, and *Izdubar* to have been a veritable king of *Erech*, whose epoch he tried to settle. It was left to Sir Henry Rawlinson to suggest immediately that there was nothing historical about the hero, and that the twelve books into which the epic is divided correspond to the twelve months, and were of a purely mythical character.

Professor Sayce is the exact reverse of George Smith. He is a general scholar, and was bred a scholar and a philologist, which was not the case with Mr. Smith, who came from the artisan's shop into the British Museum. When little more than a boy, Professor Sayce began to study the Assyrian language, and did not hesitate to write with considerable youthful conceit for *Kitto's "Journal of Sacred Literature,"* and was pretty severely handled by his elders, Dr. Norris and Dr. Hincks. But he was not easily abashed, and gradually became an excellent scholar in the language, until now, since the death of these two men, and lately of Mr. Smith, and the virtual retirement from the field of Sir Henry, he stands at the head of English scholars of Assyrian, and would stand alone, were it not that he has educated a class of half a dozen very promising young men, of whom not a little may be expected. One of them, Mr. Pinches, who takes Smith's place in the British Museum, is now editing a magnificent set of plates of the remarkable series of figures on *Shalmaneser's* bronze gates of *Balawat*. But Professor Sayce has never got over his venturesome spirit. The new thing is always warmly welcomed by him, and his later sober conclusions occasionally have to correct his first hasty opinions. To him the story of *Nimrod* is utter legend, and the hero himself has his origin in a solar myth.

George Smith's volume certainly needed revision. Though it is wonderful as a monument of his genius, the texts of which he gave the first translations have (with the exception of a few tablets which have been mislaid) been since carefully studied by other scholars, French and German, and are now much better understood. Some of his conclusions are universally given up. *Delitzsch's* translation of the volume into German was accompanied by very careful notes, and many rectifications of Smith's errors; and *Oppert* had trans-

lated much more correctly some very important fragmentary texts that were misconceived by Mr. Smith. With these and other materials before him, and an ingenious scholarship of his own, Professor Sayce has made almost a new book of the "*Chaldean Account of Genesis*." It is completely rewritten from beginning to end. Mr. Smith no longer speaks in the first person, but is spoken of in the third. The translations are all corrected up to the best scholarship of the present day, and the opinions and conclusions of Mr. Smith are altered or reversed with the utmost freedom. It is now really a new work, based on Smith's, sometimes following his language exactly, and at others utterly different. The reader must not suppose that he has before him Smith's conclusions, except when it is expressly stated that Mr. Smith thought so and so, which is occasionally done when the editor wishes to disclaim holding the opinion himself.

The changes are generally wise. The results of the last five years of study are faithfully embodied. The most important change is the giving up of the text in which Mr. Smith imagined that he found the story of the fall of man, but which really contains only a hymn to the god *Hea*. But though this part of the story must be given up, the rest remains—the creation of the world, of animals, of the planets, the sin of men, the overthrow of *Tiamat*, the dragon, or serpent, of the abyss, the Deluge, the tower of *Babel*, and the exploits and wanderings of *Izdubar*, enough to be of the most absorbing interest to the student of comparative religion. But in the new edition *Nimrod* ceases to be the actual king of *Erech*, and, as we have said, is regarded as entirely unhistorical. A vein of philosophizing on the data is conspicuous, and the reader is guided to conclusions concerning the nature and origin of the legends, and their bearing on *Genesis*—something which Mr. Smith carefully avoided. At the same time, we feel a need to be somewhat more upon our guard about accepting Professor Sayce's theories as final. We are a little surprised when we notice that where Smith made the earliest inscription known, that of *Lig-Bagas*, king of *Ur*, to be of about B. C. 2000, Professor Sayce without evident reason adds a thousand years to his antiquity, and suggests that some of the signet cylinders may be of much greater antiquity. The evidence for such an extreme antiquity is very slight. The extreme of liberty is taken with Smith's text on page 190, where Smith had directly rejected an opinion of Professor Sayce's. In this edition the opinion is stated, but the fact that Mr. Smith rejected it, with his reasons, is entirely omitted.

While the scholar would have been much better pleased with this volume if Professor Sayce had been content to reprint Smith's work without change, and then, following *Delitzsch's* example, keep his own corrections and additions entirely separate, the present form is much more convenient to the general reader. He can depend upon it as being, on the whole, much more complete and trustworthy than the first edition, and as of intense interest on account of the now trustworthy parallelism of the translations with the Hebrew of *Moses*. While there may be some difference of opinion as to the translations of the short and fragmentary texts that are supposed to relate to the confusion of tongues and the destruction of *Sodom*, the rest remains impregnable. It is beyond all question

that the Babylonians, at a period more ancient than Moses,—as far back certainly as Abraham,—were familiar with the same tales of the world's birth and childhood, told in the grossest polytheistic form, which the writer of Genesis, centuries after, told in the matchless and lofty monotheism of the Hebrew record. Whether we hold, with Smith, that these stories had a historical basis, or, with Professor Sayce, that they are wholly mythical in their origin, will depend on other considerations than those of simple text-criticism.

The Chaldean stories beyond question illustrate marvelously the Mosaic records. Whether they confirm them is not for us here to say.

We are pleased to notice among the three additional figures given by Professor Sayce in this edition one from an American source—a seal in the possession of Dr. S. Wells Williams, of New Haven, which has never before been published, though it has been the subject of a paper before the American Oriental Society. It represents the demiurge Merodach destroying the hostile dragon, or spirit of evil, who in this unique seal appears, for the first time known, under the form of a serpent, as in Genesis.

Max Müller's "Chips." Vol. V.*

THERE are few living languages save the Irish that equal English in the utter want of system in spelling, in the astonishing difference between the actual letters in a word and the pronunciation of those letters by persons to whom the language is native. German is so much better off in that respect that it is not surprising to find a philologist of German birth advocating phonetic spelling; the surprise is that the advocacy should arise in England, and at conservative Oxford. Moreover, Max Müller has always had a leaning toward the imaginative rather than the Gradgrind wing of the science of philology, and, moreover, might well be expected, as a student of derivations, to cherish a system of spelling, however absurd in practice, which undeniably preserves in many cases a record of the original meaning of words and some of the steps by which they have come to mean what they do signify to us. It is the boast of Irish that however modern pronunciation has shortened and mutilated words,—in some cases reducing words of four or five syllables to two, as, for example, Cholmondeley to *Chumly*,—yet the written word offers an infallible and very convenient register of its component parts. Doubtless Prof. Müller has come to see that while this advantage had force enough formerly, when languages had not been studied and laid down in dictionaries and grammars which have been multiplied beyond the likelihood of disappearance from the world, at the present day the advantages are almost *nil*, while the disadvantages are continually on the increase. Written language is a tool, whether we believe with one set of thinkers that it had much, or with another that it had little, to do with engendering mythologies, philosophies, and religions. But the English language, as written, is a very clumsy tool, and not only uses up much valuable time when foreigners learn to use it, but consumes a great deal of energy in native chil-

dren which might be put to better use. Müller's essay on Spelling in the "Fortnightly Review" (April, 1876) reverts to a former series of lectures, in 1863, wherein he expressed approval of Isaac Pitman's system of phonetic spelling. But in the essay he comes out square on the side of reform, and, beginning with the usual spelling, gradually admits more and more of the system till the close. His tone is apologetic: he wishes it to be understood that he is neither an advocate of the system nor a "man of the world" who sneers at the system. It seems that the essay is a piece of conscientiousness on his part, chiefly due to promises made to Mr. Pitman. That, however, does not weaken the force of what he has to say from a popular stand-point. With his usual clear and direct method of statement, he presents the facts of the case: the changes going on in English which are widening the breach between spoken and written language; the irrational, wholly arbitrary, and often unhistorical method of spelling; the loss of time spent in drilling the meaningless varieties into the minds of pupils; the errors in etymology that are perpetuated by mistaken spellings now consecrated by usage; the actual proofs that children learn to spell phonetically in a wonderfully short space of time. Max Müller did a great thing for reform in English when he published this essay in 1876; his position is re-asserted by his revising it and reprinting it in book form.

The dissertation "On Freedom," a presidential address at the Midland Institute, in 1879, has much to say to the world at large, and vindicates its position as first in the volume by liveliness and timeliness. Word from so high an authority regarding Oxford and Cambridge universities is worth reading, notwithstanding the likelihood that a professor so well treated by England should regard through rose-colored spectacles the seats of learning which have known how to appreciate him as well as any of his predecessors. He sums up his address:

"No one can read Mill's essay 'On Liberty' at the present moment (1879) without feeling that even during the short period of the last twenty years, the cause which he advocated so strongly and passionately, the cause of individual freedom, has made rapid progress—aye, has carried the day. In no country may a man be so entirely himself, so true to himself and yet loyal to society, as in England."

In defending the English universities against attacks from foreign sources, he states that the German universities err in giving too much time to lectures, too little to personal intercourse between professor and student. "In English universities, on the contrary, there is too little of academic freedom. There is not only guidance, but far too much of constant personal control."

In accordance with its modest name, this series is a sort of receptacle for odd papers and lectures. It will not rank with former volumes for many reasons. One is that Müller's time is more occupied now by larger publications than it used to be; another, that more men in the same field have the ear of the public. The essay "On Sanskrit Texts discovered in Japan" may be interesting to specialists, but hardly comes under the head of popular writing, let the term be stretched as far as it can, and let Max Müller do his best to put juice into the dry flesh. The lecture "On the

* Chips from a German Workshop. By F. Max Müller. Vol. V. Miscellaneous Later Essays. New York: Charles Scribner's Sons. London: Longmans, Green & Co.

Philosophy of Mythology" (Royal Institution, 1871) is one of the most suggestive, and at the same time the least satisfactory. It has the great merit of exciting thought, and bids the reader look farther on the subject, but no solid conclusions are reached, and even the etymologies have a forced appearance. But perhaps this arises merely from the fact that much has been written on mythology during the last decade and that we are now looking for some one to systematize the material. Ten years ago this lecture was bolder than it is now.

Parton's "Life of Voltaire."*

MR. PARTON comes to praise Voltaire, not to judge him. With his subject and his vivacity he could not fail to be amusing by intention, and instructive in spite of himself:—amusing, though the wit that flashes in every page of his author can no more be set forth by sample than sheet lightning can be photographed; and instructive, because the mere narrative of his career proves that a great mind does not quite waste its powers through eagerness in a mistaken pursuit, while, though the intended mischief fails, much incidental good remains. What that pursuit was, his biographer brings out clearly enough, leaving no doubt in the reader's mind of his failure in the effort to deify his hero, after the fashion of modern days, as one of the blameless martyrs of free thought.

Voltaire's life spans the years through which France passed from the "*L'État—c'est moi!*" to the "philosophedom" traced by Carlyle. King's darlings of either sex, and priests thought to have the faults only of both, ruled it when he was born. When he died, the page was just turning that records one of the world's catastrophes. He lived till the cycle of democracy in state and rationalism in religion had fairly begun. What did he contribute to this change, and why?

In a letter written by Voltaire to the editors of a collection of his works published in Holland with his sanction in 1764, these words occur:

"There are hardly any of my writings with which I am satisfied, and there are some of them I wish I had never written. I have written history with truth, I have abhorred abuses, quarrels, and crimes, but always with due reverence for sacred things, which men have so often used as a pretext for those quarrels and crimes."

This is the estimate of himself which Voltaire wished to be accepted. Now, what estimate of him was really accepted among the fairest judges, those of his own nation? His name stamped itself upon the language. The last and best of French lexicographers, no saint himself, admits the term *Voltaireanism*, defining it as "a spirit of mocking unbelief toward Christianity." Between these two statements lies the truth as to the conscious meaning of Voltaire's life. His biographer saves himself trouble at the expense of fairness, by adopting the first one absolutely. He goes farther, in attempting to fix a new meaning on the famous motto, "*Écrasez l'infâme*," which Voltaire was so fond of appending to his letters. He would persuade the reader that it can mean "Crush that monstrous thing, superstition." Now, though unfort-

unate in some of the renderings from other languages that appear in his book, the biographer should be well enough equipped for his task in French at least, to feel that the phrase cannot bear the strain of the sense he tries to put on it. One may use an adjective with the prefixed article to express a pure abstraction, as "*le beau*," "*le sublime*." Voltaire might have done so (though it would be coining a locution which he was averse to) if he had intended "infamy" in a wide, general sense. Or if he had meant the special sense Mr. Parton invents, the substantive was ready for his pen. Logically and grammatically, "*l'infâme*" is here a personal epithet, not a generalized quality. It was so taken when uttered—a score of passages might be cited to prove that the utterer so meant it—there is a point and impudence in the application which he would not have missed. We must believe that it is not mere carelessness which leads the biographer to translate and soften this studied insult to the founder of Christianity into a device of hatred for its superstitious abuses.

These abuses were gross enough to fix the view and kindle the wrath of so penetrating a mind and so kindly a spirit as Voltaire was endowed with. They had reached an excess that cried for chastisement. What with bishops and bastiles, relics and censures, pensions and sinecures, Jesuits and Jansenists, Toulouse persecutions and the *Parc-aux-Cerfs*, confessors ruling mistresses who ruled kings, the establishments of church and state interchanged and supported infamies. Abuses in the state, fenced by tradition, defied attack until starvation forced the barriers. But abuses in the church belied its very reason for being. The court only exceeded its ancient powers. The church added hypocrisy to oppression. Voltaire saw the point of attack, and devoted the best of his life to it.

He was born for his time and his task. The date for reform had passed, and his was the spirit to destroy. Pascal's exposure of the Jesuits, reasoned with exquisite irony, which it is laughable to hear Voltaire style illogical, had spared and was meant to strengthen the foundations of the church. Voltaire turned ruder weapons to more violent assault. He was wholly of his own generation, estranged from his family, childless, with no place or estate at risk in France, hazarding only his person and his literary property. When these were threatened he found powerful protectors, and if they failed, escaped by flight or falsehood. The thorough French quality of his mind captivated attention and sympathy. Wanting gravity or judgment, it was penetrating, subtle, nimble. And he was wit incarnate, wit that spared nothing, feared nothing, revered nothing. He had the advantage over his opponents that while the priests hated and feared him, he hated and did not fear them—only their usurped power to hurt him.

Mr. Parton cleverly so disposes his narrative as to give the impression that Voltaire, distinguishing between Christianity and its abuses, hated the latter only; and that he took up the attack on these only in his later years, after he was sixty-five. This is not the truth of biography in either respect. They knew him better in his time. Voltaire was unbelieving from the first. His early poem, the "Epistle to Uranie," written when he was twenty-eight, is a plea for deism.

* Life of Voltaire. By James Parton. 2 vols. Large 8vo. Pp. 629, 653. Houghton, Mifflin & Co. 1881.

His repute, of the sort then called impious, assured him welcome among the accomplished infidels of England, whom he admired and associated with on his visit to London at the age of thirty-two. Mockery was the sport of the guests round Frederick's table, ten years before the date given as that at which he took up his work. The intellects he held most closely to, all his life in France, were all as incredulous as his own, some bolder, some coarser, though none as active and shrewd. He did not proclaim the convulsionist miracles, the persecutions for doctrine, the concessions to royal vice, as personal priestly wickedness, but argued that they were the necessary result of Christianity. When he was himself touched, when the interest of his friends and his own literary fame suffered by the suppression of the *Encyclopedia*, then it was that he concentrated his powers in the organized attack on the Christian religion, which he pressed while life lasted, with all the advantages derived from his fame, his incomparable literary skill, and his talent, almost rising to genius. Granted that he did great service to mankind by unmasking hypocrisy and discrediting superstition. He did a great deal to destroy the evil and little to harm the good in the system he attacked. With graver patience, and purer purpose, his work might have been altogether worthy and lasting. But he was what he was—very far different from what his eulogist would have us believe him.

What would Voltaire have built up if he had succeeded in destroying? What was it he professed to reverence? "He set limits to his dissent, and adhered to his belief in a superintending deity." Pure deism, then, is what he would have taught; but that is a theory needing the support of some code of morals for the practical conduct of life. The philosopher's religion will not become for long ages yet the religion of the mass of mankind. Precepts of reason, justice, charity, he could inculcate—but the binding sense of duty, the restraint of passions, he neither preached to others nor illustrated in himself. His system was as poor a substitute for Christian commands and consolations as Rousseau's dream of a "*contrat social*" was for organized society. In the ferment of the time, the vague theories of both were turned by miscreants into acts that appalled the world. The best word that can be spoken for either of them is that both helped to raise the storm that cleared the air for modern thought. And it is fair to suppose that had Voltaire lived a few years longer, to see Mirabeau take up, and Vergniaud continue, and Danton finish what he had begun, his sense of order would have been as much shocked by the outcome in political society of their joint influence as Rousseau's moral sense would have been by the downfall of all religion in the coming generation.

No praise of Voltaire as a consummate literary artist can be extreme. Mr. Parton heightens our enjoyment of his works by his animated account of the conception and perfecting of each, and of the ingenious shifts to which the author was driven to secure publication for many of them, while evading its consequences. Partiality misleads him into making a lame apology for "*La Pucelle*." The simple heroic facts of the "*Maid of Orleans*'s" story were perfectly well known in Voltaire's day, and might have been treated as a

dignified subject by his talent, even though some one else had done it badly before him. He chose to make it the frame of an "uproarious burlesque," filled out, during the many years he kept it by him, with malignant epigrams for his enemies, and indecent flings at the church. As we read it nowadays, with its personalities all stale, it is as dull as it is dirty. It would be more frank to admit at once that Voltaire degraded a noble and tender passage in his country's history into a vehicle for spite and profanity.

Voltaire's restless life and curious spirit brought him into companionship or collision with very many people of note in Europe, from princes to pamphleteers, involving situations full of personal interest. These relations, and such domestic life as he had, are described by his biographer in a lively and entertaining manner, with the addition of new incidents and correspondence. There is a want of proportion in the treatment of the several parts of the subject, as if the writer had grown too weary of his immense material to care for shaping it into symmetry; and some renderings even of French toward the end of the volumes are very careless. These are scratches that may be effaced from the surface of the mirror he holds up to reflect Voltaire; we have indicated how it is more in fault through errors of curvature, distorting the image,—errors which lie too deep for correction.

Oscar Wilde's Poems.*

TO THOSE who have not been kept informed of the meaning of a long series of attacks in "Punch," it will afford surprise to read the adverse criticisms with which a new poet has been received here in many quarters. "Postlethwaite," the æsthetic poet and fop in whose vagaries Mr. du Maurier takes so much interest, is universally stated to be no other than Oscar Wilde, the son of a clever authoress of excellent family in Dublin. The identification of Mr. Wilde as "Postlethwaite," whether just or not, was so widely bruited, that a strong prejudice against the former had already grown up when his poems appeared. This is in itself a curious example of the force of ridicule when exercised by a draughtsman of Mr. du Maurier's force. The latter worked a prolific vein, much to the enjoyment of the world that loves a laugh. No one who enjoys good poetry will hesitate to hope that the damage is temporary only, and will be more than retrieved in the future by increased efforts on the part of Mr. Wilde. For this poor "Postlethwaite," over whose antics, as "Punch" renders them, we have all been laughing, turns out to be after all a poet of no mean caliber. There are traces of weakness in plenty. There is something of the lackadaisical, something of the carnal, and more of the hopeless wailing which is common among verse-makers of less artistic vigor. On the other hand, Oscar Wilde is full of the regret for days gone by which is also common enough among poets, and his *tedium vite* is as much owing to disgust at the commercial atmosphere of modern English life, at the grill of railroads over English fields, at the absence of the elements of beauty found in the Utopia of the troubadours, as it is because of the ridicule of "slan-

* Poems. By Oscar Wilde. London: David Bogue. Boston: Roberts Brothers. 1881.

derous fools." Keats, his acknowledged and lauded master and forerunner, had some of the same feeling, but the expression of it was much more healthy. In the sonnet called "Theoretikos" he tries to explain his view of England at the present day, and at the same time insinuate why it is that he takes that aloof and scornful attitude which his critics treat as rank affectation :

"This mighty empire hath but feet of clay :
Of all its ancient chivalry and might
Our little island is forsaken quite :
Some enemy hath stolen its crown of bay,
And from its hills that voice hath passed away
Which spake of Freedom : O come out of it,
Come out of it, my Soul, thou art not fit
For this vile traffic-house, where day by day
Wisdom and reverence are sold at mart,
And the rude people rage with ignorant cries
Against an heritage of centuries.
It mars my calm : wherefore in dreams of Art
And loftiest culture I would stand apart,
Neither for God, nor for his enemies."

For all that, other poems do not fail to show that Mr. Wilde is wiser and better-hearted than he paints himself. His very bitterness shows how keenly he feels his nationality. And it is in these poems that the healthy and promising sign lurks which ought to tell his satirists that the stuff of a true poet is in him, and that it is merely a question whether he will, or will not, cast off the affectations foreign to his own character, to become a writer of the best force. These affectations seem chiefly imitative. He has followed Swinburne too closely. He has been hurt by the prestige of Rossetti, another poet who is ever crying, "*Odi profanum* !" in mournful imitation of the feeling in British society. A chaplet of short pieces called "*Rosa Mystica*" refers to a visit to Italy. Evidently Mr. Wilde has hoped to find in Roman Catholicism an inspiration that could not be found in the Church of England, and has coquetted with Rome after the approved fashion of to-day. But remark that he comes back unsatisfied, and seems to have learned that his own country is not so entirely devoid of subjects for noble verse as he has been made to think. So we should judge from "*Ave Imperatrix*," a poem that with profit might be docked of four or five stanzas, but which is strong enough, simple enough, beautiful enough to delight an unsympathetic foreigner. How an Englishman can read it without a glow of pride and a sigh of sorrow is beyond comprehension. Mr. Wilde can comfort himself. "*Ave Imperatrix*" outweighs a hundred cartoons of "Punch."

There is the greatest difference possible in the quality of different poems in this collection—a natural thing in any volume, an inevitable thing in a first collection. The weakest are the "*Impressions du Théâtre*," as they deserve to be, to pay for their unnecessary French title. It is a sign of the times that Mr. Wilde has no better actor than Mr. Irving on whom to bestow the honor of this fine line :

"Thou trumpet set for Shakspeare's lips to blow !"

The "*Impressions*" have also superfluous French in their titles, but are charming in structure, though a trifle "precious." The imitative poems are best when the Keats element is strongest in them ; some are musical and thoroughly charming to mind and ear.

It may be said, with some extravagance, doubtless, that he has learned everything of Keats, except Keats's unflinching sincerity. But there is no need of falling foul of Mr. Wilde for all these poems in which we hear echoes of masters living and dead. They may only mark a not uncommon phase through which he is passing. Unless certain poems are very deceptive, it is a phase through which he has already passed.

The Memorial History of Boston.*

THE excellent success of the first volume of the Memorial History of Boston apparently has given an impetus to the work. At any rate, the second volume has about it an air of even greater prosperity, and the reader has the advantage—if he has faithfully read the first—of sitting down to a somewhat easier task. It was inevitable that the first volume should be largely critical in its character : the ground had to be broken for the whole work ; there were subjects involved which lay deeper in historical significance, and the connections with general history were more various when the colony was planted than while it was growing. It follows that in the second volume the work seems more carefully bounded, more exclusively devoted to Boston. The narrative prevails over the critical, and in the subject treated, one discovers the town emerging from its first form of a settlement of church members into its second, more composite, character of a provincial capital and vigorous trading-place.

It cannot be said that provincial Boston made any such contribution to history as colonial Boston ; there is a less heroic air about it, and one does not feel it necessary to brace himself for a severe view of life. The figures of Winthrop and his associates are more suitable for marble statues than those of the Mathers and Phips, but, as we have hinted, the advantage is on the side of the self-indulgent reader. He will find in these pages some of the color and the form so dexterously used by Hawthorne, and catch a glimpse of the life which Copley and Smibert painted. The very suggestion of art in connection with provincial Boston intimates how much wider a range in common human nature has been taken. Provincial the town was, not merely in the historical, but in the critical sense, and one of the most interesting features of this volume is the manner in which it discloses the growth of the town as an individuality developed from the germs planted by the first Englishman, and getting little help or harm from the outside world. One sees the high-strung religious power of the Puritans, which had at the first been kept vigorous by hard manual labor and the intellectual work of establishing the boundaries of state life, relax under prosperity, abandoning itself to theological subtleties and lapsing into superstition. One sees also the political spirit striking down more deeply into the common life, and thus the same volume contains full accounts of the Mathers and witchcraft, and leaves the reader with the livelier sense that Sam Adams and Benjamin Franklin had come to the front.

* The Memorial History of Boston, including Suffolk County, Massachusetts ; 1630-1880. Edited by Justin Winsor, librarian of Harvard University. In four volumes. Volume II., The Provincial Period. Boston : James R. Osgood & Co.

The names of the contributors to this volume are largely the same as those given in the first. Certain subjects are the extension of the same topics treated before. Thus, the chapters upon the outlying towns of Dorchester, Roxbury, Chelsea, and Charlestown are by the hands which prepared those in the earlier volume. Mr. Bynner continues his account of the topography and landmarks, Mr. Whitmore his notes on Boston families, and Mr. Scudder his general portrait of life in Boston. The efficient help of Dr. H. M. Dexter, Mr. W. F. Poole, and Mr. D. A. Goddard has been secured, and the writers, having fewer topics to discuss, are able to give to their several chapters a more continuous and comprehensive character. The illustrations are an advance upon those in the first volume; they are more copious, and drawn from more interesting material. The editor, finally, besides his constant annotation of the pages, has furnished a very important introduction to the volume, in which he brings together a great deal of valuable material for forming a distinct notion of the external appearance and the division of estates in Boston at the time. There is a satisfaction in seeing so desirable a work as this carried forward with so much intelligence and spirit. It is not overloaded with useless antiquarianism, nor does it neglect any phase of the subject which properly comes within its scope. It is readable as well as authoritative.

Munger's "On the Threshold."*

OF making books of advice to young people there is no end, and of good books of such advice we have but very few. Mr. Munger talks to young men

as freshly and admirably as if the theme had never been touched before. He speaks to them about purpose, friends and companions, manners, thrift, self-reliance and courage, wealth, reading, amusements, faith. Mr. Munger is a minister, but in his book there is none of the mannerism of the pulpit. It is the frank, wise, inspiring work of a man who carries a high ideal into the circumstances of an average American community. It is remarkable in its union of enthusiasm with good sense. Mr. Munger has in him much of the poet. He is an idealist, a man of intuitions, quick to see and keen to feel the higher spiritual aspects of the world. But he has evidently had large experience among American boys, who as a class are not poets or idealists, whose temptations are of a very unromantic character, and who have got to make a living as well as to obtain the kingdom of God. He speaks wisely and shrewdly about thrift and health, at the same time that he speaks inspiringly about courage and purpose. In his detailed counsels there is much suggestiveness; but, more than this, there is the contact everywhere of a strong, uplifting personality, a full vitality that is fed from the highest sources. The writer strikes always at the central principle of his subject. He draws his listeners toward the large, satisfying interests, so that vice and vulgarity shall appear not only odious, but contemptible and unattractive. There is nothing ascetic, nothing narrow, in the type of life he commends: his influence goes toward a manhood which is large, vital, and joyful, as well as sound and faithful.

* On the Threshold. By Theodore T. Munger. Boston: Houghton, Mifflin & Co.

THE WORLD'S WORK.

Reproduction of Pompeian Pavements.

EXPERIMENTS recently have been made in this country with our native marbles, to test their value as materials in making mosaic pavements resembling those found at Pompeii. These pavements were formed by bedding irregular bits of colored stone in a matrix of mortar, the various colors serving to form designs or rude pictures. A familiar example of this work is the figure of a black dog on a white ground, with the legend, "Beware of the dog." The experiments formed a good basis for a new art-industry, and a number of public and private buildings have already been supplied with marble mosaic floors or pavements that are exact reproductions of those found in Pompeii. The great variety of colors in our marbles gives a wide selection of colors in forming the designs, and good Portland cement, with a slight admixture of sand, makes a suitable matrix. The stones are roughly shaped into pieces about two centimeters (three-quarters of an inch) long, having one end cut or ground smooth and flat. No attempt is made to

have the end square. Any form will answer, provided it is fairly regular and symmetrical and about one centimeter in diameter. The design of the pavement is drawn and colored on paper the full size of the work, and from this the workman selects the colored pieces of marble, and sets them in position in the plastic cement by hand. The work is not laborious, and may be readily done by young women, all the skill required being easily learned in a few weeks. The pavement, whether the floor of a church, a vestibule, a sidewalk, or a hearth, does not have any seams when finished, although all the work is done in small squares varying from twenty to forty centimeters in diameter. Wooden or iron molds are prepared, and so much of the design as may be included in the inclosed space is made in the mold. Each piece of marble, when bedded in the cement, is brought to an exact level with all the other pieces, great pains being taken to have all the marbles of about the same texture. When the cement has set firmly, the block in its mold is placed under a marble-polishing machine, driven by steam power,

and all the pieces of marble are polished, the cement being cut away at the same time so as to bring the work to an even surface. The blocks, when finished, are taken to the place where the pavement is to be laid, and carefully removed from the molds. The sides of each block are then broken away with a hammer, so as to leave an irregular or ragged edge. The blocks are then put in position, and the spaces between them are carefully filled with cement and fresh pieces of marble. The design is thus restored completely, and no seam remains between the blocks. The new portions are then polished by hand, to bring the whole work to one uniform surface, and the work is complete. As the pieces of marble stand on end, and are firmly bedded in the cement, the colors and designs can never wear out, and the work will endure constant usage for an indefinite time. The pavements examined were partly of modern design and partly exact copies of Pompeian floors. The colors were clear and the outlines sharp and well drawn. At the same time, as might be expected, all the work preserved the antique character. The pavement may be confidently recommended as a new flooring material, and welcomed as the product of a new industry.

New Type-writer.

THE type-writer, like the sewing-machine, appears to be one of those tools firmly fixed in a permanent field of usefulness. It has been greatly improved within the last few years, and only the price seems to stand in its way. If it were cheaper it would become a general household tool. The cost of the machine has stimulated invention, and a great number of efforts have been made to produce a cheap and reliable type-writing (or hand-printing) machine. Among the most promising of these is a machine designed to be used with one hand, and to print the letters by direct contact. The machine examined appeared to be well designed, and to be constructed in a thorough manner. It had been in use for some time, and must be regarded as a practical apparatus for general purposes. It aims to print one letter at a time at the same spot, and to move the type and feed the paper in the direction of the printed line after each letter has been impressed. To accomplish this, there is a sheet of thin rubber, having, arranged upon it in regular order, about fifty letters, small and capitals, figures, etc. These are raised slightly above the rubber, and make the type. Above this is a small lever, hinged at one end; with this any one of the types may be pressed down by hand upon the paper under the types. Under the type-plate is an inking pad for moistening with ink all the types, except the one in use, each time a letter is impressed on the paper. Above it is a metallic plate, covering the back of the types everywhere, except in one place at the center. The type-plate is supported by a triple set of parallel levers that give it a universal lateral motion, and, as this system of levers is connected with the hand lever, the type-plate may be guided into any position desired by moving the lever. Thus, if it is desired to impress a letter in one corner of the type-plate, the lever is placed over that letter and pushed down. The next letter may be in quite another part of the plate. The lever is moved to this letter, and the type-plate follows the lever, so that, while the lever is

really pushed down at precisely the same spot, the letter under the lever has been changed. A finger-bar serves to feed the paper between the letters, and in this manner the writing is done. The lever, held in the forefinger and thumb of the right hand, is moved over a guide-plate marked with the letters, and each one is touched gently in turn while the little finger moves the finger-bar between the letters. To feed the paper between the lines, either hand may be employed. All the types are inked between the letters by an automatic device, and the writer has only to touch one letter after the other to make the printed copy. At the same time, if it is desired to repeat a letter, there is no inking between the letters. If the letter or figure is not repeated more than three times, the letters appear to be reasonably distinct. All the parts likely to wear out can be easily replaced, and new type may be put in for a few cents. The machine has the merit of cheapness and simplicity.

New Domestic Motor.

THERE has been within the past few years a demand for small motors, both for the shop and the house. A large number of domestic motors have been brought out, but the greater part have apparently failed of general approval. Steam, air, and gas engines of small size and low price are readily found, but for domestic use, the fact that all require more or less skill in using them seems to prevent their general introduction. There is also at least one good water-motor suitable for light work in the house. This is a simple overshot wheel, driven by a small stream of water from any house service where there is a moderate pressure or head of water. The wheel is hung vertically, and is inclosed in a casing supported by iron legs. A new form of water-motor recently introduced suspends the wheel, in the form of a thin metallic disk, at the end of a vertical shaft. From two to four streams may be directed against the cup-shaped vanes on the wheel, and, as the wheel is suspended freely, the waste water has plenty of room to escape below. The wheel is inclosed in a casing having a dishing shape below, with the outlet for the water in the middle, to prevent clogging or stopping of the wheel by excess of waste water. The motor is designed to be screwed directly to the faucet, and to discharge the waste water into the sink, or by a pipe into the house drain. The motor is made in several sizes, from a small machine of one-sixteenth horse-power which can be carried easily in the hand, up to one-horse-power machines.

It may be remarked, in connection with this motor, that there is also a new steam motor constructed on the same plan. A small jet of steam is thrown against the vanes of a wheel inclosed in a metallic casing. While this motor is theoretically wasteful of the steam, it has the advantages of great simplicity and entire safety. No special care is needed to run it, and these things may outweigh the waste of power that must follow from the use of steam in this manner.

Novel Foundation for Sea-shore Structures.

IN constructing a marine signal-station at the Delaware Breakwater, it was found desirable to place the building on one of the hills of loose shifting sand near

Cape Henlopen. The sand was so deep that no suitable foundation could be found by digging, and a novel method of securing the structure against the action of the wind was tried, that seems to have been suggested by the common device employed by builders to secure the base of the poles of their stagings. In parts of New York the streets are laid out on solid rock, and in erecting a building-staging it is the custom to set the ends of the poles in barrels and to fill the barrels with sand. In like manner, the new signal-tower was weighted with sand. A pit was dug at the top of the hill, and in this was laid a heavy sill of yellow pine. The sill was square, and at the corners were erected timber uprights, each 7.93 meters (26 feet) long. The sill was 1.83 meters (6 feet) below the surface, and, when the sill had been bedded in the sand, a floor was laid over the sill, the sand under it being rammed in tight. The sides of the pit were also boarded in, thus making a cellar with wooden floor and walls under the tower. The first floor was laid at a level with the surface, and under the floor the entire space was filled with sand. By this arrangement the tower was securely anchored in place, and, when finished, it was found to be more stable than any wooden structure resting on masonry. The idea of making a wooden cellar and weighting it in this manner is certainly a good one, and may prove of value when erecting seaside structures of all kinds, or wherever the character of the soil makes it difficult to secure good foundations.

New Cooking Utensil.

THE ordinary range and cook-stove, in which the fire-box is placed at the side of the oven, or in which the products of combustion pass over the top, have the disadvantage of an irregularly heated oven. The sides and top are hotter than the bottom and ends or other side, and, as a result, the bread or other food is improperly cooked—perhaps burned at top while badly done at the bottom. To correct this defect in ovens, a simple appliance has been devised for causing the air in the oven to circulate, and thus carry the heat obtained by radiation to all parts of the oven. A sheet of metal bent into the form of the top and one side of the oven is supported on wire standards and placed in the oven. In the narrow space between the sheet-metal and the hot side and top of the oven, the air is heated more than in the main body of the oven, and by expansion it rises and moves over the top of the oven, toward the cooler walls. The arrangement, simple as it is, appears to be founded on a good idea, and is reported to work well in practice. The apparatus examined was portable, and is designed to be put in the oven by the cook whenever an even heat is needed.

New Tension Belt.

BRASS-AND-STEEL wire has been recently used as a material for belting. The wire is wound in a close spiral, thus making a continuous coil spring. Placed in pulleys having a round grooved face, it is found to make an admirable means of conveying power. The elasticity of the coil gives the belt a varying tension, so that, when properly adjusted, it keeps a firm hold on the pulleys and conveys the power with economy. In passing over the pulleys it stretches and turns

partly around on its axis, so that its motion is spiral, like the flight of a rifled shot. The belting examined seemed to do its work well, and to have the merit of great freedom of movement in passing around corners or in crossing or twisting. The belts are made in sizes from three to nineteen millimeters in diameter. For conveying more power, two or more belts of the largest size are to be used in groups on the same pulley. For joining the ends of the belts, common screw-hooks are intended to be screwed into the end of the coil. The material also makes a good cord for supporting window-sash weights, and a cheap and simple form of door-spring.

New Device for Exhibiting Fabrics.

AN ingenious application of an old and familiar experiment in optical reflection recently has been made in the carpet trade. Four mirrors of equal size, placed upright and facing each other at a true right angle, will give reflections of any object placed between them, in its true proportions in every direction. This fact is the basis of an apparatus for exhibiting carpets. The four reflectors are placed on an iron frame or table, and under the table are two rollers provided with hand-cranks. From one roller to the other extends a band of some light fabric that is passed over guide rolls and under the four mirrors. On this belt are sewed the samples of carpeting that are to be displayed. Each sample is of the same size as the space between the four mirrors, so that when the band is moved each sample in turn passes under the mirrors, and may be stopped and held in position while being examined. The mirrors are about thirty-five cm. high, and they inclose a space of about forty-six cm. (eighteen inches). On looking into the inclosure the pattern appears to be repeated in every direction, and to cover about two square meters. The apparatus is a great improvement on the systems of mirrors now used to accomplish the same thing, and it would appear that it might be made equally useful in displaying wall-papers, by placing the box of mirrors upright and putting the rollers on each side.

New Boat's Mast.

TO REDUCE the weight of the masts of racing yachts, it has been the custom to bore out the heart of the stick for the whole or a part of its length. While lightness is thus gained, strength has been lost, and to compensate for this loss, a new form of hollow mast has been recently tried. The stick was carefully cut into two equal parts, and then the interior was gouged out in short sections. Spaces were left uncut between the sections, so that when the two parts were put together the stick would be an exact copy of the interior of a rod of bamboo, the stem of which is hollow, and reinforced at short distances by thick rings of woody matter that nearly close the tube made by the stem. This form of structure is light and yet very strong, and it is claimed that this form of mast will be stronger than the usual hollow mast, and very nearly as strong as a solid mast. The two parts are fastened together by putting in dowels at the reinforced places. When finished, the mast is smooth on the outside, and gives no intimation of its internal structure.

Quick Tanning Process.

BICHROMATE of potash appears to be coming into use as a tanning material. The action of this chemical upon gelatine, under the influence of light, is well known, and is used in certain photo-printing processes. The leather prepared by the use of the new material is known as chrome leather, and from all accounts it appears to resist decay quite as well as leather prepared by the use of tannin obtained from oak bark. The chief gain of the process is a material shortening of the time—good leather, it is said, being obtained from raw hides in two weeks. No change in the process seems to be introduced. No intimation is given in the accounts of the new process whether the leather, while in the bath of bichromate, is exposed to light or not. The action of light upon the bichromate when combined with gelatine is to produce a hardening of the gelatine, which causes it to resist water (this being the basis of the photo-printing processes), and as the tanning is a hardening of the gelatine, it may be presumed that the new process is partly actinic.

Welding Nickel with Iron.

THE great value of nickel as a coating for iron has led to experiments to see if it could be applied to the surface of sheet and wire iron by some mechanical means, in place of the usual electro-plating process. The experiments appear to be so far successful that both nickel and cobalt have been welded to iron, and the united metals have been afterward stamped and rolled into various shapes, such as plates, kettles, and kitchen utensils, and drawn into wire having an iron core covered by a nickel or cobalt skin. Alloys of nickel also have been made, and these alloys have been used to weld with iron. Cobalt alloyed with zinc also has been welded to iron. In all these experiments it appears to be essential that, during the welding under the hammer or rolls, the air must be excluded. This has been done by wrapping the iron and nickel, before welding, in thin sheets of iron. The iron skin was welded on at the same time, but was removed afterward by dissolving the outer skin of iron in acids, the nickel surface under it not being affected by the acids. Another method, used to exclude the air during welding, is to heat the iron and nickel in an atmosphere of carbonic oxide or carburated hydrogen. It was also found that pure nickel could be welded over a core composed of an alloy of nickel and copper. The experiments were conducted by Dr. Theodor Fleilmann, of Iserlohn, Germany, and are regarded as opening a wide field for commercial enterprise in the manufacture of nickel-plated stamped ware and nickel-covered wire.

Self-Registering Hand-Stamps.

THE hand-stamp used in post-offices to print the postmarks, and in counting-rooms to impress on letters the style of the house, usually implies two motions every time a letter is stamped. One motion is

to press the type on an inking-pad, and the second is to make the impression on the paper. To find the number of letters that have been stamped, the clerk must count each one. By two simple appliances that may be used in connection with any form of stamp, whether held in the hand or used as a lever to be pressed down by hand, the counting may now be made automatic. By one method the handle of the stamp is made hollow, and a rod holding the stamp is placed inside the handle and given a slight vertical play. On top of the handle is screwed a small counting mechanism. Each blow of the stamp causes the rod in the handle to move the counter once, and in this manner the act of stamping causes the counter to report one letter stamped. As the motion of inking the stamp also causes the counter to mark one, the first wheel of the counter has twenty instead of ten teeth. This would give too many, and by a simple arrangement of the parts the first wheel only reports ten while receiving twenty impulses. The second method uses the inking-pad in connection with a small battery and electrical counter. Each time the pad is struck by the stamp, the circuit is closed and a figure is changed on the counter. To accomplish this, the inking-pad is placed on a short lever, hinged at one end and supported by a spring. The blow from the stamp overcomes the spring, presses the lever down, and closes the circuit.

Electrical Progress.

EXHIBITIONS serve a useful purpose in showing from time to time the actual progress made in any particular art or manufacture. The recent Electrical Exhibition at Paris clearly showed, in this way, not only the rate but the direction of progress in the application of electricity to business. Briefly summed up, the advance in electrical science appeared to be almost wholly in the direction of perfection of details in electrical appliances. There were no pronounced steps forward such as marked the Centennial in the first exhibition of the telephone. Nearly all the more important electrical inventions shown at Paris have already been described in this department, and the improvements made upon them seem to be chiefly in a better adjustment of the various inventions to the wants of business, and in a slightly wider field of usefulness. As an incidental effect, may be observed the increased attention that has been paid to the sources of power for the dynamo-machines, so that it may be truly said that the dynamo-machine has been an incentive and aid to the steam engine. Very superior high-speed engines of a variety of interesting patterns have been brought out by the demand for fast and steady motors to be used in generating electricity. It may be fairly said that the Paris exhibition marks the industrial stage of electricity, because it shows that the narrow field of the telegraph has been left far behind and that the electric current has found a firm foothold in many arts, trades, and manufactures.

BRIC-À-BRAC.

The Early Days.

TURN backward, Time—face right-about,
And take me back to life's bright May.
I know you ne'er reversed your route
And only paused for Joshua,
But oh, it seems by far too soon
For hair turned gray and failing sight,
That fondly turns toward life's forenoon,
From out this "early candle-light."

Let me but for a time exist
Once more a youth, light-hearted, free;
Caressed, advised, and fondly kissed
By loved ones as I used to be.
Let night bring sleep with visions pure,
While rain-drops kiss the roof of old—
The simple, old-time water-cure
For wearied limbs and cares untold.

Oh, childhood's days, how brief ye seem
When looking backward o'er the years!
How strangely like a pleasant dream
Each recollected scene appears:
My first grand triumph with my kite,
The snow-ball charge I proudly led,
And, farther back, that blissful night
I wore my first new boots to bed!

I fain would hear the school-bell ring
As joyously as when, lang syne,
I from late buckwheat cakes would spring
Some minutes previous to nine;
Each feature of that time appears,
The stern-faced teacher in the van;—
Instinctively, amid my tears,
I once more dodge his long rattan!

The old-time church! Let me once more,
Within the well-remembered pew,
Revive the faith I felt before
The seeds of doubt took root and grew.
I see the preacher, tall, erect—
I hear his thrilling words of fire;
He used no notes—in this respect
He'd no advantage of the choir.

Those happy days on Cameron's hill
In winter, when the crust was stiff!
The bracing air so pure and still—
'Twas worth a dollar, every whiff.
One lesson learned on that huge bank,
Comes to me o'er the years' dull span—
When coasting on a hemlock plank
To note which way the slivers ran!

Can I forget the pleasant trips
With Polly Flammer o'er the farm—
Her kisses linger on my lips,
Her slender waist still haunts my arm.
Oh, cruel Fate, how couldst thou knock
That night-elopement on the head?
Poor child, for hours the nervous shock
Confined her to her trundle-bed!

Heigho! The old clock seems to say,
"Time's march is ever straight ahead";
Ah, well, I'll not impede his way,
But seek the past in dreams, abed.

Hoping to tread those paths again,
In dreams, that boyhood's feet have trod,
I join the drowsy caravan
That nightly seeks the "land of Nod."

De Yaller Chinees.

(AS DISCUSSED IN THE CABIN.)

I.

HE kin pick up a libbin' wharebber he goes
By wukin' de railroad an' washin' ole clo'es;
He kin lib' 'bout as cheap as a leather-wing bat,
For he watches de rat market keen as a cat;
An' his boa'd an' his rations is pretty nigh free,
For a mighty smart cuss is de yaller Chinees.

II.

Den, he's not gwine to keer whar' you put him to
stay,
An' his eatin' don't cost but a nickel a day;
An' he wont gib a straw for de finest hotel,
When a slab-sided shanty will suit him as well;
An' a empty old box, or a holler gum-tree,
Is a big boa'din'-house for de yaller Chinees.

III.

An' he eats little mice, when de blackberries fail,
Till de ha'r on his head gits de shape ob a tail;
An' I know by his clo'es an' his snuff-callud face
Dat he comes fum a scrubby an' *one-gallus* race;
An' I's trabbled a heap, but I nebber did see
Sich a curisome chap as de yaller Chinees.

IV.

Dis country was made for de whites an' de blacks,
For dey hoes all de corn an' dey pays all de tax;
You may think what you choose, but de 'sertion is
true,
Dat de *orf-cullud* furriner nebber will do;
For dar's heap o' tough people fum ober de sea,
But de cussedest sort is de yaller Chinees!

V.

When de bumble-bee crawls in de dirt-dobber's hole
To warm up his fingers an' git out de cole,
Dar's gwine to be fuss in de family, sho'!
An' one ob de critters mus' pack up an' go;
An' de Chinerman's gwine to diskiver right soon
Dat de rabbit can't lib' in a stump wid de 'coon!

VI.

When de woodpecker camps on de morkin'-bird's
nes',
You kin tell pretty quick which kin tussle de bes';
Dar's a mighty good chance ob a skirmish ahead
When de speckled dog loafs 'round de tommy-cat's
bed;
An' dar's gwine to be racket wuf waitin' to see
When de wukin'-man butts 'gin de yaller Chinees.

A Ballad of Old Meters.

WHEN, in the merry realm of France,
Bluff Francis ruled and loved and laughed,
Now held the lists with knightly lance,
Anon the nightly beaker quaffed;
When wit could wing his keenest shaft
With Villon's verse or Montaigne's prose,
Then poets exercised their craft
In ballades, triolets, rondeaux.

O quaint old times! O fitting chants!
With fluttering banners fore and aft,
With mirth of minstrelsy and dance,
Sped Poesy's enchanted craft;
The odorous gale that blows abaft
Her silken sails, as on she goes,
Doth still to us faint echoes waft
Of ballades, triolets, rondeaux.

But tell me with what countenance
Ye seek on modern rhymes to graft
Those tender shoots of old Romance—
Romance that now is only chafed?
O iron days! O idle raft
Of rhymesters! They are *peu de chose*—
What Scots would call supremely "saft"—
Your ballades, triolets, rondeaux.

ENVOY.

Bards, in whose veins the maddening draught
Of Hippocrene so wildly glows,
Forbear, and do not drive us daft
With ballades, triolets, rondeaux.

The Philosopher.

I TRAMPED through a province in China,
One night in a dream.
The path caracolled and curveted
By stream after stream.
There were towers of old blue towns and bridges,
And pond upon pond,
With lilies and flags at the edges,
And tea-fields beyond.

It was very Chinese, and quite dream-like;
Every hamlet and glade
Even now in my memory gleam, like
Rare jasper and jade.
But the rarest of all was a garden
Enthroned among rocks,
All shining with pines, and made pleasant
With jonquils and phlox.

It was surely a dream, and of China,
For the people I met
Were sleek and serene, and seemed never
To worry or fret,
Except one little wretch in a breech-clout,
Brown, wrinkled all o'er—
As if carved from the stone of a peach out
Long ages before.

Now 'twas just some Chinese hocus-pocus,
Uncaucasian and odd;
He sat by a gay bed of crocus,
Cross-legged, like a god.
But, instead of inditing a sonnet
Or trolling a lay,
He delved in the earth to his arm-pits,
And groaned in dismay.

But, even in dreams, and of China,
It will scarce be believed
That a spirit came nigh and said to him,
As silent he grieved:
"You who delve for the roots of things, hear you:
Why delve you so deep?
The crocus roots all lie a-near you!"
Then I woke from my sleep.

Cupid at School.

AN ARGUMENT FOR CO-EDUCATION.

YOUNG Cupid was his mother's joy,
A child of most bewitching looks;
And yet he was a naughty boy,
Because he would not mind his books.

Some things he studied well, 'tis true,
For what he knew he got by heart,
And learned to practice all he knew;
So everybody called him smart.

Co-education came in vogue—
The new idea pleased him well.
"Now, lads and lasses," lisped the rogue,
"I'll teach you all to love a spell."

Such words as "dear," "divinest," "maid,"
My "angel," "sweetheart," "darling," "dove,"
The school soon learned—they even played
With letters—letters learned to love.

The teacher taught the "Rule of Three";
They asked was there no "Rule of Two."
She said, "Oh no! that could not be,"
But Cupid said there was, he knew.

Geography seemed pastime gay:
The lads found "Nancy," "Charlotte," "Ann";
The maidens soon found "Lover's Bay,"
Then "Heart's Content,"—the "Isle of Man."

Dull grammar grew as sweet as song.
That nouns have gender all could see,
That adjectives to nouns belong,
And nouns and certain verbs agree.

"This verb is active," whispered John;
"I love, dear Jane—this tells the truth."
Blushing, she pointed further on:
"Passive, for you are loved, dear youth."

"I would be loved," hummed Mabel J.
"Ah! that's the mood!" spoke Tommy S.
(Surprising her). "And if I may,
"I'll call you 'sweetheart'—may I?" "Yes."

"If I were loved," sighed Mary Gold,—
"You are!" cried Alf, "I do declare!
I'm only waiting to be told
To parse 'am loved'—Oh, may I, fair?"

Of course he might! how could she be
So cruel as to tell him "nay"?
So Cupid danced for very glee,
While grew the school from day to day.

O naughty Cupid! thus to fool
Your Mother Venus, throned above,
And, while she boasts you love your school,
Be witching all the school with love.

AT THE PRESIDENT'S GRAVE.

September 26, 1881.

ALL summer long the people knelt
And listened at the sick man's door:
Each pang which that pale sufferer felt
Throbb'd through the land, from shore to shore.

And as the awful hour drew nigh,
What breathless watching, night and day!
What tears! what prayers! Great God on high—
Have we forgotten how to pray!

O broken-hearted, widowed one,
Forgive us if we press too near!
Dead is our husband, father, son—
For we are all one family here.

And thou remember,—though relief
Come not till thine own day grow dim,—
That never, in this world of grief,
Has mortal man been mourned like him.

EPITAPH.

A man not perfect—but of heart
So high, of such heroic rage,
That even his hopes became a part
And parcel of earth's heritage.

P. J. Hallen

THE CENTURY MAGAZINE.

VOL. XXIII.

DECEMBER, 1881.

No. 2.

JOSIAH GILBERT HOLLAND.

DOCTOR HOLLAND, editor-in-chief of this magazine since its foundation, died suddenly at his home in New York City on the morning of the 12th of October, 1881. The announcement will not be new to the readers of THE CENTURY MAGAZINE when it reaches them in these pages, but it gives pain to write it in the magazine which was the chief interest and the greatest pride of his later years. The record here is the solemn sealing up of a life full of versatile activity and crowned with many-sided distinction,—the formal farewell to him who was the public benefactor of thousands, and the affectionate and generous personal friend of all those who lived or labored near him.

His family was of the oldest Puritan stock; the original ancestors, John and Judith Holland, appear to have been members of that church which was organized before sailing from Plymouth, in England, and which emigrated, bodily and ecclesiastically, into the wilderness at Dorchester, under the guidance of the Rev. John Warham. The settlement in Dorchester, in 1630, carries us back to the Massachusetts genesis, that being the year of the "great migration" under Winthrop, the bringing over of the charter, and the first planting of organized settlements in "the Bay." All the threads of Doctor Holland's ancestry seem to have been interwoven, for many generations, with the web of New England life and history. His mother was Anna Gilbert, a daughter of Major John Gilbert, and a native of Hebron, in Connecticut. Harrison Holland, his father, came of a branch of the family that had lived for a long time in Petersham. He was an excellent and lovable man, whose lot it was to be always extremely poor. The silk used in a factory in which Harrison Holland was employed was brought from China upon reels of his invention. One of

Doctor Holland's brothers was also an inventor, and Doctor Holland himself once invented a steam-plow, and thought out long ago a stylographic pen, and a lamp for use in railway cars. But in him the inventive talent of his father was associated with larger powers, and was exercised chiefly on a higher plane. It was this inventive imagination, inherited from his father, no doubt, that made him so versatile, so fertile in resources, so ready to meet an exigency half-way with expedients. Doctor Holland had the tenderest regard and reverence for his father, mingled with a humorous perception of his peculiar traits, and in the ballad of "Daniel Gray," which first appeared in the "Atlantic Monthly," he describes the lovely, homely man in lines that are as quaintly humorous as they are pathetic. In what a severe struggle with fate has New England, hard mother of great men, trained her sons to be leaders! The Spartans cast away the weakly child, as unfit to serve a warlike state, and the old New England, with a savage penury and a fierce natural selection, put down the ambitious youth whose fiber was not of the strongest. None of New England's greatest sons was more roughly handled by poverty than Doctor Holland. During a considerable part of his childhood, the family, pursued by misfortune, led a sort of roving life. For some years they lived in Heath, then they returned to Belchertown; then we find them migrating to South Hadley, to Granby, and elsewhere, and then to Northampton, moving their slender household goods from place to place as the unprosperous father was able to find work. The promising son, Josiah, had little chance for learning, getting but a few months in the public schools in winter, and working hard to help sustain the family for the rest of the

year. This contact with poverty wrought images in his memory which were ineffaceable, and which appear and re-appear in his books. In his early novel entitled "Miss Gilbert's Career," one finds depicted the humiliation which wounded his pride, the vulgarity of associates which offended his better nature, and even the sharpness of the dye liquid which stung his blistered palms while he worked as a lad in a factory. The removal of "Arthur Bonnicastle" is but a description of the removal of his father's household to Northampton.

When, in their migrations, the Holland family reached Northampton, Josiah had come to feel aspirations that were not to be smothered in the steam of the factory, nor trodden out of him by misfortune. The son confided to his father (who was loved and revered for his worth, in spite of his inability to cope with fate) his desire to get a liberal education. The thumb-screw of poverty probably never gave Harrison Holland a severer twist than when he felt himself obliged to confess, as he did, that he could do nothing to help the budding ambition of his boy. Josiah, however, entered the Northampton High School, and pushed his studies with the strenuous eagerness of one who is attracted by a love of knowledge and propelled by aversion to an uncongenial environment. But the sedentary and studious life was too severe a strain on the youth accustomed to active labor in field and factory. He fell ill, and when after months his strength began to return, the accumulated obstacles in the way of his acquiring a liberal education were too appalling even for his courage. He still sought to educate himself, however, while resorting to many devices to get a livelihood. The older inhabitants of certain little mountain villages in Vermont will tell you to-day of a tall young man who, more than forty years ago, taught penmanship from town to town, and who used to recite his own poems to his intimate friends. He tried daguerreotypy and district-school teaching, and strove in vain, as he afterward confessed to the writer of these words, to fight off the despairing conclusion that the world had no suitable work for him to do.

Since a college course was out of the question, Doctor Holland took almost the only other road that seemed open at that time to one who wished to live by the work of his brain: at twenty-one years of age he began the study of medicine. His friends had assured him that writing for the press would never bring bread, and that he must have a more regular calling. The rigor of the struggle with poverty which had lasted from his birth had not abated. He still eked out his living by various

shifts. His good penmanship stood him in hand, and he was, for a while, a copyist of deeds in an office of record. Once, during this study of medicine, it became necessary to borrow ten dollars, but, after the debt had been contracted, the proud and honorable young man walked the streets of Northampton an entire night, in anguish of spirit because he could see no way of repaying the money. It was in one of these hard years that his three sisters died, one after another, and this bereavement affected his sensitive and affectionate nature more than all his other troubles.

In 1844, he was graduated at the Berkshire Medical College with honor. The struggling youth had fought out one battle, having, by dint of resolute endeavor, become a recognized member of a learned profession; but, like many another young man in a similar position, he found that a diploma increased the difficulty of existence. A professional man cannot go "carpet-bagging" around the country as writing-master to get his bread; he must sit and wait—a much harder thing to do. Energy of character in such circumstances only serves to wear out its possessor. He may starve, but he must make no sign and put forth no effort until he is called. Youth, a blessing invaluable to other men, is almost a crime in a physician, and he comes to look anxiously for signs of age and maturity.

When, in 1845, Doctor Holland and his classmate, Doctor Bailey, put up their sign as partners in medical practice, it was a partnership in youth, inexperience, and poverty. They had settled in Springfield when it was like a town on the frontier. The introduction of railways had begun to shift population: the car-shops had just been located in Springfield, and many working-men had come to increase the population of the village. It was prospectively a railway center, and all kinds of people who desired to "grow up with the place" had come to settle in the future metropolis of Western Massachusetts. The people were, for the most part, poor, or, at best, plain people, rich in hopes excited by the new order of things. There was, especially, a superabundance of doctors, who, in the sharp rivalry of an overstocked market, were in a state of lively discord among themselves. The older physicians held the practice in the families of substance, and those newly arrived had, for the most part, to contend for that of the workmen, and such like impecunious people. The young Doctor Holland is remembered as a man of fine presence; he was tall, lithe, and dignified. An eminent man, who knew him intimately in these years of waiting for prosperity, characterizes him as "sensitive, independent, and sweet." The practice of medicine was distaste-

ful, and brought but little money. As for poverty, he must by this time have become well seasoned to it; there seemed, indeed, no prospect of anything else for him. Though he suffered much, at times, from his privations and anxieties, I do not imagine that he was ever an unhappy man. His nature, though sensitive, was essentially buoyant and joyous.

In 1845, the year after his graduation, with the hopefulness of youth, he married Miss Elizabeth Chapin, of Springfield, and thus, in his season of darkness, laid the foundation of a domestic life of great happiness. It was during his leisurely life as a young doctor that he began to contribute to the old "Knickerbocker Magazine" and other periodicals, spending in writing the time which a young physician ought to pass in the study of medicine. It was not to be expected that so energetic and self-reliant a nature as his could brook this long waiting. His instinct led him to journalism. There lies before me the prospectus of "A New Family Newspaper," signed by "J. G. Holland, editor and proprietor." It was to be called the "Bay State Weekly Courier," and was to be published simultaneously in Springfield and the neighboring village of Cabotville. One sees here that the very ideas afterward characteristic of the "Springfield Republican" and SCRIBNER'S MONTHLY while under his direction, were fermenting in Doctor Holland thirty-five years ago. The "Courier" was to be a paper with a mission,—it was "to elevate the standard of literary taste," not only in Springfield and Cabotville, but in Middle and Western Massachusetts generally, and to defend the inalienable rights of MAN,—the word was spelled significantly in small capitals,—to afford a vehicle for free discussion, and to "tell the truth boldly and freely," on all things which concerned "Patriotism, Philanthropy, and Religion." The promise of tolerant discussion and the prominence given in this prospectus to philanthropic and religious subjects is the small beginning of a change which was wrought in the character of American journalism, in a measure through Doctor Holland's initiative. The new paper, thus announced a generation ago, was to be "independent of party, sect, or social organization." This was italicized, and was likewise characteristic of the conductor of this magazine.

This literary organ of Springfield and Cabotville lived but six months. What first venture in journalism ever succeeded? For four years Doctor Holland had been waiting for success in his profession, and in 1848 his patience and hope appear fairly to have broken down. Offered a place as a teacher in Richmond, Virginia, he accepted it and remained there for three

months, until he was invited to take charge of the public schools in Vicksburg, whereupon he returned to Springfield to make preparations for the long journey. Every remonstrance of friends in Springfield against his removal to a place so antipodal to New England ways and ideas as was Vicksburg in that day, he met with the plea of necessity. The journey was made in company with Mrs. Holland, in the dead of winter, and being chiefly by stage and steam-boat, was one of considerable difficulty and hardship.

At the end of the tedious river voyage, he found that the public schools which he had been called to superintend had not yet been organized, and that beyond a department for girls, they had no existence. Doctor Holland was warned that discipline was out of the question—that if he exacted obedience he would be put out by the larger boys. There ensued a stern fight for supremacy between him and his rebellious pupils, in which his quick decision of character gave him the mastery. Even at a later day than this, such a thing as the shooting of a school-master for whipping a boy was not unknown in the Southwest, and it is a wonder that Doctor Holland escaped violence. Nothing but his superior quickness and unfaltering courage saved him.

Once, the larger boys resolved on revenge. One who had suffered a sharp punishment at his hands provided himself with a club, and, backed by a crowd of burly, overgrown school-fellows, waited to attack the teacher on his way to the post-office. Seeing the crowd, and knowing its meaning, Doctor Holland fixed his steady dark eyes on the one who held the club, clenched his fists, and walked straight forward through the very midst of the group, which melted slowly away at the approach of the terrible master. When the rebels had dispersed, the teacher found the prints of his nails in the palms of his hands. Though he staid in Vicksburg but fifteen months, he wrought a revolution in its educational system. In less than a year from his coming, the private schools were all given up, except one which derived its support from out-of-town pupils. The schools were graded, and were taught in one building under his supervision.

The illness of Mrs. Holland's mother rendered it necessary that he should resign his place and return once more to Springfield, which event—the turning-point in his life,—took place in March, 1850. He seems to have felt no inclination to reënter the struggle for medical practice, for within two weeks after his return, he was installed as assistant editor of the "Republican." He was now thirty years of age, with a varied experience and large possibilities. His pay, for the first

year, was four hundred and eighty dollars, and as he and Mr. Bowles constituted the entire staff of the paper, he not only wrote editorials, but reported cattle-shows, public meetings, primary caucuses, runaway horses,—the two editors “doing the work of five.” His second year’s pay was seven hundred dollars, and at the close of the year, Mr. Bowles was so anxious to retain him that he sold him a quarter interest in the paper for three thousand five hundred dollars, for which amount Doctor Holland gave his notes. When he sold out his share in the “Republican,” fifteen years later, it was worth more than fourteen times what he had paid.

That was a rare conjunction which brought together on the same paper, in a small inland town, two men of such journalistic ability as Holland and Bowles. On that side of journalism which affects public life, Samuel Bowles was one of the greatest of his class. Editing a paper that could never be other than provincial, his rare insight and foresight, his unpartisan frankness, his rugged and even rude integrity, made the opinions of his paper more valuable, and its adverse judgments more feared, than those of any other journal in the nation. Greeley and Raymond were great partisan advocates, but Bowles was a journalistic day of judgment. His masterpiece of wisdom in selecting his lieutenants was his hitting upon Doctor Holland, whose gifts were of a kind precisely opposite to his own. Mr. Bowles’s attention was absorbed by public questions, and the business management of the paper; Holland, though writing on national topics, had small relish for politics. He was the most popular and effective preacher of social and domestic moralities in his age; the oracle of the active and ambitious young man; of the susceptible and enthusiastic young woman; the guide, philosopher, and school-master of humanity at large, touching all questions of life and character. If Bowles made the “Republican” esteemed and feared in Massachusetts and the nation, Holland made it loved in ten thousand homes. Wanting either of these men, the paper must have failed to become what it did.

Your true journalist never reaches a point of repose; he is always seeking for something to “improve the paper,” and is never weary of trying to heap Atlas’s load upon his own shoulders. Still possessed with the ideals of journalism which he had announced in the prospectus of the “Bay State Courier,” Holland sought to give the “Republican” some other interest than that of politics, market reports, and town gossip. His first serial-writing was in the letters “from Max Manering to his sister in the country.” These

were satires of social life, as social life existed in a largish village like Springfield a quarter of a century ago. Doctor Holland did a much more important thing for the paper. He introduced into the “Republican,” and was one of the first to bring into secular journalism, the discussion of social, moral, philanthropic, and religious topics. The American public has always been profoundly interested in such questions, but American journalism of old stood aloof from them as something that would be out of place in a newspaper. You might as well read the Bible at a primary caucus, as to write of religion or personal morals in a journal devoted “to politics and general intelligence.” Whether Doctor Holland fully appreciated the benefit which the change he was working would confer on journalism, or whether he only wrote on such themes from the irresistible tendency of his nature, I cannot say. No man knew the people better than he did,—he was bone of their bone,—and I make no doubt that much of the early success of the “Republican” was due to the qualities that made Holland’s writings so popular.

Neither Doctor Holland nor Mr. Bowles was content with the “Republican” as a village or county paper. They had the sagacity to see how favorable was the opportunity made by the centering of railway lines at Springfield to conquer a somewhat wider world. “Write a play about me, and my son-in-law and I will be interested in it,” says an old man in a French comedy. The way to interest the people of the hill-country of Massachusetts in the “Springfield Republican” was to write about them and their forefathers. So, to all his other endeavors to improve the paper, Dr. Holland now added that of writing for the “Republican” a “History of Western Massachusetts,” which should appear serially in its columns. One who has not attempted historical writing cannot imagine the drudgery of the task to which the rising journalist now set himself. To say that he was required to read a hundred, or, perhaps, hundreds of times the number of lines that he wrote, will give no notion of it. To track a fact and dog a vexed question until you run it to earth takes much time and wearisome research, and perhaps results in changing a date or erasing a line. When Holland, yet quite ignorant of his subject, and even of the kind of writing, approached such patient special students as Sylvester Judd and the librarian of Harvard University, seeking material, they frankly expressed amazement at the boldness of a young man who should endeavor to cover such a field in a year and a half. A man of Doctor Holland’s temperament cer-

tainly would not be attracted by the rusty-musty books and pamphlets in which his material lay. The two volumes of this work represented, as he confessed, "an enormous amount of drudgery." It procured his election to membership in the Massachusetts Historical Society, and is an accepted authority in its field to-day. I doubt if he felt any more desire to push further his reputation as a local historian than a discharged galley-slave has to exercise with the oars.

And yet, as Samson got honey from the lion, so Doctor Holland's first novel, "Bay Path," came from his study of local history. This novel also appeared serially in the "Republican," into whose columns, like the true journalist that he was, Holland poured without reserve the best that was in him. The story was brought out in 1857, by the house of Putnam, in New York. Though more favorably received by the critics than some of its successors, "Bay Path" did not have an encouraging sale.

Doctor Holland's positive personal success began at last where he probably did not expect it. Nine years after he entered the paper, he began the publication of the "Letters to Young People, Married and Single" in the columns of the "Republican." The playful signature, "Timothy Titcomb," and all the circumstances of their production, go to show that the author had no thought of winning his first decisive battle with these general epistles. But they were popular from the start, and Holland found out then what all the world knows now, that he was a great preacher. But, notwithstanding their newspaper popularity, the Titcomb letters traveled all up and down the streets of Boston and New York seeking a publisher. "Bay Path" had not sold largely, the trade was yet staggering under the financial blow of 1857, and few publishers were willing to risk anything so like sermons in their texture as Timothy Titcomb's Letters. At last Mr. Charles Scribner was approached. He listened to Doctor Holland's reading of the letters awhile, and was delighted. "Stop there," he said, "I'll take the book." It had an amazing run, as all the world knows, and the total sale in this country has been sixty-two thousand copies. This was the starting-point of a series of books, of which the Scribner book-house has sold four hundred and eighty-one thousand volumes; and with its publication began the friendship which brought about the conjunction of Doctor Holland and Mr. Scribner at the beginning of this magazine.

The poem of "Bitter-sweet" appeared in the same year, 1858, and was yet more successful. Its sale has run up to seventy-five

thousand copies, besides its circulation in the collected poems. "Gold-foil," which appeared serially as "Preachings from Popular Proverbs," was put in covers in 1859, "Miss Gilbert's Career," a novel, was issued in the following year; "Lessons in Life" in 1861, and the "Letters to the Joneses" in 1863; a volume of lectures was published in 1865, and in the same year appeared Doctor Holland's "Life of Abraham Lincoln," which was sold by subscription, and brought him more money than he probably ever dreamed of possessing during his early life. The climax of his fame and popular success as an author of books was attained in 1868, when the poem "Kathrina" appeared. It has outstripped all its fellows in popular favor, and outsold all other American poems except Longfellow's "Hiawatha." The sales now aggregate over ninety-nine thousand. "The Marble Prophecy," a poem founded on the Laocöon, was issued in 1872, and then appeared in succession, in the pages of SCRIBNER'S MONTHLY first, and afterward in book form, the later group of novels, "Arthur Bonnicastle," "Sevenoaks," and "Nicholas Minturn." Though reaching a sale far in advance of most novels of their time, they have not attained to the popularity of the author's first works. Yet they contain some of his best writing. "The Mistress of the Manse" appeared in 1875.

Doctor Holland was always proud of that which his critics have made a reproach to him. He was in all respects in the closest sympathy with the people, and his literary success never drew him away from them. He lived the life of the people; was interested in churches, Sunday-schools, and total abstinence societies; possessing a fine tenor voice, he led the excellent quartette choir of the North Church in Springfield for many years. Among his intimate friends were the pastors to whom he listened. Such were Dr. Noah Porter, now president of Yale College, and Dr. Buckingham, of Springfield, to both of whom I am much indebted for reminiscences of his early life and struggles, and such was Mr. Drummond, a volume of whose sermons he edited after the author's death. Doctor Holland, in conjunction with his steadfast friend, Mr. George M. Atwater, was active in establishing a church in Springfield, which was, and is to-day, without attachment to any denomination, and tolerably free from creed restrictions. Which leads one to remark on the character of Doctor Holland's religious life. "Formulas mean nothing to me," he said; "I receive Christianity through my feelings."

Before the founding of the Memorial Church, he was once accused of teaching heresy to

his Bible-class, and an informal investigation was had, at which he would give no statement of his doctrine, but read a chapter from the New Testament, saying: "That is my creed." His heresies, whatever they were, seem never to have passed beyond the nebulous stage. If he did not formulate orthodox statements, he uttered no heretical ones. Heartily religious with a piety cast in evangelical molds, he did not care at all for the molds.

There is some interesting self-revelation in his will: "I am thankful for having enjoyed the privileges of labor and influence, thankful for wife and children, thankful for all my successes. I have intentionally and consciously wronged no man, and if I know my heart, I have forgiven all my enemies. For the great hereafter, I trust in the Infinite Love, as it is expressed to me in the life and death of my Lord and-Saviour Jesus Christ."

These closing words, evangelical in sentiment, but without dogmatic precision, well express Dr. Holland's religious life.

It was not that he shrank from the obloquy of heresy—he boldly accepted that in a vicarious way. He was the most chivalrous defender of the right of other people to think the thought that was in them, and to express it. He hated in his own brave fashion all ecclesiastical processes for suppressing freedom of thought in established organizations, and he took all risks of being misunderstood in defending those who had offended by their candor and courage. Soon after the success of the Titcomb letters made him widely known, he became one of the most popular of all American lecturers, and from end to end of the country he traveled, delivering before the lyceums lectures which were little else than pleasing sermons, full of healthy common-sense and sound moral teaching. For, in an age of much literary and pulpit charlatanism, the most hostile critic never accused him of sensational methods.

When Mr. Bowles tried for a short time to plant a successful journal in the soil of Boston, so uncongenial to a man of his stamp, Dr. Holland became chief editor of the "Republican," whose fortunes he had helped to make. When, foiled by circumstances beyond control, Mr. Bowles came back disappointed to Springfield, Dr. Holland resigned the editorship of the paper to him, and in 1867, he sold his share in the establishment. He was now at liberty, the possessor of large means for a man of letters, the owner of a beautiful home in the suburbs of Springfield, the most beloved and influential member of the Memorial Church, a citizen greatly respected in his little city, and at the zenith of his fame.

In 1868, he went to Europe, where he remained two years. It was a very important epoch in his life, and an important point in the history of American literature and art, for it was, as he has related, on a bridge in Geneva that he proposed to his friend Mr. Roswell Smith the founding of SCRIBNER'S MONTHLY, a plan which had grown out of the proposition previously made by his friend Mr. Charles Scribner, that he take the editorship of "Hours at Home." This institution is of itself enough to make American literature forever Dr. Holland's debtor.

I shall not tell again the story of this magazine and its wonderful success. It is the offspring of many minds, the work of many hands. None knew better than Doctor Holland how largely it was indebted to the masterful business tact and force of its publisher, to the diligence, tasteful discrimination, and journalistic ability of his editorial associates, and to the coöperation of an able staff of contributors and artists; but the editorial authority was Doctor Holland's, and it was his large tolerance of spirit that made room for the successful play of the individuality of his associates. The maxim *facit per alium, facit per se* is nowhere truer than in newspaper and magazine work, and with a chief editor of views less liberal or methods less large, the magazine could never have reached its brilliant results.

Doctor Holland's last years were years of great enjoyment. He was surrounded by a multitude of friends in New York, and held, for some years, the presidency of the Board of Education. Even after he knew that his heart-disease must prove fatal, he had many sources of happiness. The great magazine with which his name must ever be most prominently associated was prosperous, well-manned and organized, so that he felt less and less solicitude about it, and handed it over more and more to those who should come after him. Knowing that his remaining years must be few, he wisely sold his share of the magazine stock to his business and editorial associates, and arranged his affairs in such a way as to make its management by his family an easy task. He had his home in New York and his beautiful country place in the Thousand Islands of the St. Lawrence, and he was able to pass the closing hours of life's day-time in thorough enjoyment of the world. Fortune, which had been niggardly enough in his youth, opened both hands to him as he advanced in life.

Let others measure his genius and mark his limitations at some future time. I cannot attempt a critical estimate of him now, when he has but just gone, and while the printer

waits for the words I write. But this one fact should always be remembered: that he was preëminently a moralist. Whether he wrote poetry or prose, letters or essays, novels or editorials, the moral purpose never forsook him. It is by this that he is to be judged. His art was never merely for art's sake, but it served to give wings to his instructions. Doctor Holland wrote, long ago: "I account the honor of occupying a pure place in the popular heart—of being welcomed in God's name into the affectionate confidence of those for whom life has high meanings and high issues, of being recognized as among the beneficent forces of society, the greatest honor to be worked for and won beneath the stars."

I am far from undervaluing the literary character of his writings,—I believe, indeed, that many of his best utterances in prose and verse have not yet received the recognition they deserve. There comes always a sifting time when an author dies. The world cannot carry the burden of a hundredth part of what is written, even by those of eminent reputation. That which is best and compactest is preserved, the rest is gradually left behind to make room for the thought of new thinkers. It is too soon to say what, or how much, of all Doctor Holland's large production will be kept alive. But he is more fortunate than other writers, in that he has a worthy fame that is quite beyond the reach of literary oblivion. A French critic says that "an orator is remembered by the effects he has produced." So a great journalist is remembered, not alone by the preservation of his writings, which may lose interest as the occasion of them is forgotten. It is possible that little of all that Greeley or Raymond has written will have any permanent place in letters, but the men have achieved fame by what they did. Doctor Holland was, of course, far more of a literary man than either of them, but his talent was preëminently journalistic, and he is sure of a rank among the greater journalists. His ideas and plans were always large; he would have a liberal scale of payment to contributors, and he was ever ready to incur the cost of the most excellent art-work to be had. He knew that small economies wrongly applied are fatal to a great enterprise.

Doctor Holland was a man of dignified and impressive presence; he had something of that talent for affairs which is indispensable to the journalist, but he was also a man of rare simplicity and transparency. He often showed his inmost thoughts to strangers, and sometimes cast the pearls of his confidence before swine who turned upon him. He loved approbation and he craved affection. De

Quincey never got over the physical pangs occasioned by prolonged hunger, and the man who has been thoroughly browbeaten and downtrodden by persistent hard fortune in his youth is likely to have a life-long hunger for the love and appreciation of his fellows. This appetite for approval, joined to a nature incorrigibly frank and open, made Doctor Holland seem to some people to possess more self-esteem than he really had. In truth, a good deal of what appeared to be self-assertion was the offspring of a latent self-discouragement. No critic could make a more acute estimate of Doctor Holland's ethical books than he does in these modest words from the preface to "*Lessons in Life*":

"In this book, as in its predecessors, the author has aimed at being neither brilliant nor profound. He has endeavored, simply, to treat in a familiar and attractive way a few of the more prominent questions which concern the life of every thoughtful man and woman. Indeed, he can hardly pretend to have done more than organize and put into form the average thinking of those who read his books,—to place before the people the sum of their own choicer judgments,—and he neither expects nor wishes for these essays higher praise than that which accords to them the quality of common sense."

Having been poor himself, he gave freely to others who were straitened. His generosity, and what I have denominated his simplicity, made him a prey to the ingenious romancers who live upon the sympathies of the good. He said once that he could better afford to give a worthless fellow twenty-five dollars than to subject himself to the demoralizing influences of suspicion. It gave him a severe pang to distrust anybody.

After all, the great heart was a large part of the man. He cherished high and generous ideals himself, and nourished them in others. His sympathies and sensibilities nothing could blunt. He had words of kindness for the humblest, and he loved the common people with a sympathy which reacted upon his own life and character. He would sometimes, at Bonnie-castle, hide his face in his hands with a sort of terror when he saw strangers approaching, but he would never refuse to see them and show them about the place. His superabundant sympathy drew to him, from all classes of society, a love not often given to any man. People visited his summer home as though making a pilgrimage to a shrine, and carried away relics of every kind, begging sometimes for even a handful of pebbles out of the road-way. This grateful love of thousands grew out of the genuine service that he had been able to render to the men and women of his generation, and it was a noble and enviable guerdon, bravely and worthily won.

CHARACTERISTICS OF PRESIDENT GARFIELD.

A CRITICAL estimate of the importance and value of President Garfield's public services cannot well be made, until sufficient time elapses for us to see to what extent his busy, fruitful life and tragic death influence our future politics, and how effective his teachings and example prove in molding the thought and purposes of the nation. In this paper I shall only endeavor to sketch the prominent traits of his character, and give a few reminiscences drawn from cherished memories of a friendship of nearly twenty years—a friendship which, on his side, was always faithful, helpful, and sympathetic.

The real secret of General Garfield's success was courageous, persevering industry. He was gifted with a receptive and observant mind, a robust physical constitution, a candid, affectionate disposition, and a reasonable amount of ambition. Hard work did the rest. He was the most indefatigable worker I ever knew. He was never satisfied with the amount of study needed to gain the knowledge he wanted for use in any given direction; he went to the bottom of every subject he took hold of, and having got to the bottom of it, reached out on all sides for all the facts and opinions he could gather relating to it. He seemed to think that to be honest with himself he must be content with no superficial acquirements. When he was at the head of a committee to prepare a bill for taking the ninth census, he studied the history of every census taken in this or any other country about which the Library of Congress afforded information, and then, getting his committee together one hot vacation season, selected a cool room in the basement of the Capitol, and, much to their annoyance, opened what might have been called a school for the study of the science of statistics. What his fellow-members had dreaded as a dry and perfunctory affair, he converted into a symposium of instructive research and discussion. I think they will all agree that the weeks they spent with General Garfield in the census work were among the most valuable and agreeable of their Congressional career. In the Fortieth Congress he was given his first chairmanship,—that of military affairs, then an important position on account of the large amount of war business remaining to be cleared up, and the questions of army re-organization which demanded attention. Some of his colleagues had been volunteer generals like himself; others were civilians. "Let us spend a few

weeks gathering information," he said to them, "before we try to legislate." He summoned the leading officers of the army to the committee-room,—all the generals, the heads of the staff corps, and many representatives of the line,—and opened the whole broad question of the future needs of our military establishment: the opportunity for improving its efficiency, the duties and relations of staff and line—ranging in his inquiries all the way from the authority and functions of the general commanding to the dealings of the post-traders with the private soldiers. The immediate result of the investigation was a unique volume of facts and opinions on army matters, of great interest to officers and soldiers, and of permanent value to legislators as a book of reference. Two years later, when put at the head of the Banking Committee, General Garfield pursued a similar system of thorough research, and, two years later still, as chairman of the Committee on Appropriations, he revolutionized the methods of making money grants to carry on the Government, by requiring detailed estimates and studying with conscientious care every object of expenditure.

I doubt whether there was ever a man in Congress who understood so completely all the ramifications of the vast machinery of the Federal Government. I remember a conversation with him soon after he was appointed to the Appropriations chairmanship. "No wheel, no shaft, no rivet in our governmental machinery performs its function without money," he said. "If I find out where every dollar goes, and how it is used, I shall understand the apparatus thoroughly, and know if there are useless or defective parts." He made the committee a class-room for studying the practical workings of all the functions of federal administration. This close scrutiny revealed many extravagances and abuses, and opened the way to important reforms.

It was to political economy and the cognate subjects of currency and the public debt, however, that the late President devoted the most arduous study. While his colleagues in Congress were absorbed in the Reconstruction problem, and in other questions growing immediately out of the war,—matters in which he himself took a strong interest,—he foresaw that the time would come when the management of the huge war-debt, and the redemption of the portion of it which floated as currency, would be the dominant questions in the fields

GARFIELD AT SIXTEEN. (FROM THE PHOTOGRAPH BY J. F. RYDER OF THE DAGUERREOTYPE IN POSSESSION OF THE FAMILY.)

of politics and legislation. In foreseeing these issues and preparing himself to meet them, he showed one of the highest faculties of practical statesmanship. All the time he could spare from his current work in the House and upon committees he gave to studying the experience of other nations with like questions, and particularly that of England after the Napoleonic wars, and to familiarizing himself with the views of eminent authorities, European and American, who had written or spoken on financial topics. In those days the lamp was often seen burning in his study until two o'clock in the morning. It was his practice to copy the statistics and striking passages in his reading which he thought worth remembering, as weapons for use in future debates. In this way he got a vast amount of good material fixed in his mind, and when the long struggle over the debt and currency began, in Congress and upon the

stump, he was the best-equipped orator in the country on the bill for the resumption of specie payments and the strict fulfillment of national obligations. The value of his services in this line is not yet fully appreciated, and will not be until the historian shall take up that singular phase of our national life, the contest against repudiation and an irredeemable currency, which began in 1867, and lasted until the resumption of specie payments.

In this contest General Garfield was more than a sound theorist and a persuasive orator—he was a shrewd and far-sighted legislator. When the clamor for “more money” in Congress was too strong and too unreasoning to be put down by argument, and there was danger that the flood-gates would be opened and a torrent of irredeemable greenbacks let loose upon the country, he outwitted the enemy by offering a bill to authorize the issue of fifty-four millions of additional bank-notes.

"If you are right," he said to the paper-money fanatics, "this additional currency will be taken up by new banks and old ones at once, for you say the country is thirsting for more circulating medium wherewith to transact its business. Let us try this experiment, and put off your greenback bills till next session." They walked into the trap, and it was three years before they got out of it, for the new currency was taken very slowly. All that time, when demagogues tried to raise the old cry that the country was suffering for want of currency, General Garfield met it with the question, "Why, then, doesn't it take these new bank-notes?" There was no answer to be made, for the Greenbackers had all along been claiming that banking was a profitable monopoly. As soon as the new bank currency was all taken, the demagogues began afresh to declaim about contraction, dearth of circulating medium, and bank monopoly. Then General Garfield carried through a free-banking bill, permitting any association conforming to the laws for securing bill-holders and depositors to start a national bank. After the passage of that bill, the mouths of the rag-money men were stopped for a time, and when they opened them again they had to abandon their old delusive arguments about a scarcity of money, and make a square issue in favor of irredeemable treasury notes as against bank currency.

It was a fixed idea with General Garfield that whatever honors or public positions he was to have in life would come to him unsought. He got this belief very early, and it was wonderfully confirmed and strengthened throughout his career. One evening, shortly after the Chicago Convention, while I was sitting with him on the veranda of his Mentor farm-house, he told me of this belief, not in a superstitious way, but still in a tone which showed it was a matter of firm conviction. Beginning with the incident of his first school,—when, after seeking in vain employment as a teacher through two townships in Cuyahoga County, and giving up the quest in despair, a neighbor offered him the school that was nearest his home,—and coming down to the nomination at Chicago, he told me how every step forward in his career, from the country school-house to the Executive Mansion, had been prepared for him without his knowledge or effort. When the trustees of Hiram College offered him the presidency of that institution, he was greatly surprised, for, young as he was, he had thought himself fortunate a year before in obtaining a modest professorship. The nomination to the Ohio Senate, which first brought him into political life, came about in a way that was wholly unexpected. He

was returning from an Eastern journey, when he was met by two friends in Cleveland, who told him that the gentleman to whom the nomination had been conceded, an old and active politician, had died during his absence, and that, unless he positively refused, the Convention, which was to meet in a few days, would certainly choose him. When the war broke out, he declined the colonelcy of a regiment because of lack of military experience, whereupon the regiment elected him its lieutenant-colonel, and before it went to the field, the colonelcy became vacant, and he was pushed into the place. His first nomination to Congress was made while he was serving with the army in Kentucky, and the news of the action of the convention in the old Giddings district was the first intimation he had of an intention on the part of the Republicans there to make him a candidate. In 1877, he refused an election to the United States Senate, because he preferred to oblige President Hayes, who wanted him to stay in the House, to lead the Republican minority, and, besides, wanted his friend Stanley Matthews to have the senatorship. When elected Senator, it was by the unanimous choice of the Republicans in the Ohio Legislature. Everybody knows how the last great honor of his life came to him unsought, by a quick and unexpected turn in the current of feeling at the Chicago Convention. "Since my experience with the country school," said General Garfield, in the conversation referred to above, "I have never occupied any public position that did not come to me without my seeking it, and I have long felt that if I should try for any place I should not get it." He was not a fatalist in the sense in which Napoleon was, but he believed that the main lines of his life were shaped by the force of his own mental organization, directed by a higher power than his own will.

I do not think it is generally known that Garfield rejected overtures in 1872 to be elected to the Senate by the votes of the Democrats, combined with those of a number of Republicans from his section of Ohio, who were dissatisfied with the caucus nomination of their party. The reason he gave for his course was that the position would not be an independent one, and that he would be placed under obligations to the Democrats, although they asked no pledges. Three times he declined to be a candidate for the Republican nomination for Governor of Ohio, when he had only to consent to let his name go before the Convention to have had the honor conceded to him without a contest. In preferring the House of Representatives to the executive chair at Columbus, he was wise.

His place was in the field of ideas, arguments, and constructive work, and he would have been restive at any post of duty which limited the activity of his intellect, and held him down to the enforcement of statutes made by other men. Indeed, the presidency was foreign to his tastes, except as it gave him opportunities to impress his ideas upon Congress and the country. A few weeks before he was shot, I heard from his own lips an expression of the distaste he felt for the business of deciding between the claims of individuals for office. "I have all my life delighted in conflicts of ideas," he said, "but I never cared for conflicts of persons. Now I am obliged to spend nearly my whole time in hearing arguments and appeals in behalf of individuals." He went on to say that, if he failed of success in his new position, he thought it would be because of his want of liking and training for this important part of executive duties. He found it almost impossible to give his mind to the question whether A, B, or C was the best man to be postmaster at Peoria, or whether D should be turned out of a collect- orship to make place for E.

Years ago, it used to be commonly said in Washington that General Garfield was the best-read man in Congress except Charles Sumner. The truth is, Sumner had about ten years the advantage of Garfield, and ten years counts for a great deal in the life of a studious man. Sumner's range of reading was much greater than Garfield's, but not so thorough in special lines. The Massachusetts statesman was better versed in history, *belles-lettres*, and art, while the Ohio statesman had gone much farther than he in political economy, finance, and other lines bearing directly upon his work as a legislator. Garfield was a much busier man than Sumner, spent far more time in plodding Congressional tasks, and, instead of devoting his vacations to rest and reading, gave them almost wholly to the service of his party upon the stump. There was hardly a Northern State in which his voice was not heard; in his own State he spoke in nearly all the counties, and in his own district there was no hamlet or small town unvisited. Taking one campaign with another, and one issue with another, he was, I think, the best stump and platform speaker the Republican party had. A man so much absorbed in political and legislative work could not be at the same time a constant student, but he always kept up with the best literature of the day, and was never out of the current of the progress of scientific discovery and religious discussion. He even managed to get time now and then to keep the classical learning he acquired at college from getting rusty. In

1871 he wrote to a friend: "I am now up to my eyes in the work of the Committee on Appropriations, of which I am chairman, though I do manage to steal a little time from work and sleep almost every day to read over carefully a few lines from Horace, to keep the breath of classical life in my body." In January, 1874, he made a metrical translation of the third ode of Horace's first book, and sent it to the same friend. It was his constant practice to "steal a little time from work and sleep," to round out the processes of his intellectual growth by courses of study and reading quite outside of those pursued for their relations to his labors in Congress. His theory of brain action was that rest was best obtained, not by a cessation of activity, but by giving to the processes of thought a different direction from that which had become fatiguing. Thus what seemed to his friends hard study he regarded as recreation. In the winter of 1875, which was among his busiest seasons in Washington, he took up the study of Goethe and his epoch, and in accordance with his habit of doing some creative work of his own in every special line in which he directed his mind, he wrote a sixty-page paper on the state of literature and art in Europe in the Goethe period. Speaking of this at the time, he said: "I think some work of this kind, outside of one's every-day avocations, is necessary to keep up real growth." As an illustration of the wide range of his reading, I may quote the following passage from a letter written in the summer of 1875, when an illness kept him confined to his house for about three weeks: "Since I was taken sick I have read the following: Sherman's two volumes, Leland's 'English Gypsies,' George Borrow's 'Gipsies of Spain,' Borrow's 'Romany Rye,' Tennyson's 'Mary,' seven volumes of Froude's 'England,' several plays of Shakspere, and have made some progress in a new book which I think you will be glad to see—'The History of the English People,' by Professor Green, of Oxford." It will be seen that in this list are three books relating to one subject—the gypsies. This was characteristic of General Garfield's method of reading. He was never content with a single work on a given theme. If there were two sides to a question, he wanted to know what could be said on both; and every line of study and research into which his active mind was thrown, he widened out as far as possible. The catholicity and liberality of his thought formed one of his most admirable traits.

In his teaching days, General Garfield read German easily, made acquaintance in the original with the poetry of Goethe and Schiller, and could converse in the language

fairly well, but, from want of practice, he lost much of the German that he had gained by study. It was always his desire to revive it and to get a good conversational grasp upon it, and he meant, in the golden time of leisure to which he looked forward with pleasant anticipations, to find time for realizing this purpose. French, also studied at school, he did revive some years ago, when he felt the need of knowing what the French economists were writing on questions of currency, banking, and tariff. But he did not speak it much, for want of occasion for practice. With the genius and structure of both languages he was familiar, and, if I am not mistaken, he made occasional excursions into Italian and Spanish. He had a great love for linguistic knowledge, and would often make a half-game and half-study with his children of telling the meanings of words, or detecting errors in pronunciation. Dropping in at his house, one morning in the campaign summer of 1880, just as breakfast was over, I found the family lingering at the table while the General read from a little dictionary of words frequently mispronounced. He would spell the word, and then ask each in turn what the correct pronunciation should be. The elders were about as apt to make mistakes as the children, and a great deal of lively chat and merriment, and not a little instruction, resulted from the exercise. This he kept up every morning after breakfast until the book was exhausted. At another time he read the definitions of words, and the others endeavored to hit upon the exact words defined—not so easy a task as one would imagine at first thought. This was an exercise in which the children greatly delighted. When they came near the right word, the father would say, "Now you are getting warm"; and when they were wide of the mark, he would say "Cold," or "Very cold." He had the natural gift of teaching—the faculty of making a diversion of study, and developing the thinking powers of the student. His family was always a school, and yet there was nothing in the least formal or pedantic in his way of converting the breakfast-table or the evening fireside circle into a class-room. It interested the children more than play. Whether the exercise was an object-lesson, or a study in mathematics or language, or a talk on the science of familiar things, the father so illustrated it with his own fresh thoughts that it became an entertainment.

I have said before that General Garfield was the most effective stump and platform orator of his party. He went directly to the reason of his hearers. There was never any sophistry in his speeches, or any appeal to

prejudice, or any trick of suppression or half-statement. He approached his audiences neither in a way of mock deference nor of superiority, but as if he were one of them, come to talk with them on terms of intellectual equality, and desirous only of convincing their minds by a perfectly fair presentation of facts and arguments. He had a strong, far-reaching voice, pitched in the middle key, a dignified, manly presence, and an abundance of the quality which, for want of a better term, we call personal magnetism. His manner in his speeches was first engaging by reason of its frankness and moderation, and afterward impressive by its earnestness and vigor. At the climax of a speech he gathered up all the forces of statement and logic he had been marshaling, and hurled them upon his listeners with tremendous force. His eyes dilated, his form seemed to expand, his voice took on a sort of explosive quality, his language gained the height of simple and massive eloquence, and his gestures became so energetic and forcible that he seemed, at times, to be beating down opposition with sledge-hammer blows, throwing his arguments forward like solid shot from a cannon.

In the debates of the House he was not a ready and skillful fencer, but he was unexcelled in the ability to deal with an important question in all its bearings in a candid, convincing, and masterly manner. When he first entered the House, his speeches abounded in illustrations drawn from his classical studies and his historical and practical readings, and were not liked by the majority of the members, who had little imagination and but a small stock of learning. Later, he cultivated a more unadorned and business-like style, and became a master of the art of clear, condensed, analytical statement. But whether discoursing to vast outdoor audiences, in strains of lofty eloquence, on great questions deeply touching the life of the nation, or explaining to the House the details of an appropriation bill, the real source of his power as an orator was his sincere, truthful, manly nature, which forced people to like him and respect him. He believed what he said, and therefore he made others believe.

By the natural bent of his mind, the late President had a liking for philosophic and religious studies, which was strengthened and gratified during his two terms at Williams College, where a good deal of attention is given to metaphysics, and his subsequent four years of teaching at Hiram; but in his later career the practical questions of life absorbed him so much that he found little time to devote to the domain of speculation and theoretical thought. He read Mill, Comte, and Spencer, however,

J. A. Garfield

and was deeply interested in such books as James Freeman Clarke's "Ten Great Religions," and in the current discussions in the English reviews and magazines on new phases of religious belief and criticism. There was nothing of the bigot about him. He welcomed all honest discussion, and was always willing to throw off old opinions if convinced they were erroneous. In his religious views he might have been called a rationalistic Christian. I doubt if he could have passed a successful catechising on the doctrinal points of any orthodox creed, but on such essential matters as a belief in the divine guidance of the universe and the immortality of the human soul, his faith was unshaken. Modern materialism made no impression upon him. The argument that the mind is only a phenomenon of matter he thought a stupid reversal of the truth. The soul or life-principle was the real thing, he maintained, and the phases of matter only its transient and varying expression. The church to which he belonged from boyhood has no written creed and does not question its members as to their theological conceptions; therefore he was not hampered by formal statements of faith in his intellectual growth, and was able without hypocrisy to retain associations which became very dear to him in early life.

The world likes to hear of the personality of its heroes—their habits, tastes, peculiarities, likes, and dislikes. I may be pardoned, therefore, for speaking of things in connection with the dead President which would be of trifling interest, if not an impertinence, if said of one not widely loved and honored. General Garfield had a warm, affectionate nature. The people he liked were very dear to him. He took them to his heart and gave them his full confidence. He would often sit down beside a friend and throw his arm over his neck, or put his hand on his shoulder or knee, as the natural expression of his liking, or in walking would place his arm through that of the friend. He had a way of calling an intimate friend or comrade "old boy" or "old fellow," and once, when Colonel Rockwell thanked him for some kindness, he said, putting his hand on his friend's shoulder, "Old boy! the ties of friendship are sometimes stronger than those of blood!" By the courtesy of Colonel Rockwell I am also enabled to include here one of General Garfield's most characteristic letters. Colonel Rockwell says:

"On the Sunday preceding the election I had sent him a little expression of my confidence in his success, closing, as I remember, with the stanza from Goethe:

"The future hides in it
Gladness and sorrow.
We press still thorow;
Naught abides in it
Daunting us,—Onward!"

"To this, on the eve of election, he sent the following reply:

"MENTOR, OHIO, NOV. 1, 1880.

"DEAR JARVIS: The evening mail brings me your letter of the 31st, and I take a moment, in the lull before the battle, to say how greatly glad I am for all the earnest and effective things you have done for me. Whatever may be the issue to-morrow, I shall carry with me, through life, most grateful memories of the enthusiastic and noble work my friends have done, and especially my college classmates. The campaign has been fruitful to me in the discipline that comes from endurance and patience. I hope that defeat will not sour me, nor success disturb the poise which I have sought to gain by the experiences of life.

"From this edge of the conflict I give you my hand and heart, as in all the other days of our friendship.

"As ever, yours,

"J. A. GARFIELD.

"Col. A. F. Rockwell, Washington, D. C."

General Garfield's tastes were all simple. He had no longings for luxury. His home-life was that of the plain New England farmer element from which he sprang, broadened and beautified by culture, but taking little note of the fancies and extravagances of fashion. He liked substantial furniture, good engravings, a big cane-seat chair, an open fire, a simple meal, a wide-brimmed felt hat, and easy-fitting clothes. His table was bountifully supplied with plain, well-cooked food, but he made his meals such feasts of reason that his guests scarcely noticed what they ate. He regarded formal dinners as a bore, and avoided them as much as a famous man well could whose company was much sought by the dinner-giving people in Washington; but he enjoyed lingering at his own table with his wife, his children, his old mother, and two or three friends, and unbending his mind from the strain of the day's work with chat and anecdotes. His memory for anecdotes was almost as good as Lincoln's, but he remembered best such as he got in his reading of biography and history, and were applicable to some intellectual theme he was discussing, rather than the merely quaint and humorous.

There was not, as there was in Lincoln's, an under-current of melancholy in Garfield's nature. Until he was nominated for President, I never saw in him anything like somber-

ness, foreboding, or a disposition to find a sad side in human life. His nature was sound, buoyant, aspiring, and undisturbed by morbid sensibility. He loved men and women, thought the world a good place to live and work in, and believed that when we get through with the affairs of earth we go to a better country. After he was nominated for the presidency, a more serious and at times solemn mood came upon him. He began to like to be alone, which was quite a new thing with him, for he used to want companionship at all times, even when reading or writing, and he got a sad and weary earnestness of expression which he never had before. He did not talk of the future. During the few weeks he spent in the White House, there seemed to be a veil before him which he could not lift. I believe he had a presentiment of the evil that was to befall him. It is remarkable, however, that the last few days before he received his fatal wound were unusually bright ones for him. At Elberon, just before the fatal journey to Washington, he told me he had not felt so well, physically and mentally, since his inauguration. Something of his former habitual freshness and cheerfulness of spirits returned, and he was more like his old self than he had been for a year.

General Garfield was influenced by his domestic ties to a greater extent than are most strong-framed, ambitious men. He was one of the most home-loving men I ever knew. With his children, he was more like a loving elder brother than a stern father. He governed them by kindness, and appealed to their hearts and minds when they committed faults, instead of to their sense of fear, and his tender expostulations were more effectual than any punishment would have been. His wife and mother were strong forces in his life. His tenderness and consideration toward his mother were admirable. In building his new house, the first thought was how to get a room for his mother that should be exactly suited to her taste and convenience. She sat at his right hand at table, and was consulted upon all questions concerning the family and his public career. His wife was his intellectual companion, sharing his reading and studies, as well as the mistress of his home and the loving mother and teacher of his children. Her strong principles and quiet, earnest, self-reliant, tender, and faithful nature were his sheet-anchor in all the troubles of his life.

General Garfield was fond of simple, old-fashioned music. Scotch and English ballads were his favorites, and the hymns he heard in childhood. For instrumental music he cared much less. The drama he liked only

for its intellectual side, and not as a mere amusement. He went occasionally to the theater, to hear a good play or see a famous actor. Horace was his favorite among ancient poets, and Tennyson among modern ones. He could repeat many of the odes of the former and whole pages of the poems of the latter. He was not a great newspaper reader, and believed that the tendency in this country is to neglect books and give the time that can be spared for reading too much to the daily journals, a large part of the contents of which are only of passing interest, and have no value for mental training and culture. Habitually, he read one New York daily for general news, a Cleveland daily for the news of Northern Ohio, and a critical New York weekly, and the principal magazines. Of course, he saw a multitude of other periodicals, which came to him with marked articles, or which he obtained when he wanted a broad view of newspaper opinion on special public measures. But he spent little time over them. Cities he disliked. He was a countryman through and through, a lover of orchards, forests, growing crops, cattle, meadows, and wild-flowers. I remember the pleasure he took, after he went to live upon the Mentor farm, in driving a yoke of cattle and in helping his farm-hands in the hay-field. He found he could still swing a scythe with the best of them, and that his old knowledge of soils and seasons of planting, harvesting, and housing crops, gained when a boy, all came back to him. His farm was the first home he had that satisfied his tastes. His house in Hiram, where he lived in the early years after his marriage, was only a little cottage, with a contracted village-lot; his Washington house was a winter dwelling, to be retained while he staid in public life in the capital; but the Mentor farm, bought five years ago, gave him the conditions of a broad, free, natural home-life, which, to his thinking, was possible only in the country. It was in the spring of 1880 that his means enabled him to expand the little story-and-a-half farm-house, with its small rooms and low ceilings, into a spacious, comfortable dwelling. After thirty years of hard work he found himself, at forty-eight, in the possession at last of a home that was the expression of his tastes and desires. Life began to assume a more serene and happy phase, and to promise a peaceful ripening into a contented and harmonious age, in the midst of his intelligent, affectionate family and his admiring, sympathetic friends, when all was changed by the unexpected summons to the presidency, and the entry upon the new path of glory which led but to the grave.

A CRUISE IN A PILOT-BOAT.

AT THE LIGHT-SHIP.
UNDER STUDDING SAILS.

PILOT-BOAT UNDER FULL SAIL.

BOUND OUT.

FEW of those who have heard of, or have seen, the trim pilot-boats of New York Bay are aware what a thorough preparatory education and experience is required of a New York pilot. Nor is it generally known how systematic is the organization which regulates the movements of these pilots, and what hazards they must encounter in plying their vocation on the boisterous Atlantic.

Having accepted a cordial invitation to take a cruise in the *Caprice*, Mr. Burns and myself were notified to keep ourselves in readiness to sail at a moment's warning. The schooner was then at sea, but was expected back at any hour to pick up her pilots and provisions. More than a week passed, however, before we were notified to be at the pier on the following morning. The *Caprice* had been

detained by severe weather, which gave us the promise of a boisterous trip. When we reached the office of the Pilot Commissioners,—a low-studded, elbow-shaped room, on the corner of Burling Slip,—everything portended a storm. A massive antique mahogany desk, at one side, served partially to conceal the busy secretary of the department, whose position is by no means a sinecure. All the multifarious accounts, together with most of the shore business of the pilots, pass under his eye. Between two windows stood a large and elaborate chronometer clock, including with it a barometer and thermometer, and around the room were ranged a number of closets or lockers. One by one the pilots straggled in, took a look at the glass, and discussed the prospects of the weather, which

was pronounced to be unusually foreboding, with the mercury ranging below twenty-nine degrees and a sky of the most sinister aspect.

By half-past nine, the pilots who belonged to the *Caprice* having arrived, we started for the pier where she was lying. I confess the prospect of a cruise in such a graceful little craft filled me with enthusiasm. She was ninety-six feet long and twenty feet beam, and drew eleven feet aft. Not over-sparred, like too many of our yachts, her masts were beautiful sticks and admirably proportioned, without a knot or a crack. The cabin was coziness itself; nothing can exceed the comfort of a snug little cabin when all hands but the watch are below, the swinging lamp is lit, and the long steady howl of the gale and the boom of the seas breaking on deck blend in a sublime organ-peal—the tumult of the storm often rising above the jests and yarns of the men gathered around the table or lying in their bunks with feet dangling over the side. A stove was firmly fixed in the center, on a brightly burnished plate of brass. On each side were a stateroom and two berths that could be closed by slides. The galley and quarters of the crew were amidships, and were divided from the cabin by a bulkhead. The crew included four able seamen, a swarthy lascar cook, a cabin-boy, and the boat-keeper. The latter commands the schooner, and takes her back to port after all the pilots have been put on board other vessels. But before that, the boat is under the direction of the pilot whose turn it is to board the next ship.

We put to sea with six pilots, the full complement being seven. These formed a joint-stock company, but while all were licensed pilots, they were not all of equal rank. This matter of rank underlies the whole principle involved in piloting according to the laws of the State of New York, and a *résumé* of the regulations is therefore pertinent, while the schooner is making sail. The number of pilot-boats licensed to run out of the port of New York is fixed by law; it is now twenty-eight, and they register from forty to seventy tons. Each boat is obliged to carry its number in enormous black figures on the mainsail. These boats are owned by about one hundred and seventy pilots, but, strange to say, they are never said to be manned except when left in charge of the boat-keeper. Including pilots and crews, this fleet of schooners gives employment to nearly four hundred men. In this survey we do not, of course, include the New Jersey pilots who sail out of New York Bay, but are subject to the laws of the other State. This number is by no means excessive when we consider that the

foreign entries and departures of vessels in the port of New York are at present over ten thousand a year, while the coastwise entries and departures are nearly four times that number. Coasting vessels, though they often find it expedient to employ a pilot, are at liberty to decline to take one. But vessels coming from, or bound to, foreign ports have no option in the matter. If a pilot-boat can get near enough to hail them, they must either accept a pilot or pay the full charges he would be entitled to receive if he boarded that ship. This law is by no means so unfair as some might regard it. The pilots must devote much time and expense to qualify themselves for their business, and are exposed to great perils. Unless they are protected by the laws from the whims of sea-captains, the profits of pilotage would be so reduced that it would be impossible to induce capable men to enter the service. While it may be alleged that in fine weather their services are often not needed, on the other hand, emergencies frequently arise when a good pilot is indispensable.

The responsibility devolving on a pilot, and the extent of his qualifications, may be partly appreciated when one learns that, immediately on boarding a vessel, he takes command, and is answerable for any accident until he has discharged his duty of taking the vessel in or out of port. If any mishap befall the ship at that time, he is liable to have his license revoked, and thus lose all further opportunity of plying his vocation. The New York pilot must, therefore, for the good of all concerned, pass through a long and rigorous course of training. He must serve, man and boy, before the mast till he masters every problem in the management of every form of rig. To this he must add a thorough knowledge of navigation. Then he must contrive to obtain the position of boat-keeper or pilot's mate. In that capacity, he must serve three full years on one pilot-boat before he can be admitted for his examination for a license. If through ill-fortune he lose his position, he must begin *de novo*, and serve the full time on another boat. Sometimes, a boat-keeper serves nine or ten years on various boats before his apprenticeship is complete. After all this, he must pass a most rigid examination on all points of seamanship and navigation before the Board of Pilot Commissioners, and exhibit a thorough knowledge of the tides, rips, sands, and all other phenomena for hundreds of miles out from the piers of the East and North rivers. But even after receiving his license, he is sometimes forced to wait years, until some pilot happens to die and leave a vacancy for him. The first year

ICED UP.

of pilotage, he is granted a license to pilot vessels drawing less than sixteen feet. If he give satisfaction, the following year he is permitted to take charge of ships drawing eighteen feet. If he pass a satisfactory examination the third year, he then receives a full license, entitling him to pilot vessels of any draught, and is then first called a branch or full pilot.

This matter of draft often gives rise to amusing maneuvers between captain and pilot—the former sometimes endeavoring to evade a correct statement of the actual draft of the vessel at the time, and the latter in turn employing his wits to get at the truth without appearing to doubt the word of the captain. Vessels drawing under fourteen feet pay three dollars and seventy cents a foot; the rate increases by degrees, until ships drawing twenty-one feet and upward pay six dollars and fifty cents per foot.

On receiving his license, the pilot must give bonds for the proper discharge of his duty, and he is liable to heavy fines if he declines to fill a vacancy or to board a vessel making signals for a pilot. He is also required to be temperate in his habits and of reputable character. The proper execution of these regulations is to a large degree insured by the great competition among the boats, and the consequent vigilance of each to detect delinquencies in his rivals.

It is evident that to be a New York pilot is no sinecure, and that the position is one of great responsibility and trust.

In a few moments the *Caprice* was stealing past Castle Garden, and leaving behind her the towering roofs and spires of the lower part of New York. Nothing could be more disheartening than the pall of sullen clouds that hung over the bay. There was scarcely any wind, but the glass and the sky indicated that we were either in the center of a revolving storm or that one was rapidly approaching. But there were also signs of a shift of the wind into the north-west, and a few vessels bound south had concluded to venture out, and were gliding with the tide toward the Narrows.

No sooner had we put off into the stream than the pilots began to look about for a possible prize. Their keen enterprise was illustrated sooner than I expected. Scarcely had we shoved off from the pier when we saw a schooner putting to sea a mile away.

"Johnnie, head her for that schooner," said one of the pilots, to the man at the wheel.

"You can't catch her," said another.

"Yes, we can. She's only got her foresail and jib up."

"She'll have her mainsail up in a minute. They're hoisting it now."

"I don't care if they be. We'll catch her, anyway."

And catch her we did, by making all sail with man-of-war speed. Hauling under her stern, we hailed her, and sent a pilot on board to guide her past Sandy Hook. We then took some provisions from Staten Island, and glided through the Narrows. We picked up our pilot at the station-boat. This leads us to notice that one of the pilot fleet is always stationed off Sandy Hook, to serve as a rendezvous to pilots when they leave vessels, after having piloted them out of New York. The boat anchors between the light-ship and Sandy Hook for four days, when another boat takes her place. When the weather is very bad, the station-boat lies off and on. Sometimes she is forced to make a harbor herself, but it is wild weather indeed when she is obliged to do that. A penalty of one hundred dollars a day is enforced on every boat that delays to appear at the station when its turn has arrived.

The storm signal was flying at Sandy Hook, but it is not for pilots to observe its warning, and we ran out to sea and headed south. At night-fall we double-reefed the mainsail and hove to. We were now in the water where the *Caprice*, at Christmas-time two years ago, encountered the most frightful dangers. Every sea that came on board froze, until the ice on deck was twelve inches thick, and it was feared she might founder with the weight of the ice. Great blocks of ice grew on the furled jib, and could not be detached without tearing the sail. On New Year's Eve, William Wright, the boat-keeper, entered in the ship's log-book: "January 1st and a happy New Year!" Five days after that, another hand entered on the pages of the same log-book the following terse but tragic record: "Thursday, 6th. Blowing hard from N. E. At 4 A. M. hauled the jib down. Lost a man off the bowsprit. Hove the yawl out and lost two men and the yawl; then hove the other yawl out and lost her. Lay around tacking till daylight, and kept a lookout on the mast-head till 8 A. M. Then started for town at 1 P. M." One of these poor fellows was Wright, the boat-keeper. One month more, and he would have been licensed as a pilot!

Two years before this, the *Caprice* was hove on her beam-ends in a terrific squall, losing both masts and a man who was in the rigging. On still another occasion she was tripped by a huge wave and nearly filled. Momentarily expecting her to go down, the crew took to the boats and were picked up. The schooner survived the gale, however, was towed into port by a passing vessel, and

was repurchased at auction by her former owners. On another occasion she was run into by a steamer, cut down to the water's edge and sunk in shoal water, from which she was raised again. She seems to lead a charmed life, but her career well illustrates some of the hazards of piloting—which are so well appreciated by the underwriters that they charge ten per cent. premium for insuring pilot-boats.

Nothing of note occurred during the first night, and after running south for a few hours after daylight, we had just hove to again with the helm lashed, when the lookout at the mast-head cried:

"A pilot-boat on the weather bow, sir."

Immediately the order rang out, in quick, sharp tones:

"Shake out the reefs of the mainsail and keep her away!"

An exciting race followed between the two pilot-boats, several miles apart, to reach a large ship standing north. Now rising, now plunging over the gray seas, and staggering under a press of canvas, we neared the prize only to see it snatched from our grasp by the other boat. No sooner was that fact ascertained than we shortened sail, the lookout was sent aloft to his usual eyrie at the fore cross-trees, and the pilots, without so much as a word of regret, returned to studying the chart, reading a threadbare novel, fingering the well-thumbed cards, or snatching a little sleep in their bunks. This is about the ordinary routine in a pilot-schooner during good weather—intervals of seeming quiet broken by sudden alternations of the utmost excitement, together with a feverish, endless vigilance from mast-head and deck.

Nothing of note occurred on the third day; the recent prevailing winds had kept vessels out at sea. The third night it blew half a gale, and we hove to under close reefs about forty miles south-east of Barnegat light. About ten o'clock, the lights of a steamer heading northward were faintly descried in the mysterious gloom that overhung the sea.

"Give her a torch!" was the order that instantaneously followed the discovery. A tub containing turpentine was brought on deck; a ball of cotton was dipped into this and set on fire. It resembled the contrivance used to light cigars, except on a larger and ruder scale. The torch was so held as to illuminate the large numbers on the mainsail. Nothing more picturesque can be imagined than this contrast of light and shade—the dark figure in uncouth oil suit standing on the low, reeling deck, fiercely whirling the ball of fire over his head, and the ruddy sail and rigging clear-cut against the impenetrable blackness

ON THE LOOKOUT.

cided to beat in under the land, where we should find smooth water. It was a long and arduous pounding with the seas, but finally we found ourselves close under the sand dunes of Little Egg Harbor. Then we wore ship, and trimmed the sheets to run up the coast to Sandy Hook. Several other pilot-boats were in company, and an impromptu race immediately ensued. Not to speak too technically, it suffices to say we were under very short sail. The sky was a clear, crisp azure, flecked with swiftly scudding wind-clouds. The blasts swept off the land with exceeding violence and suddenness, laying the little vessel over on her side and burying her lee rail under a mass of boiling foam, the spray smoking under her bow the while, and blowing off to leeward in sheets. Thus hour after hour went by in this stimulating race. Hour after hour, also, we threaded our way through a fleet of coasting schooners, that were taking advantage of the northerly gale to run down the coast in ballast. Their swelling sails gleamed like flakes of flame over the intense amethystine blue of the sea, that was ridged with long crests of foam. We flew past the lofty light-house of Barnegat and its whitening reefs, past the cedar-tufted banks of Manasquan, the sloping cottages of Elberon, the spacious hotels of Long Branch, the pointed gables of Seabright, and the twin watch-towers of the Highlands, until the sentinel shaft of Sandy Hook loomed grandly in the north, and the splendor of the setting sun suffused land and sea with indescribable beauty. Then we headed up into a cove behind the Hook, dropped anchor close by the beach, and went below to a smoking supper. Though the quartering moon shone gloriously that evening, we all snatched a much-needed slumber before venturing out once more to encounter the wild March winds on the gray wastes of the Atlantic.

At dawn we made sail, and stood due east along the shore of Long Island before half a gale of wind. At ten o'clock we discovered a pilot-boat ahead, and crowded on sail to over-haul her. While she was in sight our movements would be necessarily influenced by her own. Finding that we were overhauling her, she finally put her helm down and headed south.

We kept on to the east, deciding to go as far as Saint George's Bank after steamers. These vessels are the great prizes in the pilot lottery, because their draft averages more than that of sailing ships. To secure an inbound steamer also insures piloting her out again. Ocean steamers are therefore very desirable game, and great risks are encountered in order to intercept them. The opposite ex-

of night, while the wind whistled through the cordage and the foam seemed to turn into blood as it washed on board.

The steamer, which proved to be a coastwise craft, gradually drew nearer and passed by, heedless of the signal. The excitement was over, and all hands but the watch turned in. At four we signaled a second steamer, and discovered the torch of another schooner in our vicinity.

On the following morning, a wild scene presented itself to view when I went on deck. The gale which had been blowing around us, and of which we had had a taste during the night, had suddenly shifted into the north-west, and was shrieking out of that quarter, with every prospect of increasing. The quick, short, emerald waves, smitten with the gold of the sun bursting over the low shores of New Jersey, were streaked with foam and were rising fast. As it was useless to look for inbound vessels with this wind, and as its force might increase to a dangerous degree, we de-

STEADY!

treme are Norwegian barks, for they are small and generally come to this country in ballast. "To get a Norwegian bark" is therefore considered a good joke on the poor fellow whose luck it is to board one. Steamers which are exclusively freight boats, and are irregular in their sailing days and slow in their movements, are called "tramps," and are also not held in high esteem by the pilots. The cruises to the eastward are sometimes, although rarely, protracted to twenty or thirty days. But the average luck is good.

The following evening, when we were well eastward of Nantucket light-ship, a steamer was reported heading directly for us. Immediately the cards were flung aside, and in a moment every soul was on deck. The pilot whose turn it was to board the next vessel, after a hurried survey of the steamer, exclaimed:

"Boys, good-bye. Finish the game for yourselves!"

He then dashed below, and in all haste put on a "boiled" shirt and a Sunday-go-to-meeting suit, and packed his valise. It should be remembered that these steamers are rather more "swell" than sailing ships, and seem to demand a corresponding difference in apparel. In the meantime, the torch was blazing on deck in the liveliest manner. The needle-like points of light representing the steamer gradually approached, and at last the huge, vague form of the vessel herself could be defined. But she already had a pilot, and paid no attention to us. The game in the cabin was resumed at once, and the

"boiled" shirt was once more folded up and laid away carefully in the locker. The precariousness of steamer-catching is well illustrated by this matter of dressing to board them. One of our pilots told us that he had actually shaved and dressed six times in one trip, for a steamer, before he had succeeded in boarding one. There is a tradition of a pilot who dressed seventeen times before success crowned his perseverance.

Morning broke on a savage scene; enormous mounds of water, crested with foam, swelled up against the sky and tossed the little *Caprice* like an egg-shell. The gale increasing with great fury, we have to under-try-sails—sails scarcely larger than a tablecloth, showing a spread of canvas so moderate that, as they say at sea, we were under "a three-reefed mitten with the thumb brailed up." The squalls were tremendous, and were accompanied by blinding sheets of snow, which seemed to sweep from the horizon in a moment and envelop the sea in impenetrable gloom; the decks and rigging were robed in ermine. The gale increased to a hurricane. The little schooner for the most part rode easily, but sometimes a sea, that seemed to go bodily over her, would strike her, and might have sunk her but for the low bulwarks, only a foot high, that allowed the water to run off; sometimes, too, she was carried over so far that there was danger of her rolling com-

A GLIMPSE OF THE SUN.

LAUNCHING THE BOAT.

pletely over. Three times during the day we wore ship in order that we might not be driven out of the track of the steamers; whatever the weather, business was never forgotten. This maneuver was, under the circumstances, one of extreme peril, and required the greatest skill and circumspection.

The sun went down over one of the wildest scenes I have ever witnessed at sea. With some difficulty we managed to get supper, while the deafening roar of the howling winds and the thunder of the surges pounding on deck almost deadened the conversation that went on uninterruptedly below; yarns were told, and intricate problems with cards were discussed by men in oil jackets and sou'westers, while the cook served out rations of hot coffee. Any moment a terrific catastrophe was likely to overwhelm us, but it is not in the nature of the sailor, after he has taken every precaution, to borrow trouble about

possibilities. A vivid flash of lightning at long intervals indicated that the gale was approaching its height, and it was decided to put up stanchions, or posts, in the cabin. These were firmly fixed between the timbers of the deck and the cabin floor, to keep the ballast from shifting in case a sudden lurch should throw the schooner on her beam-ends. If the ballast had shifted, it would have been all over with us in a moment. So violent was the lurching and creaking of the little vessel, all that long, dreary night, that no one slept until toward dawn, when the weather moderated slightly.

But while the wind was less violent, it blew hard at intervals, and the temperature was so low that the deck was covered with a layer of ice. At noon we succeeded in getting an observation, the pale sun flashing for a moment through the scud and causing the heaving deep to look like molten silver. We were in longitude $66^{\circ} 30'$ and in 48 fathoms

of water, and were heading south-west, under very short sail, when a fearful squall darkened the horizon and rushed toward us with appalling rapidity. At the same instant the lookout discovered two steamers and a pilot-boat to the eastward. The wildest excitement ensued. Reefs were shaken out, notwithstanding the squall, and the little schooner flew before the blast as if bewitched. The "boiled" shirt was put on again, winds and waves were defied, and everything was forgotten except the great fact that we must snatch the steamers from the clutches of the rival pilot-boat under our lee. When the dense pall of gloom finally passed off to leeward, the southernmost steamer was discovered to have been boarded by our rival. Every effort that skill could devise was then put forth to catch the other steamer. As we lessened the distance, the *Caprice* was hove to and awaited her approach. Slowing up, the great Cunarder gradually drew toward us, majestically mounting and plunging on the vast surges, while cataracts poured from her hawse-holes as the bow soared skyward. At this exciting moment an enormous whale, little, if any, shorter than our schooner, arose close alongside the *Caprice*, and, spouting as if to salute her, dived again into the depths.

The yawl, only sixteen feet long, was now launched over our lee side into the frothing waters, and with two seamen and the pilot started for the steamer, then a quarter of a mile distant. I confess it was a thrilling spectacle to see this mere cackle-shell, with her precious freight of three lives, now lifted far above us on a mountainous billow, and now descending out of sight into the depths of a hollow vale, and hiding there until it seemed as if she would never appear again.

By slow degrees the yawl succeeded in reaching the lee side of the steamer. There again the greatest prudence was required to prevent her from being swamped by the action of the mighty hull, rolling deep in the turbulent sea. At last we saw the pilot, the merest speck, spring on the ladder and creep up the side of the steamer. Then came the yet more difficult task of picking up the yawl. The way it was done was by keeping her head to the wind, and allowing her to drift down toward the schooner. By wearing, we kept directly in the track of the yawl; she slipped across our stern, and pulling up under the lee side, was hauled on board.

As can be easily imagined, one of the pilot's most arduous duties is to board a vessel in heavy weather. Each pilot-schooner is provided with two yawls. They are lashed to the deck, bottom upward, and are lifted and

launched over the low side of the schooner by means of a light tackle reaching down from the mast-heads, and hooked into the stem and stern. The pilot-yawls differ from other boats in that they are short, broad, and deep, and are thus very buoyant. It is not an uncommon circumstance for men to be lost when boarding vessels. Both yawls of one of our New York pilot-boats were successively capsized last winter, when trying to board the *Arizona* in a gale of wind. Happily the men were picked up by the life-boats of the steamer, after great exertion.

It is with regret that I must add that the pilots are sometimes unfairly treated by the captains of the regular transatlantic lines. There is too often a disreputable reason why these steamers give the go-by to pilot-boats that are almost within hail, and pick up another that is beyond. Almost every passenger who has crossed on the regular lines has had experience of the various black-mailing schemes that are sprung on the passengers toward the close of the voyage. Now it is to make up a purse for the captain, who has simply done his duty for a good salary, and no more requires a testimonial than other men who fulfill their duty in their chosen pursuits; or, again, money is solicited for some absurd or imaginary scheme, generally in the name of charity. Only those who have crossed a number of times discover that this is black-mail pure and simple under disguise, and that it is generally engineered by blatant and officious passengers, who have axes of their own to grind. It is black-mail because it is generally brought forward in such a manner that even those who see through the business are forced to contribute, in order to avoid the charge of stinginess. But the worst form of this vile business which assails the luckless passenger on board these steamships is the system of gambling called betting on the number of the pilot-boat that shall board the steamer.

I remember a minister, inexperienced in matters of real life, who urged me to subscribe to the list of those who were betting on the number of our prospective pilot-boat. "My dear sir," I replied to him, "don't you see that this is nothing more nor less than gambling?" But he could not be convinced, and lost his money. Why he lost, and why others lose on such a wager, is explicable in a few words. The captain and some of his officers often join in the betting—of course through other persons—or they have friends among the betters whom they are willing to favor. The passengers, on the other hand, are generally so ignorant of nautical matters that the captain can do as he pleases with little risk

BOARDING A STEAMER.

of detection. For this reason, he can steer out of the way of a pilot-boat that is not the one on which he has staked his money, and go out of his course to take a pilot from the boat on which he has staked his money. It is true that, sometimes, he may not come across that one; but, in most cases, the game is in his hands, while the passenger, on the other hand, little knows that he is so heavily handicapped. We have heard that the master of

one of the largest steamers going out of New York had a serious altercation, growing out of a transaction of this sort, with one of his passengers, who was sharper than the majority of the class.

On the eighth day out, we were four hundred and fifty miles east of New York, on the southern edge of Saint George's Bank. At one time, we passed off soundings into blue water for a few hours, a fact proclaimed in sono-

rous tones by one of the pilots, when he sang out :

"No sound,
No ground,
No bottom to be found
With a long pitch-pine pole, daddy."

The day was gloriously beautiful, the sky cloudless, and the swell remaining after the gale was scarcely dimpled by the zephyr-like cat's-paws.

One of the crack boats of the New York pilot-fleet loomed above the western horizon, carrying every stitch of canvas. Her shapely sails gleaming in the morning sun, she gradually crept up in our wake, while another pilot-boat was also visible in the eastern board. Circumstances being thus against us, we hauled to the wind on the starboard tack, and headed south until we had run them both out of sight.

"Our policy is to scatter," dryly remarked one of our pilots, a tall, slender Scotchman, of large intelligence and an inexhaustible stock of dry humor.

A standing reward of two dollars for the discovery of a steamer was now offered to the crew, whose vigilance was thus greatly stimulated, although it would have been impossible to sharpen their sense of sight.

"Sail ho!" rang from the mast-head at noon. It proved to be a sailing-ship far to the southward. The wind was so light we could not hope to reach her except by sending out a yawl. But the uncertain nature of the season made this inexpedient. This hazardous method is, however, quite frequently followed by our pilots in calm weather. Its nature is well indicated by the following adventure, which befell one of the pilots of the *Caprice* some years ago :

It was on a summer day. A dead calm prevailed. They were forty miles south of Long Island. A bark lay eight miles away, motionless. The pilot-schooner was also unable to move. But it would not do to allow the prize to escape, as she might do if a breeze should strike her sails first. It was decided to row in the yawl to the bark. Eight miles, as every one knows, is quite a distance with oars, or, as it is called, with a "white-ash breeze." But the weather promised to continue fine, and the pilot and his two men started off without water, provisions, compass, or sail. Gradually they gained on the chase. But night was creeping on; the cat's-paws stealing along the horizon suggested, too, that they had better hasten their strokes or the bark would get away from them. By great good fortune, as it seemed to them, they finally came almost within hailing distance of her. Five minutes more and they would have boarded her!—when the coming wind

filled her flapping sails, and they had the mortification to see her slowly glide away. Their frantic shouts, if heard, were unheeded. They found themselves alone on the wide ocean, parched with thirst, and weary and hungry. Night was coming on apace. A low, wailing wind was moaning from the south, and as soon as the sun sank out of sight the sea began to rise, and storm-clouds obscured the hazy light of the stars. At that juncture their schooner, which had been following, came not far from them; but, supposing they had been picked up by the bark, did not perceive them, and again their shouts were unheard. Then, indeed, they gave themselves up for lost. The nearest land was forty miles away. As the wind was blowing it would sweep them toward it, while the increasing violence of the gusts foreboded a sea so wild that they must almost inevitably be swamped and drowned in making a landing. Yet their only course was to drive before the wind, and trust to luck to extricate them from their perilous situation. As night wore on, the storm increased; often the little boat shipped water and seemed on the verge of destruction. Every moment was bringing them nearer to the crisis of their fate. Toward dawn, when the night is darkest, they heard the thunder of surf on the reefs, and faintly discerned, in the gloom, the ghostly pallor of the upward-driven foam. Exhausted as they were, they yet kept their wits about them to seize any possibility of escape that might offer. In one spot there seemed to be a break in the ridge of foam. Skillfully guiding the boat toward it, in another instant they felt the yawl lifted up on the crest of an enormous breaker rushing with lightning speed toward the land. A deafening roar succeeded, a crash, a whirl, and a torrent of foam. In a twinkling the boat was capsized, and the men were borne far up on the beach. One struck a rock and was drowned. The others, as the wave receded, ran up the sand. When the next wave followed, they dug their hands into the beach and held on, lest they should be swept away by the under-tow. But for the fortunate break in the reef through which they had guided the boat, they would all have been lost.

TWO DAYS of perfect weather, each closed with a sunset of magical splendor, were followed by a change. The glass began to fall; cloud-streamers arched over the zenith from horizon to horizon. A sad wind moaned over the heaving deep, and a mist gradually closed us in. Then came fitful showers, and, between the flaws, the little schooner flapped her slatting sails with foreboding dreariness.

REEFING THE MAINSAIL.

Another storm was stealing upon us. During the day—it was Sunday—we saw a number of steamers, bound eastward, which had left New York on the previous day. I should add that for two days we had been heading westward, and were now not far from the Nantucket light-ship. An inbound steamer was also seen from the mast-head, and we flung out all the kites and let our little schooner fly at her wildest rate. Here seemed a fair chance at last, for we were apparently south of the pilot-boats we had previously seen, while the whole horizon round revealed not a boat in sight. But, after another mad chase, our hopes were blasted in a moment when the steamer hung out her signal to inform us she was provided with a pilot.

That night there was a snow-ring around the moon, and the glass was still slowly falling. On the following day we had a very exciting chase after a White Star boat. But she, again, had been already boarded. At four P. M. the wind, which had been whiffing about in a dubious manner to all points of the compass,

settled into a strong, steady breeze from the east, and by night-fall it blew half a gale.

"Call all hands to reef!" rang through the ship, and soon the crew were ranged along the booms, shortening sail. A wild night was before us. For a while we hove to, in order to be in the track of steamers, reasoning that as the wind was likely to hold awhile it would prevent other boats from getting far east of New York, and thus we should have a fair chance of not being interrupted in our chances by interlopers. But, as the gale freshened, it seemed unlikely that we should board any vessel in the weather now threatening, and the helm was put up and we stood west again. We had now been out twelve days.

At sunset the sky was completely obscured by a dense canopy of cloud. Just as the sun rested on the ocean's verge, the clouds lifted enough to allow the sun to burst forth and illumine the horizon with a line of vivid fire, below which the ocean rolled intensely sullen and livid. But who can describe the awful magnificence which irradiated the entire heav-

HOVE TO FOR A PILOT.

ens with a volcanic glow! The sky was like the dome of a vast oven heated to the last degree. At the same moment a shower fell on the sea, and immediately two perfect rainbows spanned the firmament. Then, as if a curtain had been drawn across the scene, night closed in, and the wild winds howled over a little ship tossing alone on a dreary waste of waves.

It blew very hard that night. A dangerous cross-sea set in, and twice the *Caprice* was nearly thrown on her beam-ends with terrific lurches. We kept a bright light at the mast-head and a double lookout, for it was an uncanny time for a collision, and we were directly in the track of ships.

On the following day it moderated, but the wind, which had only "backed in," shifted from north to east after dark. This brought a corresponding change of weather. Rain and fog set in, and a very puffy breeze that settled into a gale before morning. We ran westward all night under short sail, taking casts of the lead at intervals. Soon after ten,

the atmosphere being thick, but not so much so as to prevent us from discerning objects the distance of a mile, we discovered a sailing-ship ahead, evidently running for New York, and probably in need of a pilot. Edging away toward her, we lit our torch, and had the satisfaction of seeing her send up a couple of rockets in response. At the same time she backed her reefed main-topsail and hove to. Running down on her lee side, we also hove to very near to her, and proceeded to launch the yawl. It was a wild scene as the little boat vanished into the darkness, perhaps never to be seen again. But her crew carried a lantern with them, and after they had left the pilot on board the ship, we were able to shape our movements by this little glimmer bobbing up and down like an *ignis fatuus* in the misty dark. As the night wore on, the fog grew so dense that we brought up our six-pound brass piece from the fore peak, and fired it at short intervals; this was done, not, as one might suppose, to keep vessels from coming into collision with the schooner,

but to inform them there was a pilot-boat in the vicinity. But this very fact required redoubled vigilance on our part, in order that we might not be run down. In the middle watch we were startled, just after firing the cannon, by the answering whistle of a steamer hoarsely coming down the wind, and close at hand. The excitement of the moment was intense. Again we fired the cannon. The whistle drew nearer, and all at once the colored lights of a steamer loomed out of the dripping mist, and her huge bow emerged from the gloom, so near that it actually seemed to overhang our deck. Passing close alongside, she slowed up the palpitation of her mighty engine a moment to make sure of our position, and then vaguely glided out of sight.

On the following morning, the sun was invisible. The war of the elements was raging with increasing fury. The wind had shifted to south-east. The fog was less dense, and

we could see some distance. We were running under a bit of foresail, and hardly needed that. It seemed, at times, as if the following seas would founder the schooner as they towered over the low taffrail. Not a sail was in sight, not even a solitary gull; it is a curious fact that, excepting the petrels, seabirds keep near to the land in bad weather. By means of the patent log towing astern and from casts of the lead, we knew we could not be far from Sandy Hook light-ship.

About ten, the light-ship hove in sight. We rushed by it at the rate of thirteen knots. An enormous sea was rolling over the bar, but the depth of water was enough for vessels like the *Caprice*, and by skillful steering she passed over handsomely. The fierceness of the wind was now terrific, and, dowsing the foresail, we ran up the Lower Bay and flew through the Narrows under bare poles. Thus ended a most delightful and entertaining cruise.

THE EARLY WRITINGS OF ROBERT BROWNING.

It is not my design in the following pages to attempt any exact review or any minute analysis of the writings of one of the most copious and versatile of modern poets. The range of Mr. Browning's genius is so wide, the temper of his muse so Shakspearean and universal, that he will probably exhaust the critical powers of a great many students of literature before he finally takes his right place among the chief authors of modern Europe. The constellation which is still ascending our poetical heavens is too much confused as yet by those mists of personal prejudice and meteors of temporary success which always lurk about the horizon of the Present to enable us to map the stars in it with certainty. Many attempts, of course, have been made, and some with a great measure of success. Two such studies, among others, demand recognition for their extent and authority—the volume on Mr. Browning's poetry by Mr. John Nottelshipp, since known as an animal-painter, and the elaborate criticism printed in this magazine by Mr. E. C. Stedman. I shall not attempt to compete with these or any similar reviews; my purpose is to touch lightly on those early volumes of Mr. Browning which are comparatively less known to his admirers, and to enrich such bibliographical notes as I have been able to put together with a variety of personal anecdotes and historical facts which now for the first time see the light, and which I have jotted

down, from time to time, from Mr. Browning's lips, and with his entire consent and kindly coöperation. No one is more alive than Mr. Browning, or, may I add, than I, to the indelicacy of the efforts now only too widely made to pry into the private affairs of a man of genius, to peep over his shoulder as he writes to his intimate friends, and to follow him like a detective through the incidents of a life which should not be less sacred from curiosity than the life of his butler or his baker. The poet has expressed his mind with extreme plainness:

"A peep through my window, if folks prefer;
But, please you, no foot over threshold of mine."

But literary history, the most charming of all occupations of the human mind, as Warburton said, is a very different thing from personal history, and there are certain facts about the development of a poet's intellect and the direction that it took, the welcomes that it received and the reverses that it endured, about which curiosity is perfectly legitimate. For those who desire such a peep through Mr. Browning's window as this, the shutters are at last by his own courtesy taken down.

Mr. Robert Browning was born at Camberwell, a southern suburb of London, on the 7th of May, 1812. His father, who bore the same name as himself, and who died in 1866

ROBERT BROWNING AT THE AGE OF 47. (FROM THE DRAWING BY RUDOLF LEHMANN, IN 1859.)

at the age of eighty-four, was in many ways a remarkable man. It is, we must suppose, not merely filial piety that makes his son declare that his father had more true poetic genius than he has. Of course the world at large will answer, "By their fruits shall ye know them," and of palpable fruit in the way of published verse the elder Mr. Browning has nothing to show. But it seems that his force and fluency in the use of the heroic couplet, the only metrical form for which he had much taste, were extraordinary; and his son speaks of his moral vein as that of a Pope born out of due time. For his son's poetic gods he had, of course, no fondness, and, from the very first, the two minds diverged upon every intellectual point—until the close of the old gentleman's life, when it is pathetic to hear that he learned, as the world was learning, to appreciate the fine flavor of his son's poetry. He was always, however, loving and sympathetic, divining the genuine poetic impulse though blind to the beauty of the forms it took, and in this one case the rare phenom-

enon seems to have appeared of a boy consciously, and of set purpose, trained to be a poet. The only other instance that occurs to me is that of Jean Chapelain, who was set apart from birth by his parents "to relight the torch of Malherbe"; the result was not nearly so happy as in the case of Mr. Browning. The latter, however, can hardly remember a time when his intention was not to be eminent in rhyme, and he began to write at least as early as Cowley. His sister remembers him, as a very little boy, walking round and round the dining-room table, and spanning out the scansion of his verses with his hand on the smooth mahogany. When he was about eight years old, this ambitious young person disdained the narrow field of poetry, and, while retaining that scepter, debated within himself, as Dryden says Anne Killegrew did, whether he should invade and conquer the province of painting or that of music. It soon became plain to him, however, that, as he himself put it thirty-five years later,

"I shall never, in the years remaining,
Paint you pictures, no, nor carve you statues,
Make you music that should all-express me:
..... Verse alone, one life allows me,"

and he began writing with assiduity. It is curious to reflect that all the giants were alive in those days—not even Keats himself laid to sleep under the Roman grasses. In 1824, the year that Byron died, the boy had collected poems enough to form a volume, and these were taken around to publisher after publisher, but in vain. The first people who saw the nascent genius of this lad of twelve years old were the two Misses Flower, the younger afterward authoress of "*Vivia Perpetua*," and too sadly known as Sarah Flower Adams. The elder Miss Flower thought the poems so remarkable that she copied them and showed them to the distinguished Unitarian, the Rev. William Johnson Fox, then already influential as a radical politician of the finer order. As a matter of course, Mr. Fox was too judicious to recommend the publication of poems so juvenile, but he ventured to prophesy a splendid future for the boy, and he kept the transcripts in his possession. To Mr. Browning's great amusement, after the death of Mr. Fox, in 1864, his daughter returned the MS. to the author, who read in maturity the forgotten verses of his childhood. At the time they were written he was entirely under the influence of Byron, and his verse was so full and melodious that Mr. Fox confessed, long afterward, that he had thought that his snare would be a too gorgeous scale of language and tenuity of thought, concealed by metrical audacity. But about a year after this, an event revolutionized Robert Browning's whole conception of poetic art. There came into his hands a miserable pirated edition of part of Shelley's works; the window was dull, but he looked through it into an enchanted garden. He was impatient to walk there himself, but, in 1825, it was by no means easy to obtain the books of Shelley. No bookseller that was applied to knew the name, although Shelley had been dead three years. At last, inquiry was made of the editor of the "*Literary Gazette*," and it was replied that the books in question could be obtained of C. & J. Ollier, of Vere street. To Vere street, accordingly, Mrs. Browning proceeded, and brought back as a present for her son, not only all the works of Shelley, but three volumes written by a Mr. John Keats, which were recommended to her as being very much in the spirit of Mr. Shelley. A bibliophile of to-day is almost dazed in thinking of the prize which the unconscious lady brought back with her to Camberwell. There was the Pisa "*Adonais*," in its purple paper cover; there was

"*Epipsychidion*,"—in short, all the books she bought were still in their first edition, except "*The Cenci*," which professed to be in the second. Poets of our own day need not grumble at the indifference of the public, when we see that within human memory two of the greatest writers of modern times, three and four years after their decease, were still utterly unsalable. Well, the dust of the dead Keats and Shelley turned to flower-seed in the brain of the young poet, and very soon wrought a change in the whole of his ambition. First of all, they made him thoroughly dissatisfied with what he had hitherto written, and showed him—always a very salutary lesson for a boy—that the elements of his art were still to be learned. Meanwhile, the business of ordinary education took up the main part of his time; till 1826, he was at school at Dulwich, then with a tutor at home, and finally, but I think only for a very short time, at London University.

The elder Mr. Browning had but two children—the poet, and a daughter who still keeps house for her brother. When the son had arrived at that age at which the bias or opportunity of parents usually dictates a profession to a youth, Mr. Browning asked his son what he intended to be. It was known to the latter that his sister was provided for, and that there would always be enough to keep him also, and he had the singular courage to decline to be rich. He appealed to his father whether it would not be better for him to see life in the best sense, and cultivate the powers of his mind, than to shackle himself in the very outset of his career by a laborious training, foreign to that aim. The wisdom or unwisdom of such a step is proved by its measure of success. In the case of Mr. Browning the determination has never been regretted, and so great was the confidence of the father in the genius of the son that the former at once acquiesced in the proposal. At this time, young Browning's brain was full of colossal schemes of poems. It is interesting and curious to learn that at a time of life when almost every poet, whatever his ultimate destination, is trying his power of wing in song, Mr. Browning, the early Byronic lilt having been thrown aside, did not attempt any lyrical exercise. He planned a series of monodramatic epics, narratives of the life of typical souls—a gigantic scheme at which a Victor Hugo or a Lope de Vega would start back aghast. Several of these great poems were sketched; only one exists, and that in fragmentary form. At Richmond, whither the family had gone to live,—on the 22d of October, 1832,—Mr. Browning finished a poem which he named, from the object, not the

Robert Browning.

(FROM THE PAINTING BY RUDOLF LEHMANN.)

subject, "Pauline." This piece was read and admired at home, and one day his aunt said to the young man:

"I hear, Robert, that you have written a poem; here is the money to print it."

Accordingly, in January, 1833, there went to press, anonymously, a little book of seventy pages, which remained virtually unrecognized until the author, to preserve it from piracy, unwillingly received it among the acknowledged children of his muse, in 1867.

But, although "Pauline" was excluded from recognition by its author for more than thirty years, he has to confess that its production was attended with circumstances of no little importance to him. It was the intention and desire of Mr. Browning that the authorship should remain entirely unknown, but Miss Flower told the secret to Mr. Fox, who reviewed the poem with great warmth and fullness in the "Monthly Repository." But a more curious incident was that a copy fell into the hands of John Stuart Mill, who was only six years the senior of the poet. It delighted him in the highest degree, and he immediately wrote to the editor of "Tait's Magazine," the only periodical in which he was at that time free to express himself, for leave to review "Pauline" at length. The reply was that nothing would have been more welcome, but that, unfortunately, in the preceding number the poem had been dismissed with one line of contemptuous neglect. Mr. Mill's opportunities extended no further than this one magazine, but at his death there came into Mr. Browning's possession this identical copy, the blank pages of which were crowded with Mill's annotations and remarks. The late John Forster took such an interest in this volume that he borrowed it,—“convey, the wise it call,”—and when he died, it passed with his library into the possession of the South Kensington Museum, where the curious relic of the youth of two eminent men has at last found a resting-place. Nor was this the only instance in which the poem, despite its anonymity and its rawness, touched a kindred chord in a man of genius. There was much in it that was new, forcible, and fine,—such passages of description as this of the wood where Pauline and her lover met:

"Walled in with a sloped mound of matted shrubs,
Dark, tangled, old and green, still sloping down
To a small pool whose waters lie asleep
Amid the trailing boughs like water-plants;
And tall trees overarch to keep us in,
Breaking the sunbeams into emerald shafts;
And in the dreamy water one small group
Of two or three strange trees are got together,
Wondering at all around, as strange beasts herd
Together far from their own land: all wildness,
No turf nor moss, for boughs and plants pave all,

And tongues of bank go shelving in the waters,
Where the pale-throated snake reclines his head,
And old gray stones lie making eddies there,
The wild mice cross them dry-shod: deeper in!
Shut thy soft eyes—now look—still deeper in!
This is the very heart of the woods, all round
Mountain-like heaped above us; yet even here
One pond of water gleams; far off the river
Sweeps like a sea, barred out from land; but one—
One thin clear sheet has overleaped and wound
Into this silent depth, which gained, it lies
Still, as but let by sufferance; *the trees bend*
O'er it as wild men watch a sleeping girl,"—

or such fine bursts of versification as this about Andromeda:

"As she awaits the snake on the wet beach,
By the dark rock and the white wave just breaking
At her feet; quite naked and alone; a thing
You doubt not, fear not for, secure that God
Will come in thunder from the stars to save her."

Such beauties as these were not likely to escape the notice of curious lovers of poetry. Many years after, when Mr. Browning was living in Florence, he received a letter from a young painter whose name was quite unknown to him, asking him whether he were the author of a poem called "Pauline," which was somewhat in his manner, and which the writer had so greatly admired that he had transcribed the whole of it in the British Museum reading-room. The letter was signed D. G. Rossetti, and thus began Mr. Browning's acquaintance with this eminent man. But to the world at large "Pauline" was a sealed book, by nobody, and the reviewers simply ignored it.

One very creditable exception was the "Athenæum," then in its infancy, which dedicated several columns to a kindly, if not very profound, analysis, and to copious quotations. Mr. Browning discovered long afterward that this notice was written by Allan Cunningham.

After the publication of "Pauline" there came a period of respite, in which the poetical ferment of the young writer's mind was settling down, and his genius was preparing to take its proper form. The scheme of illustrating, in a series of vast biographies in blank verse, whatever was unusual or tragical in the history of a soul, was gradually abandoned, and the excitement of travel took the place of the excitement of composition. Mr. Browning set out upon his *Wanderjahr*, 1834, and made a long stay at St. Petersburg. Of all that was thought and planned in these two years preceding the rapid authorship of "Paracelsus," the only specimen remaining is to be found in two very curious lyrics, included in the "Dramatic Lyrics" of 1842, and now finally relegated to "Men and Women." They were printed first in "Fox's Monthly Repository," under the single title of "Mad-house Cells," although they

are now known to every reader of Mr. Browning as "*Joannes Agricola in Meditation*" and "*Porphyrion's Lover*." It is a curious matter for reflection that two poems so unique in their construction and conception, so modern, so interesting, so new, could be printed without attracting attention, so far as it would appear, from any living creature. Here was a poet with a fresh voice, appealing to the intellectual youth of Europe in a direct way, such as only one other man had dreamed of, and that was Heine. Then came "*Paracelsus*," written in London through the winter of 1834, finished in March, 1835, and published before the summer. This work has had so many admirers that it needs, perhaps, a little courage to say that it was surely not so important as a sign of its author's genius as the little pieces just mentioned. It is a drama of a shapeless kind, parent in this sort of a monstrous family of "*Festuses*," and "*Balders*," and "*Life Dramas*," only quite lately extirpated, and never any more, it is hoped, to flourish above ground. There are four persons in the drama: *Paracelsus*, the male and female genii of his career; *Festus* and *Michal*, friend and lover, and finally *Aprile*, the foil and counterpoise to his ambitious gravity. Every one knows how the poem is conducted; how full it is of subtlety, of melody, of eloquent and casuistical intelligence. But we cannot forget that it is a drama in which one of the characters, more than once, expresses himself in upward of three hundred lines of unbroken soliloquy. The precedent was bad, as all disregard of the canons of artistic form is apt to be; and in the hands of his imitators Mr. Browning must often have shuddered at his own contorted reflection. The public refused to have anything to say to so strange a poem; very few copies sold, and the reviews were contemptuously adverse. The "*Athenæum*," even, which had received "*Pauline*" so warmly, dismissed "*Paracelsus*" with a warning to the author that it was useless to reproduce the obscurity of Shelley minus his poetic beauty. But certain finer minds here and there recognized the treasury of power and genius concealed in this crabbed shape. The "*Examiner*," in particular, contained a review of the poem at great length, in which full justice was done to Mr. Browning's genius. This, again, was the commencement of a memorable intimacy. But in the meantime the young poet formed the acquaintance of one of the most striking personages of that generation—Macready, the tragedian. This happened at a dinner at the house of W. J. Fox, on the 27th of November, 1835. The actor was exceedingly charmed with the young and ardent writer, who, he said, looked more like a poet than any man

he had ever met. He read "*Paracelsus*" with a sort of ecstasy, and cultivated Mr. Browning's acquaintance on every occasion. He asked him to spend New Year's Day with him at his country-house at Elstree, and on the last day of 1835, Mr. Browning found himself at "*The Blue Posts*" waiting for the coach, in company with two or three other persons, who looked at him with curiosity. One of these, a tall, ardent, noticeable young fellow, constantly caught his eye, but as the strangers knew one another, and as Mr. Browning knew none of them, no conversation passed as they drove northward. It turned out that they were all Macready's guests, one of the elder men being George Cattermole, while the noticeable youth was no other than John Forster. He, on being introduced to Mr. Browning, said: "Did you see a little notice of you I wrote in the '*Examiner*'?" The friendship so begun lasted, with a certain interval, until the end of Forster's life.

The acquaintance with Macready deepened rapidly on both sides. The actor had scarcely finished reading "*Paracelsus*" before he began to think that here was a tragic poet to his mind. He suggested that Mr. Browning should write him an acting play, and the subject of Narses, the eunuch who conquered Italy for Justinian, was discussed between them. At first the actor seemed more eager in the matter than the poet. Early in 1836, Macready made this striking entry in his journal:

"Browning said that I had *bit* him by my performance of *Othello*, and I told him I hoped I should make the blood come. It would, indeed, be some recompense for the miseries, the humiliations, the heart-sickening disgusts which I have endured in my profession, if, by its exercise, I had awakened a spirit of poetry whose influence would elevate, ennoble, and adorn our degraded drama. May it be!"

In April, 1836, the miseries to which Macready referred, and which were caused by the meanness of his manager and the bad state of the law of contract, were suddenly brought to a climax. One evening, after playing part of "*Richard II.*," and being forbidden to conclude the tragedy, Macready's patience suddenly failed him, and he inflicted upon the notorious and ridiculous Mr. Alfred Bunn a sound thrashing. Notwithstanding this unfortunate *contretemps*, to which Mr. Macready's chivalrous ideal gave more importance in his own eyes than was felt by an indulgent and scandal-loving public, it was possible, as early as May 26th, 1836, to bring out at Covent Garden Theater, under the management of Mr. Osbaldiston, Talfourd's new tragedy of "*Ion*." The supper which succeeded the first performance of this ex-

tremely successful play was a momentous occasion to Mr. Browning. He found himself seated opposite to Macready, who was supported on his right hand and his left by two elderly gentlemen, in whom the young poet recognized for the first time William Wordsworth and Walter Savage Landor. In the course of the evening Talfourd, with marked kindness, proposed the name of the youngest English poet, and Wordsworth, leaning across the table, said, with august affability, "I am proud to drink your health, Mr. Browning!" The latter saw much of Wordsworth during the next few years, for Talfourd invited him to his house whenever Wordsworth came up to town. He listened to his slow talk with reverence and interest, but never got over the somewhat chilling and awful personal bearing of the old man. With Landor, on the contrary, Mr. Browning afterward became, as readers of Forster's life must be aware, extremely intimate, and helped, indeed, to add sunshine to the last dark days of that leonine exile. To return, however, to the "Ion" supper: the success of that tragedy had whetted the appetite of all the luckless playwrights of the day, and one of them, Miss Mitford, with pert audacity, ventured to propose a poetic play to the tragedian while he was at table. But she utterly failed in her ruse, and Mr. Browning was, therefore, doubly surprised when, as the guests were leaving, Macready came behind him on the stairs, and, laying his hand on his arm, said, "Write a play, Browning, and keep me from going to America!" It was said so earnestly that there could be no doubt that it was meant, and Mr. Browning simply replied: "Shall it be historical and English? What do you say to a drama on *Strafford*?" In this rapid interchange of sympathies Mr. Browning's next work was conceived, but it was several months before he satisfied himself that he was sufficiently read in the historical part of the subject to fill up the plot. On the 19th of November, 1836, the tragedy of "*Strafford*" was brought, almost finished, to Macready; in March of the next year it was completed and put in rehearsal, and, on the first of May, it was brought out on the boards of Covent Garden Theater.

It is time now to deny a statement that has been repeated *ad nauseam* in every notice that professes to give an account of Mr. Browning's career. Whatever is said or not said, it is always remarked that his plays have "failed" on the stage. In point of fact, the three plays which he has brought out have all succeeded, and have owed it to fortuitous circumstances that their tenure on

the boards has been comparatively short. "*Strafford*" was produced when the finances of Covent Garden Theater were at their lowest ebb, and nothing was done to give dignity or splendor to the performance. "Not a rag for the new tragedy," said Mr. Osbaldiston. The *King* was taken by Mr. Dale, who was stone-deaf, and who acted so badly that, as one of the critics said, it was a pity that the pit did not rise as one man and push him off the stage. All sorts of alterations were made in the text; where the poet spoke of "grave gray eyes," the manager corrected it in rehearsal to "black eyes." But at last Macready appeared, in the second scene of the second act, in more than his wonted majesty, crossing and recrossing the stage like one of Vandyke's courtly personages come to life again, and Miss Helen Faucit threw such tenderness and passion into the part of *Lady Carlisle* as surpassed all that she had previously displayed of histrionic power. Under these circumstances, and in spite of the dull acting of Vanderhoff, who played *Pym* without any care or interest, the play was well received on the first night, and on the second night was applauded with enthusiasm by a crowded house. There was every expectation that the tragedy would have no less favorable a "run" than "*Ion*" had enjoyed, but after five nights, Vanderhoff suddenly withdrew, and though Elton volunteered to take his place, the financial condition of the theater, in spite of the undiminished popularity of the piece, put an end to its representation.

Mr. Browning, the elder, had paid for the cost of "*Paracelsus*"; "*Strafford*" was taken by Longmans, and brought out, at their expense, as a little volume—not, like most of the tragedies of the day, in dark-gray paper covers, with a white label. However, at that time the public absolutely declined to buy Mr. Browning's books, and "*Strafford*," although more respectfully received by the press, was as great a financial failure as "*Paracelsus*." It was part of Mr. Browning's essentially masculine order of mind to be in no wise disheartened or detached from his purpose by this indifference of the public. He was silent for three years, but all the time busy with copious production. The success of "*Strafford*" on the stage led Mr. Browning's thoughts very naturally to the drama, and besides the purely lyrical masque or "proverb" of "*Pippa Passes*," he concluded, before 1840, two tragedies with the intention of seeing them acted. These were "*King Victor and King Charles*," and "*Mansoor the Hierophant*," rebaptized on publication by the name of "*The Return of the Druses*."

These plays, however, found no manager or publisher willing to accept them, and the author fell back on the dream that he had commenced his career with, namely, that of chronicling in poetry the whole life of a single soul. He set to work, and produced one of the most considerable, certainly one of the most characteristic, of his works, in the epic of "Sordello," begun in 1838, finished and printed in 1840. It is scarcely necessary to remark that for forty years this book has been an eminent stumbling-block, not merely in the path of fools, but in that of very sensible and cultivated people. "The entirely unintelligible 'Sordello'" has enjoyed at least its due share of obloquy and neglect. There are not a few of Mr. Browning's readers who would miss it from the collection of his books more than any other of his longer poems. It possesses passages of melody and insight, fresh enough, surprising enough to form the whole stock-in-trade of a respectable poet; it needs reading three times, but on the third even a school-boy of tolerable intelligence will find it luminous, if not entirely lucid, and half the charge of obscurity is really a confession of indolence and inattention.

"Who wills may hear 'Sordello's' story told,"

and if our space to-day would give us leave to roam through its fragrant pages, we might find a thousand reasons why "Sordello" ought to be one of the most readable of books. And yet the Naddos of contemporary criticism were not wholly wrong. The book is difficult, and Mr. Browning in the philosophic afternoon of life frankly confesses as much. It is hard reading, over-condensed, over-rapid, like much of Milton in its too arrogant contempt for the commonplace habits of the intelligence. This is the author's explanation of his error, for that it was an error he is perhaps more ready than some of his admirers to admit. In 1838, the condition of English poetry was singularly tame and namby-pamby. Tennyson's voice was only heard by a few. The many delighted in poor "L. E. L.," whose sentimental "golden violets" and gushing *improvisatores* had found a tragic close at Cape Coast Castle. Among living poets, the most popular were good old James Montgomery, droning on at his hopeless insipidities and graceful "goodnesses," the Hon. Mrs. Norton, a sort of soda-water Byron, and poor, rambling T. K. Hervey. The plague of annuals and books of beauty was on the land, with its accompanying flood of verses by Alaric A. Watts and "Delta" Moir. These virtuous and now almost forgotten poetasters had brought the art of poetry into such dis-

esteem, with their puerilities and their thin, diluted sentiment, that verse was beginning to be considered unworthy of exercise by a serious or original thinker. Into this ocean of thin soup Mr. Browning threw his small square of solid pemmican—a little mass which could have supplied ideas and images to a dozen "L. E. L.'s" without losing much of its consistence. Of course, to a generation long fed on such thin diet, the new contribution seemed much more like a stone than like anything edible, and even to this day there are lovers of poetry who can get as little out of it as Alton Locke could. About 1863, Mr. Browning, becoming a little impatient of the long-repeated denigration of his favorite offspring, set about rewriting "Sordello" on a simpler principle; needless to say that was a failure, and there are few who will regret that for once, at least, so profound a student of the human heart wrote rather as he himself felt than as his readers, even the most sympathetic of them, might have wished. The book has become a classic, and to each coming generation will in all probability present less difficulty than to the preceding one.

But from the popular point of view "Sordello" was a failure, and in the face of so much poetry still unprinted, Mr. Browning could not but ruefully remember how expensive his books had been to his sympathetic and uncomplaining father. To go on indefinitely in this way was scarcely to be thought of, and yet poetry kept in a desk, on the Horatian principle, is a property that wears out the soul with hope deferred. One day, as the poet was discussing the matter with Mr. Edward Moxon, the publisher, the latter remarked that at that time he was bringing out some editions of the old Elizabethan dramatists in a comparatively cheap form, and that if Mr. Browning would consent to print his poems as pamphlets, using this cheap type, the expense would be very inconsiderable. The poet jumped at the idea, and it was agreed that each poem should form a separate brochure of just one sheet,—sixteen pages, in double columns,—the entire cost of which should not exceed twelve or fifteen pounds. In this fashion began the celebrated series of "Bells and Pomegranates," eight numbers of which, a perfect treasury of fine poetry, came out successively between 1841 and 1846. "Pippa Passes" led the way, and was priced first at sixpence; then, the sale being inconsiderable, at a shilling, which greatly encouraged the sale; and so, slowly, up to half a crown, at which the price of each number finally rested. As the advertisement of "Bells and Pomegranates" has never been reprinted, and as that volume is not very common, I make no

apology for reproducing that characteristic little document:

"Two or three years ago I wrote a play, about which the chief matter I much care to recollect at present is, that a pitfull of good-natured people applauded it. Ever since, I have been desirous of doing something in the same way that should better reward their attention. What follows I mean for the first of a series of dramatical pieces, to come out at intervals, and I amuse myself by fancying that the cheap mode in which they appear will for once help me to a sort of pit-audience again. Of course, such a work must go on no longer than it is liked; and to provide against a certain and but too possible contingency, let me hasten to say now what, if I were sure of success, I would try to say circumstantially enough at the close, that I dedicate my best intentions most admiringly to the author of "Ion"—most affectionately to Sergeant Talfourd."

There had been nothing in the pastoral kind written so delightfully as "Pippa Passes" since the days of the Jacobean dramatists. It was inspired by the same feeling as gave charm and freshness to the masques of Day and Nabbes, but it was carried out with a mastery of execution and fullness of knowledge such as those unequal writers could not dream of exercising. The figure of *Pippa* herself, the unconscious messenger of good spiritual tidings to so many souls in dark places, is one of the most beautiful that Mr. Browning has produced, and in at least one of the more serious scenes,—that between *Sebald* and *Ottina*,—he reaches a tragic height that places him on a level with the greatest modern dramatists. Of the lyrical interludes and seed-pearls of song scattered through the scenes, it is a commonplace to say that nothing more exquisite or natural was ever written, or rather warbled. The public was first won to Mr. Browning by "Pippa Passes." Next year, 1842, he printed the old tragedy of "King Victor and King Charles," which he had had by him for some years. If "Pippa Passes" was, as Miss Barrett said, a pomegranate that showed

"A heart within blood-tinctured, of a veined humanity,"

this latter drama was a bell, clear-toned and clangorous, fitly rung before the curtain should rise upon a stately theatrical spectacle. The poetry here, as in "Strafford," which it resembles, is carefully subordinated to stage effect and movement, and it is unfortunate that Mr. Browning was not successful in getting it accepted by any manager, for it would be a popular piece on the stage. Not a lyrical passage, scarcely a lyrical touch, checks the business and bustle of the scenes till *Victor* dies so majestically, with his son's crown on his head, defying *d'Ormea*. The same year followed the brief pamphlet or booklet called

"Dramatic Lyrics." Short as this book is, only sixteen pages, it was shorter still when the printer's devil came from Mr. Moxon's shop to ask for more copy to fill up the sheet. Mr. Browning gave him a *jeu d'esprit* which he had written to amuse little Willie Macready, and which he had had no idea of publishing. This was "The Pied Piper of Hamelin," which has probably introduced its author's name into hundreds of thousands of homes where otherwise it never would have penetrated. In other respects the collection was sparse, but remarkable enough. First came the three "Cavalier Tunes," as at present; then, under the titles of "Italy" and "France," what we now find among the "Dramatic Romances" as "My Last Duchess" and "Count Gismond." Then the "Incident of the French Camp" and "The Soliloquy of the Spanish Cloister"; then "In a Gondola," perhaps the most delicate in harmonic effect of all Mr. Browning's lyrics; then "Artemis Prologizes"; then "Waring," in which was sung the disappearance of Mr. Alfred Dommett, who, after a long exile, returned from Vishnulan, or New Zealand, a few years ago; then "Rudel and the Lady of Tripoli," "Cristina," "Mad-house Cells,"—which we have already discussed,—"Through the Metidja," and finally "The Pied Piper." Early in 1843 there followed the glowing and passionate tragedy "The Return of the Druses," a play which would be sure to rivet attention on the stage, but which no manager hitherto has had the courage to produce.

But, in the meantime, the hopes that had sprung eternal in the breasts of all dramatic poets began to cluster once more around the person of Mr. Macready. That illustrious actor, by that time recognized as by far the most able and eminent tragedian in the English-speaking world, after performing for a season at the Haymarket, took Drury Lane Theater under his own management, and held out flattering promises to the poets. This season opened on the 10th of December, 1842, with "The Patrician's Daughter" of Mr. Westland Marston. This was the first work of a young man of great promise, of whom much had been talked in literary and theatrical circles. Mr. Macready took the part of *Mordaunt*, Miss Helen Faucit that of *Lady Mabel Lynterne*, and great pains were taken to secure a thoroughly satisfactory cast. It was distinctly understood that if "The Patrician's Daughter" was a great success, the public was to be rewarded by a series of original tragedies by poets of repute. Everything seemed as glittering and auspicious as possible, and nobody knew what a dangerous game Macready was playing. He was, as a

matter of fact, on the verge of bankruptcy, and driven almost to distraction by a variety of vexations. Unfortunately, Marston's play, from which so much was expected, enjoyed only a success of esteem. It was removed, to be succeeded on the boards by a play called "Plighted Troth," by a brother of George Darley, and a man of the same peevish, hopeless temperament as his more distinguished relative. This tragedy proved to be miserable trash, and was scarcely endured a single night. But, in the meantime, Mr. Browning, who had been asked by Macready to write a play for him, had devised and composed, in the space of five days, one of the most remarkable of his works, "The Blot on the 'Scutcheon." This had been received, and delight had been expressed by Macready on reading it. The author was, therefore, surprised that, on the withdrawal of "Plighted Troth," he received no invitation, in accordance with etiquette, to read it aloud to the actors previous to rehearsal. He had no inkling whatever of Macready's embarrassments, and not the slightest notion that it was hoped that he would withdraw the piece. At last, on Saturday, the 4th of February, 1843, Macready called Mr. Browning into his private room, and said to him:

"Your play was read to the actors yesterday, and they received it with shouts of laughter."

"Who read it?"

"Oh, Mr. Wilmot."

Now, Wilmot was the prompter, a broadly comic personage with a wooden leg and a very red face, whose vulgar sallies were the delight of all the idle jesters that hung about the theater. That such a drama as "The Blot on the 'Scutcheon" should be given to Wilmot to read was simply an insult, and one of which Mr. Browning did not conceal his perception. Macready saw his mistake, and said: "Wilmot is a ridiculous being, of course. On Monday I myself will read it to the actors." On Monday, accordingly, he read it, but he announced to Mr. Browning that he should not act in it himself, but that Phelps, then quite a new man, would take the principal part. This was an unheard-of thing in those days, when it was supposed that Macready was absolutely essential to a new tragedy. Of course his hope was that Mr. Browning would say: "You not play in it? Then, of course, I withdraw it." But the actor's manner was so far from suggesting that truth that the poet never suspected the real state of the case. He accepted Phelps, but, when the rehearsal began on Tuesday, Phelps was very ill with English cholera, and could not be present, so Macready read his

part for him. On Wednesday Mr. Browning noticed that Macready was not merely reading: he was rehearsing the part, moving across the stage, and counting his steps. When Mr. Browning arrived on Thursday, there was poor Phelps sitting close to the door, as white as a sheet, evidently very poorly. Macready began: "As Mr. Phelps is so ill—you are very ill, are you not, Mr. Phelps?—it will be impossible for him to master his part by Saturday, and I shall therefore take it myself." Mr. Browning was not at all pleased with this shuffling, for which he could divine no cause, and he was still more annoyed at the changes which were being made in the poem. The title was to be changed to "The Sisters," the first act was to be cut out, and it was to end without any tragic *finale*, but with these sublime lines, due to the unaided genius of Macready himself:

"Within a monastery's solitude

Penance and prayer shall wear my life away."

Mr. Browning was determined, if possible, to check this wanton sacrifice of the poem, and so he took the MS. to his publisher Moxon, who also had a quarrel with Macready, and who was therefore only too pleased to coöperate in his confusion. "The Blot on the 'Scutcheon" was printed in a few hours, in a single sheet, as part five of "Bells and Pomegranates," and was in the hands of each of the actors before Mr. Browning reached the theater on Friday morning. As he entered, he met Phelps, who was waiting for him at the door, and who said:

"It is true, sir, that I have been ill, but I am better now, and if you chose to give the part to me, which I can hardly expect you to do, I should be able to act it to-morrow night."

"But is it possible," said Mr. Browning, "that you could learn it so soon?"

"Yes," answered Phelps, "I should sit up all night and know it perfectly."

Mr. Browning's determination was soon taken; he took Phelps with him into the green-room, where Macready was already studying the play in its printed form, with the actors around him. Mr. Browning stopped him, and said:

"I find that Mr. Phelps, although he has been ill, feels himself quite able to take the part, and I shall be very glad to leave it in his hands." Macready rose and said:

"But do you understand that I, I, am going to act the part?"

"I shall be very glad to intrust it to Mr. Phelps," said Mr. Browning, upon which Macready crumpled up the play he was holding in his hand, and threw it to the other end of the room.

After such an event, it was with no very hopeful feelings that Mr. Browning awaited the first performance on the next night, February 11th. He would not allow his parents or his sister to go to the theater; no tickets were sent to him, but finding that the stage-box was his, not by favor, but by right, he went with no other companion than Mr. Edward Moxon. But his expectations of failure were not realized. Phelps acted magnificently, carrying out the remark of Macready, that the difference between himself and the other actors was that they could do magnificent things now and then, on a spurt, but that he could always command his effects. Anderson, a *jeune premier* of promise, acted the young lover with considerable spirit, although the audience was not quite sure whether to laugh or no when he sang his song, "There's a Woman like a Dewdrop," in the act of climbing in at the window. Finally, Miss Helen Faucit almost surpassed herself in *Mildred Fresham*. The piece was entirely successful, though Mr. R. H. Horne, who was in the front of the pit, tells me that Anderson was for some time only half-serious, and quite ready to have turned traitor if the public had encouraged him. When the curtain went down, the applause was vociferous. Phelps was called and recalled, and then there rose the cry of "Author!" To this Mr. Browning remained silent and out of sight, and the audience continued to shout until Anderson came forward, and keeping his eye on Mr. Browning, said, "I believe that the author is not present, but if he is I entreat him to come forward!" The poet, however, turned a deaf ear to this appeal, and went home very sore with Macready, and what he considered his purposeless and vexatious schemings. "The Blot on the 'Scutcheon'" was announced to be played "three times a week until further notice"; was performed with entire success to crowded houses, until the final collapse of Macready's schemes brought it abruptly to a close.

Such is the true story of an event on which Macready, in his journals, has kept an obstinate silence, and which one erring critic after another has chronicled as the failure, "as a matter of course," of Mr. Browning's "improbable" play. Neither on its first appearance, nor when Phelps revived it at Sadler's Wells, was "The Blot on the 'Scutcheon'" received by the public otherwise than with warm applause. As in the case of "Strafford," a purely accidental circumstance, unconnected with Mr. Browning, cut it short in the midst of a successful run.

Fired with the memory of so many plaudits, Mr. Browning set himself to the composition of another actable play, and this also had

its little hour of success, though not until many years afterward. "Colombe's Birthday," which formed number six of "Bells and Pomegranates," appeared in 1843. I have before me at the present moment a copy of the first edition, marked for acting by the author, who has written: "I made the alterations in this copy to suit some—I forget what—projected stage representation: not that of Miss Faucit, which was carried into effect long afterward." The stage-directions are numerous and minute, showing the science which the dramatist had gained since he first essayed to put his creations on the boards. Some of the suggestions are characteristic enough. For instance, "unless a very good Valence" is found, this extremely fine speech, perhaps the jewel of the play, is to be left out. In the present editions the verses run otherwise. Valence speaks:

"He stands, a man, now; stately, strong and wise—
One great aim, like a guiding-star, before—
Which tasks strength, wisdom, stateliness to follow,
As, not its substance, but its shine, he tracks,
Nor dreams of more than, just evolving these
To fullness, will suffice him to life's end
After this star, out of a night he springs,
A beggar's cradle for the throne of thrones
He quits; so mounting, feels each step he mounts,
Nor as from each to each exultingly
He passes, overleaps one grain of joy.
This for his own good:—with the world each gift
Of God and man—Reality, Tradition,
Fancy, and Fact—so well environ him,
That as a mystic panoply they serve—
Of force untenanted to awe mankind,
And work his purpose out with half the world,
While he, their master, dexterously slipt
From such encumbrance, is meantime employed
In his own prowess with the other half.
So shall he go on, every day's success
Adding, to what is He, a solid strength,—
An airy might to what encircles him,
Till at the last, so life's routine shall grow,
That as the Emperor only breathes and moves,
His shadow shall be watched, his step or stalk
Become a comfort or a portent; how
He trails his ermine take significance,—
Till even his power shall cease his power to be,
And most his weakness men shall fear, nor vanquish
Their typified invincibility.
So shall he go on greatening, till he ends—
The man of men, the spirit of all flesh,
The fiery center of an earthy world!"

Mr. Browning says that very little has hitherto been printed about his life, and that little "mostly false." A curious instance of this last clause is the statement that has been authoritatively made, in a quarter from which we do not expect error, to the effect that "Colombe's Birthday" was brought out by Miss Cushman, at the Haymarket, in 1844, as "The Duchess of Cleves." The editor of Mr. Browning's letters to Mr. R. H. Horne was probably thinking about a play, with a "Duchess" in the title, written by Henry

Chorley for Miss Cushman, and which she brought out while Mr. Browning was in Italy. It seems to have been some projected performance of "Colombe's Birthday" in 1846, by Helen Faucit, to whom the poet had read his play, that caused the latter to make the stage directions to which I have just referred. In point of fact, it was not till 1852 that Miss Faucit produced, and with marked success, the play in question.

The last number of "Bells and Pomegranates," which appeared in double size, contained

a quaint rabbinical apology for the general title, and consisted of two plays, "Luvia," dedicated to Walter Savage Landor, and "A Soul's Tragedy." These bore the date 1846, and with these the first act of Mr. Browning's public as well as private life would seem to have closed, for on the 12th of September, 1846, he was married, at St. Marylebone, to Miss Elizabeth Barrett Barrett, the illustrious poet, and directly afterward proceeded with her to find a new home in Italy.

TO RALPH WALDO EMERSON.

September, 1881.

POET of every soul that grieves
O'er death untimely: whose high plaint
Lights up the farthest Dark, and leaves
A bow across the heavens bent:

Dead in an upper room doth lie
A nation's darling; can it be
Thy ear too faintly hears the cry
The West wind utters to the sea?

Thy Concord pæan may have caught
Glow from that elder Garfield's name:
What fitter aureole could be sought
For such a son than such a flame!

Bard of the Human: since we yearn
For that one manly heart in vain,
Forgive the reverent eyes that turn
Toward the low stream in Concord plain.

Warned by the favoring touch of Death,
Thy *Nunc Dimittis* thou hast sung;
No more the thunder's stormy breath
Shall sweep the lyre with lightnings strung.

And yet, for him, remains—unsigned,
Unspoken—all thy noble praise,
When (port more worth the cruise!) thou find
His sail beyond the final haze;

But us? O Seer, to whose gift
Looms large the Future's better part,
What other prophet voice shall lift
This burden from the people's heart!

MR. JACK'S PROMOTION.

I.

THE winter had been very cold. Old Uncle Philander, who was a sort of Boswell of the weather, as he had been intimately acquainted with some seventy-five winters, and issued annual oral biographies of them all, said it was "the bitterest he ever see,—but just onct, when it was so cold it actually put out his pipe"; and taking a piece of tobacco, handed him in response to this meteorological hint, he slowly puffed himself into silence.

But now, after many vain attempts to steal a march on winter, and after putting forth a few buds, as Noah sent out the doves from the Ark, spring had come in its beauty, and had brought the land which, a few weeks before, had seemed so very far off; and the Proteus-like New-Englanders found themselves suddenly transformed from Laplanders into Italians.

And the mind of Mrs. Captain Thacher was also moved by the return of pleasant weather.

"I've noticed," she remarked, one bright morning in the spring-time, "that after an extry cold winter we 'most allus have an extry hot summer; and I've half a mind to advertise for some of these city folks. I've heard that quite a number of 'em likes to go away into the country in summer, and sometimes they give as much as five dollars a week. They say they're 'most crazy after scup and blue-fish—can't seem to get enough, no how. Now, if anybody's anxious to pay five dollars for the privilege of doin' nòthin' but just eat scup for a week, I'm sure I sha'n't refuse their money."

Now Mrs. Eleazer Thacher lived with her brother, Captain Hiram Baxter, in a large "yellow-washed" house near the bay. It had been built by the captain's grandfather nearly a century before, and had been altered and added to, until, if the salty spirit of the ancient sailor had returned on a tour of inspection, he would hardly have recognized his own. A large porch, then the main body of the house, with parlor and spare bedroom, then seven or eight L's, starting out in all directions. Almost room enough for the whole village to dwell within, and then, by crowding up a little, to ask the rest of the entire town to dinner. The older rooms were curiously built, with heavy carved beams overhead, and wide closets with glass doors for the display of blue-and-white china, and old silver. The panes in the

windows were hardly larger than one's hand—at least, than the captain's hand—and were of glass that twisted and distorted the corn-field, and the strip of barren shore, and the stretch of blue water that lay before them; and cut the mast of the captain's boat clean off the deck, and held it pitching and tossing over the boat in a truly miraculous manner. There was not a tree within stone's-throw. According to Captain Baxter, "What we want aint a lot o' old trees, all full o' worms, and rottin' the shingles on the roof. Let's hev all the sunlight we can git, and if it gits hot, why jes' take a nap till evenin', and forgit all about it. What do you s'pose they do in Injy, where the sun is twict as near to 'em as 'tis to us? 'They think they're lucky if they can keep from tannin' into niggers, to say nothin' of keepin' cool."

And the captain wiped his lips with the back of his hand, and laughed.

But, in spite of the lack of trees, the house was cool. The fresh, sweet breeze came tumbling up over the corn-fields from the water at all hours of the day and night, and the bluff along the bay was fringed with tall willows, which seemed to throw down a spray of cold sunshine on the shade beneath.

The first thought that occurred to Mis' 'Leazer, as she was called by her neighbors, was to hang up a notice, "Rooms with Board," in her parlor window, and trust to Fame to spread the news in the distant city. But after much deep thought, she decided to seek advice at the parsonage, that local Delphi of every New England village.

Now, the minister had not studied in vain the words: "Be ye wise as serpents." He knew that where one reads the paid advertisements of summer resorts, fifty will read a pleasant letter from the sea-shore; and where ten will believe the correspondent of a daily paper, a thousand will take for inspired truth even the headings and misspellings of a religious weekly.

And so he wrote a summer letter to the "Weekly Zion." He did not confine himself to telling of blue skies and green grass and summer breezes, such as might be found anywhere. He told, rather, of the great bay sweeping past the village; of the drives winding for miles along wooded bluffs skirting the sea; and then of Mrs. Thacher and her hospitable home, and of Captain Baxter and his boat.

Some time after, the minister sent down

the religious weekly for Mis' 'Leazer to read her eulogy. At the moment, the captain was seated on an overturned bushel-basket, just inside the barn-door, whittling out a whale for a weather-vane. The old sailor, with indescribable suggestions of salt, and sou'westers, and foreign cruises hovering about him, and with groups of domestic hens, and lofts full of sweet hay, and long rows of flaring dahlias close at hand, suggested such a picture as would be presented by Neptune digging potatoes with his trident.

But in spite of his masculine contempt for curiosity, he felt constrained to go into the house and hear the news. He found Mis' 'Leazer excitedly trying to turn the newspaper inside out and put on her glasses at the same time, but she soon sat down, and began to look for the letter. First, she saw a letter from a minister's wife in Santa Miranda, Texas, in which the printers had not spared italics and spacing and full-face type, telling how her husband had been cured of consumption in four days by the use of the Golden Restorative; and then a description of Whisker Lotion, with a picture of a thin, consumptive, clean-shaved man, with a crutch, named Before, and a fat, stylish gentleman in a beaver and with flowing beard, stepping briskly along, named After—the whole change having apparently been effected by Whisker Lotion; and then an advertisement of a perfectly safe investment in Wall street, yielding twenty-seven per cent. a month; all of which the captain piously looked on as a sort of sequel to the gospels,—proofs of real miracles effected under the supervision of the reverend editor. At last, after wandering through a desert of obituaries, and of jests and political items which seemed inserted as a sort of sugar-coating and were considered, when part of the religious paper, as only tilting in the balance of expurgation, she arrived at the promised land, and found the letter.

When she came to read of the cool house and its pleasant owners,—what good company they were,—what fine stories the captain could tell,—she stopped—it was too much. She put her apron up to her eyes, and murmured:

"Be we dead or alive, Hiram? It reads like one o' these 'ere obituaries that tell how that Deacon some one or 'nother, that's taken the paper reg'lar for forty years, has just closed a useful life. It seems as if it ought to end up like an epitaph I see onct in the old buryin'-ground down to South Point, about

"A brother and a sister, side by side,
They lived together till they died."

"Oh, don't feel so bad, Marthy," said the captain, in a gruff, comforting voice. "There

aint no danger of your dyin'; you're good to keep boarders for twenty year yet."

Cheered by the prospect of this brilliant future, Mis' 'Leazer was just folding up the paper, when a small, barefooted urchin, all out of breath, burst through the open door-way, his hair flying in the wind and his eyes starting from their sockets.

"Wall," said the captain, gazing at him with a calm, sarcastic look, "wall, what of it? I suppose one of your hens has laid an extr'y egg, or a pail o' butter's fallen down the well—hey? What's that in your hand? A letter? Le's see."

And after holding off the letter at arm's length and staring at it a moment, he took his great jack-knife and opened the envelope like a clam, and drew out the letter.

"Wall!" he exclaimed. "Boarders a'ready, Marthy; they want to come next week."

II.

SEVERAL years ago, if you had gone into the custom-house in X—, you might have seen an intelligent, smart-looking man of perhaps fifty, writing at his high desk, or directing the work of a number of other clerks. His hair was steely gray, but he seemed vigorous and active, except that he limped so badly in walking that he had to carry a cane. His lameness was not a natural defect. Many years before, when he was an energetic and active young fellow, he had been salesman in a New York wholesale house, and, thanks to his untiring labor and great fitness for the work, was rising very rapidly. He was married and had one child, a little girl. Then Sumter was fired on; then it surrendered. He was one of the first to forget every other consideration, to give up his position and enlist as a volunteer. And through the long, weary months and years he never repented of his determination, never doubted that that course was best. He fought gallantly, rose in rank, became colonel, led his regiment at Gettysburg, and then came home in weak health, with a bullet in his leg. For a year he was unable to work at all. Then he had drifted too far from the current of his former business to get on in that successfully, even if his health had permitted. And he found himself in the enviable position of a patriot whom everybody will cheer and throw up his hat for, but who cannot find honorable employment fitted to what strength he has saved from his country's service.

At last, however, through the influence of a Congressman, he obtained a clerkship in the great custom-house at X—. Never

did Uncle Sam have a better servant. He worked as hard over his country's account-books as he had on her battle-fields. He threw all his energy into his work, and as his strength came gradually back, he did it better and better. John Hardy, or Mr. Jack, as he was called in the office, was not much of a politician, though he always attended the caucus, and generally voted the straight ticket; and so he saw better "workers," though poorer workmen, constantly appointed to office over his head. Gradually, since he did his work so perfectly, he rose little by little; came to be looked on as a sort of anomaly in the office—a good man to have on hand as a proof of the Collector's virtue in appointing a man simply because he had served his country, and could do his work to perfection, instead of because he could pack a caucus or pull wires.

But this spring, another prospective Congressman was looming above the horizon, and the Collector felt that his sun would soon sink, unless some political Joshua should arise to bid it hold for a season. To tell how he summoned his henchmen, pulled wires, raised subscriptions, and promised positions, would be to tell a very old story. At last, to leave no stone unturned, he sent for Mr. Jack.

Now it happened that, some five years before, Mr. Jack's wife had died, leaving him three children; that the youngest, a boy, was a sickly child, and the money had disappeared in the doctors' hands as a tiny rivulet would in trying to cross Sahara; that Mr. Jack had used up all his small savings, had borrowed ahead, had been unable to pay, and was now at his wit's end to know what to do.

He sat one evening at his desk when his day's work was done. He had shut his books, and was resting his head on his arms folded on the desk. He was trying once more to think of some way of escape. There was Rose, his eldest child—she must complete her schooling; there was little Ruth, a mere child yet; there was poor Harry, tossing his little limbs in pain; there were his debts, which would probably increase, and the creditors with the constant bills. Perhaps he could find some other employment that would pay better. But no; he had given that up long ago. A man of fifty, accustomed to the peculiar routine of official work, and unacquainted with business, stands a poor chance in the rush and tear of our commercial life. And then, for an instant—just one instant—he thought of what his life would have been if he had taken a selfish view of things, had let the war take care of itself, had staid in business and continued to rise. But he crushed down the very thought. He

was glad he had fought for his country, would be willing to fight again,—if need be, willing to die for her. But he would like a fair chance to rise in her service.

Just at this moment he felt a hand on his shoulder.

"The Collector would like to speak with you, sir."

As he walked toward the Collector's office, the burden was still pressing heavily upon him. He knocked, entered, and stood before his superior. The Collector was writing a note. When he had finished, he turned.

"Mr. Hardy," he said, "I have decided to promote you to the position of head-clerk of your division. The appointment will be made out next week. You deserve special praise for the manner in which you have performed your duties. Good-day, sir."

But just as Mr. Jack, with radiant face and heart too full for utterance, was closing the door, he heard:

"Mr. Hardy—one moment. I know that you are not interested in—in public affairs,"—while the Collector had been fighting for his custom-house, Mr. Jack had been fighting for his country,—“that you are not interested in matters of public moment. But this year it will be well for you to exert yourself a little—do you see?”

"Yes, sir," said Mr. Jack, slowly; but the smile faded from his face.

"We need not mince matters, Mr. Hardy," said the Collector. "Every man in this office must work. Otherwise—we are all"—and he jingled his watch-chain.

"And am I to understand that my promotion has any connection with the work I am to do?" said Mr. Jack, still more slowly.

"You need understand nothing," said the Collector, "except that you are promoted, and will be expected"—he stopped, and looked Mr. Jack full in the eye—"expected to do your utmost in the fall."

Mr. Jack bowed his head. There was silence.

"I can do my office-work," said Mr. Jack at last, in a low voice. "I can be a faithful workman; but on these new conditions I must decline the promotion."

Again silence.

When Mr. Jack looked up at length, he was surprised to see the Collector smiling. In fact he was a kindly man, and had hardly expected much from Mr. Jack.

"Well," he said, "I am sorry; I think you foolish. But you may be thankful, Mr. Hardy, that you have made yourself indispensable in this office. You shall have your promotion. I believe your vacation begins on Friday? Good-day, sir."

III.

It was a bright, calm evening. The bay near the captain's house lay perfectly glassy and still, except when a "friar" or a "pogy" leaped into the air, and fell back with a splash; so glassy and so still that it reflected every glorious tint and form in the sky above, so that whether you looked at sky or bay, you would see the great cloud-giants fading away in stationary conflict, and the purple vessels sailing into a golden harbor. The sun had just gone to rest, and everything seemed hushed into silence for fear of disturbing his slumbers. A whip-poor-will, lamenting, went flying slowly over the island in the bay, until he was lost in the gathering darkness. And then, soft over the water, came faintly the chime from a distant village, telling the hour of nine.

"Nine o'clock, Marthy," cried the captain, who was tipped back in a chair at the door-way, cased in the stylish misery of a "store" suit; "better put on them fish, or they wont be done in time. The stage'll be right along now."

And sure enough, in a moment a faint rattle of wheels was heard in the distance; then silence; then a rumble growing louder; then the clatter of hoofs and the crack of a whip and a loud "geddap"; then a black form at the top of the hill, rolling and reeling against the dark sky; then rattle and rumble and clatter and crack all at once, as the great stage came plunging down the steep road, turned a sharp corner, and suddenly drew up within a foot of the captain's chair.

"Noise like the world comin' to an end," cried the captain, who felt like a dried specimen in a show-case; "sounded 's if the road was bein' ripped open from top to bottom; and when it's all over, what of it? Oh, 'twas jest Alec takin' a little drive."

Here the captain became suddenly aware of some strange faces within the stage, and as suddenly shrank into the seclusion of his boiled collar.

"Come, Cap'n," cried Alec, "here's some ladies come to see you. Hope you aint agoin' to leave 'em settin' in the stage all night."

So the captain, like a hermit-crab, moved up to the stage in his borrowed shell, and clumsily opened the door.

"If this 'ere was a boat," he said, "I'd know how to git ye out, but, I jimminy, these is the—wall, that is, the darndest things I ever did see. There ye be. Aint ye comin' in to have somethin' to eat, Alec? Oh yes, come right in. Alec, this is Mr. Hardy and his folks, from X——."

The sun rose the next morning with its accustomed punctuality, and the captain, like an attendant squire, rose too. He laid away the state garments which he had donned the night before in honor of his guests, and resumed his official robes; and a moment later, hoe in hand, he burst upon the little garden-patch, which was surrounded by a neat lattice-work fence.

"I've b'en to England, and to Chiny, and 'bout everywhere else," he sometimes said; "I've seed these 'ere yaller fellers with pig-tails, livin' in houses made out o' sticks, and I've seed the Queen's palace; but I tell you——" and then he would look at the straggling old house, with its resplendent brass knocker on the front door, and the climbing roses, and the neat patch of potatoes and corn, and Mis' 'Leazer sitting in her rocking-chair, in the open door-way, knitting a blue-yarn stocking—"I tell you——;" and then came a shrewd wink, as much as to say, "You and I know a thing or two that them 'ere Chinese and them queens aint got hold of yet."

The captain (whose work somewhat resembled that described by old Caspar, on the battle-field of Blenheim, inasmuch as he brought up from time to time pieces of defunct crabs and fish which had been plowed in that spring) had been at work some time, when he heard a step just the other side of the white lattice fence. He turned, and saw Mr. Jack.

"Oh, good-mornin'," he cried. "S'pose you've come out to see if these potatoes is hoed right;" and he looked at Mr. Jack's white hands, and laughed.

"Yes, Captain," answered Mr. Jack, "that's just what I came for;" and to the surprise of the captain, he hobbled briskly through the gate-way, and sticking his cane in the ground, he took the hoe and began to work.

"There," he said, after a moment, "that's the way I used to do it, thirty-five years ago; and, in' fact," he added, quizzically, after a pause, "in fact, I believe I do it a little better now than you do."

The captain was just preparing to turn the tables on Mr. Jack, when Mis' 'Leazer appeared in the door-way, ringing the bell for breakfast.

"Now that 'ere bell may look jes' like any other bell," said the captain, "but I brought that to Marthy when I come home from one of my foreign trips—let's see, where did I go that trip? Oh, yes, to Chiny."

"Ah, it came from China?" exclaimed Mr. Jack; and he looked at the conventional Yankee dinner-bell in surprise.

"Oh, Lor' bless your soul," cried the captain; "that never come from Chiny. There

aint nothin' in Chiny that Marthy would pick up with the tongs. There's them pagodies, now,—very fine structures, but they would look rayther peculiar a-settin' in my back-yard near them hen-coops, the bells all a-jinglin', and that 'ere whale a-flyin' on top for a weather-vane. So I didn't buy nothin' for Marthy till I got back to New Bedford, and thar I see a peddler, second cousin to my father's first wife's daughter. 'Hullo!' says I, 'what'll ye take for that bell?' says I; 'want it for a momento of Chiny,' says I.

"'Well,' says he, 'considerin' the pe-culiar circumstances, one thirty-seven and a half,' says he; and so," he added, as they entered the kitchen, "that 'ere bell allus makes me think of Chiny."

Captain Baxter had offered to take the children clamming, across the bay, and so, in the afternoon, they all went down to the shore—the captain, with Harry in his arms; and Ruth, flying about on all sides after toads, and darning-needles, and the pretty humming-birds among the captain's scarlet beans; and Rose walking beside Harry, and telling him of what she had seen that morning before breakfast—the scarlet toadstools and the trailing morning-glories; and Mr. Jack, who, with metropolitan enthusiasm, was telling the captain of a new method of draining swamp-land, which the captain heard with rustic apathy.

"I'd jes' like to see 'em try a lick at my swamp," he remarked. "Fust man what went in to dig the drean would sink clean out o' sight afore he had time to stick in his shovel."

And so they came on their way, as Bunyan would have said, till they reached the wharf. There were several boats lying off from the shore at a little distance, at their stakes, and with their sails raised and shaking gently in the wind, they looked like great birds just ready to fly up and join their brothers, the white gulls, which were skimming and screaming over the bay. Then the captain slowly raised his sail—creak, creak, creak; and the boom swung from side to side, slowly but resolutely. And after they were all seated, the captain "cast off," and the boat swung around, and the mast creaked, and the streamer waved, and the sail filled, and the boat tipped, and the shore sank away behind them. The water lapped gently against the boat, "as if it was tasting the paint," Ruth said. And Harry, who was lying on the seat beside Rose, looking up at the sky, said the white clouds were having a race with them across the bay.

And then they talked of boats, and fish, and foreign voyages, interrupted by frequent exclamations and questions from the children,

who came to Rose for nautical information when the captain was busy. And then Rose sung them a song that told of a sailor who sailed away from his sweetheart, and of how she longed for his return, and of the stormy sea, and the wreck on the shoals.

Mr. Jack was sailing the boat, under the close supervision of the captain.

"Now I've no doubt myself," he said, "that I could sing a good song, too, only you'd all laugh. Perhaps the captain and I could sing a duet. Can you sing, Captain?"

The children clapped their hands.

"Wall, no," answered the captain; "singin' aint jest in my line. No reason, neither," he added. "When I was a boy, all the children was goin' to singin'-school, and I says to my father, 'Le' me go, too,' says I. 'Let's hear ye sing *do, re, mi*,' says he. So I lets out as loud as I could. 'Thar!' says he. 'That's enuf and gret plenty,' says he. 'Anythin' reasonable, but as for a fog-horn learnin' to lead a choir, I sha'n't try no experiments with you,' says he. And so I never learned how to sing. Allus sorry; allus wanted to be able to bear down on 'Old Hunderd' in church, anyhow."

They were approaching the shore where the clams resided; and so the captain hauled out his anchor from "under for'ard," and made ready to land.

And very soon they were scattered along the beach; and while Rose sat down to build a fort for Harry, and Ruth scoured the whole shore for shells, and fiddler-crabs, and pretty pebbles, which she kept bringing up to show him, Captain Baxter rolled up his trowsers—he couldn't take off his shoes, for he had none on—and waded into the water, and began the amphibious operation of hoeing for clams. Mr. Jack sat near him on the shore.

"Wall, now, sir," said the captain, as he tossed up the first clam with his hoe, "I've heard a good deal over to the store, lately, about how these 'ere government offices is distributed 'round. Can you tell me the truth about it?"

"I think I can," he answered.

"Why, I've heard," said the captain, raising his hoe in one hand and holding a clam in the other, "I've heard that men is put in that can't do the work, 'cause they've helped some one or 'nother to git 'lected. Mebbe they're car'less—no matter; mebbe they can't figger—no matter; mebbe they steal—no matter; mebbe they git drunk—no matter; that don't make no difference. Is that so?"

"Sometimes."

"I've heard that the clerks all hev to help pay 'lection expenses, or they're discharged. Is that so?"

"Sometimes."

"I've heard that every time a new officer goes in he makes a clean sweep, so as to put in all his friends. Is that true?"

"Yes, very often."

"I suppose there's thousands o' these 'ere offices, fust and last?"

"Yes, nearly a hundred thousand."

"And do you mean to tell me," asked the captain, looking savagely at the clam in his hand, "do you mean to tell me that a' honest man, what's able to do the work better than anybody else, can't git any place in our own government unless he's helped some one or 'nother to git 'lected, and that when a man's once in and doin' well, he's noways sure o' stayin' in?"

"I'm afraid that's so."

Captain Baxter examined the clam as if he had never seen one before. Then he looked at Mr. Jack blankly.

"Wall, I sw'ar!" said he; and he began to dig again.

After a while he looked up and said:

"I've got a gran'child over yunder to Pine Beach. Smart boy; allus ahead in school. Honest? Oh, Lor', honest's no name for it. He aint got no mother, poor boy; father's a worthless kind o' man. Now, I'd like to see him git ahead. I thought, p'raps, —you might—say there was some chance—if he was fit for the place—he might git in to some o' these 'ere government offices, bimeby. But 'twouldn't pay to try, would it?"

"No," said Mr. Jack. "If there's any honest business for him, he'd better go into it. He'd have no chance. I've had good luck. I never could have got a place but for being a soldier. Public opinion was strong soon after the war: every soldier must have a place. But it died out quick enough, God knows. I've seen scores of soldiers with clerkships, working hard, doing as much with one arm as most men with two—hard time to get along, but thankful for any work; and all of a sudden, with no notice, off they're sent, and some rough, dishonest politician gets the place. I've had good luck. In fact, I've just been promised promotion; but, generally—oh, no, don't let the boy try that."

"Wall, I sw'ar!" said the captain, again; and he threw down a clam on the sand and smashed it with his hoe. "That's what I'd do to them fellers if I had hold of 'em," he said.

After his bucket was full, they sailed home in the peaceful light of the late afternoon. The captain sat in a deep reverie all the way, with his eyes fixed on the horizon. Occasionally he roused himself a little, and they heard him murmur:

"Wall, I sw'ar!"

As they walked up the footpath from the bay, they saw Mis' 'Leazer standing on the steps and shading her eyes with her hand as she watched for them. And then after tea they sat outdoors while the quiet darkness was closing in, and the children sang, and they talked of their pleasant life in X—, and laid plans for the next winter; and Harry seemed so happy that Mr. Jack smiled and told the children he had decided to leave them with the captain for a month,—he could afford to be a little free now. And then they relapsed into silence, which seemed in harmony with the peaceful sky and fields. No one spoke. Suddenly they heard a gruff voice from behind the net-door:

"Wall, I sw'ar!"

IV.

"Be you Mr. Hardy, that's stoppin' with Captain Baxter? Well, I see a man from the Corners this mornin'—told me the' was a letter from Washington for you, over to the office. Thought you might like to know. G' mornin'."

And the messenger drove on.

It seemed to Mr. Jack that his heart leaped up to his mouth. It had come—the letter from Washington. He must have it—have it now. He found a good horse and a carriage at one of the neighbors', and off he went, his heart beating high and his mind full of pleasant anticipations. He snapped the whip and urged on the horse. The road lay along the bay, and as he came out of the woods into a clearing two or three miles from the village, he chanced to look down toward the water; a sail-boat was in sight, with a man at the helm, two women, and some children. They were dressed in bright colors, and had pinned a long scarlet scarf to the sail, and it was streaming in the breeze, and they were singing some sweet old song as they went flying over the water. In a moment the sail swung over, and first the mast disappeared around a bend, then the deck, then inch by inch the boat floated by and was gone.

"Perhaps I shall be back before them," he thought. "How happy Rose will be. No more lack of money now, no pinching to make both ends meet, no need to cheat yourself to make the children happy. Noble girl, now she shall have her rest. And further promotion, too; far easier to go on when once they begin to realize one's ability and honesty."

In his excitement he shouted and whipped on his horse, which was already dashing along over the rough road. As he went on, his

spirits rose higher and higher. To think of the happy years ahead even yet; of the comfort; of the chance so long deferred to lay up something for old age. He was almost too happy.

As he turned a bend in the road, just before him he saw a white-haired old man, with wizened face and bent back, creeping slowly along in the sunshine. He looked so wretched, so forsaken, that a wave of compassion swept over the soul of the happy man who was riding by. He stopped.

"Will you ride?" he said, in a pleasant, ringing voice.

But the old fellow trudged on unheeding. Mr. Jack leaped out and seized him by the arm.

"Will you ride with me?" he shouted in his ear.

The old man looked at him with a vacant stare, and then a weak smile played over his worn face.

"I can't hear what you say," he answered; "I'm pretty tired; I wish you'd give me a lift."

Mr. Jack led him gently to the carriage, and almost lifted him up to his seat. His heart was large enough to take in a whole world just now.

"You look happy enough," said the old fellow beside him, in a trembling, childish voice. "Well, I used to be once. Long ago I was cap'n of a big foreign vessel, and had a fine family of children. But the vessel went on the rocks, and my children died, one after another." There was a pause. "I live over yonder now," he said, as if anticipating a question he could not hear; and he pointed to a great, barren white house, with a white-washed stone-wall about it.

"Poor fellow," said his happy companion; "poor fellow."

And then he began to think of the children, and what they would say when he showed them the appointment; and he forgot the poor wreck at his side till he felt him pluck at his sleeve.

"Here we are," he said.

Mr. Jack jumped out and helped him down, and then, giving him a kindly, patronizing nod, drove on again. He was nearly there now, and he took out the whip. He knew just how the letter would look and feel. He knew how it would read: a little complimentary, perhaps,—*"In consideration of faithful and efficient service in the past,"* etc., etc. Here he drove into a little settlement; he slackened his speed as he drove through the peaceful, shady street, lighted by the rays of the setting sun. These last few moments were delightful in their anticipation. There was

the post-office; there, there within was *the* letter. He leaped out.

"You have a letter for Mr. Hardy?" he asked.

"Yes, sir," said the postmaster, looking at the horse covered with foam, and then at the man before him. "Important, I suppose."

"Yes, yes," he answered, and smiled to think how important.

His hand trembled, his eyes beamed. He saw the letter in the man's hand, yes, just as he had seen it before. He seized it, tore it open, and —

"Well," said the postmaster, in recounting the event that evening to a group of villagers; "he turned just as white as a sheet, kind of trembled and tottered a half a minute, and then out of the door and into his buggy, and off like a streak. Seemed to be struck all of a heap. I looked out after him, and when he got some ways up the road, the horse stopped; stopped five minutes, I should say; then he started up slow-like, and went along. Some bad news, I suppose."

The road home lay for the most part through the woods. It was growing dark. What difference did that make to him? The horse plodded slowly along, moved solely by thoughts of supper and bed, for no hand kept him to his duty—the reins were trailing beside him on the ground. Inside the carriage, it was darker still,—pitch dark; but something was crouched in the corner almost indistinguishable,—a straggling mass of gray hair streaming over the face; the hands hanging listlessly by the sides. And still the horse plodded on, now *clatter, clatter* over a bit of gravel road, now *thud, thud* on the soft leaves, now *rumble, rumble* over the loose boards of the bridge. Darker and darker. Cold, too, and chill—*thud, thud, thud*. Still no movement. None when the carriage passed by the great white house with the cold white stone-wall; none when they reached the clearing where he had seen the boat, with the children and the flying streamer, and had heard the song; none when they drove through the village street, and the horse's hoofs pounded at last on the floor of his master's barn.

"What be yer—asleep or dead?" cried the owner, coming out a moment after. "Come, wake up!" And he pushed him along on the seat.

At last he stirred; he crept slowly down and passed out into the darkness, without a word.

"Well!" said the farmer. "Didn't s'pose by his looks he was that kind of a man; wouldn't have let him the team if I had. Jehoshaphat! look at that horse!"

Hardy, meanwhile, crept down the road.

Here was where the man told him of the letter, but he did not know it. He did not stop to rest—but went straight on. It seemed as if he were untreading the happy steps he had made over that same path on that same afternoon.

There was the captain's house ahead—he did not see it. There was a light in the window—he did not know it.

Across the road he went, into the house, to his room. He cast himself down, half on the bed, half on the floor, and buried his face in his hands. The clock in the next room was ticking away the time—*tick, tick, tick, tick*, but all else was still.

Hark! they were coming now. He heard at last, rose a little, and listened; yes, they were coming home. He heard their merry voices.

"And where is father?" he heard Rose ask. "Oh, why didn't he go with us?"

There were steps in the hall, and a hand turned the knob. Silence.

"Father! . . . No, he's not here. He'll be so glad to hear of our sail."

The door closed; there was a rustle; and she was gone.

V.

A FEW days after Mr. Jack's interview with the Collector, a fat, greasy fellow sat in the same office, with his feet on the table.

"Now jest you look here, Collector," he said, and he pushed his rumped stove-pipe to the back of his head, and stuffed his hands into his pockets and rocked himself on the back legs of his chair; "now jest you look here. Do you mean business, or don't ye? Come!"

"I can't let you have that place, any way," answered the Collector, who was resting his elbows on his desk, and his head on his hands. "I've promised it to Hardy, and I've given Hardy's old place to Jim Watkins. I can't do it."

"Confound that Hardy!" said the Collector's visitor. "He's a low, sneaking fellow—don't care a snap for nobody but himself. Why, I asked him only last month to sign a recommendation for me, and you

oughter have seen how he glared at me. A low sneak!"

"He does his work well," said the Collector, slowly, without looking up.

"Oh, yes; you're very pious all of a sudden, aint ye?" said the visitor, lighting a cigar and then putting his hands back in his pockets. "That'll do very well to talk, but you know well enough you don't care if your office goes to the devil if you can only keep hold of it. Come, what do you say?"

And he put down his feet, tipped his hat on one side, shook his coat by the lapels, and stood up.

"No," answered the Collector, "I can't do it."

"Oh, very well, sir," said the caller; "very well; next month you'll wish you'd sung a different tune—that's all. Them votes of mine are worth money. I sha'n't have no trouble in gettin' red of 'em, at all. Good-day."

"Good heavens! I don't know what to do," said the Collector, in despair. "I can't get along without him—haven't any excuse, either."

"Well, we'll find excuses enough to get along without you before long," said the other. Then he turned the knob.

"Why, hang it," said the Collector, looking up at last. His face was pale, his hair disheveled. "How many more removals do you suppose I can make?"

"Oh, none at all," said the fellow; and he re-arranged his scarlet neck-tie. "I wouldn't make a single one more, if I was you. Better stop jest one too soon, ye know;" again grinning.

"Well," said the Collector, burying his face in his hands again; "well,—you shall have the place."

"Ha! ha!" cried the fellow, stepping up to the Collector and snatching his hand. "Good enough, good enough. I thought you'd come 'round. Have a cigar with me now? No? Ha! ha! now we'll have some courage to work together. I'll bring you up some friends of mine this evening, that will take right hold. You must find some corner or other to fit 'em into. Shake hands again. It makes me laugh to think how Hardy will look when he gets his dismissal. Ha! ha!"

A COLONIAL MONASTERY.

SAAL AND SARON, EPHRATA, PENNSYLVANIA.

ANTIQUARIAN hankerings do not find much material to feast upon in America—at least not in the line of our own race. We have no lumber-rooms of history, no remains of architecture illustrative of the march of civilization.

There is, however, one little-known place where we can breathe the musty air of lang syne, and feast our fancy with the visions of a by-gone period.

Ephrata, Lancaster County, Pennsylvania, lies on the Reading and Columbia railroad, about twenty miles from Reading and thirteen miles from Lancaster. There is nothing peculiar about the village itself or its people. They speak—as is general in that neighborhood—two languages, English and Pennsylvania German. A stranger, arriving at Ephrata in the summer season, would probably go first to the Ephrata Mountain Springs, a pleasure resort on a lofty ridge, noted for its salubrious air, excellent water, and delightful outlook. But it is not there we want to go. We ask for the "Cloister," and are told to follow the road that runs north-west.

After walking about half a mile, we come to a bridge which crosses the Cocalico—a name which occurs frequently in the Chronicles of Ephrata, and, by the by, is derived from *koch-hale-kung*, i. e., cave of serpents. A path on the left, which leads past a grist-mill, brings us to an open grassy plot, from which we see odd-looking, antiquated buildings, the larger of which are the convents, the former abodes of the Ephrata monks and nuns. Their high gable roofs and the irregularly distributed little windows, measuring about two feet square, give them a peculiar appearance. The outside walls are covered with shingles, turned black by age and exposure. In their striking contrast with the green turf upon which they stand and the bright foliage that greets us from all sides, these dark, ill-shapen, gloomy masses look like a ghostly birth of the night thrust into a world of beauty and promise. Stepping up to the nearest building, the southernmost of the group, we find the door-sill flush with the ground. The door is low and narrow, as if made for

beings of slender proportions. There is no such thing as a bell or a knocker, and, entering, we find ourselves in a narrow, dimly lighted passage-way running from one end of the building to the other—a length of about seventy-five feet. The floor is of hard plaster. On each side we observe a number of doors, so low that only persons of short stature can enter without stooping. Nothing stirs, and our footsteps echo dismally through the long corridor. We seem to be in an enchanted house, haunted by the spirits of the solitary brethren and the world-renouncing sisters.

We open one of the doors and enter a low, whitewashed room, lighted by two square windows. Its simple and substantial

swing on wooden hinges, and have wooden latches but no locks. Here the monks, or "Solitary Brethren," rested at night on a bench, with a billet of wood for a pillow. Formerly, there were ten such chambers on the southern side, and as many doors may be counted now, but some of the apartments have been connected with others by removing the partitions. On the opposite side there are three spacious rooms, each connected with several narrow cells of the same description as the chambers just noted; these were intended for brethren that roomed together. In the middle of the building the corridor is crossed by a wide passage that leads to a door on the south side. Here are the chim-

THE BROTHER HOUSE.

furniture and its undeniable neatness give it a certain air of comfort. And here we discover, at last, a human being in the form of an elderly woman, who receives the intruders with more politeness than the blunt unconcern of most of them entitles them to. She speaks German in the Pennsylvania dialect, and answers all inquiries with kind readiness. We learn of her that several rooms in this and the other buildings are occupied by matrons and families that belong to the sect of the Siebentäiger, or Seventh-day Baptists.

We now go through the building. On the left, or southern, side of the corridor, are a number of cells about ten feet long, five feet wide, and seven feet high, each provided with a narrow little window. The doors

swing on wooden hinges, and have wooden latches but no locks. Here the monks, or "Solitary Brethren," rested at night on a bench, with a billet of wood for a pillow.

Narrow and dark stair-ways lead to the upper stories, and in place of balusters, a rope serves to steady the steps in climbing. The arrangement of the rooms in the second and third stories is nearly the same as on the ground floor. A large number of them are vacant or stored with old furniture, spinning-wheels, or household utensils. The loft, which forms the fourth story, extends over the entire length and breadth of the house. The beams and rafters of the roof are fastened together with wooden pegs—evidence that wood was preferred to metal, probably more from a consideration of economy than for any other reason. The flagons, goblets, trays, and com-

ILLUMINATED LETTERS.

munion vessels, then in use, even the candlesticks, forks, and plates, were also made of that material, and manufactured in the cloister itself. Hour-glasses were in common use, and some are still shown as relics of the olden time.

The house just described, we were assured by our informant, is the "Kedar" of old. "Kedar" was the first conventual building of the brotherhood, erected in 1735. The description, however, which the "Chronicon Ephratense" gives of its interior arrangements does not tally with our building. Again, it is surprising that neither Morgan Edwards, in 1770, nor the accurate Ebeling, in 1790, made mention of Kedar as one of the existing buildings; they know only Bethania, Saron, and Zion. The latter stood upon the hill,

and has since been demolished. We are inclined to identify the southern building with Bethania.

We now crossed the meadow ground to take a look at the other large building, and on our way passed two dilapidated little dwellings, one of which probably is the one occupied for a long time by Conrad Beissel, the founder of the Ephrata cloister. The second convent we now came to, designated as "Saron," or the Sisters' house, is in its external appearance very much like its mate, Bethania—huge, oppressive, and gloomy, sheathed in black shingles, and dotted with little square windows. The rooms and passages, however, are quite differently plotted, and seem to have been altered to suit the uses of more recent times. In one of the cells we noticed a huge hamper; its size, in fact, compared with the dimensions of the door, was suggestive of the Chinese puzzle, the imprisoned ivory ball, much too large for the apertures of the incasing cell. How was this overgrown basket ever squeezed through so narrow an opening? It never was. An industrious nun, bent upon doing some good and useful work for the monastery, plied in her cell, for many days and weeks, her busy hands, to weave for domestic needs that extraordinary piece of

wicker-work. She did not discover, until she had finished it, that it was much too large to pass through the door of her cell. And so it remains there, *in perpetuum rei memoriam*.

In Saron, also, a number of families and single women have been accommodated, and a kindly disposed old lady, who occupied one of the rooms, brought out some precious relics she had charge of, such as rare books printed on the press of Ephrata, and specimens of ornamental penmanship. Among the latter, the most gorgeous piece was a folio volume containing sample alphabets of various sizes and styles. The letters of the first alphabet are about twelve inches long, each filling a whole page. Around the heavier ground lines, graceful arabesques curl and twine, and charming little pictures of flowers and birds, or emblematical designs, are tastefully introduced within the flourishes. The title, executed in ornamental style, has this device for a motto:

"Des Christen A B C
Ist Leiden, Dulden, Hoffen.
Wer dieses hat gelernt,
Der hat sein ziel getroffen.
Ephrata, MDCCL."

("The Christian's A B C
Is: suffer, bear, and hope.
If you have mastered that,
Then you have reached the scope.")

SISTER PAULINE'S BASKET.

IN THE GARRET.

Rooms had been in the cloister set apart for writing, especially in large German text, and the artists had to use their own ingenuity and taste in building up decorative letters. Among the most skillful writers are mentioned sisters Iphigenia and Anastasia. The latter, born in Switzerland, was, at the time when she entered the convent, a young maiden of very comely appearance, and gifted with musical talents of a high order. As a nun she was at first called Tabea, and became quite a favorite of the spiritual head of the establishment, Conrad Beissel. Falling in love with a young man, Daniel Scheibly, whom the Brethren had recently "purchased" by paying his passage-money, she concluded to leave the Society and to marry the object of her affections. On the day set for the wedding, she took leave of her associates, no longer robed in the white garments of her order; but, at the interview with Beissel, her heart failed her, and, bursting into a flood of tears, she renewed the vow that confined her—and this time permanently—to the convent. Beissel declared that her tears had washed away the stain of her apostasy, and called her henceforth "Anastasia," *i. e.*, the resurrected.

We now turn to the place of worship, the so-called "Saal," which, from the beginning down to the present time, has continued to serve the purpose for which it was constructed; for,

though the generation of Solitary Brethren and Sisters who once inhabited the convent and met at the Saal for worship has died out, the Seventh-day Baptists of the neighborhood convene here every Saturday for religious services. More than any other spot of old Ephrata, this hall retains the traces of the "genius of the place." The square room on the ground floor accommodates about sixty to eighty persons. The benches and tables of pine wood constituting its furniture are of the plainest workmanship, not painted, but, thanks to the regular application of the scrubbing-brush, white and smooth. The ceiling consists of solid planks dovetailed into the beams, which project into the room and run from one side to the other.

The charts with ornamental writing that cover the walls constitute the most striking feature of the Saal. They are executed in large German text, and exhibit either passages of Scripture or bits of original religious poetry. The following specimens are translated from the German originals:

"Here in the temple's sacred fold
We live, in purity united,
Snatched from the world's disastrous hold,
By flames of sweetest love required.
In hope we live here, that above
To blessed freedom God will raise us
When, with our souls entranced in love,
We shall forever chant His praises."

Over the entrance hangs a tablet, inscribed with these verses:

"The house is entered through this door
By peaceful souls that dwell within.
Those that have come will part no more,
For God protects them here from sin.
Their bliss is found in flames of love
That spring from loving God above."

The praise of celibacy and the delights of seraphic love are the themes on which nearly all these inscriptions descant. Here is another:

"Our love is the crown with which we are blessed,
And wisdom the seal that God has impressed,
Our darling the Lamb, whom we trustingly heed.
We, purest of virgins, shall follow his lead."

Among the decorations of the room there are two curious allegorical pen-pictures, representing the life and destiny of the pious inmates of the cloister. The one delineates the narrow and difficult way to salvation; a multitude of Scripture texts along the road are designed to furnish the Christian pilgrim needful advice and comfort. The other picture represents the three heavens—in one, Christ, the Shepherd, gathers his flock; in the next may be seen a long array of persons in Capuchin dress (such as the Ephrata people wore) and heads of an innumerable host; the third shows the throne, surrounded by two hundred angels and archangels.

Besides the hymn-books of modern date which the congregation use at present, there lay on the tables copies of those curious collections of German songs, printed long ago in the monastery and in Germantown for the use of the monks and nuns, such as: "The Voice of the Lonely and Forsaken Turtle-dove, that is, of the Christian Church, set to rhymes. By a Peaceable Pilgrim,

OLD STILE AND GRAVE-YARD.

travelling to tranquil eternity, now collected and brought out for the use of the Solitary and Forsaken at Zion. Ephrata. Printed by the Brotherhood, 1747." It is a quarto volume of three hundred and fifty-nine pages. Its subdivisions have very quaint titles, *e. g.*: "Spiritual Bridal Wreath of the Sacred Virgins," "Occidental Morning Dawn," "Plaintive Heart-emotions of the Solitary under the Wings of the Deserted Turtle-dove." The author of this singular volume of hymns, the "Peaceable Pilgrim," is no other than Conrad Beissel, the founder and president of the monastery.

An even larger old hymn-book lay on the table, called the "Paradisiacal Wonder-Play; Ephrata, Typis et Consensu Societatis, A. D. 1766." It is a quarto of four hundred and seventy-two pages, containing seven hundred and twenty-six hymns of decidedly mystic character, four hundred and forty-one of which were written by Beissel. The Brother Song has two hundred and fifteen, the Sister Song two hundred and fifty, verses.

Another book found in the chapel is, in some respects, the most remarkable of them all. Its title is: "The Zionitic Incense Hill, or Mount of Myrrh. Germantown. Printed by Christoph Saur, 1739." This collection of hymns, which numbers about eight hundred, is the first book that was printed with German type in America. The manuscript was furnished by Ephrata brethren and the book was printed for them.

Before closing our tour of inspection, we must pay our devoirs to the grave-yard. The graves are marked with simple stones, inscribed with the names of the buried. A few have memorial notices. One of them reads: "Here rest the bones of the sublime philosopher Jacob Martin. He was born in Europe, June 10th 1725, and died a good Christian, July 19th, 1790." But this good Christian, not yet known to history as a great philosopher, is not the sage of Ephrata; we come to a larger monumental stone, and stand on the spot where *he* lies. "Here rests an outgrowth of the love of God, 'Friedsam,' a Solitary Brother, afterward a leader, ruler, teacher of the Solitary and the Congregation of Christ in and around Ephrata. Born in Eberbach, in the Palatinate, called Conrad Beissel, fell asleep July 6th, 1768, in the fifty-second year of his spiritual life, but the seventy-second year and fourth month of his natural life." Beissel's successor in the presidency of the convent has the following epitaph: "Here lies buried Peter Miller, born in the Oberamt Lautern, Palatinate, came as Reformed minister to America in 1730, was baptized into the congregation of Ephrata in 1735, and called Brother Jaebez; was afterward their teacher to his end. Fell asleep September 11th, 1796."

THE reader's most natural query is,—Who were the eccentric occupants of these gloomy buildings? How came they to bid adieu to the world, to establish a monastic order, to glorify celibacy, to chant mystic hymns, and to keep the seventh day of the week as Sabbath?

In tracing the origin of the singular sect of Ephrata, we light upon the Dunkers, with whom they had some principles in common, and from whom they sprang by secession. The Dunkers are a species of Baptists, first heard of in Germany in 1708. At that time, under the laws of the empire, only three confessions were allowed free exercise of their religious worship,—the Catholics, the Lutherans, and the Reformed (or Calvinists); all others were considered unsound, erratic, and dangerous. In some localities, however, where the Government was

more tolerant, or intolerance less vigilant, a variety of sects sprang up and in a few nooks of the wide empire the Separatists found not only an asylum but, through the sympathy of the rulers, a cordial welcome. This was, notably, the case in the territories of the Counts of Isenburg and Witsgenstein, in the south-western part of Germany. It was there, in 1708, that some Separatists, under the lead of Alexander Mack, a miller of Schriesheim, resolved "to establish a covenant of conscience, and to accept the teachings of Christ as a gentle yoke." They solemnized their union by triune immersion in the river Eder, near Schwarzenau, and this was the origin of the Dunkers (Dunkards, or Tunkers), which is merely a nickname for Baptists, fashioned after the Dutch term *Dompelaers*.

The founders of the society numbered only eight, but they soon received considerable accessions from the Palatinate, Würtemberg, and Switzerland. A distinguished member of the city councils of Strasburg, Michael Eckerlin, removed with his whole family to Schwarzenau, and joined the brethren by receiving baptism. Three of his sons became subsequently connected with the convent at Ephrata, where their independence of character involved them in serious dissensions.

A branch of the Schwarzenau Baptists established itself at Marienborn, in the principality of Isenburg, but the halcyon days of the young sect were followed by scattering storms. The members of the Marienborn society removed, in 1715, to Crefeld, a city noted for its tolerance to dissenters, and thence, in 1719, to Pennsylvania, amounting then to about two hundred souls. These were the first Dunkers in America; they settled mainly in Germantown, where they organized a congregation in 1723, holding their meetings at first in the house of John Pettikofer, with Peter Becker for their minister. In 1729, the members of the parent society of Schwarzenau, who had meantime changed their original quarters for a refuge in Frisia, followed the example of their brethren and emigrated to Pennsylvania.

The first Dunkers had not been many years in their new homes when the schism occurred that led to the separate organization of the Seventh-day Baptists under Conrad Beissel, and subsequently to the establishment of the Order of the Solitary. Before we follow up this branch, which has left such curious traces at Ephrata, some remarks on the original Dunkers, on their principles, mode of worship, and present condition, may not be inappropriate.

With the advancing tide of settlers, the Dunkers spread into the interior counties of

Pennsylvania, and the yearly conference, which deals with the common concerns of the Brotherhood, was, in course of time, alternately held east and west of the Susquehanna River.

Gradually they found their way into Virginia and the Western States, where they are now most numerous, and it was deemed fair to hold the conference every second year west of the Ohio. Now, when Kansas, Nebraska, Colorado, Idaho, California, Oregon, and Washington Territory have their Dunker congregations, it has been suggested that the conference be held alternately west and east of the Mississippi River. For there is now, as of old, only one yearly conference in which the whole body of the Dunkers is represented. In the present year it met at Ashland, Ohio.

They number in the United States—for they also have missions in Europe—about two hundred thousand souls, with nearly two thousand ministers to attend to their spiritual wants, none of whom receives a salary.

The Dunkers profess all the fundamental principles of Christian faith. They do not, however, believe in the eternal perdition of souls. They have no creed apart from the Bible. What they aim at is to restore Christianity to its primitive purity, scrupulously to follow the precepts and the example of the Saviour, and to make religious conviction the sole arbiter of conduct in life. They still baptize the neophytes—as their founders at Schwarzenau did—by immersing them three times, in the name of the Father, the Son, and the Spirit. Their holy communion is preceded by the rite of foot-washing. A curious discussion has of late engaged their attention—upon the question whether the single or the double mode has the better claim for observance. When the same brother both washes and dries the feet, it is the single mode; when each service is performed by a separate person, they call it foot-washing by the double mode. It is not to be understood, however, that the whole congregation is thus served by one or two of their number. There are enough of them going around with tub and towel to finish the ceremony within a reasonable time. Foot-washing and communion are always administered in the evening; during the afternoon a love-feast is held, in commemoration of the supper which Jesus took with his disciples. There is no binding rule as to the choice of food, though among the viands lamb has the preference. Even such luxuries as coffee and butter, unknown to Scriptural Palestine, are not objected to. After the love-feast comes the “holy kiss.” The minister gives it to the brother that sits next to him on the right; he applies it, in turn, to

his neighbor, and thus it is passed along the line, and by the last is carried to the next table. The same order is observed with the women, with the exception that the first kiss is applied by the minister to the first sister’s hand.

The Dunkers live in peace with one another, and seek no redress, for injury done to them, by recourse to law. Disagreements among themselves are settled by the elders, whose decision is final. Only in exceptional cases, and after permission is granted by the officers of the congregation, do they institute lawsuits against the people of the world. Like the Quakers and Mennonites, they refrain from taking or administering oaths, from participating in warfare, or giving countenance to it in any manner whatever. They are averse to accepting public office. Their poor they support. Among their host of two hundred thousand people, there is not one who suffers from want. Even those who fail in business are aided to make a new effort, and such assistance may be lent three times. After the third failure, they take it to be the will of God that the unfortunate brother shall not succeed.

Cultivating the utmost simplicity in raiment, food, and other exteriors of life, they look upon all glitter and display with misgivings; so much so that the Philadelphia Exhibition was generally avoided by the people of the Dunker persuasion as one of the world’s vanities. Some superstitious notions of old days, *e. g.*, that the use of lightning-rods betokens a defiance of God’s power, still linger among them, though they do not object to roofs as a protection of their barns and houses against the wrath of storms. The wearing of broad-brimmed hats and of long beards is a custom generally adhered to, but not enjoined by rule.

One of their prejudices, *viz.*, that ignorance is the healthiest condition of man in this preparatory stage of life, has well-nigh passed away. As a proof of the value they attach to education, we may mention their collegiate institutions, in which ancient and modern languages, as well as scientific branches, form a part of the regular course, open to both sexes. There are three of these in operation, one at Mount Morris, Ogle County, Illinois, with two hundred and fifteen students during the last session; another at Ashland, Ohio, with two hundred students, and a third at Huntington, in Pennsylvania, with about one hundred and seventy-five students. Till about 1850, the Dunkers published not a single paper; now they have nine, and several juvenile or Sunday-school papers.

While the Dunkers of the old stock have thus grown in numbers and in consequence,

FOOT-WASHING.

with the fairest prospect of further expansion, the Ephrata sect, which occupies us more particularly at present, is all but defunct, and its most remarkable phase, the adoption of monastic life and the countenance given to celibacy, curious as an anomaly of Protestant Christianity, and still more so as a wrinkle of early colonial history, has long ago passed out of existence.

The founder of the Order of the Solitary was Conrad Beissel, born at Eberbach in 1690. In Germany he does not appear to have been affiliated with the Dunkers, but was strongly impressed with the emotional religion of the Pietists and the mystic antics of the "Inspired." He was by trade a baker, and during his apprenticeship as gay as any other young fellow at the fiddle and the dance. In 1715, a change came over him that brought him into contact with the ranting convulsionist Frederick Rock, with Dr. Carl, the editor of the Berleburg Bible, and others of the "awakened." His biographers assert that the regenerating grace which he experienced improved even the quality of the bread which he baked at Heidelberg. Weary of the petty persecution which the peculiar brand of his piety drew upon him, he emigrated in 1720, with Stiefel and some other friends, to America. In Germantown, he learned the art of weaving from the Dunker preacher Peter Becker. But finding that the brethren of that persuasion were too much entangled in the concerns of the world, he left, in 1721, the habitations of men, to lead

a contemplative life at Mill Creek, a streamlet that empties into the Conestoga River, in Lancaster County. He became a hermit, having no other company than that of his *fidus Achates*, Stiefel.

Beissel had a recent example for such a course. John Kelpius, the hermit of the Wissahickon, who had come to Pennsylvania in 1674 with about forty associates, bent like himself upon parting fellowship with the world, had closed his eyes in 1708, leaving, as the "Chronicon Ephratense" has it, a good odor of saintliness behind him. Born at Denndorf, in Transylvania, he studied divinity at Altorf under the famous theologian John Jacob Fabricius, obtained the degree of Magister in 1689, and after writing some Latin treatises on professional subjects, plunged into the mystic and millennial speculations of his age. Hence he was drawn into companionship with the so-called Philadelphic League, an association of mystics, which was headed in England by Jane Leade. After his arrival in America he withdrew from the world, settling, with his companions (several of them men of learning), on the ridge near the Wissahickon, where he awaited with his friends the coming of the Heavenly Bridegroom. Probably led by his speculations on the mystic import of the "Woman in the Wilderness" (Revelation xii. 6), he named his little flock the "Society of the Woman in the Wilderness." A cave on Mr. Prowatsain's property, upon the high bank that skirts the Wissahickon, is pointed out as the place

where Kelpius spent his days in retirement.

When Kelpius died (1708), his flock gradually fell away, and most of them became forgetful of their vows of celibacy, or, as the "Chronicon Ephratense" caustically puts it, "took to woman." Some, however, like John Selig, Conrad Matthaei, and Geisler, remained single and continued in their hermit life. There is a tradition that connects a spacious stone building on the Wissahickon, situated on high ground near a woody, romantic dell, with the pious anchorets, who belonged either to the "Woman of the Wilderness" or were allied with the Ephrata order of monks. It is popularly called the "Monastery," though no particulars as to its use for such a purpose are known. That the example and the fancies of John Kelpius, his ascetic habits, his advocacy of a virgin life, his faith in direct inspirations and his mystic musings, had a direct and strong influence on Conrad Beissel, is admitted in the Chronicles of Ephrata:

"The same spirit that was astir in Kelpius, of blessed memory, entered into our leader."

We left the latter rustivating in the solitude of Lancaster County, near the Conestoga River. His hermit's life suffered a short interruption by a trip he made with Isaac von Bebborn to Bohemia Manor, in Cecil County, Maryland, where the Labadists under Peter Schlüter had formed a settlement conducted on principles of religious communism. It is quite likely that the impressions then received were not lost upon him, and had something to do with the social features of the Ephrata cloister.

Soon after his return, Conrad Beissel submitted to baptism in the Pequea Creek (November 12, 1724), at the hands of Peter Becker, the Dunker minister of Germantown, who, with about a dozen of the Brethren, traversed the land upon a missionary errand. The baptism, however, meant no peace, nor fellowship. It was followed by controversies among the men and quarrels among the women. Soon Beissel began to assert his authority and to preach doctrines distasteful to the Dunkers, urging celibacy and the observance of Saturday as Sabbath. A little knot of followers that gathered about him were baptized or rather rebaptized by him, in May, 1725. With this the step was taken that called into existence the sect of Seventh-day Dunkers. Conrad, who was chosen their

MEMENTOS OF BEISSEL.

leader, became greatly impressed with his own importance and discoursed like a prophet, sometimes with closed eyes, as if he were in a trance. With the Dunkers, the questions at issue were discussed with a good deal of acrimony. Once an over-shrewd fellow, Joel, who sided with Beissel, proposed to settle the dispute by a sort of ordeal. With a keen perception of the better odds, quite surprising in so God-fearing a man, Joel addressed Brother Hildebrand thus: "If God shall on this day do a miracle upon my person,—if here in your presence and before your eyes I fall down like a dead man, and if by your prayers I be made to rise up again to life,—then God hath *not* sent me to you, and *you* are God's people. But if I do *not* fall down like a dead man, but go fresh and hearty out of that door, then shall ye know that God hath indeed sent *me*, and that *ye* are not the people of the Lord." Upon this, Joel, turning his back upon them, went out of the door fresh and hearty. It does not appear that the proof offered convinced the other side.

Between the Dunkers and the Seventh-day sectaries there were constant bickerings; even among the saints themselves not everything

was lovely. Perhaps this was the reason why Conrad, in the year 1732, seven years after the origin of the Conestoga schism, took a sudden resolution and again withdrew into the wilderness. He went about eight miles farther north, and selected a spot on the river Cocalico for his lonely musings. At that time there was but a single hut there, which was occupied by a hermit named Elimelech. The good man ceded his abode to Beissel, neither of them knowing that the ground upon which they stood would a few years afterward become famous as Ephrata, a name chosen by the founder in allusion to Psalm 132, v. 5 and 6.

Conrad cleared a piece of ground, tilled it

brothers followed, then came Anna and Mary Eicher, whose yearning after spiritual comfort left them no rest. To silence the tongues of scandal-mongers, a little house was built for them on the other side of the Cocalico River. Revivals in the Tulpehocken district, in Falkner Swamp (Hanover), and Oley, brought quite an influx of converts, and the neighborhood became dotted with numerous huts and block-houses, the abodes of solitary brethren, or of families that held to the new doctrine. The several settlements were called Massa, Zohar, Hebron, and Cades, names which have now disappeared. Prominent among those who joined the Seventh-day Dunkers were the three brothers, Israel,

THE SUPPOSED MONASTERY OF WISSAHICKON.

with his hoe, and felt happy to think that he was once more upon the track of the Egyptian anchorites. In this frame of mind he composed many hymns redolent with the flowers of mysticism.

Speaking of Beissel's poetry, a remarkable fact of American bibliography, not generally known, deserves to be mentioned. The earliest book of German poetry written and published in America has Conrad Beissel for its author. It is a small duodecimo volume, printed by Benjamin Franklin, in 1730, in Roman type. Its very curious fanciful title is too long to be transcribed here in full. It begins:

"Göttliche Liebes und Lobesgethöne."

(Godly Lays of Love and Praise.)

Our fugitive from the world was not long allowed to enjoy his solitude. First, several

Samuel, and Gabriel Eckerlin, the same who had with their father Michael removed from Strasburg to Schwarzenau, to be baptized by Alexander Mack. One of them, Samuel, suffered imprisonment in Lancaster, with another Dunker, for working on Sunday—a martyrdom which any of the fraternity would fain have undergone for the sake of bearing testimony.

In 1735, at length the first cenobitic building was put up, and called Kedar. It contained a large room for religious exercises, halls for love-feasts and foot-washing, and several cells for solitary brethren and sisters. The latter occupied the upper story. In place of the "Babylonian garments," a peculiar style of dress was then introduced, designed to hide as much as possible "the loathsome image revealed by sin," *i. e.* the body. The outer vestments of the brethren consisted of a

long, close robe, fastened with hooks down to the feet, with narrow sleeves, and a collar fitted close to the neck; also a girdle around the waist. During service they donned a cape that reached to the waist. Attached to the robe was a cowl, or hood, that hung down over the back, and could be drawn over the head for protection. The habiliments of the sisters were similar; their hoods, however, were round, not pointed like those of the brethren. During work they were thrown back, but at the approach of a stranger were modestly pulled over head and face "to hide the loathsome image." A large veil, reaching front and back to the girdle, and resembling a scapular, completed the sisters' costume. The garments used in winter were of wool; in summer, linen or cotton. Both sexes were barefooted during the warm season.

In course of time more buildings were added, partly for worship and the accommodation of members, partly for industrial objects. In 1738 a house of considerable dimensions, called Zion, was built upon the hill; another, Pniel, mainly intended for religious service, went up in 1741. Saron, erected in 1745, was to be a convent for self-divorced couples, the men and the women living in different parts of the house. But the plan would not work; the letters of divorce were, by mutual consent, torn up, and the couples returned to their homesteads, and Saron was then assigned to the Sisters. It is one of the buildings yet standing. As new quarters were required for the monks, also, Bethania was built in 1746. It was constructed in a very durable manner, and contained accommodations for one hundred solitary brethren. The industry of the cloister consisted mainly of the operations of the flour, paper, saw, and fulling mills, and of a flaxseed-oil press. The honest dealing of the monks did much toward reconciling outsiders with their religious notions.

It is time to say something about the latter subject. The cloister people of Ephrata and those allied with them are generally known as Seventh-day Dunkers, as if they had differed from the parent sect in no other way than the observance of Saturday as Sabbath. There is, however, another and a very important element that entered into the religion of the Ephrata society. They were in intimate accord with the mystics of the period, such as Hochmann von Hochenau, Gottfried Arnold, Frederick Rock, and, through them, with Gichtel and Jacob Boehme. The craving after direct communion with God, the sinking of self into the awful abyss of the Infinite, the extinction of individual will and

thought, finally the unutterable ecstasy of delight springing from the "divine intoxication"—all these features of mystic religion were present in the lessons which Conrad Beissel imparted at Ephrata. In order to express by words the rapturous feelings engendered in this state of mind, the vocabulary of love was ransacked for terms and metaphors of delight. Gottfried Arnold, or some older mystic, had invented the divine "Sophia," to whom the devotees paid their homage in impassioned strains of love-songs. This "Sophia," together with the "Lamb" and the "Bridegroom," was addressed by the pious monks and nuns of Ephrata in the most endearing language of amorous transport. Hence we have the paradoxical fact that the same people who repudiated all earthly love as impure, and threw a slur on married life, would sing at their devotions hymns like these:

"Sweet are the kisses of thy mouth,"

and

"Come, O dove, come, my love,
Let me give you a thousand kisses."
"Mouth to mouth and heart to heart," etc.

Beissel's style of preaching is thus described by Israel Acrelius, who gives an abstract of his sermon: "All this was spoken with an incomparable rapidity, in hasty language, with rapid gestures. Now he struck out his hands, now he pressed them to his breast, now he placed them on one side, now upon the other, and now upon both."

The cloister was no resort for idlers. Every one was put to work—on the farm, at the mills, at a trade, in the copying-room, in the printing-office, or the bindery. At the beginning the land was cultivated without the aid of horses or oxen, the brethren themselves, in a long line, dragging at the plow. There was no end of building, and all the labor was done by the members of the order. Thus the little colony made itself independent of the outside world. The printing-press of Ephrata was put up about 1742, and turned out a number of works now eagerly sought after by bibliophiles.

The singing-schools were founded in 1742. Conrad Beissel had much musical talent, and composed upward of four hundred airs, upon a system of his own. The effect of the choral singing at Ephrata is described as peculiarly sweet and pleasing: it obtained celebrity and attracted many strangers. A visitor thus speaks of it in a letter to Governor J. Penn: "The performers sat with their heads reclined, their countenances solemn and dejected, their faces pale and emaciated from their manner

of living, the clothing exceeding white and quite picturesque, and their music such as thrilled the very soul. I almost began to think myself in the world of spirits."

The note-books required by the choirs were

tain upward of four hundred hymns, all composed by Beissel.

The fare at the convents was of the plainest kind, and consisted almost entirely of bread, mush, and vegetables. Animal food,

THE SISTERS.

written with the greatest neatness by sisters appointed for that duty. Each air is headed by the first line of the hymn that is sung by it, with a number that refers to the respective page of the "*Zionitischer Weihrauchhügel*," their great hymn-book. The note-books con-

tain upward of four hundred hymns, all composed by Beissel. The fare at the convents was of the plainest kind, and consisted almost entirely of bread, mush, and vegetables. Animal food, even milk and cheese, was thought to clog the spirit and to injure the voice. None of the forty-eight drinks which the Rev. I. Acrelius enumerates as in use in Pennsylvania at that time, passed muster in Ephrata. The pious inmates of the cloister were to

THE BRETHREN DRAGGING AT THE PLOW.

confine themselves to the "innocent pure water." But in this particular, the founder himself appears during his advancing years to have fallen from grace.

Among the peculiar customs of the monastery were the love-feasts and the night-services. The former were occasionally held at the private dwellings of affiliated brethren, but generally in the halls of the convent, sometimes for one sex, at other times for both. The night-services were held whenever Father Friedsam (Beissel) gave the summons. This he often did without previous announcement by pulling at a bell-cord that stretched from his dwelling to the male and female convents. All had to get up, even at or after midnight, and appear in the dress of their order. At such occasions, small paper lanterns that were kept in the cells were used.

A very notable fact it is that communism was in practical operation at Ephrata for a considerable number of years. The "Chronicon Ephratense," speaking of the events of 1740, says: "Then, at first, was property declared to be a sin. All was put in a common stock, and by what it yielded into the treasury all the necessities of life were purchased for the brethren. The same was done in the convent of the sisters. This arrangement lasted many years, till at length it became necessary to reestablish property,

though to the present day everything, in the main, is held in common." As the "Chronicon" was published in 1786, practical communism had then existed forty-six years. Those that entered the order had to surrender all they had, absolutely and without reserve. It may be news to the historians of socialistic theories that, a century before Proudhon ventured upon the bold paradox that property is theft, property had been branded at Ephrata as sin.

When Conrad Beissel died, in 1768, the office of *Vorsteher* devolved on Peter Miller, who had been prior for many years. Miller came to America in 1730, as minister of the Reformed Church, and settled at Tulpehocken. A revival carried him, in 1735, with Conrad Weiser, the Indian interpreter, and others, into the Ephrata sect; Weiser soon retraced his steps, but Miller proved to be a permanent acquisition. He was a fine classical scholar, was well versed in theology, and became a member of the American Philosophical Society, and led an unblemished life. But in spite of all this, the monastery continued to decline. That part of Lancaster County where it was planted remained no longer the wilderness that had proved so attractive to the enthusiasts of a former period. The world's people gained upon them, and time came when a few decrepit monks and nuns,

that lingered in the desolate convents, or basked upon the greensward, were looked upon as living curiosities. In 1814, with the consent, and at the request, of the few surviving members of the monastery, the Assembly of Pennsylvania incorporated the "Seventh-day Baptists of Ephrata" as a society, to succeed in the rights of property of the dying-out fraternity. Since then, the land and the buildings of the "Solitary" have been held in trust for "religious, charitable, and literary objects."

We shall close our account of Ephrata with a story or tradition of Revolutionary times, still living among the people of the neighborhood, and sure to be repeated to the curious inquirer or accidental wayfarer. It concerns the pious prior of the cloister, Peter Miller. If not true in its details, it still has, as may be inferred from the pages of the Colonial Records of Pennsylvania, a grain of fact for its foundation, and will serve to show the high estimate placed on the Christian character of one of the principal men of Ephrata.

A person by the name of Michael Widman,

an inn-keeper in Cocalico township, and a staunch member of the Reformed Church, had conceived a spiteful feeling against Miller, because he had renounced the Reformed creed to join the Ephrata brotherhood. When abusive language failed to ruffle Miller's temper, Widman went so far as to spit in his face, without, however, provoking the saintly prior to anger, or acts of retaliation. During the Revolution, Widman espoused the cause of the Tories; we know this to be the case by repeated references to his disloyalty in the Colonial Records. It is said that he acted as spy to the British, or committed some other treasonable offense that, when he fell into the hands of the Americans, brought him under sentence of death. When Peter Miller heard that the life of his former assailant was in jeopardy, he went to General Washington to plead for the remittance of the death penalty. The General remarked that the state of public affairs demanded the severest measures against spies and traitors, "otherwise," he added, "I should cheerfully release your friend." "Friend!" replied Miller,—“he is

INTERCESSION FOR AN ENEMY.

the only enemy I have," and, upon further inquiry, he related what indignities he had suffered from the man for whose life he was now pleading. It is further reported that so shining an example of forgiveness made a deep impression upon Washington, and that the pardon was granted. Miller, with several of his brethren, arrived upon the ground where

the gallows was erected for the traitor's execution just in time to announce the General's act of grace, and to save the wretched Widman from an ignominious death. It appears from the Colonial Records that the latter did not, however, escape all punishment. His property, consisting of several farms and houses, was confiscated, and sold in March, 1780.

THE LINCOLN LIFE-MASK AND HOW IT WAS MADE.

My first meeting with Abraham Lincoln was in 1858, when the celebrated senatorial contest opened in Chicago between him and Stephen A. Douglas. I was invited by the latter to accompany him and his party by a special train to Springfield, to which train was attached a platform-car having on board a cannon, which made considerable noise on the journey. At Bloomington we all stopped over night, as Douglas had a speech to make there in the evening. The party went to the Landon House, the only hotel, I believe, in the place at the time.

While we were sitting in the hotel office after supper, Mr. Lincoln entered, carrying an old carpet-bag in his hand, and wearing a weather-beaten silk hat,—too large, apparently, for his head,—a long, loosely fitting frock-coat, of black alpaca, and vest and trousers of the same material. He walked up to the counter, and, saluting the clerk pleasantly, passed the bag over to him, and inquired if he was too late for supper. The clerk replied that supper was over, but thought enough could be "scraped up" for him.

"All right," said Mr. Lincoln; "I don't want much."

Meanwhile, he said he would wash the dust off; he was certainly very dusty, for it was the month of June and quite warm. While he was so engaged several old friends, who had learned of his arrival, rushed in to see him, some of them shouting out, "How are you, Old Abe?" Mr. Lincoln grasped them by the hand in his cordial manner, with the broadest and pleasantest smile on his rugged face. This was the first good view I had of the "coming man," though I had seen him at a distance, and passed him on the sidewalk in Chicago a few days before.

Mr. Lincoln was on the platform in front of the court-house when Mr. Douglas spoke,

and replied to the Senator when he had finished. I regretted to hear some hard words which passed between them while Mr. Douglas was speaking.

The next day we all stopped at the town of Lincoln, where short speeches were made by the contestants, and dinner was served at the hotel, after which, and as Mr. Lincoln came out on the plank-walk in front, I was formally presented to him. He saluted me with his natural cordiality, grasping my hand in both his large hands with a vice-like grip, and, looking down into my face with his beaming dark, dull eyes, said:

"How do you do? I am glad to meet you. I have read of you in the papers: you are making a statue of Judge Douglas for Governor Matteson's new house?"

"Yes, sir," I answered; "and sometime, when you are in Chicago and can spare the time, I would like to have you sit to me for your bust."

"Yes, I will, Mr. Volk—shall be glad to, the first opportunity I have."

All were soon on board the long train, crowded with people, going to hear the speeches at Springfield. The train stopped on the track, near Edwards's Grove, in the northern outskirts of the town, where staging was erected and a vast crowd waiting under the shade of the trees. On leaving the train, most of the passengers climbed over the fences and crossed the stubble-field, taking a short-cut to the grove, among them Mr. Lincoln, who stalked forward alone, taking immense strides, the before-mentioned carpet-bag and an umbrella in his hands, and his coat-skirts flying in the breeze. I managed to keep pretty close in the rear of the tall, gaunt figure, with the head craned forward, apparently much over the balance, like the Leaning Tower of Pisa, that was moving something like a hurricane across that rough

LIFE-MASK OF ABRAHAM LINCOLN. (HITHERTO UNPUBLISHED.)

stubble-field! He approached the rail-fence, sprang over it as nimbly as a boy of eighteen, and disappeared from my sight. Soon after, and while Douglas was speaking, Mr. Lincoln suddenly re-appeared in the crowd, mounted upon a fine, spirited horse.

In the evening I went to hear him speak in the Hall of Representatives of the old State House. He spoke with much deliberation and earnestness, and I thought there was sadness in his tone of voice; he reminded his friends of the difficulty of carrying the State for himself, owing to the way in which it was restricted at the time, and cautioned them not to be over-sanguine—to be prepared for defeat; if they wished for victory, no stone must be left unturned.

I did not see him again for nearly two years. I spent most of the winter of 1860 in Washington, publishing a statuette of Senator Douglas, and just before leaving, in the month of March, I called upon Mr. Douglas's colleague in the Senate from Illinois, and asked him if he had an idea as to who would be the probable nominee of the Republican party for President, that I might model a bust of him in advance. He replied that he did not have the least particle of an idea who he would be, only that it would not be Judge Douglas.

I returned to Chicago, and got my studio in the "Portland Block" in order and ready for work, and began to consider whose bust I should first begin in the clay, when I noticed in a morning paper that Abraham Lincoln was in town—retained as one of the counsel in a "Sand-bar" trial, in which the Michigan Central Railroad was either plaintiff or defendant. I at once decided to remind him of his promise to sit to me, made two years before. I found him in the United States District Court-room (in a building known at the time as the "Larmon Block"), his feet on the edge of a table, one of his fingers thrust into his mouth, and his long, dark hair standing out at every imaginable angle, apparently uncombed for a week. He was surrounded by a group of lawyers, such as James F. Joy, Isaac N. Arnold, Thomas Hoynes, and others. Mr. Arnold obtained his attention in my behalf, when he instantly arose and met me outside the rail, recognizing me at once with his usual grip of both hands. He remembered his promise, and said, in answer to my question, that he expected to be detained by the case for a week. He added:

"I shall be glad to give you the sittings. When shall I come, and how long will you need me each time?"

Just after breakfast, every morning, would, he said, suit him the best, and he could remain till court opened, at ten o'clock. I

answered that I would be ready for him the next morning, Thursday. This was in the early part of April, 1860.

"Very well, Mr. Volk, I will be there, and I'll go to a barber and have my hair cut before I come."

I requested him not to let the barber cut it too short, and said I would rather he would leave it as it was; but to this he would not consent. Then, all of a sudden, he ran his fingers through his hair, and said:

"No, I cannot come to-morrow, as I have an engagement with Mr. W—— to go to Evanston to-morrow and attend an entertainment; but I'd rather come and sit to you for the bust than go there and meet a lot of college professors and others, all strangers to me. And I will be obliged if you will go to Mr. W——'s office now, and get me released from the engagement. I will wait here till you come back."

So off I posted, but Mr. W—— would not release him, because, he said, it would be a great disappointment to the people he had invited. Mr. Lincoln looked quite sorry when I reported to him the failure of my mission.

"Well," he said, "I suppose I must go, but I will come to you Friday morning."

He was there promptly—indeed, he never failed to be on time. My studio was in the fifth story, and there were no elevators in those days, and I soon learned to distinguish his steps on the stairs, and am sure he frequently came up two, if not three, steps at a stride. When he sat down the first time in that hard, wooden, low-armed chair which I still possess, and which has been occupied by Douglas, Seward, and Generals Grant and Dix, he said:

"Mr. Volk, I have never sat before to sculptor or painter—only for daguerreotypes and photographs. What shall I do?"

I told him I would only take the measurements of his head and shoulders that time, and next morning, Saturday, I would make a cast of his face, which would save him a number of sittings. He stood up against the wall and I made a mark above his head, and then measured up to it from the floor, and said:

"You are just twelve inches taller than Judge Douglas, that is, just six feet one inch."

Before commencing the cast next morning, and knowing Mr. Lincoln's fondness for a story, I told him one in order to remove what I thought an apprehensive expression—as though he feared the operation might be dangerous; and this is the story:

I occasionally employed a little black-eyed, black-haired, and dark-skinned Italian as a *formatore* in plaster work, who had related to me a short time before that himself and a

comrade image-vender were "doing" Switzerland by hawking their images. One day, a Swiss gentleman asked him if he could make his likeness in plaster. "Oh, yes, signor; I am a sculptor!" So Matteo Mattei—such was the name of the pretender—got some plaster, laid the big Swiss gentleman on his back, stuck a quill in each nostril for him to breathe through, and requested him to close his eyes. Then "Mat," as I called him, poured the soft plaster all over his face and forehead; then he paused for reflection; as the plaster was beginning to set he became frightened, as he had never before undertaken such a job, and had neglected to prepare the face properly, especially the gentleman's huge beard, mustache, and the hair about the temples and forehead, through which, of course, the plaster had run and become solid. "Mat" made an excuse to go outside the door—"then," said he, "I run like —."

I saw Mr. Lincoln's eyes twinkle with mirth. "How did he get it off?" said he.

I answered that probably, after reasonable waiting for the *scultore*, he had to break it off, and cut and pull out all the hair which the tenacious plaster touched, the best way he could. "Mat" said he took special pains to avoid that particular part of Switzerland after that artistic experience. But his companion, who somewhat resembled him, not knowing anything of his partner's performance, was soon after overhauled by the gentleman and nearly cudged to death.

Upon hearing this, the tears actually trickled down Mr. Lincoln's bronzed cheeks, and he was at once in the best of humors. He sat naturally in the chair when I made the cast, and saw every move I made in a mirror opposite, as I put the plaster on without interference with his eyesight or his free breathing through the nostrils. It was about an hour before the mold was ready to be removed, and being all in one piece, with both ears perfectly taken, it clung pretty hard, as the cheek-bones were higher than the jaws at the lobe of the ear. He bent his head low and took hold of the mold, and gradually worked it off without breaking or injury; it hurt a little, as a few hairs of the tender temples pulled out with the plaster and made his eyes water; but the remembrance of the poor Swiss gentleman evidently kept him in good mood.

He entered my studio on Sunday morning, remarking that a friend at the hotel (Tremont House) had invited him to attend church, "but," said Mr. Lincoln, "I thought I'd rather come and sit for the bust. The fact is," he continued, "I don't like to hear cut and dried sermons. No—when I hear a man

preach, I like to see him act as if he were fighting bees!" And he extended his long arms, at the same time suiting the action to the words. He gave me on this day a long sitting of more than four hours, and when it was concluded, went to our family apartment, on the corner of the building across the corridor from the studio, to look at a collection of photographs which I had made in 1855-6-7, in Rome and Florence. While sitting in the rocking-chair, he took my little son on his lap and spoke kindly to him, asking his name, age, etc. I held the photographs up and explained them to him, but I noticed a growing weariness, and his eyelids closed occasionally as if he were sleepy, or were thinking of something besides Grecian and Roman statuary and architecture. Finally he said: "These things must be very interesting to you, Mr. Volk, but the truth is I don't know much of history, and all I do know of it I have learned from law-books."

The sittings were continued daily till the Thursday following, and, during their continuance, he would talk almost unceasingly, telling some of the funniest and most laughable of stories, but he talked little of politics or religion during those sittings. He said: "I am bored nearly every time I sit down to a public dining-table by some one pitching into me on politics." Upon one occasion he spoke most enthusiastically of his profound admiration of Henry Clay, saying that he "almost worshiped him."

I remember, also, that he paid a high compliment to the late Gen. William A. Richardson, and said: "I regard him as one of the truest men that ever lived; he sticks to Judge Douglas through thick and thin—never deserted him, and never will. I admire such a man! By the by, Mr. Volk, he is now in town, and stopping at the Tremont. May I bring him with me to-morrow to see the bust?" Accordingly, he brought him and two other old friends, ex-Lieut.-Gov. McMurtry, of Illinois, and Ebenezer Peck, all of whom looked a moment at the clay model, saying it was "just like him!" Then they began to tell stories and rehearse reminiscences, one after another. I can imagine I now hear their hearty laughs, just as I can see, as if photographed, the tall figure of Lincoln striding across that stubble-field.

Many people, presumably political aspirants with an eye to future prospects, besieged my door for interviews, but I made it a rule to keep it locked, and I think Mr. Lincoln appreciated the precaution.

The last sitting was given Thursday morning, and I noticed that Mr. Lincoln was in something of a hurry. I had finished the

head, but desired to represent his breast and brawny shoulders as nature presented them; so he stripped off his coat, waistcoat, shirt, cravat, and collar, threw them on a chair, pulled his undershirt down a short distance, tying the sleeves behind him, and stood up without a murmur for an hour or so. I then said that I was done, and was a thousand times obliged to him for his promptness and patience, and offered to assist him to re-dress, but he said: "No. I can do it better alone." I kept at my work without looking toward him, wishing to catch the form as accurately as possible while it was fresh in my memory. Mr. Lincoln left hurriedly, saying he had an engagement, and with a cordial "Good-bye! I will see you again soon," passed out. A few moments after, I recognized his steps rapidly returning. The door opened, and in he came, exclaiming: "Hello, Mr. Volk! I got down on the sidewalk and found I had forgotten to put on my undershirt, and thought it wouldn't do to go through the streets this way." Sure enough, there were the sleeves of that garment dangling below the skirts of his broadcloth frock-coat! I went at once to his assistance, and helped to undress and re-dress him all right, and out he went, with a hearty laugh at the absurdity of the thing.

On a Thursday in the month of June following, Mr. Lincoln received the nomination on the third ballot for President of the United States. And it happened that on the same day I was on the cars, nearing Springfield. About midday, we reached Bloomington, and there learned of his nomination. At three or four o'clock, we arrived at our destination. The afternoon was lovely—bright and sunny, neither too warm nor too cool; the grass, trees, and the hosts of blooming roses, so profuse in Springfield, appeared to be vying with the ringing bells and waving flags.

As soon as I had brushed off the dust and registered at the old Chenery House, I went straight to Mr. Lincoln's unpretentious little two-story house. He saw me from his door or window coming down the street, and as I entered the gate, he was on the platform in front of the door, and quite alone. His face looked radiant. I exclaimed: "I am the first man from Chicago, I believe, who has the honor of congratulating you on your nomination for President." Then those two great hands took both of mine with a grasp never to be forgotten. And while shaking, I said: "Now that you will doubtless be the next President of the United States, I want to make a statue of you, and shall do my best to do you justice." Said he: "I don't doubt it, for I have come to the conclusion that you are an honest man," and with that

greeting I thought my hands were in a fair way of being crushed. I was invited into the parlor, and soon Mrs. Lincoln entered, holding a rose-bouquet in her hand, which she presented to me after the introduction; and in return I gave her a cabinet-size bust of her husband, which I had modeled from the large one, and happened to have with me. Before leaving the house, it was arranged that Mr. Lincoln would give Saturday forenoon to obtaining full-length photographs to serve me for the proposed statue.

On Saturday evening, the committee appointed by the Convention to notify Mr. Lincoln formally of his nomination, headed by Mr. Ashman, of Massachusetts, reached Springfield by special train, bearing a large number of people, two or three hundred of whom carried rails on their shoulders, marching in military style from the train to the old State House Hall of Representatives, where they stacked them like muskets. The evening was beautiful and clear, and the entire population was astir. The bells pealed, flags waved, and cannon thundered forth the triumphant nomination of Springfield's favorite and distinguished citizen. The bonfires blazed brightly, and especially in front of that prim-looking white house on Eighth street. The committee and the vast crowd following passed in at the front door, and made their exit through the kitchen door in the rear, Mr. Lincoln giving them all a hearty shake of the hand as they passed him in the parlor.

After it was all over and the crowd dispersed, late in the evening, I took a stroll and passed the house. A few small boys only were in the street, trying to keep up a little blaze among the dying embers of the bonfire. One of them cried out:

"Here, Bill *Lincoln*—here's a stick."

Another chimed in:

"I've got a good one, Bill"—a picket he had slyly knocked from a door-yard fence.

By previous appointment, I was to cast Mr. Lincoln's hands on the Sunday following this memorable Saturday, at nine A. M. I found him ready, but he looked more grave and serious than he had appeared on the previous days. I wished him to hold something in his right hand, and he looked for a piece of paste-board, but could find none. I told him a round stick would do as well as anything. Thereupon he went to the wood-shed, and I heard the saw go, and he soon returned to the dining-room (where I did the work), whittling off the end of a piece of broom-handle. I remarked to him that he need not whittle off the edges.

"Oh, well," said he, "I thought I would like to have it nice."

When I had successfully cast the mold of the right hand, I began the left, pausing a few moments to hear Mr. Lincoln tell me about a scar on the thumb.

"You have heard that they call me a rail-splitter, and you saw them carrying rails in the procession Saturday evening; well, it is true that I did split rails, and one day, while I was sharpening a wedge on a log, the ax glanced and nearly took my thumb off, and there is the scar, you see."

The right hand appeared swollen as compared with the left, on account of excessive hand-shaking the evening before; this difference is distinctly shown in the cast.

That Sunday evening I returned to Chicago with the molds of his hands, three photographic negatives of him, the identical black alpaca campaign-suit of 1858, and a pair of Lynn newly made pegged boots. The clothes were all burned up in the great Chicago fire. The casts of the face and hands I saved by taking them with me to Rome, and they have crossed the sea four times.

The last time I saw Mr. Lincoln was in January, 1861, at his house in Springfield. His little parlor was full of friends and politicians. He introduced me to them all, and remarked to me aside that, since he had sat to me for his

bust, he had lost forty pounds in weight. This was easily perceptible, for the lines of his jaws were very sharply defined through the short beard which he was allowing to grow. Then he turned to the company, and announced in a general way that I had made a bust of him before his nomination, and that he was then giving daily sittings, at the St. Nicholas Hotel, to another sculptor; that he had sat to him for a week or more, but could not see the likeness, though he might yet bring it out.

"But," continued Mr. Lincoln, "in two or three days after Mr. Volk commenced my bust, there was the animal himself!"

And this was about the last, if not the last, remark I ever heard him utter, except the good-bye and his good wishes for my success.

I have omitted to say that, when sitting in April for the model, and speaking of his Cooper Institute speech delivered in New York a short time before, he said that he had arranged and composed this speech in his mind while going on the cars from Camden to Jersey City. When having his photograph taken at Springfield, he spoke of Colonel Ellsworth, whom he had met a short time before, and whose company of Zouaves he had seen drill. Lincoln said:

"He is the greatest little man I ever met!"

THE HIEROGLYPHS OF CENTRAL AMERICA.

In May, 1841, Mr. John L. Stephens published his work on the antiquities of Central America in two volumes, richly illustrated by elaborate drawings made on the spot by his fellow-traveler, Mr. Catherwood. In three months nine editions were sold, and in 1842 the twelfth edition was printed. This rapid sale speaks not only of the great value of the book, but of the popular interest in the subject of which it treats—an interest which still exists, as is shown by the continued sale of these volumes.

It is safe to say that nearly all of the current information on the subject of Central American archaeology is still derived from this work, which has not been superseded by any of the writings of later explorers, although it has been admirably supplemented by the photographs of De Charnay and others.*

The cuts which accompany the present

article are all copied from those given by Stephens, except the few which have been taken direct from Mr. Bancroft's "Native Races of the Pacific States," and from monographs, for comparison.

It will be impossible here to give any sketch of the nature and meaning of the statues, temples, etc. still existing in Yucatan. A general knowledge of the history of past researches must be assumed, and if it is lacking, it can be supplied by consulting the two works named.

The complete proof of any one of the propositions which I shall lay down is also not to be given within the short limits of a single article. For a detailed account, I must refer to the Annual Report (for 1880) of the Director of the Bureau of Ethnology of the Smithsonian Institution, in which I have given a full, though condensed, history of the work which has been accomplished.

It will, however, be interesting to examine the question of the deciphering of the Yucatec hieroglyphs a little nearer. Let the reader

* The results of the explorations of M. de Charnay are now in course of publication in the "North American Review."—ED. C. M.

turn to any one of the accompanying plates and examine one of the hieroglyphs. It will be seen to consist usually of a pictorial representation of some object, surrounded by ornaments and additions more or less conventionalized, as rows of dots or bars, etc. In the most obvious cases, the main feature is a human face, usually a profile, and it is to these that attention must first be directed. Take, for example, the top row of hieroglyphs on the right-hand side of the Figure No. 1, and choose the second symbol. It consists of a head in profile, the tongue protruding from the mouth, a circle with four segments marked off in it, accompanied by an oval having its center hatched over by cross lines to represent the skin of a serpent, this oval being surmounted by a conventional sign for feathers or plumage. The whole is a portrait of Cukulcan (Mexican, Quetzalcoatl), meaning, in both languages, "Snake-plumage." This personage introduced the practice of wounding the tongue at sacrificial feasts (hence the protruding tongue); he was one of the inner circle of gods, whom we call, for want of a better name, "the gods of hell," and the circle with its cut-off segments is the conventional sign for this family. The *rebus* of his name is given in the oval with its cross-hatchings and its feathers, so that any native describing what he saw, *Cukul*—feathers, *kan*—serpent, pronounced the name of the god.

Let us see how this and other conclusions can be arrived at, by a simple and rational method, the spirit of which can be at once understood. It is to be remembered also that, up to this time, the meaning of every single hieroglyph has remained unknown in spite of all attempts at interpretation.

By the processes which I have employed, a few names have been discovered and the order according to which the lines and columns are to be read; and a method has been laid down by following which further progress can be made. Such progress now depends mainly upon the research being made, according to this method, by professional archæologists to whom the whole history and mythology of the Maya nations are familiar, through long study. Advances must be suggested by an imagination cultivated by intimate acquaintance with the lore of the Central American people, and controlled by erudition in the works of the first white inhabitants of their country.

In my own studies, I have (necessarily) confined myself to what could be proved, and I have, I believe, taken no step which was not inevitable. I have attempted to apply the principles of ordinary deciphering to the stone tablets, just as one would do to

an ordinary cipher message whose meaning and code were unknown.

The difference of the two cases is not so great as might at first sight appear. The underlying principles are the same, and the chief difficulty in the Yucatec inscriptions is our lack of any definite knowledge of the nature and intent of the aboriginal records.

I therefore determined to apply these principles, without any bias, to the Yucatec inscriptions, and to go as far as I could certainly. Arrived at the spot where demonstration ceased, it would become my duty to stop.

My programme at beginning was: *First*, to see if the inscriptions at Copan and Palenque were written in the same tongue. When I say "to see," I mean to definitively prove the fact, and so in other cases. *Secondly*, to see how the tablets were to be read, that is, in horizontal lines, are they to be read from right to left, or the reverse? in vertical columns, are they to be read up or down? *Thirdly*, to see whether they were phonetic characters, or merely ideographic, or a mixture of the two—rebus-like, in fact.

If the characters turned out to be purely phonetic, I had determined to stop at this point, since I had not the time at my command to learn the Maya language.

It is not to be forgotten that here we have no Rosetta stone to act at once as key and criterion, and that, instead of the accurate descriptions of the Egyptian hieroglyphics which were handed down by the Greek contemporaries of the sculptors of these inscriptions, we have only the crude and brutal chronicles of an ignorant Spanish soldiery, or the bigoted accounts of an unenlightened priesthood. To Cortez and his companions, a memorandum that it took one hundred men all day to throw the idols into the sea was all-sufficient. To the Spanish priests, the burning of all manuscripts was praiseworthy, since those differing from Holy Writ were noxious, and those agreeing with it superfluous. It is only to the patient labor of the Maya sculptor, who daily carved the symbols of his belief and creed upon enduring stone, and to the luxuriant growths of semi-tropical forests which concealed even these from the passing Spanish adventurer, that we owe the preservation of the memorials of past beliefs and vanished histories.

SYSTEM OF NOMENCLATURE.

TO MAKE any progress, it was first necessary to decide on a system of nomenclature. The

F. Catherwood del.

FIG. 1. THE PALENQUE CROSS.

one I use may be understood by giving it for a special tablet, as the right-hand half of Figure 1. The top row of hieroglyphs I numbered 2020, 2021, 2022, 2023, 2024, 2025; the next row was 2030, 2031, 2032, 2033, 2034, 2035; the next row began with 2040; the next with 2050; and the last row was 3080, 3081, 3082, 3083, 3084, 3085.

In passing, it will be noted that two hieroglyphs which occur next each other in a tablet have consecutive numbers; if one is over the other, their numbers differ by ten.

IN WHAT ORDER ARE THE HIEROGLYPHS READ?

BEFORE any advance can be made in the deciphering of the hieroglyphic inscriptions, it is necessary to know in what directions, along what lines or columns, the verbal sense proceeds.

All the inscriptions that I know of are in rectangular figures. At Copan, they are usually in squares. At Palenque, the long inscriptions are in rectangles. At Palenque, again, there

C.R. Trill del.

Wm. P. Northrup & Co., Sc. Buffalo.

FIG. 1. THE PALENQUE CROSS.

are some cases where there is a single horizontal line of hieroglyphs over a pictorial tablet. Here, clearly, the only question is, do the characters proceed from left to right, or from right to left? In other cases, as in the tablet of the cross, there are vertical columns. The question here is, shall we read up or down?

Now, the hieroglyphs must be phonetic or pictorial, or a mixture of the two. If they are phonetic, it will take more than one sym-

bol to make a word, and we shall have groups of like characters when the same word is written in two places. If the signs are pictorial, the same thing will follow—that is, we shall have groups recurring when the same idea recurs. Further, we know that the subjects treated of in these tablets must be comparatively simple, and that names, as of gods, kings, etc., must necessarily recur.

The names, then, will be the first words deciphered. At present, no single name is

FIG. 2. STATUE AT COPAN.

known. These facts, together with our system of nomenclature, will enable us to take some steps.

Take, for example, the right-hand side of the Palenque-cross tablet, as given by Rau. Our system of numbering is here:

FIG. 3. STATUE AT COPAN.

2020	2021	2022	2023	2024	2025
2030	2031	2032	2033	2034	2035
*	*	*	*	*	*
*	*	*	*	*	*
*	*	*	*	*	*
3080	3081	3082	3083	3084	3085

Now pick out the duplicate hieroglyphs in this—that is, run through the tablet, and, wherever 2020 occurs, erase the number which fills the place and write in 2020. Do the same for 2021, 2022, etc., down to 3084. The result will be as follows:

FIG. 5. YUCATEC STONE.

RIGHT-HAND SIDE OF PALENQUE-CROSS TABLET.

2020	2021	2022	2023	2024	2025	2021	2091	2092	{ 2025	2094	2095
2030	2031	2032	2033	2034	2035	3000	2023	2034	{ 2053	2033	3005
2040	2041	2042	{ 2025	2020	2021	3010	2083	3012	2024	3014	2091
2050	2051	2034	{ 2053	2054	2055	2053	3021	2023	2020	3024	2024
2053	2061	2062	2063	2064	2065	{ 2024	2025	2021	3033	{ 2025	2034*
2070	2071	2020	2021	2022?	2024?	{ 2053*	3021	3042	3043	{ 2035	3045
2053	2020	2082	2083	2025	2053	{ 3050	2083	2025	2034	3054	3055
						See 2082					
						2024	2020	2035	3063	2024	2025
						2021	2031	2020	2021	2035	3045
						3080	3081	2091	2093	2020	2021

Summing up, we have 14 cases of horizontal pairs, 4 cases of vertical pairs—102 characters in all, of which 51 appear more than once, so that there are but 51 independent hieroglyphs.

Here the first two lines are unchanged. In the third we find that 2043 is the same as 2025, 2044 equals 2020, 2045 equals 2021, and so on.

After this is done, connect like pairs by braces whenever they are consecutive, either vertical or horizontal.

Take the pair 2020-2021 for example. 2020 occurs eight times in the tablet, viz.: as 2020, 2044, 2072, 2081, 3023, 3061, 3072, 3084. In five out of

FIG. 4. SYNONYMOUS HIEROGLYPHS FROM COPAN AND PALENQUE.

the eight cases, it is followed by 2021, viz.: as 2021, 2045, 2073, 3073, 3085.

It is clear this is not the result of accident. The pair 2020-2021 means something, and when the two characters occur together they must be read together. There is no point of punctuation between them. We also learn that they are not inseparable. 2020 will make sense with 2082, 3024, and 3062. Here it looks as if the writing must be read in lines horizontally. We do not know yet in which direction.

We must examine other cases. This is to be noticed: if the reading is in horizontal lines from left to right, then the progress is from top to bottom in columns, as the case of 3035-3040 (marked with asterisks in the table) shows. 3035 occurs at the end of one line, and the corresponding symbol to make the pair is at the beginning of the next line below. Thus the lines are connected. The large symbols at the beginning of the lines on the left-hand side of Figures 1 and 13 show that the lines begin at the left. So that the conclusion is that these inscriptions are read in the same direction as the words on the present page, beginning at the left.

COMPARISON OF TWO STATUES AT COPAN.

IN examining the various statues at Copan, as given by Stephens, one naturally looks for points of striking resemblance or of

FIG. 6. HUITZILOPOCHTLI (BACK).

striking difference. Where all is unknown, even the smallest sign is examined in the hope that it may prove a clew. Figure 2 has a twisted knot (the "square-knot" of sailors) of cords over its head, and above this is a *chiffre* composed of ellipses, and above this again a sign like a sea-shell. A natural suggestion was that these might be the signs for the name of the personage depicted in Figure 2. If this is so, and we should find the same sign elsewhere in connection with a figure, we should expect to find this second figure like the first in every particular. This would be a rigid test of the theory. Now, after looking through the Palenque series, and finding no similar figure and sign, I examined the Copan series, and in Figure 3 I found the same signs exactly—i. e., the knot and the two *chiffres*.

At first sight, there is only the most general resemblance between the personages represented

FIG. 7. HUITZILOPOCHTLI (FRONT).

FIG. 8. HUITZILOPOCHTLI (SIDE).

FIG. 10. MAYA WAR-GOD.

in the two plates; as Stephens says, in his original account of them, they are "in many respects similar." If he had known them to be the same, he would not have wasted his time in drawing them. The scale of the two drawings and of the two statues is different. But the two personages are identical: figure for figure, ornament for ornament, they correspond. It is unnecessary

to give the minute comparison here in words. It can be made by any one from the two plates herewith. Take any part of Figure 2,

find the corresponding part of Figure 3, and whether it is human feature or sculptured ornament, the two will be found to be the same. Take the middle face depending from the belt in each plate. The ear-rings are the same; the ornament below the chin, the knot above the head, the complicated bead-work on each side of this face—all are the same. The bracelets of the right arms have each the forked serpent-tongue, and the left-arm bracelets are similarly ornamented. The crosses with beads almost inclosed in the right hands are alike, the elliptic ornaments above each wrist, the knots and *chiffres* over the serpent-masks which surmount the faces—all are the same.

Here, then, is an important fact. The theory that the *chiffre* over the forehead is characteristic, though it is not definitively proved, receives strong confirmation. The parts which have been lost by the effects of time on one statue can be supplied from the other. Better than all, we gain a test of the minuteness with which the sculptors worked, and an idea of how close the adherence to a type was required to be. Granting once that the two personages are the same (a fact about which I conceive there can be no possible doubt, since the chances in favor are literally thousands to one), we learn what license was allowed

and what synonyms in stone might be employed. Thus, the ornament suspended from the neck in Figure 3 is clearly a tiger's skull. That from the neck of Figure 2 has been shown to be the derived form of a skull by Dr. Harrison Allen,* and we now know that this common form relates, not to the human skull, as

*The Life Form in Art: Trans. Amer. Phil. Soc. Vol. XV., 1873, page 325.

FIG. 9. MICLANTECUTLI (BACK).

Dr. Allen has supposed, but to that of the tiger. We shall find this figure often repeated, and the identification is of importance. This is a case in regard to synonyms. The kind of symbolism so ably treated by Dr. Allen is well exemplified in the conventional sign for the *crotalus* jaw at the mouth of the mask over the head of each figure. This is again found on the body of the snake in Figure 12, Tlaloc (rain-god), and in other places. Other important questions can be settled by comparison of the two plates. For example, at Palenque we often find a sign composed of a half-ellipse, inside of which bars are drawn.

I have elsewhere shown that there is reason to believe the ellipse to represent the concave of the sky, its diameter to be the level earth, and, in some cases, at least, the bars to be the descending and fertilizing rain. The bars are sometimes two, three, and sometimes four in number.

Are these variants of a single sign, or are they synonyms? Before the discovery of the identity of the personages in these two plates, this question could not be answered. Now we can say that they are not synonyms, or, at least, that they must be considered separately. To show this, examine the bands just above the wristlets of the two figures. Over the left hands of the figures the bars are two in number; over the right hands there are four.

This exact similarity is not accidental. There is a meaning in it, and we must search for its explanation elsewhere; but we now have a valuable test of what needs to be regarded, and of what, on the other hand, may be passed over as accidental or unimportant.

These statues, then, are to us a dictionary of synonyms in stone—a test of the degree of adherence to a prototype which was exacted, and a criterion of the kind of minor differences which must be noticed in any rigid study.

I have not insisted more on the resemblances since the accompanying figures present a demonstration.

ARE THE HIEROGLYPHS OF COPAN AND PALENQUE IDENTICAL?

ONE of the first questions to be settled is whether the same system of writing was employed at Palenque and at Copan. Before any study of the meanings of the separate *chiffres* can be made, we must have our material properly assorted, and must not include, in the figures we are examining for the detection of a clew, any which may belong to a system possibly very different.

The opinion of Stephens and of later writers is confirmed by my comparison of the Palenque and the Copan series—that is, it becomes evident that the latter series is far the older.

In Nicaragua and Copan, the statues of

FIG. 11. ADORATORIO.

FIG. 12. MAYA RAIN-GOD.

gods were placed at the foot of the pyramid; farther north, as at Palenque, they were placed in temples at the summit. Such differences show a marked change in customs, and must have required much time for their accomplishment. In this time did the picture-writing change? or, indeed, was it ever identical?

To settle the question whether they were

written on the same system, I give here simply the results of an examination of a card-catalogue of hieroglyphs, which I have formed. The practical result of this examination is that similar characters of the Copan and Palenque series may be used interchangeably.

A detailed study of the undoubted synonyms of the two places will throw much light on the manner in which these characters were gradually evolved. This is not the place for such a study, but it is interesting to remark how, even in unmistakable synonyms, the Palenque character is always the most conventional, the least pictorial—that is, the latest. Examples of this are given in Figure 4.

The mask in profile which forms the left-hand edge of the Copan figure seems to have been conventionalized into the two hooks and the ball which have the same place in the other one. The larger of these two was cut on stone, the smaller in stucco. The mask is conventionalized into the ball and hooks, the angular nose ornament into a single ball—easier to make and quite as significant to the Maya priest. But to us the older (Copan) figure is infinitely more significant. The curious rows of little balls which are often placed at the left-hand edge of the various *chiffres* are also conventions for older forms.

The conclusion that the hieroglyphs of the two places were written on the same system will, I think, be found amply justified by any one who will examine the material in the way I have sketched out.

I have now to come to the comparison of a sculpture (Figure 5) which is known to be of Yucatec origin, with statues known to represent Huitzilopochtli, the Mexican god of war, and his trinity (see Figures 6, 7, 8, 9). It is not possible here to give the detailed proof of the identity of the personage represented, but it will suffice to say that I conceive I have established that Figure 5 represents the war-god of Yucatan, who was the same personage as Huitzilopochtli, the war-god of the Aztecs.

In Figure 5, the Yucatec personage has all the symbols of Huitzilopochtli—the sun, the

FIG. 13. TABLET AT PALENQUE (SLIGHTLY REDUCED AT SIDES AND BOTTOM).

winds, the air, the birds, the captive trodden under foot, etc.

The uppermost hieroglyph of those given in this figure also contains the symbols of the sun (a circle), of the air (a cross), etc., and is the name, or part of the name, of the Maya war-god. Other considerations show that the personage of Figure 5 is the same as the one of Figure 10.

Now, in Mexico, Huitzilopochtli was the companion and equal of Tlaloc, the god of waters. Tlaloc was also a Maya god, although Huitzilopochtli has not been considered to have been, I believe. In Mexico, they had their temples together. In Yucatan (Palenque) they also had their temple together (Figure 11), and the personage of Figure 12 is the Maya Tlaloc, a sorcerer, who spits fire, and controlled the winds and waters, whose symbols were the leopard and the snake.

Figure 12 shows this personage with the leopard-skin on his back and bestriding the serpent. It is curious to mark how the snake is covered with the conventional sign for a snake—*i. e.*, the hook for the open jaws and the dots for the rattles.

These two figures stand in front of the Adoratorio in Figure 11, one on each side. The tablet within the building is given in Figure 13, and its similarity to the tablet of the cross, Figure 1, has often been remarked.

One side of each tablet belongs to each of the two companion gods, Huitzilopochtli and Tlaloc, the left side to the first, the right to the other. This has been established in many ways too numerous to detail, but I wish to give a curious confirmation of the theory, only perceived long after the proof was written out.

Sacrifices of human beings were made to both gods, but Tlaloc required at a certain feast that the children offered to him should have two curls of hair growing on their foreheads—so tradition tells us. Now, in Figure 13 the acolytes are offering victims to the central figure. The victim of the left-hand side has no peculiar mark, but the victim of Tlaloc has the two curls of hair plainly marked.

As in this case, so in many others. There are numberless checks on speculation and on conclusions, which must be recognized by the investigator to save him from going hope-

lessly wrong in a symbolism so foreign to modern ideas. But the checks are there, and we must constantly remember that the rules of hieratic art forbade the drawing of an unmeaning line.

With the bases firmly established, it was easy to make at least a few onward steps. The symbols for the names of the Maya gods corresponding to the Aztec Huitzilopochtli and Tlaloc have been selected from the others, and the symbol for the name Cukulcan, or Quetzalcoatl, as before explained.

In this last selection, it will be of interest to see the use to which the dictionary of synonyms in stone (Figures 2 and 3) has been put, as indicating the methods of proof adopted. The question is, does the cross-hatching on the oval in the second symbol of the top row of the right-hand half of the tablet in Figure 1 really mean "serpent"? Can it be proved or disproved? Recurring to Figure 3, we find this cross-hatching on the folds of what might be a serpent, just above the left hand of the statue. In the corresponding place in Figure 2 we find the same folds, which may be those of a serpent, but in the place of the cross-hatching we find the well-known symbols for the *crotalus* tongue and rattles.

The two artists of the two statues have used synonyms, and we learn, definitely, that our guess at the meaning of the cross-hatching was correct. The same method has been used in other cases with like success, and it is capable of many more applications. By it I have already discovered the signs for the names of at least three of the gods of the Maya pantheon, and the purpose of several of the stone tablets and statues has been made plain, as I believe, for the first time. The most important part of the investigation has been the introduction of a scientific method by which proofs of a step are obtainable. I conceive that these researches have an important future, and, in hands abler than my own, that they will lead to a complete deciphering of the Central American inscriptions. This, at least, may be said, that the mystery surrounding them has been removed, by rational processes which appeal to any intelligence, and that we may fairly hope to know somewhat of the Maya mythology, as it was believed and recorded by the Mayas themselves.

A MODERN INSTANCE.*

BY W. D. HOWELLS,

Author of "Venetian Life," "A Chance Acquaintance," "The Undiscovered Country," etc.

I.

THE village stood on a wide plain, and around it rose the mountains. They were green to their tops in summer, and in winter white through their serried pines and drifting mists, but at every season serious and beautiful, furrowed with hollow shadows, and taking the light on masses and stretches of iron-gray crag. The river swam through the plain in long curves, and slipped away at last through an unseen pass to the southward, tracing a score of miles in its course over a space that measured but three or four. The plain was very fertile, and its features, if few and of purely utilitarian beauty, had a rich luxuriance, and there was a tropical riot of vegetation when the sun of July beat on those northern fields. They waved with corn and oats to the feet of the mountains, and the potatoes covered a vast acreage with the lines of their intense, coarse green; the meadows were deep with English grass to the banks of the river, that, doubling and returning upon itself, still marked its way with a dense fringe of alders and white birches.

But winter was full half the year. The snow began at Thanksgiving, and fell snow upon snow till Fast Day, thawing between the storms, and packing harder and harder against the break-up in the spring, when it covered the ground in solid levels three feet high, and lay heaped in drifts, that defied the sun far into May. When it did not snow, the weather was keenly clear and commonly very still. Then the landscape at noon had a stereoscopic glister under the high sun that burned in a heaven without a cloud, and at setting stained the sky and the white waste with freezing pink and violet. On such days the farmers and lumbermen came in to the village stores, and made a stiff and feeble stir about their door-ways, and the school children gave the street a little life and color, as they went to and from the Academy in their red and blue woollens. Four times a day the mill, the shrill wheeze of whose saws had become part of the habitual silence, blew its whistle for the hands to begin and leave off work, in blasts that seemed to shatter themselves against the thin air. But otherwise an arctic quiet prevailed.

Behind the black boles of the elms that swept the vista of the street with the fine gray tracery of their boughs, stood the houses, deep-sunken in the accumulating drifts, through which each householder kept a path cut from his door-way to the road, white and clean as if hewn out of marble. Some cross-streets straggled away east and west with the poorer dwellings; but this, that followed the northward and southward reach of the plain, was the main thoroughfare, and had its own impressiveness, with those square white houses which they build so large in northern New England. They were all kept in scrupulous repair, though here and there the frost and thaw of many winters had heaved a fence out of plumb, and threatened the poise of the monumental urns of painted pine on the gate-posts. They had dark-green blinds, of a color harmonious with that of the funereal evergreens in their door-yards; and they themselves had taken the tone of the snowy landscape, as if by the operation of some such law as blanches the fur-bearing animals of the North. They seemed proper to its desolation, while some houses of more modern taste, painted to a warmer tone, looked, with their mansard roofs and jigsawed piazzas and balconies, intrusive and alien.

At one end of the street stood the Academy, with its classic façade and its belfry; midway was the hotel, with the stores, the printing-office, and the churches, and at the other extreme, one of the square white mansions stood advanced from the rank of the rest, at the top of a deep-plunging valley, defining itself against the mountain beyond so sharply that it seemed as if cut out of its dark, wooded side. It was from the gate before this house, distinct in the pink light which the sunset had left, that, on a Saturday evening in February, a cutter, gay with red-lined robes, dashed away, and came musically clashing down the street under the naked elms. For the women who sat with their work at the windows on either side of the way, hesitating whether to light their lamps, and drawing nearer and nearer to the dead-line of the outer cold for the latest glimmer of the day, the passage of this ill-timed vehicle was a vexation little short of grievous.

Every movement on the street was precious to them, and with all the keenness of their starved curiosity, these captives of the winter could not make out the people in the cutter. Afterward it was a mortification to them that they should not have thought at once of Bartley Hubbard and Marcia Gaylord. They had seen him go up toward Squire Gaylord's house half an hour before, and they now blamed themselves for not reflecting that of course he was going to take Marcia over to the church sociable at Lower Equity. Their identity being established, other little proofs of it reproached the inquirers; but these perturbed spirits were at peace, and the lamps were out in the houses (where the smell of rats in the wainscot and of potatoes in the cellar strengthened with the growing night), when Bartley and Marcia drove back through the moonlit silence to her father's door. Here, too, the windows were all dark, except for the light that sparsely glimmered through the parlor blinds; and the young man slackened the pace of his horse, as if to still the bells, some distance away from the gate.

The girl took the hand he offered her when he dismounted at the gate, and as she jumped from the cutter,

"Wont you come in?" she asked.

"I guess I can blanket my horse and stand him under the wood-shed," answered the young man, going around to the animal's head and leading him away.

When he returned to the door the girl opened it, as if she had been listening for his step; and she now stood holding it ajar for him to enter, and throwing the light upon the threshold from the lamp, which she lifted high in the other hand. The action brought her figure in relief, and revealed the outline of her bust and shoulders, while the lamp flooded with light the face she turned to him, and again averted for a moment, as if startled at some noise behind her. She thus showed a smooth, low forehead, lips and cheeks deeply red, a softly rounded chin touched with a faint dimple, and in turn a nose short and aquiline; her eyes were dark, and her dusky hair flowed crinkling above her fine black brows, and vanished down the curve of a lovely neck. A peculiar charm lay in the form of her upper lip: it was exquisitely arched, and at the corners it projected a little over the lower lip, so that when she smiled it gave a piquant sweetness to her mouth, with a certain demure innocence that qualified the Roman pride of her profile. For the rest, her beauty was of the kind that coming years would only ripen and enrich; at thirty she would be even handsomer than at twenty, and be all the more

southern in her type for the paling of that northern color in her cheeks. The young man who looked up at her from the door-step had a yellow mustache, shadowing either side of his lip with a broad sweep, like a bird's wing; his chin, deep-cut below his mouth, failed to come strenuously forward; his cheeks were filled to an oval contour, and his face had otherwise the regularity common to Americans; his eyes, a clouded gray, heavy-lidded and long-lashed, were his most striking feature, and he gave her beauty a deliberate look from them as he lightly stamped the snow from his feet, and pulled the seal-skin gloves from his long hands.

"Come in," she whispered, coloring with pleasure under his gaze; and she made haste to shut the door after him, with a luxurious impatience of the cold. She led the way into the room from which she had come, and set down the lamp on the corner of the piano, while he slipped off his overcoat and swung it over the end of the sofa. They drew up chairs to the stove, in which the smoldering fire, revived by the opened draft, roared and snapped. It was midnight, as the sharp strokes of a wooden clock declared from the kitchen, and they were alone together, and all the other inmates of the house were asleep. The situation, scarcely conceivable to another civilization, is so common in ours, where youth commands its fate and trusts solely to itself, that it may be said to be characteristic of the New England civilization wherever it keeps its simplicity. It was not stolen or clandestine; it would have interested every one, but would have shocked no one in the village if the whole village had known it; all that a girl's parents ordinarily exacted was that they should not be waked up.

"Ugh!" said the girl. "It seems as if I never should get warm."

She leaned forward, and stretched her hands toward the stove, and he presently rose from the rocking-chair in which he sat, somewhat lower than she, and lifted her sack to throw it over her shoulders. But he put it down and took up his overcoat.

"Allow my coat the pleasure," he said, with the ease of a man who is not too far lost to be really flattering.

"Much obliged to the coat," she replied, shrugging herself into it and pulling the collar close about her throat. "I wonder you didn't put it on the sorrel. You could have tied the sleeves around her neck."

"Shall I tie them around yours?" He leaned forward from the low rocking-chair into which he had sunk again, and made a feint at what he had proposed.

But she drew back with a gay "No!" and

added: "Some day, father says, that sorrel will be the death of us. He says it's a bad color for a horse. They're always ugly, and when they get heated they're crazy."

"You never seem to be very much frightened when you're riding after the sorrel," said Bartley.

"Oh, I've great faith in your driving."

"Thanks. But I don't believe in this notion about a horse being vicious because he's of a certain color. If your father didn't believe in it, I should call it a superstition; but the Squire has no superstitions."

"I don't know about that," said the girl. "I don't think he likes to see the new moon over his left shoulder."

"I beg his pardon, then," returned Bartley. "I ought to have said religions: The Squire has no religions."

The young fellow had a rich, caressing voice, and a securely winning manner which comes from the habit of easily pleasing; in this charming tone, and with this delightful insinuation, he often said things that hurt; but with such a humorous glance from his softly shaded eyes that people felt in some sort flattered at being taken into the joke, even while they winced under it.

The girl seemed to wince, as if, in spite of her familiarity with the fact, it wounded her to have her father's skepticism recognized just then. She said nothing, and he added:

"I remember we used to think that a red-headed boy was worse tempered on account of his hair. But I don't believe the sorrel-tops, as we called them, were any more fiery than the rest of us."

Marcia did not answer at once, and then she said, with the vagueness of one not greatly interested by the subject:

"You've got a sorrel-top in your office that's fiery enough, if she's anything like what she used to be when she went to school."

"Sally Morrison?"

"Yes."

"Oh, she isn't so bad. She's pretty lively, but she's very eager to learn the business, and I guess we shall get along. I think she wants to please me."

"Does she! But she must be going on seventeen now."

"I dare say," answered the young man, carelessly, but with perfect intelligence. "She's good-looking in her way, too."

"Oh! Then you admire red hair?"

He perceived the anxiety that the girl's pride could not keep out of her tone, but he answered, indifferently:

"I'm a little too near that color myself. I hear that red hair's coming into fashion, but I guess it's natural I should prefer black."

She leaned back in her chair, and crushed the velvet collar of his coat under her neck in lifting her head to stare at the high-hung mezzotints and family photographs on the walls, while a flattered smile parted her lips, and there was a little thrill of joy in her voice.

"I presume we must be a good deal behind the age in everything at Equity."

"Well, you know my opinion of Equity," returned the young man. "If I didn't have you here to free my mind to once in a while, I don't know what I should do."

She was so proud to be in the secret of his discontent with the narrow world of Equity that she tempted him to disparage it further by pretending to identify herself with it.

"I don't see why you abuse Equity to me. I've never been anywhere else, except those two winters at school. You'd better look out: I might expose you," she threatened, fondly.

"I'm not afraid. Those two winters make a great difference. You saw girls from other places—from Augusta, and Bangor, and Bath."

"Well, I couldn't see how they were so very different from Equity girls."

"I dare say they couldn't, either, if they judged from you."

She leaned forward again, and begged for more flattery from him with her happy eyes.

"Why, what *does* make me so different from all the rest? I should really like to know."

"Oh, you don't expect me to tell you to your face!"

"Yes, to my face! I don't believe it's anything complimentary."

"No, it's nothing that you deserve any credit for."

"Pshaw!" cried the girl. "I know you're only talking to make fun of me. How do I know but you make fun of me to other girls, just as you do of them to me? Everybody says you're sarcastic."

"Have I ever been sarcastic with you?"

"You know I wouldn't stand it."

He made no reply, but she admired the ease with which he now turned from her, and took one book after another from the table at his elbow, saying some words of ridicule about each. It gave her a still deeper sense of his intellectual command when he finally discriminated, and began to read out a poem with studied elocutionary effects. He read in a low tone, but at last some responsive noises came from the room overhead; he closed the book, and threw himself into an attitude of deprecation, with his eyes cast up to the ceiling.

"Chicago," he said, laying the book on the table, and taking his knee between his hands, while he dazzled her by speaking from the abstraction of one who has carried on a train of thought quite different from that on which he seemed to be intent,—“Chicago is the place for me. I don't think I can stand Equity much longer. You know that chum of mine I told you about; he's written to me to come out there and go into the law with him at once.”

“Why don't you go?” the girl forced herself to ask.

“Oh, I'm not ready yet. Should you write to me if I went to Chicago?”

“I don't think you'd find my letters very interesting. You wouldn't want any news from Equity.”

“Your letters wouldn't be interesting if you gave me the Equity news; but they would if you left it out. Then you'd have to write about yourself.”

“Oh, I don't think that would interest anybody.”

“Well, I feel almost like going out to Chicago to see.”

“But I haven't promised to write yet,” said the girl, laughing for joy in his humor.

“I shall have to stay in Equity till you do, then. Better promise at once.”

“Wouldn't that be too much like marrying a man to get rid of him?”

“I don't think that's always such a bad plan—for the man.”

He waited for her to speak; but she had gone the length of her tether in this direction.

“Byron says:

“‘Man's love is of man's life a thing apart—
'Tis woman's whole existence.’

Do you believe that?” He dwelt upon her with his free look, in the happy embarrassment with which she let her head droop.

“I don't know,” she murmured. “I don't know anything about a man's life.”

“It was the woman's I was asking about.”

“I don't think I'm competent to answer.”

“Well, I'll tell you, then. I think Byron was mistaken. My experience is that when a man is in love, there's nothing else of him. That's the reason I've kept out of it altogether of late years. My advice is, don't fall in love: it takes too much time.” They both laughed at this. “But about corresponding, now; you haven't said whether you would write to me, or not. Will you?”

“Can't you wait and see?” she asked, slanting a look at him, which she could not keep from being fond.

“No, no. Unless you wrote to me I couldn't go to Chicago.”

“Perhaps I ought to promise, then, at once.”

“You mean that you wish me to go.”

“You said that you were going. You oughtn't to let anything stand in the way of your doing the best you can for yourself.”

“But you would miss me a little, wouldn't you? You would try to miss me, now and then?”

“Oh, you are here pretty often. I don't think I should have much difficulty in missing you.”

“Thanks, thanks! I can go with a light heart, now. Good-bye.”

He made a pretense of rising.

“What! Are you going at once?”

“Yes, this very night—or to-morrow. Or no, I can't go to-morrow. There's something I was going to do to-morrow.”

“Perhaps go to church.”

“Oh, that, of course. But it was in the afternoon. Stop! I have it! I want you to go sleigh-riding with me in the afternoon.”

“I don't know about that,” Marcia began.

“But I do,” said the young man. “Hold on: I'll put my request in writing.” He opened her portfolio, which lay on the table.

“What elegant stationery! May I use some of this elegant stationery? The letter is to a lady—to open a correspondence. May I?”

She laughed her assent. “How ought I to begin? Dearest Miss Marcia, or just Dear Marcia: which is better?”

“You had better not put either——”

“But I must. You're one or the other, you know. You're dear,—to your family,—and you're Marcia: you can't deny it. The only question is whether you're the dearest of all the Miss Marcias. I may be mistaken, you know. We'll err on the safe side: Dear Marcia:” He wrote it down. “That looks well, and it reads well. It looks very natural, and it reads like poetry—blank verse; there's no rhyme for it that I can remember. Dear Marcia: Will you go sleigh-riding with me to-morrow afternoon, at two o'clock sharp? Yours—yours? sincerely, or cordially, or affectionately, or what? The ‘dear Marcia’ seems to call for something out of the common. I think it had better be affectionately.” He suggested it with ironical gravity.

“And I think it had better be ‘truly,’” protested the girl.

“‘Truly’ it shall be, then. Your word is law—statute in such case made and provided.” He wrote, “With unutterable devotion, yours truly, Bartley J. Hubbard,” and read it aloud.

She leaned forward, and lightly caught it away from him, and made a feint of tearing it. He seized her hands.

"Mr. Hubbard!" she cried, in under-tone. "Let me go, please."

"On two conditions—promise not to tear up my letter, and promise to answer it in writing."

She hesitated long, letting him hold her wrists. At last she said, "Well," and he released her wrists, on whose whiteness his clasp left red circles. She settled her bracelets over these, and as she tore off a scrap of paper she said:

"Who would think, to see you anywhere else, that you were such a case to carry on?"

"Nobody! That is my secret—my little joke. Respect it; and answer my letter."

She wrote a single word on the paper, and pushed it across the table to him. He rose with it, and went around to her side.

"This is very nice. But you haven't spelled it correctly. Anybody would say this was *No*, to look at it; and you meant to write *Yes*. Take the pencil in your hand, Miss Gaylord, and I will steady your trembling nerves, so that you can form the characters. Stop! At the slightest resistance on your part, I will call out and alarm the house; or I will ——" He put the pencil into her fingers, and took her soft fist into his, and changed the word, while she submitted, helpless with her smothered laughter. "Now the address. Dear ——"

"No, no!" she protested.

"Yes, yes! Dear Mr. Hubbard. There, that will do. Now the signature. Yours——"

"I *wont* write that. I wont, indeed!"

"Oh, yes, you will. You only think you wont. Yours gratefully, Marcia Gaylord. That's right. The Gaylord is not very legible, on account of a slight tremor in the writer's arm, resulting from a constrained posture, perhaps. Thanks, Miss Gaylord. I will be here promptly at the hour indicated ——"

The noises renewed themselves overhead—some one seemed to be moving about. Hubbard laid his hand on that of the girl, still resting on the table, and grasped it in burlesque alarm; she could scarcely stifle her mirth. He released her hand, and reaching his chair with a theatrical stride, sat there cowering till the noises ceased. Then he began to speak soberly, in a low voice. He spoke of himself; but in application of a lecture which they had lately heard, so that he seemed to be speaking of the lecture. It was on the formation of character, and he told of the processes by which he had formed his own character. They appeared very wonderful to her, and she marveled at the ease with which he dismissed the frivolity of his recent mood, and was now all seriousness. When he came to speak of the influence of others

upon him, she almost trembled with the intensity of her interest.

"But of all the women I have known, Marcia," he said, "I believe you have had the strongest influence upon me. I believe you could make me do anything; but you have always influenced me for good; your influence upon me has been ennobling and elevating."

She wished to refuse his praise; but her heart throbbed for bliss and pride in it; her voice dissolved on her lips. They sat in silence; and he took in his the hand that she let hang over the side of her chair.

The lamp began to burn low, and she found words to say, "I had better get another," but she did not move.

"No—don't," he said; "I must be going, too. Look at the wick, there, Marcia; it scarcely reaches the oil. In a little while it will not reach it, and the flame will die out. That is the way the ambition to be good and great will die out of me, when my life no longer draws its inspiration from your influence."

This figure took her imagination; it seemed to her very beautiful; and his praise humbled her more and more.

"Good-night," he said, in a low, sad voice. He gave her hand a last pressure, and rose to put on his coat. Her admiration of his words, her happiness in his flattery, filled her brain like wine. She moved dizzily as she took up the lamp to light him to the door.

"I have tired you," he said, tenderly, and he passed his hand around her to sustain the elbow of the arm with which she held the lamp; she wished to protest against his embrace, but she could not try.

At the door he bent down his head and kissed her. "Good-night, dear—friend."

"Good-night," she panted, and after the door had closed upon him, she stooped and kissed the knob on which his hand had rested.

As she turned, she started to see her father coming down the stairs with a candle in his hand. He had his black cravat tied around his throat, but no collar; otherwise, he had on the rusty black clothes in which he ordinarily went about his affairs: the cassimere pantaloons, the satin vest, and the dress-coat which old-fashioned country lawyers still wore ten years ago, in preference to a frock or sack. He stopped on one of the lower steps, and looked sharply down into her uplifted face, and as they stood confronted, their consanguinity came out in vivid resemblances and contrasts; his high, hawk-like profile was translated into the fine aquiline outline of hers; the harsh rings of black hair, now grizzled with age, which clustered tightly over his head, except where they had retreated from his deeply seamed and wrinkled fore-

head, were the crinkled frow above her smooth white brow; and the line of the bristly tufts that overhung his eyes was the same as that of the low arches above hers. Her complexion was from her mother; his skin was dusky yellow; but they had the same mouth, and hers showed how sweet his mouth must have been in his youth. His eyes, deep sunk in their cavernous sockets, had rekindled their dark fires in hers; his whole visage, softened to her sex and girlish years, looked up at him in his daughter's face.

"Why, father! Did we wake you?"

"No. I hadn't been asleep at all. I was coming down to read. But it's time you were in bed, Marcia."

"Yes, I'm going, now. There's a good fire in the parlor stove."

The old man descended the remaining steps, but turned at the parlor door, and looked again at his daughter with a glance that arrested her, with her foot on the lowest stair.

"Marcia," he asked, grimly, "are you engaged to Bartley Hubbard?"

The blood flashed up from her heart into her face like fire, and then, as suddenly, fell back again, and left her white. She let her head droop and turn, till her eyes were wholly averted from him, and she did not speak. He closed the door behind him, and she went upstairs to her own room; in her shame, she seemed to herself to crawl thither, with her father's glance burning upon her.

II.

BARTLEY HUBBARD drove his sorrel colt back to the hotel stable through the moonlight, and woke up the hostler, asleep behind the counter, on a bunk covered with buffalo-ropes. The half-grown boy did not wake easily; he conceived of the affair as a joke, and bade Bartley quit his fooling, till the young man took him by his collar, and stood him on his feet. Then he fumbled about the button of the lamp, turned low and smelling rankly, and lit his lantern, which contributed a rival stench to the choking air. He kicked together the embers that smoldered on the hearth of the Franklin stove, sitting down before it for his greater convenience, and having put a fresh pine-root on the fire, fell into a doze, with his lantern in his hand. "Look here, young man!" said Bartley, shaking him by the shoulder, "you had better go out and put that colt up, and leave this sleeping before the fire to me."

"Guess the colt can wait awhile," grumbled the boy, but he went out, all the same, and Bartley, looking through the window, saw his lantern wavering, a yellow blot in the white

moonshine, toward the stable. He sat down in the hostler's chair, and, in his turn, kicked the pine-root with the heel of his shoe, and looked about the room. He had had, as he would have said, a grand good time; but it had left him hungry, and the table in the middle of the room, with the chairs huddled around it, was suggestive, though he knew that it had been barrenly put there for the convenience of the landlord's friends, who came every night to play whist with him, and that nothing to eat or drink had ever been set out on it to interrupt the austere interest of the game. It was long since there had been anything on the shelves behind the counter more cheerful than corn-balls and fancy crackers for the children of the summer boarders; these dainties being out of the season, the jars now stood there empty. The young man waited in a hungry reverie, in which it appeared to him that he was undergoing unmerited suffering, till the stable-boy came back, now wide awake, and disposed to let the house share his vigils, as he stamped over the floor in his heavy boots.

"Andy," said Bartley, in a pathetic tone of injury, "can't you scare me up something to eat?"

"There aint anything in the buttery but meat-pie," said the boy.

He meant mince-pie, as Hubbard knew, and not a pasty of meat; and the hungry man hesitated.

"Well, fetch it," he said, finally. "I guess we can warm it up a little by the coals here."

He had not been so long out of college but the idea of this irregular supper, when he had once formed it, began to have its fascination. He took up the broad fire-shovel, and, by the time the boy had shuffled to and from the pantry beyond the dining-room, Bartley had cleaned the shovel with a piece of newspaper, and was already heating it by the embers which he had raked out from under the pine-root. The boy silently transferred the half-pie he had brought from its plate to the shovel. He pulled up a chair and sat down to watch it. The pie began to steam and send out a savory odor; he himself, in thawing, emitted a stronger and stronger smell of stable. He was not without his disdain for the palate which must have its mince-pie warm at midnight—nor without his respect for it, either. This fastidious taste must be part of the splendor which showed itself in Mr. Hubbard's city-cut clothes, and in his neck-scarfs and the perfection of his finger-nails and mustache. The boy had felt the original impression of these facts deepened rather than effaced by custom; they were for every day, and not, as he had at first conjectured, for some great occasion only.

"You don't suppose, Andy, there is such a thing as cold tea or coffee anywhere, that we could warm up?" asked Bartley, gazing thoughtfully at the pie.

The boy shook his head.

"Get you some milk," he said; and, after he had let the dispiriting suggestion sink into the other's mind, he added, "or some water."

"Oh, bring on the milk," groaned Bartley, but with the relief that a choice of evils affords.

The boy stumped away for it, and when he came back the young man had got his pie on the plate again and had drawn his chair up to the table. "Thanks," he said, with his mouth full, as the boy set down the goblet of milk. Andy pulled his chair round so as to get an unrestricted view of a man who ate his pie with his fork as easily as another would with a knife. "That sister of yours is a smart girl," the young man added, making deliberate progress with the pie.

The boy made an inarticulate sound of satisfaction, and resolved in his heart to tell her what Mr. Hubbard had said.

"She's as smart as time," continued Bartley.

This was something concrete. The boy knew he should remember that comparison.

"Bring you anything else?" he asked, admiring the young man's skill in getting the last flakes of the crust on his fork. The pie had now vanished.

"Why, there isn't anything else; is there?" Bartley demanded, with the plaintive dismay of a man who fears he has flung away his hunger upon one dish when he might have had something better.

"Cheese," replied the boy.

"Oh!" said Bartley. He reflected awhile. "I suppose I could toast a piece on this fork. But there isn't any more milk."

The boy took away the plate and goblet, and brought them again replenished.

Bartley contrived to get the cheese on his fork and rest it against one of the andirons so that it would not fall into the ashes. When it was done, he ate it as he had eaten the pie, without offering to share his feast with the boy.

"There!" he said. "Yes, Andy, if she keeps on as she's been doing, she won't have any trouble. She's a bright girl."

He stretched his legs before the fire again, and presently yawned.

"Want your lamp, Mr. Hubbard?" asked the boy.

"Well, yes, Andy," the young man consented. "I suppose I may as well go to bed."

But, when the boy brought his lamp, he still remained with outstretched legs in front

of the fire. Speaking of Sally Morrison made him think of Marcia again, and of the way in which she had spoken of the girl. He lolled his head on one side in such comfort as a young man finds in the conviction that a pretty girl is not only fond of him, but is instantly jealous of any other girl whose name is mentioned. He smiled at the flame in his reverie, and the boy examined, with clandestine minuteness, the set and pattern of his trousers, with glances of reference and comparison to his own.

There were many things about his relations with Marcia Gaylord which were calculated to give Bartley satisfaction. She was, without question, the prettiest girl in the place, and she had more style than any other girl began to have. He liked to go into a room with Marcia Gaylord; it was some pleasure. Marcia was a lady; she had a good education; she had been away two years at school; and, when she came back at the end of the second winter, he knew that she had fallen in love with him at sight. He believed that he could time it to a second. He remembered how he had looked up at her as he passed, and she had reddened and tried to turn away from the window as if she had not seen him. Bartley was still free as air; but if he could once make up his mind to settle down in a hole like Equity, he could have her by turning his hand. Of course she had her drawbacks, like everybody. She was proud, and she would be jealous; but, with all her pride and her distance, she had let him kiss her; and with not a word on his part that any one could hold him to.

"Hullo!" he cried, with a suddenness that startled the boy, who had finished his meditation upon Bartley's trousers, and was now deeply dwelling on his boots. "Do you like 'em? See what sort of a shine you can give 'em for Sunday-go-to-meeting to-morrow morning." He put out his hand and laid hold of the boy's head, passing his fingers through the thick red hair. "Sorrel-top!" he said, with a grin of agreeable reminiscence. "They emptied all the freckles they had left into your face—didn't they, Andy?"

This free, joking way of Bartley's was one of the things that made him popular; he passed the time of day, and was give and take right along, as his admirers expressed it, from the first, in a community where his smartness had that honor which gives us more smart men to the square mile than any other country in the world. The fact of his smartness had been affirmed and established in the strongest manner by the authorities of the college at which he was graduated, in answer to the reference he made to them when negotiating with the

committee in charge for the place he now held as editor of the Equity "Free Press." The faculty spoke of the solidity and variety of his acquirements, and the distinction with which he had acquitted himself in every branch of study he had undertaken. They added that he deserved the greater credit because his early disadvantages as an orphan, dependent on his own exertions for a livelihood, had been so great that he had entered college with difficulty and with heavy conditions. This turned the scale with a committee who had all been poor boys themselves, and justly feared the encroachments of hereditary aristocracy. They perhaps had their misgivings when the young man, in his well-blackened boots, his gray trowsers neatly fitting over them, and his diagonal coat buttoned high with one button, stood before them with his thumbs in his waistcoat pockets, and looked down over his mustache at the floor with sentiments concerning their wisdom which they could not explore; they must have resented the fashionable keeping of everything about him, for Bartley wore his one suit as if it were but one of many; but when they understood that he had come by everything through his own unaided smartness, they could no longer hesitate. One, indeed, still felt it a duty to call attention to the fact that the college authorities said nothing of the young man's moral characteristics in a letter dwelling so largely upon his intellectual qualifications. The others referred this point by a silent look to Squire Gaylord.

"I don't know," said the Squire, "as I ever heard that a great deal of morality was required by a newspaper editor." The rest laughed at the joke, and the Squire continued: "But I guess if he worked his own way through college, as they say, that he haint had time to be up to a great deal of mischief. You know it's for idle hands that the devil provides, doctor."

"That's true, as far as it goes," said the doctor. "But it isn't the whole truth. The devil provides for some busy hands, too."

"There's a good deal of sense in that," the Squire admitted. "The worst scamps I ever knew were active fellows. Still, industry is in a man's favor. If the faculty knew anything against this young man they would have given us a hint of it. I guess we had better take him; we sha'n't do better. Is it a vote?"

The good opinion of Bartley's smartness which Squire Gaylord had formed was confirmed some months later by the development of the fact that the young man did not regard his management of the Equity "Free Press" as a final vocation. The story went that he lounged into the lawyer's office one Saturday afternoon in October, and asked him to let him take his

Blackstone into the woods with him. He came back with it a few hours later.

"Well, sir," said the attorney, sardonically, "how much Blackstone have you read?"

"About forty pages," answered the young man, dropping into one of the empty chairs, and hanging his leg over the arm.

The lawyer smiled, and opening the book, asked half a dozen questions at random. Bartley answered without changing his indifferent countenance, or the careless posture he had fallen into. A sharper and longer examination followed; the very language seemed to have been unbrokenly transferred to his mind, and he often gave the author's words as well as his ideas.

"Ever looked at this before?" asked the lawyer, with a keen glance at him over his spectacles.

"No," said Bartley, gaping as if bored, and further relieving his weariness by stretching. He was without deference for any presence; and the old lawyer did not dislike him for this: he had no deference himself.

"You think of studying law?" he asked, after a pause.

"That's what I came to ask you about," said Bartley, swinging his leg.

The elder recurred to his book, and put some more questions. Then he said:

"Do you want to study with me?"

"That's about the size of it."

He shut the book, and pushed it on the table toward the young man.

"Go ahead. You'll get along—if you don't get along too easily."

It was in the spring after this that Marcia returned home from her last term at boarding-school, and first saw him.

III.

BARTLEY woke on Sunday morning with the regrets that a supper of mince-pie and toasted cheese is apt to bring. He woke from a bad dream, and found that he had a dull headache. A cup of coffee relieved his pain, but it left him listless, and with a longing for sympathy which he experienced in any mental or physical discomfort. The frankness with which he then appealed for compassion was one of the things that made people like him; he flung himself upon the pity of the first he met. It might be some one to whom he had said a cutting or mortifying thing at their last encounter, but Bartley did not mind that; what he desired was commiseration, and he confidently ignored the past in a trust that had rarely been abused. If his sarcasm proved that he was quick

and smart, his recourse to those who had suffered from it proved that he did not mean anything by what he said; it showed that he was a man of warm feelings and that his heart was in the right place.

Bartley deplored his disagreeable sensations to the other boarders at breakfast, and affectionately excused himself to them for not going to church, when they turned into the office, and gathered there before the Franklin stove, sensible of the day in freshly shaven chins and newly blacked boots. The habit of church-going was so strong and universal in Equity that even strangers stopping at the hotel found themselves the object of a sort of hospitable competition with the members of the different denominations, who took it for granted that they would wish to go somewhere, and only suffered them a choice between sects. There was no intolerance in their offer of pews, but merely a profound expectation, and one might continue to choose his place of worship Sabbath after Sabbath without offense. This was Bartley's custom, and it had worked to his favor rather than his disadvantage; for in the rather chaotic liberality into which religious sentiment had fallen in Equity, it was tacitly conceded that the editor of a paper devoted to the interests of the whole town ought not to be of fixed theological opinions.

Religion there had largely ceased to be a fact of spiritual experience, and the visible church flourished on condition of providing for the social needs of the community. It was practically held that the salvation of one's soul must not be made too depressing, or the young people would have nothing to do with it. Professors of the sternest creeds temporized with sinners, and did what might be done to win them to heaven by helping them to have a good time here. The church embraced and included the world. It no longer frowned even upon social dancing—a transgression once so heinous in its eyes; it opened its doors to popular lectures, and encouraged secular music in its basements, where, during the winter, oyster-suppers were given in aid of good objects. The Sunday-school was made particularly attractive, both to the children and the young men and girls who taught them. Not only at Thanksgiving, but at Christmas, and latterly even at Easter, there were special observances, which the enterprising spirits having the welfare of the church at heart tried to make significant and agreeable to all, and promotive of good feeling. Christenings and marriages in the church were encouraged, and elaborately celebrated; death alone, though treated with cut-flowers in emblematic devices, refused to lend itself to the

cheerful intentions of those who were struggling to render the idea of another and a better world less repulsive. In contrast with the relaxation and uncertainty of their doctrinal aim, the rude and bold infidelity of old Squire Gaylord had the greater affinity with the mood of the Puritanism they had outgrown. But Bartley Hubbard liked the religious situation well enough. He took a leading part in the entertainments, and did something to impart to them a literary cast, as in the series of readings from the poets which he gave, the first winter, for the benefit of each church in turn. At these lectures he commended himself to the sober elders, who were troubled by the levity of his behavior with young people on other occasions, by asking one of the ministers to open the exercises with prayer, and another, at the close, to invoke the divine blessing; there was no especial relevancy in this, but it pleased. He kept himself, from the beginning, pretty constantly in the popular eye. He was a speaker at all public meetings, where his declamation was admired, and at private parties, where the congealed particles of village society were united in a frozen mass, he was the first to break the ice, and set the angular fragments grating and grinding upon one another.

He now went to his room, and opened his desk, with some vague purposes of bringing up the arrears of his correspondence. Formerly, before his interest in the newspaper had lapsed at all, he used to give his Sunday leisure to making selections and writing paragraphs for it; but he now let the pile of exchanges lie unopened on his desk, and began to rummage through the letters scattered about in it. They were mostly from young ladies with whom he had corresponded, and some of them inclosed the photographs of the writers, doing their best to look as they hoped he might think they looked. They were not love-letters, but were of that sort which the laxness of our social life invites young people, who have met pleasantly, to exchange as long as they like, without explicit intentions on either side; they commit the writers to nothing; they are commonly without result, except in wasting time which is hardly worth saving. Every one who has lived the American life must have produced them in great numbers. While youth lasts, they afford an excitement whose charm is hard to realize afterward.

Bartley's correspondents were young ladies of his college town, where he had first begun to see something of social life in days which he now recognized as those of his green youth. They were not so very far removed in point of time; but the experience of a larger world

in the vacation he had spent with a Boston student had relegated them to a moral remoteness that could not readily be measured. His friend was the son of a family who had diverted him from the natural destiny of a Boston man at Harvard, and sent him elsewhere for sectarian reasons. They were rich people, devout in their way, and benevolent, after a fashion of their own; and their son always brought home with him, for the holidays and other short vacations, some fellow-student accounted worthy of their hospitality through his religious intentions or his intellectual promise. These guests were indicated to the young man by one of the faculty, and he accepted their companionship for the time with what perfunctory civility he could muster. He and Bartley had amused themselves very well during that vacation. The Hallecks were not fashionable people, but they lived wealthily: they had a coachman and an inside man (whom Bartley at first treated with a consideration which it afterward mortified him to think of); their house was richly furnished with cushioned seats, dense carpets, and heavy curtains; and they were visited by other people of their denomination and of a like abundance. Some of these were infected with the prevailing culture of the city, and the young ladies especially dressed in a style and let fall ideas that filled the soul of the country student with wonder and worship. He heard a great deal of talk that he did not understand; but he eagerly treasured every impression, and pieced it out, by question or furtive observation, into an image often shrewdly true, and often grotesquely untrue, to the conditions into which he had been dropped. He civilized himself as rapidly as his light permitted. There was a great deal of church-going; but he and young Halleck went also to lectures and concerts; they even went to the opera, and Bartley, with the privacy of his friend, went to the theater. Halleck said that he did not think there was much harm in a play; but that his people staid away for the sake of the example—a reason that certainly need not hold with Bartley.

At the end of the vacation he returned to college, leaving his measure with Halleck's tailor, and his heart with all the splendors and elegancies of the town. He found the ceilings very low and the fashions much belated in the village; but he reconciled himself as well as he could. The real stress came when he left college and the question of doing something for himself pressed upon him. He intended to study law, but he must meantime earn his living. It had been his fortune to be left, when very young, not only an orphan, but an extremely pretty child, with an exceptional

aptness for study; and he had been better cared for than if his father and mother had lived. He had been not only well housed and fed, and very well dressed, but pitied as an orphan, and petted for his beauty and talent, while he was always taught to think of himself as a poor boy, who was winning his own way through the world. But when his benefactor proposed to educate him for the ministry, with a view to his final use in missionary work, he revolted. He apprenticed himself to the printer of his village, and rapidly picked up a knowledge of the business, so that at nineteen he had laid by some money, and was able to think of going to college. There was a fund in aid of indigent students in the institution to which he turned, and the faculty favored him. He finished his course with great credit to himself and the college, and he was naturally inclined to look upon what had been done for him earlier as an advantage taken of his youthful inexperience. He rebelled against the memory of that tutelage, in spite of which he had accomplished such great things. If he had not squandered his time or fallen into vicious courses in circumstances of so much discouragement; if he had come out of it all self-reliant and independent, he knew whom he had to thank for it. The worst of the matter was that there was some truth in all this.

The ardor of his satisfaction cooled in the two years following his graduation, when in intervals of teaching country schools he was actually reduced to work at his trade on a village newspaper. But it was as a practical printer, through the freemasonry of the craft, that Bartley heard of the wish of the Equity committee to place the "Free Press" in new hands, and he had to be grateful to his trade for a primary consideration from them which his collegiate honors would not have won him. There had not yet begun to be that talk of journalism as a profession which has since prevailed with our collegians, and if Bartley had thought, as other collegians think, of devoting himself to newspaper life, he would have turned his face toward the city where its prizes are won—the ten and fifteen dollar reporterships for which a four years' course of the classics is not too costly a preparation. But, to tell the truth, he had never regarded his newspaper as anything but a make-shift, by which he was to be carried over a difficult and anxious period of his life, and enabled to attempt something worthier his powers. He had no illusions concerning it; if he had ever thought of journalism as a grand and ennobling profession, these ideas had perished in his experience in a village printing-office. He came to his work in Equity with practical and immediate purposes which pleased the committee

better. The paper had been established some time before, in one of those flurries of ambition which from time to time seized Equity, when its citizens reflected that it was the central town in the county, and yet not the shire-town. The question of the removal of the county-seat had periodically arisen before; but it had never been so hotly agitated as now. The paper had been a happy thought of a local politician, whose conception of its management was that it might be easily edited by a committee, if a printer could be found to publish it; but a few months' experience had made the "Free Press" a terrible burden to its founders; it could not be sustained, and it could not be let die without final disaster to the interests of the town; and the committee began to cast about for a publisher who could also be editor. Bartley, to whom it fell, could not be said to have thrown his heart and soul into the work, but he threw all his energy, and he made it more than its friends could have hoped. He espoused the cause of Equity in the pending question with the zeal of a *condottiere*, and did service no less faithful because of the cynical quality latent in it. When the legislative decision against Equity put an end to its ambitious hopes for the time being, he continued in control of the paper, with a fair prospect of getting the property into his own hands at last, and with some growing question in his mind whether, after all, it might not be as easy for him to go into politics from the newspaper as from the law. He managed the office very economically, and by having the work done by girl apprentices, with the help of one boy, he made it self-supporting. He modeled the newspaper upon the modern conception, through which the country press must cease to have any influence in public affairs, and each paper become little more than an open letter of neighborhood gossip. But while he filled his sheet with minute chronicles of the goings and comings of unimportant persons, and with all attainable particulars of the ordinary life of the different localities, he continued to make spicy hits at the enemies of Equity in the late struggle, and kept the public spirit of the town alive. He had lately undertaken to make known its advantages as a summer resort, and had published a series of encomiums upon the beauty of its scenery and the healthfulness of its air and water, which it was believed would put it in a position of rivalry with some of the famous White Mountain places. He invited the enterprise of outside capital, and advocated a narrow-gauge road up the valley of the river through the Notch, so as to develop the picturesque

advantages of that region. In all this the color of mockery let the wise perceive that Bartley saw the joke and enjoyed it, and it deepened the popular impression of his smartness.

This vein of cynicism was not characteristic, as it would have been in an older man; it might have been part of that spiritual and intellectual unruliness of youth, which people laugh at and forgive, and which one generally regards in after life as something almost alien to oneself. He wrote long, bragging articles about Equity, in a tone bordering on burlesque, and he had a department in his paper where he printed humorous squibs of his own and of other people; these were sometimes copied, and in the daily papers of the State he had been mentioned as "the funny man of the Equity 'Free Press.'" He also sent letters to one of the Boston journals, which he reproduced in his own sheet, and which gave him an importance that the best endeavor as a country editor would never have won him with the villagers. He would naturally, as the local printer, have ranked a little above the foreman of the saw-mill in the social scale, and decidedly below the master of the Academy; but his personal qualities elevated him over the head even of the latter. But above all, the fact that he was studying law was a guaranty of his superiority that nothing else could have given; that science is the fountain of the highest distinction in a country town. Bartley's whole course implied that he was above editing the "Free Press," but that he did it because it served his turn. That was admirable.

He sat a long time with these girls' letters before him, and lost himself in a pensive reverie over their photographs, and over the good times he used to have with them. He mused in that formless way in which a young man thinks about young girls; his soul is suffused with a sense of their sweetness and brightness, and unless he is distinctly in love there is no intention in his thoughts of them; even then there is often no intention. Bartley might very well have a good conscience about them; he had broken no hearts among them, and had only met them half-way in flirtation. What he really regretted, as he held their letters in his hand, was that he had never got up a correspondence with two or three of the girls whom he had met in Boston. Though he had been cowed by their magnificence in the beginning, he had never had any reverence for them; he believed that they would have liked very well to continue his acquaintance; but he had not known how to open a correspondence, and the point was

one on which he was ashamed to consult Halleck. These college-belles, compared with them, were amusingly inferior; by a natural turn of thought, he realized that they were inferior to Marcia Gaylord, too, in looks and style, no less than in an impassioned preference for himself. A distaste for their somewhat veteran ways in flirtation grew upon him as he thought of her; he philosophized against them to her advantage; he could not blame her if she did not know how to hide her feelings for him. His college training had been purely intellectual; it left his manners and morals untouched, and it seemed not to have concerned itself with his diction or accent; so far as his thoughts took shape in words, he thought slangily; and he now reflected that no girl had ever "gone for him" so before; yet he knew that Marcia was the right sort, and would rather have died than let him suppose that she cared for him, if she had known that she was doing it. The fun of it was, that she should not know; this charmed him, it touched him, even; he did not think of it exultantly, as the night before, but sweetly, fondly, and with a final curiosity to see her again, and enjoy the fact in her presence. The acrid little jets of smoke which escaped from the joints of his stove from time to time annoyed him; he shut his portfolio at last and went out to walk.

IV.

THE forenoon sunshine, beating strong upon the thin snow along the edges of the porch floor, tattered them with a little thaw here and there; but it had no effect upon the hard-packed levels of the street, up the middle of which he walked in a silence intensified by the muffled voices of exhortation that came to him out of the churches. It was in the very heart of sermon-time, and he had the whole street to himself on his way up to Squire Gaylord's house. As he drew near, he saw smoke ascending from the chimney of the lawyer's office—a little white building that stood apart from the dwelling on the left of the gate, and he knew that the old man was within, reading there, with his hat on and his long legs flung out toward the stove, unshaven and unkempt, in a grim protest against the prevalent Christian superstition. He might be reading Hume or Gibbon, or he might be reading the Bible—a book in which he was deeply versed, and from which he was furnished with texts for the demolition of its friends, his adversaries. He professed himself a great admirer of its literature, and, in the heat of controversy, he often found himself a defender of its doctrines when he had occa-

sion to expose the fallacy of latitudinarian interpretations. For liberal Christianity he had nothing but contempt, and refuted it with a scorn which spared none of the worldly tendencies of the church in Equity. The idea that souls were to be saved by church sociables filled him with inappeasable rancor; and he maintained the superiority of the old Puritanic discipline against them with a fervor which nothing but its reestablishment could have abated. It was said that Squire Gaylord's influence had largely helped to keep in place the last of the rigidly orthodox ministers, under whom his liberalizing congregation chafed for years of discontent; but this was probably an exaggeration of the native humor. Mrs. Gaylord had belonged to this church, and had never formally withdrawn from it, and the lawyer always contributed to pay the minister's salary. He also managed a little property for him so well as to make him independent when he was at last asked to resign by his deacons.

In another mood, Bartley might have stepped aside to look in on the Squire, before asking at the house-door for Marcia. They relished each other's company, as people of contrary opinions and of no opinions are apt to do. Bartley loved to hear the Squire get going, as he said, and the old man felt a fascination in the youngster. Bartley was smart; he took a point as quick as lightning; and the Squire did not mind his making friends with the Mammon of Righteousness, as he called the visible church in Equity. It amused him to see Bartley lending the church the zealous support of the press, with an impartial patronage of the different creeds. There had been times in his own career when the silence of his opinions would have greatly advanced him, but he had not chosen to pay this price for success; he liked his freedom, or he liked the bitter tang of his own tongue too well, and he had remained a leading lawyer in Equity, when he might have ended a judge, or even a Congressman. Of late years, however, since people whom he could have joined in their agnosticism so heartily, up to a certain point, had begun to make such fools of themselves about Darwinism and the brotherhood of all men in the monkey, he had grown much more tolerant. He still clung to his old-fashioned deistical opinions; but he thought no worse of a man for not holding them; he did not deny that a man might be a Christian, and still be a very good man.

The audacious humor of his position sufficed with a people who liked a joke rather better than anything else; in his old age, his infidelity was something that would hardly have been changed, if possible, by a popular vote.

Even his wife, to whom it had once been a heavy cross, borne with secret prayer and tears, had long ceased to gainsay it in any wise. Her family had opposed her yoking with an unbeliever when she married him, but she had some such hopes of converting him as women cherish who give themselves to men confirmed in drunkenness. She learned, as other women do, that she could hardly change her husband in the least of his habits, and that, in this great matter of his unbelief, her love was powerless. It became easier at last for her to add self-sacrifice to self-sacrifice than to vex him with her anxieties about his soul, and to act upon the feeling that if he must be lost, then she did not care to be saved. He had never interfered with her church-going; he had rather promoted it, for he liked to have women go; but the time came when she no longer cared to go without him; she lapsed from her membership, and it was now many years since she had worshiped with the people of her faith, if, indeed, she were still of any faith. Her life was silenced in every way, and, as often happens with aging wives in country towns, she seldom went out of her own door, and never appeared at the social or public solemnities of the village. Her husband and her daughter composed and bounded her world,—she always talked of them, or of other things as related to them. She had grown an elderly woman, without losing the color of her yellow hair; and the bloom of girlhood had been staid in her cheeks as if by the young habit of blushing, which she had kept. She was still what her neighbors called very pretty-appearing, and she must have been a beautiful girl. The silence of her inward life subdued her manner, till now she seemed always to have come from some place on which a deep hush had newly fallen.

She answered the door when Bartley turned the crank that snapped the gong-bell in its center; and the young man, who was looking at the street while waiting for some one to come, confronted her with a start.

"Oh!" he said, "I thought it was Marcia. Good-morning, Mrs. Gaylord. Isn't Marcia at home?"

"She went to church, this morning," replied her mother. "Wont you walk in?"

"Why, yes, I guess I will, thank you," faltered Bartley, in the irresolution of his disappointment. "I hope I sha'n't disturb you."

"Come right into the sitting-room. She wont be gone a great while, now," said Mrs. Gaylord, leading the way to the large square room into which a door at the end of the narrow hall opened. A slumbrous heat from a sheet-iron wood-stove pervaded the place,

and a clock ticked monotonously on a shelf in the corner. Mrs. Gaylord said, "Wont you take a chair?" and herself sank into the rocker, with a deep feather cushion in the seat, and a thinner feather cushion tied half-way up the back. After the more active duties of her housekeeping were done, she sat every day in this chair with her knitting or sewing, and let the clock tick the long hours of her life away, with no more apparent impatience of them, or sense of their dullness, than the cat on the braided rug at her feet, or the geraniums in the pots at the sunny window.

"Are you pretty well to-day?" she asked.

"Well, no, Mrs. Gaylord, I'm not," answered Bartley. "I'm all out of sorts. I haven't felt so dyspeptic for I don't know how long."

Mrs. Gaylord smoothed the silk dress across her lap—the thin old black silk which she still instinctively put on for Sabbath observance, though it was so long since she had worn it to church.

"Mr. Gaylord used to have it when we were first married, though he aint been troubled with it of late years. He seemed to think, then, it was worse Sundays."

"I don't believe Sunday has much to do with it, in my case. I ate some mince-pie and some toasted cheese, last night, and I guess they didn't agree with me very well," said Bartley, who did not spare himself the confession of his sins when seeking sympathy: it was this candor that went so far to convince people of his good-heartedness.

"I don't know as I ever heard that meat-pie was bad," said Mrs. Gaylord, thoughtfully. "Mr. Gaylord used to eat it right along all through his dyspepsia, and he never complained of it. And the cheese ought to have made it digest."

"Well, I don't know what it was," replied Bartley, plaintively submitting to be exonerated, "but I feel perfectly used up. Oh, I suppose I shall get over it, or forget all about it, by to-morrow," he added, with strenuous cheerfulness. "It isn't anything worth minding."

Mrs. Gaylord seemed to differ with him on this point.

"Head ache any?" she asked.

"It did this morning, when I first woke up," Bartley assented.

"I don't believe but what a cup of tea would be the best thing for you," she said, critically.

Bartley had instinctively practiced a social art which ingratiated him with people at Equity as much as his demands for sympathy endeared him: he gave trouble in little unusual ways. He now said:

"Oh, I wish you would give me a cup, Mrs. Gaylord."

"Why, yes, indeed! That's just what I was going to," she replied. She went to the kitchen, which lay beyond another room, and re-appeared with the tea directly, proud of her promptness, but having it on her conscience to explain it. "I 'most always keep the pot on the stove hearth, Sunday morning, so's to have ready if Mr. Gaylord ever wants a cup. He's a master hand for tea, and always was. There: I guess you better take it without milk. I put some sugar in the saucer, if you want any." She dropped noiselessly upon her feather cushion again, and Bartley, who had risen to receive the tea from her, remained standing while he drank it.

"That does seem to go to the spot," he said, as he sipped it, thoughtfully observant of its effect upon his disagreeable feelings. "I wish I had you to take care of me, Mrs. Gaylord, and keep me from making a fool of myself," he added, when he had drained the cup. "No, no!" he cried, at her offering to take it from him. "I'll set it down. I know it will fret you to have it in here, and I'll carry it out into the kitchen." He did so before she could prevent him, and came back, touching his mustache with his handkerchief. "I declare, Mrs. Gaylord, I should love to live in a kitchen like that!"

"I guess you wouldn't if you had to," said Mrs. Gaylord, flattered into a smile. "Marcia, she likes to sit out there, she says, better than anywhere in the house. But I always tell her it's because she was there so much when she was little. I don't see as she seems over-anxious to do anything there *but* sit, I tell her. Not but what she knows how well enough. Mr. Gaylord, too, he's great for being 'round in the kitchen. If he gets up in the night, when he has his waking spells, he had rather take his lamp out there, if there's a fire left, and read, any time, than what he would in the parlor. Well, we used to sit there together a good deal when we were young, and he got the habit of it. There's everything in habit," she added, thoughtfully. "Marcia, she's got quite in the way, lately, of going to the Methodist church."

"Yes, I've seen her there. You know I board 'round at the different churches, as the school-master used to at the houses in the old times."

Mrs. Gaylord looked up at the clock, and gave a little nervous laugh.

"I don't know what Marcia will say to my letting her company stay in the sitting-room. She's pretty late to-day. But I guess you won't have much longer to wait, now."

She spoke with that awe of her daughter

and her judgments which is one of the pathetic idiosyncrasies of a certain class of American mothers. They feel themselves to be not so well educated as their daughters, whose fancied knowledge of the world they let outweigh their own experience of life; they are used to deferring to them, and they shrink willingly into household drudges before them, and leave them to order the social affairs of the family. Mrs. Gaylord was not much afraid of Bartley for himself, but as Marcia's company he made her more and more uneasy toward the end of the quarter of an hour in which she tried to entertain him with her simple talk, varying from Mr. Gaylord to Marcia, and from Marcia to Mr. Gaylord again. When she recognized the girl's quick touch in the closing of the front door, and her elastic step approached through the hall, the mother made a little deprecating noise in her throat, and fidgeted in her chair. As soon as Marcia opened the sitting-room door, Mrs. Gaylord modestly rose and went out into the kitchen: the mother who remained in the room when her daughter had company was an oddity almost unknown in Equity.

Marcia's face flashed all into a light of joy at sight of Bartley, who scarcely waited for her mother to be gone before he drew her toward him by the hand she had given. She mechanically yielded, and then, as if the recollection of some new resolution forced itself through her pleasure at sight of him, she freed her hand, and, retreating a step or two, confronted him.

"Why, Marcia," he said, "what's the matter?"

"Nothing," she answered.

It might have amused Bartley, if he had felt quite well, to see the girl so defiant of him, when she was really so much in love with him, but it certainly did not amuse him now: it disappointed him in his expectation of finding her femininely soft and comforting, and he did not know just what to do. He stood staring at her in discomfiture, while she gained in outward composure, though her cheeks were of the Jacqueminot red of the ribbon at her throat.

"What have I done, Marcia?" he faltered.

"Oh, you haven't done anything."

"Some one has been talking to you against me."

"No one has said a word to me about you."

"Then why are you so cold—so strange—so—so—different?"

"Different?"

"Yes, from what you were last night," he answered, with an aggrieved air.

"Oh, we see some things differently by day—

light," she lightly explained. "Wont you sit down?"

"No, thank you," Bartley replied, sadly but unresentfully. "I think I had better be going. I see there is something wrong——"

"I don't see why you say there is anything wrong," she retorted. "What have I done?"

"Oh, you have not *done* anything; I take it back. It is all right. But when I came here this morning—encouraged—hoping—that you had the same feeling as myself, and you seem to forget everything but a ceremonious acquaintanceship—why it is all right, of course. I have no reason to complain; but I must say that I can't help being surprised." He saw her lips quiver and, her bosom heave. "Marcia, do you blame me for feeling hurt at your coldness when I came here to tell you—to tell you I—I love you?" With his nerves all unstrung, and his hunger for sympathy, he really believed that he had come to tell her this. "Yes," he added, bitterly, "I *will* tell you, though it seems to be the last word I shall speak to you. I'll go, now."

"Bartley! You shall *never* go!" she cried, throwing herself in his way. "Do you think I don't care for you, too? You may kiss me—you may *kill* me, now!" The passionate tears sprang to her eyes, without the sound of sobs or the contortion of weeping, and she did not wait for his embrace. She flung her arms around his neck and held him fast, crying: "I wouldn't kiss you for your own sake, darling; and if I had died for it—I thought I should die last night—I was never going to let you put your arm around me again till you said—till—till—now! Don't you see?" She caught him tighter, and hid her face in his neck, and cried and laughed for joy and shame, while he suffered her caresses with a certain bewilderment. "I want to tell you now—I want to explain," she said, lifting her face and letting him from her as far as her arms, caught around his neck, would reach, and feverishly searching his eyes, lest some ray of what he would think should escape her. "Don't speak a word first! Father saw us at the door last night—he happened to be coming downstairs, because he couldn't sleep—just when you——. Oh, Bartley, don't!" she implored, at the little smile that made his mustache quiver. "And he asked me whether we were engaged; and, when I couldn't tell him we were, I know what he thought. I knew how he despised me, and I determined that, if you didn't tell me that you cared for me, you should never touch me again, except to shake hands, like any one else; and that's the reason, Bartley, and not—not because I didn't care more for you than I do for the

whole world. And—and—you don't mind it, now, do you? It was for your sake, dearest."

Whether Bartley perfectly divined or not all the feeling at which her words hinted, it was delicious to be clung about by such a pretty girl as Marcia Gaylord, to have her now darting her face into his neck-scarf with intolerable consciousness, and now boldly confronting him with all-defying fondness while she lightly pushed him and pulled him here and there in the vehemence of her appeal; and Bartley laughed as he caught her head between his hands, and covered her lips and eyes with his kisses. Perhaps such a man, in those fastnesses of his nature which psychology has not yet explored, never loses, even in the tenderest transports, the sense of prey as to the girl whose love he has won; but if this is certain, it is also certain that he has transports which are tender, and Bartley now felt his soul melted with affection that was very novel and sweet.

"Why, Marcia!" he said, "what a strange girl you are!" He sunk into his chair again, and, putting his arms around her waist, gathered her upon his knee, like a child.

She held herself apart from him at her arm's length, and said:

"Wait! Let me say it before it seems as if we had always been engaged, and everything was as right then as it is now. Did you despise me for letting you kiss me before we were engaged?"

"No," he laughed again. "I liked you for it."

"But if you thought I would let any one else, you wouldn't have liked it?"

This diverted him still more.

"I shouldn't have liked that more than half as well."

"No," she said, thoughtfully. She dropped her face awhile on his shoulder, and seemed to be struggling with herself. Then she lifted it, and "Did you ever—did you——" she gasped.

He put her head down with his hand, and turned his face aside to nestle against hers. Then he said, laughing out his amusement in her:

"If you want me to say that all the other girls in the world are not worth a hair of your head, I'll say that, Marcia. Now, let's talk business!"

This made her laugh, and—

"I shall want a little lock of yours," she said, as if they had hitherto been talking of nothing but each other's hair.

"And I shall want all of yours," he answered.

"No. Don't be silly." She critically explored his face. "How funny to have a mole

in your eyebrow!" She put her finger on it. "I never saw it before."

"You never looked so closely. There's a scar at the corner of your upper lip that I hadn't noticed."

"Can you see that?" she demanded, radiantly. "Well, you *have* got good eyes! The cat did it when I was a little girl."

The door opened, and Mrs. Gaylord surprised them in the celebration of these discoveries—or, rather, she surprised herself, for she stood holding the door and helpless to move, though in her heart she had an apologetic impulse to retire, and she even believed that she made some murmurs of excuse for her intrusion. Bartley was equally abashed, but Marcia rose with the coolness of her sex in the intimate emergencies which confound a man.

"Oh, mother, it's you! I forgot about you. Come in! Or I'll set the table, if that's what you want." As Mrs. Gaylord continued to look from her to Bartley in her daze, Marcia added, simply: "We're engaged, mother. You may as well know it first as last, and I guess you better know it first."

Her mother appeared not to think it safe to relax her hold upon the door, and Bartley went filially to her rescue—if it was rescue to salute her blushing defenselessness as he did. A confused sense of the extraordinary nature and possible impropriety of the proceeding may have suggested her husband to her mind; or it may have been a feeling that some remark was expected of her, even in the mental destitution to which she was reduced.

"Have you told Mr. Gaylord about it?" she asked, of either, or neither, or both, as they chose to take it.

Bartley left the word to Marcia, who answered:

"Well, no, mother. We haven't yet. We've only just found it out ourselves. I guess father can wait till he comes in to dinner. I intend to keep Bartley here to prove it."

"He said," remarked Mrs. Gaylord, whom Bartley had led to her chair and placed on her cushion, "'t he had a headache when he first came in," and she appealed to him for corroboration, while she vainly endeavored to gather force to grapple again with the larger fact that he and Marcia were just engaged to be married.

Marcia stooped down, and pulled her mother up out of her chair with a hug.

"Oh, come now, mother! You mustn't let it take your breath away," she said, with patronizing fondness. "I'm not afraid of what father will say. You know what he thinks of Bartley—or Mr. Hubbard, as I presume you'll want me to call him! Now,

mother, you just run upstairs, and put on your best cap, and leave me to set the table and get up the dinner. I guess I can get Bartley to help me. Mother, mother, mother!" she cried, in happiness that was otherwise unutterable, and clasping her mother closer in her strong young arms, she kissed her with a fervor that made her blush again before the young man.

"Marcia, Marcia! You hadn't ought to! It's ridiculous!" she protested. But she suffered herself to be thrust out of the room, grateful for exile, in which she could collect her scattered wits and set herself to realize the fact that had dispersed them. It was decorous, also, for her to leave Marcia alone with Mr. Hubbard, far more so now than when he was merely company; she felt that, and she fumbled over the dressing she was sent about, and once she looked out of her chamber window at the office where Mr. Gaylord sat, and wondered what Mr. Gaylord (she thought of him, and even dreamt of him as Mr. Gaylord, and had never, in the most familiar moments, addressed him otherwise) *would* say! But she left the solution of the problem to him and Marcia; she was used to leaving them to the settlement of their own difficulties.

"Now, Bartley," said Marcia, in the business-like way that women assume in such matters, as soon as the great fact is no longer in doubt, "you must help me to set the table. Put up that leaf and I'll put up this. I'm going to do more for mother than I used to," she said, repentant in her bliss. "It's a shame how much I've left to her." The domestic instinct was already astir in her heart.

Bartley pulled the table-cloth straight from her, and vied with her in the rapidity and exactness with which he arranged the knives and forks at right angles beside the plates. When it came to some heavier dishes, they agreed to carry them turn about; but when it was her turn, he put his arm about her to support her elbow—"as I did last night, and saved you from dropping a lamp."

This made her laugh, and she dropped the first dish with a crash.

"Poor mother!" she exclaimed. "I know she heard that, and she'll be in agony to know which one it is."

Mrs. Gaylord did indeed hear it, far off in her chamber, and quaked with an anxiety which became intolerable at last.

"Marcia! Marcia!" she quavered, down the stairs, "what *have* you broken?"

Marcia opened the door long enough to call back, "Oh, only the old blue-edged platter, mother!" and then she flew at Bartley, cry-

ing, "For shame! For shame!" and pressing her hand over his mouth to stifle his laughter. "She'll hear you, Bartley, and think you're laughing at her."

But she laughed herself at his struggles, and ended by taking him by the hand and pulling him out into the kitchen, where neither of them could be heard. She abandoned herself to the ecstasy of her soul, and he thought she had never been so charming as in this wild gayety.

"Why, Marsh! I never saw you carry on so before!"

"You never saw me engaged before! That's the way all girls act—if they get the chance. Don't you like me to be so?" she asked, with quick anxiety.

"Rather!" he replied.

"Oh, Bartley!" she exclaimed, "I feel like a child. I surprise myself as much as I do you; for I thought I had got very old, and I didn't suppose I should ever let myself go in this way. But there is something about this that lets me be as silly as I like. It's somehow as if I were a great deal more alone when I'm with you than when I'm by myself! How does it make you feel?"

"Good!" he answered, and that satisfied her better than if he had entered into those subtleties which she had tried to express: it was more like a man. He had his arm about her waist again, and she put down her hand on his to press it closer against her heart.

"Of course," she explained, recurring to his surprise at her frolic mood, "I don't expect you to be silly because I am."

"No," he assented; "but how can I help it?"

"Oh, I don't mean for the time being; I mean generally speaking. I mean that I care for you because I know you know a great deal more than I do, and because I respect you. I know that everybody expects you to be something great, and I do, too."

Bartley did not deny the justness of her opinions concerning himself, or the reasonableness of the general expectation, though he probably could not see the relation of these cold abstractions to the pleasure of sitting with an arm around a girl's waist. But he said nothing.

"Do you know," she went on, turning her face prettily around toward him, but holding it a little way off, to secure attention as impersonal as might be under the circumstances, "what pleased me more than anything else you ever said to me?"

"No," answered Bartley. "Something you got out of me when you were trying to make me tell you the difference between you and the other Equity girls?"

She laughed, in glad defiance of her own consciousness.

"Well, I *was* trying to make you compliment me; I'm not going to deny it. But I must say I got my come-uppance: you didn't say a thing I cared for. But you did afterward. Don't you remember?"

"No. When?"

She hesitated a moment.

"When you told me that my influence had—had—made you better, you know——"

"Oh!" said Bartley. "That! Well," he added, carelessly, "it's every word true. Didn't you believe it?"

"I was just as glad as if I did; and it made me resolve never to do or say a thing that could lower your opinion of me; and then, you know, you kissed me there at the door, and it all seemed part of our trying to make each other better. But when father looked at me in that way, and asked me if we were engaged, I went down into the dust with shame. And worse than that, it seemed to me that you had just been laughing at me, and amusing yourself with me, and I was so furious I didn't know what to do. Do you know what I wanted to do? I wanted to run downstairs to father, and tell him what you had said, and ask him if he believed you had ever done so to any other girl." She paused a little, but he did not answer, and she continued. "But now I'm glad I didn't. And I shall never ask you that, and I shall not care for anything that you—that's happened before to-day. It's all right. And you *do* think I shall always *try* to make you good and happy, don't you?"

"I don't think you can make me much happier than I am at present, and I don't believe anybody could make me feel better," answered Bartley.

She gave a little laugh at his refusal to be serious, and let her head, for fondness, fall upon his shoulder, while he turned round and round a ring he found on her finger.

"Ah, ha!" he said, after a while. "Who gave you this ring, Miss Gaylord?"

"Father, Christmas before last," she promptly answered, without moving. "I'm glad you asked," she murmured, in a lower voice, full of pride in the maiden love she could give him. "There's never been any one but you, or the thought of any one." She suddenly started away.

"Now, let's play we're getting dinner." It was quite time; in the next moment the coffee boiled up, and if she had not caught the lid off and stirred it down with her spoon, it would have been spoiled. The steam ascended to the ceiling, and filled the kitchen with the fragrant smell of the berry.

"I'm glad we're going to have coffee," she said. "You'll have to put up with a cold dinner, except potatoes. But the coffee will make up, and I shall need a cup to keep me awake. I don't believe I slept last night till nearly morning. Do you like coffee?"

"I'd have given all I ever expect to be worth for a cup of it, last night," he said. "I was awfully hungry when I got back to the hotel, and I couldn't find anything but a piece of mince-pie and some old cheese, and I had to be content with cold milk. I felt as if I had lost all my friends this morning when I woke up."

A sense of remembered grievance trembled in his voice, and made her drop her head on his arm, in pity and derision of him.

"Poor Bartley!" she cried. "And you came up here for a little petting from me, didn't you? I've noticed that in you! Well, you didn't get it, did you?"

"Well, not at first," he said.

"Yes, you can't complain of any want of petting at last," she returned, delighted at his indirect recognition of the difference. Then the daring, the archness, and caprice that make coquetry in some women, and lurk a divine possibility in all, came out in her; the sweetness, kept back by the whole strength of her pride, overflowed that broken barrier now, and she seemed to lavish this revelation of herself upon him with a sort of tender joy in his bewilderment. She was not hurt when he crudely expressed the elusive sense which has been in other men's minds at such times: they cannot believe that this fascination is inspired, and not practiced.

"Well," he said, "I'm glad you told me that I was the first. I should have thought you'd had a good deal of experience in flirtation."

"You wouldn't have thought so if you hadn't been a great flirt yourself," she answered, audaciously. "Perhaps I have been engaged before!"

Their talk was for the most part frivolous, and their thoughts ephemeral; but again they were, with her at least, suddenly and deeply serious. Till then all things seemed to have been held in arrest, and impressions, ideas, feelings, fears, desires, released themselves simultaneously, and sought expression with a rush that defied coherence.

"Oh, why do we try to talk?" she asked, at last. "The more we say the more we leave unsaid. Let us keep still awhile!"

But she could not.

"Bartley! When did you first think you cared about me?"

"I don't know," said Bartley. "I guess it must have been the first time I saw you."

"Yes. That is when I first knew that I cared for you. But it seems to me that I must have always cared for you, and that I only found it out when I saw you going by the house that day." She mused a little time before she asked again.

"Bartley!"

"Well?"

"Did you ever use to be afraid— Or, no! Wait! I'll *tell* you first, and then I'll *ask* you. I'm not ashamed of it now, though once I thought I couldn't bear to have any one find it out. I used to be awfully afraid you didn't care for me! I would try to make out, from things you did and said, whether you did or not; but I never could be certain. I believe I used to find the most comfort in discouraging myself. I used to say to myself, 'Why, of course he doesn't! How can he? He's been around everywhere, and he's seen so many girls. He corresponds with lots of them. Altogether likely he's engaged to some of the young ladies he's met in Boston; and he just goes with me here for a blind.' And then when you would praise me, sometimes, I would just say, 'Oh, he's complimented plenty of girls. I know he's thinking this instant of the young lady he's engaged to in Boston.' And it would almost kill me; and when you did some little thing to show that you liked me, I would think, 'He doesn't like me! He hates, he despises me. He does, he does, he does!' And I would go on that way, with my teeth shut, and my breath held, I don't know *how* long."

Bartley broke out into a broad laugh at this image of desperation, but she added, tenderly,

"I hope I never made you suffer in that way?"

"What way?" he asked.

"That's what I wanted you to tell me. Did you ever—did you use to be afraid sometimes that I—that you— Did you put off telling me that you cared for me so long because you thought, you dreaded— Oh, I don't see what I can ever do to make it up to you if you did! Were you afraid I didn't care for you?"

"No!" shouted Bartley. She had risen and stood before him in the fervor of her entreaty, and he seized her arms, pinioning them to her side, and holding her helpless, while he laughed, and laughed again. "I knew you were dead in love with me from the first moment."

"Bartley! Bartley Hubbard!" she exclaimed; "let me go—let me go, this instant! I never heard of such a shameless thing!"

But she really made no effort to escape.

THE AMERICAN STUDENT AT THE BEAUX-ARTS.

IN THE LATIN QUARTER. (C. A. VANDERHOOF.)

THE young American who has come to Paris to learn to paint will, of course, make straight for the "Quartier Latin," if only to be near the school of the Beaux-Arts. He will pleasantly recall a good deal he has read about "the Quarter," and he will be too well prepared for delight to escape disappointment. That habitat of the student race is no longer the picturesque tangle of old-fashioned streets with which the prose poetry of the Romantic period has made us familiar. The hand of civic improvement is rapidly reducing the region to right angles. The aboriginal inhabitant or student flies before the invader to the most inaccessible parts of this labyrinth, but, in some instances, he sees the folly of resistance, and takes his lodging in the straight streets. The American, however, is always the last to yield, for to him these most unreasonable thoroughfares constitute one of the charms of living abroad. He likes to wind himself into his house like a shell-fish, as though to find relief from the maddening geometrical memories of a childhood passed in a city of "blocks." There is but little of the old Quarter left, what with the

Boulevard St. Germain cutting through it at one angle, and the equally straight, broad, perfect, and altogether exasperating Boulevard St. Michael intersecting it at another. Between these two, however, some quaint old bits still nestle, or rather hide, as though in terror of approaching dissolution, and, by fairly diligent search, you may find just enough of decay to make a picture.

The men are at first as disappointing as the Quarter, but they are disappointing in the best sense. The novice, fresh from the schools at home, will miss much of the raw art talk, rough-hewed in the block from Ruskin and Symonds. The student of the Quarter is a man of action in art. His devotion, however intense, rarely finds expression in any form of words, though often enough in a quiet endurance of hardships. It is just as bad form at the Beaux-Arts as at Magdalen to talk like a book about the studies of the place. There has, in fact, been a change all around in the character of the youthful colony. It has extended to the girl students, who once gave no small scandal here by trying to ignore the difference in manners and customs be-

tween Paris and Poughkeepsie. They thought that what a blameless Una might do there, she surely might do here, and so they sometimes went into the studios among the men,—French in the main, be it understood,—with very disagreeable results. In consequence, many worthy people at home still entertain a lively horror of these pilgrimages of young women for foreign study. They do not know that now that the pilgrims have consented to keep to themselves the peril has almost disappeared. The Daisy Millers of our time have learned that, if you want to live in Europe with comfort, you had better conform in some respects to European ways. Frenchmen never understood the system of “mixed classes” in art. It always seemed the drollest

mense service of teaching him how to live. They will show him how to lodge in one room for six and a half dollars a month, to get his coffee and roll in the morning for five *sous* (a fraction under five cents of United States currency), and his twelve-o'clock breakfast of meat and vegetables at from twenty-two to twenty-five cents of the same money. Some of the boarding-houses offer two solid meals a day, without lodging, at from eighteen to twenty-four dollars a month. The less said about the quality of the meat the better. It too often tastes of the harness of its original state of nature. One favorite restaurant is a long square tube rather than an architectural structure, with a place for customers at one

A ROSA BONHEUR OF THE FUTURE. (HENRY BACON.)

of foreign eccentricities, inviting to something worse than eccentricity in return. They ought, no doubt, to have been better read in manners and customs, but this is just what they used to say of us. The ladies have lost nothing; there are good special studios for them in Paris where they may have the teaching of such men as Bonnat and Carolus Duran. Many, too, have adopted a line of art which admits of their working very much by themselves. Some take to flower-painting; and one of the most successful is a painter of animals—a Rosa Bonheur of the future, who finds her models in the goats of the Champs Élysées and in the lions of the Jardin des Plantes.

The freshman will soon be made free of the Quarter, and his chums will do him the im-

end, and at the other an open kitchen filled with the smoking food.

Gustave Doré has complained of the French academical system that it forces all minds through one mold, first taking out of the students the peculiar talent, the germ of individualism, as a weed to be cast away. The academical system certainly takes a good deal of the nonsense out of a young student, whatever else it puts in; and it is always interesting to observe the student's surprise during the earlier stages of this process. He generally brings with him to the school a larger stock of feeling than of drawing, and he thinks he can make pictures with the first, but he is quickly undeceived. In time, he gives up the rebellious struggle and he meekly accepts academical direction. There

THE COPPERSMITH: A STUDY UNDER MUNKACSY. (C. Y. TURNER.)

are some few instances in which this original self, good or evil, is not to be put down either by the system or even by the man. I knew one American student, for instance, who had the curse of caricature upon him. Whenever he saw a new face it worked on him like a spell. He had caricatured all the men in his set; not that he wanted to do it, but because he could not help it. All his taste for art was for serious work. He worshiped Holbein, and if he could have helped it he would never have drawn a line to raise a laugh. He was really a strong man, but now and then he had to yield to what he considered his infirmity, like a reforming tippler returning to his old habits under stress of temptation. There is a story of his calling on a new man, with the air of a visitor who is half-ashamed of his errand. "Sit still," he said, sadly—"it won't take me long"; and without another word he drew out a pocket-book and fell to work on what proved to be a wonderful caricature of the freshman's face. It was a thing to take the conceit out of a sitter for half his life-time, and the sourness and ill-nature for the whole of it—it was so genial with inten-

tion and so alive with fun. "You see, I knew I should have to do it some time or other," he said, "and I thought I might get it over at once, if you didn't mind. Please keep it," he added, meekly handing his victim the sketch—"it is of no use to me now," and they parted the best friends in the world.

This life in the Latin Quarter is the life of the beginner in art. The men who have "arrived," as the French say, must be looked for in quite another part of Paris. Cross the exquisite little Park Monceau to the Avenue de Villiers, and you will see a row of palaces, finished models of the Gothic, the Italian-Renaissance, and many other beautiful and gorgeous styles. Meissonier lives in one of them, Detaille in another, Munkacsy in a third, and De Neuville and De Nittis are not far off. Very often they lay the foundation-stone of the building with the proceeds of their first picture, and they pay as they go on, the fine, sandy soil soaking up their millions like a sponge. Meissonier's place is not finished yet, because it takes so long to carve the wood-work from his own designs.

Admission to the Beaux-Arts is usually

obtained by application to a professor for leave to become an "aspirant" member of his class, or man taken on trial. Most of the Americans go to Gérôme. Students are beginning to avoid Cabanel, once the very prince of draughtsmen, but now grown lazy with age and success. Gérôme has a kindly manner, but an interview with him is rather impressive. He is one of the kings of art, and though kings at a distance may not appear very formidable to republican eyes, the presence has always its disturbing effect. The

enliness, as a single glance at his painting might show. The place is so trim, like a room in a public museum, well swept and dusted, and with every "curiosity" in its place, that your first impulse is to ask for the catalogue. His kindness of manner is, perhaps, providentially bestowed to temper great severity of expression. He is lean and has high cheekbones, and strongly marked features generally, with wiry gray hair, a heavy mustache, and bright eyes, which look the brighter for their cavernous orbits. He has need of all

THE FOUR-O'CLOCK SKETCH-CLUB. (FRANK C. JONES.)

studio is on the Boulevard de Clichy, in a row of houses built for the use of artists. He does not live there, but at his luxurious house in the country, only now and then using it as a *pied à terre* for town. His work-room is splendidly furnished. He has made the most of his artistic properties—his suits of Roman armor, reproduced in electrotype from originals in the museums, his Japanese and other Eastern weapons, and, in short, all the tasteful accumulation of a long and prosperous artistic career. He has a horror of all slo-

his good-nature to bear the boredom of his lot. If all aspirants were earnest and fairly competent, it would be well; but so many who come to him are neither one nor the other, but bring him daubs with the greatest assurance in the world, and expect to be immediately summoned to the *atelier*, and to be made the objects of his peculiar care.

The number of admissions at a professor's disposal in the Beaux-Arts is limited by the mere area of the place, while the applications are virtually without number.

This first interview over, the fortunate student's next meeting with Gérôme will be in "the antique," at a very early hour, when the professor is walking the great common hall in which all the aspirants work. His men rise as he approaches, and listen, with an air of profound humility, to his criticisms. They never get nearer to him than that, except at the annual dinner to which each *atelier* invites its professor, and here a man from Providence, Rhode Island, has been known to sing a negro song and dance a breakdown before the master's awful eye. On other days, it is the turn of other professors of painting—Cabanel, who has the air of a very superior *bourgeois*; or the ascetic-looking Lehmann, who seems to have stepped clean out of a painted window to take his class. This homage to the professor is the only payment at the Beaux-Arts, where the poorest lads of all countries get the first teaching of the age without the expenditure of a *sou*.

Some day the professor will tell the student—in answer, perhaps, to his second or third timid application—that he may leave "the antique" and enter the *atelier*. His period of probation is now passed, and this move into the *atelier* is the most important of the young fellow's life. In the first place, no matter what his standing in art has been at home, he is now convinced that he is a dunce. The best men from the American schools and from the British Royal Academy come here, and melt up, as it were, like wax before the fire. They have their theory of the superiority of this or that man at home, to say nothing of their opinion of themselves as his most successful imitators. The theory goes to nothing, and in six months it is an insult to remind them that they ever held it. No special influence kills it; it simply cannot live in the bright sunlight of French art. Then, again, the *atelier* is a state, while "the antique" is merely a territory. It has its rights, customs, privileges, and even its feelings. One *atelier* is very jealous of another. Gérôme's is in a condition of simmering war with Cabanel's, Cabanel's with Lehmann's, and so on. It has also its peculiar institutions, one of which is that the last newcomer regularly goes into bondage as a fag.

The fagging at the Beaux-Arts is the most novel of all new experiences for the transatlantic man. When he first hears of it he will probably ask for explanations from one of his set, and he must be easily satisfied if they are at all re-assuring. They are the less likely to be so, as he will get no sympathy in resistance, even from the old hands. "You have to be a slave to the fellows," he will be told, "to fetch and carry for them, wash the brushes, run errands, and stand any amount of chaff

PUNISHMENT OF A NOUVEAU. (W. F. BROWN.)

about your ugliness, if you have any—if not, about your good looks."

"I won't."

"Why?"

"Because

I am an American."

"Humph!

Who asked

you to

come here?

When you are at Rome—you know the proverb."

"I mean to fight for it."

"No, you won't do that."

"Why, do you mean to say I'm afr——"

"Most decidedly I do—afraid of being turned out of the school."

"Then I shall appeal to the professors."

"Sneak!"

"What about passive resistance—a Quaker shake of the head, without a blow or another word?"

"They'll put you out of the *atelier*."

"I'll come in again."

"They'll daub you with paint till you are like Sitting Bull, or truss you up—arms and legs together—worse than any sitting frog, and hoist you upon a shelf. And you'll howl to come down, I can tell you; it hurts. No, old fellow, it won't do. There are, no doubt, a hundred ways of being fagged, but there is only one good one at the Beaux-Arts—to bear it with a grin. They soon call off the pack when there is no sport."

The freshman will finally come to the same conclusion, and will go down to the *atelier* as secure against any outbreak of temper as good resolutions can make him. In this frame of mind he will seek out the *massier*, a supervisor, a student elected by the others to manage all their common affairs.

THE ARAB CHIEF: A STUDY UNDER MUNKACSY. (ST. JOHN HARPER.)

This is generally a big fellow, bearish in look and manner, his head covered with a tangle of long hair, and his glance the perfection of surly insolence as he surveys you from head to foot.

"*Nouveau*" (freshman), he says, contemptuously,—he never once calls you by your name,—“you know our customs. Have you brought the money for your footing?”

The freshman is prepared for this, and he hands him thirty francs as his contribution to the cost of the “plant” in the *atelier*, and twenty more for refreshments—the last with the easy grace with which a man empties his pockets for the benefit of a Sicilian brigand who has friends in the neighboring bushes.

“Now, *Nouveau*,” he says, “we had better go out and fetch the things; some wine, cigars,—I smoke a two-*sous* weed myself; you can get some at one *sou* for the rest,—anything that’s nice.”

Very likely the freshman will not be prepared for this.

“What! take your orders for my treat! That’s rather rough.”

And who will blame him if he gets red in the face?

“*Nouveau*,” says the *massier*, complacently, “is the treat for us or for you? *Oh, ces braves Yankees! Mille tonnerres!*”

“Bravo, young Barnum. Don’t you go.”

“*Vive l’Indépendance des États Unis!*” cry half a dozen *faux frères*, whose faces are hid in the forest of easels. The true one, of whom he first sought counsel, and who, in spite of his affectation of being nonchalantly out of it, has all this time been watching his countryman from a distant corner of the studio, simply shakes his head and frowns. The *nouveau* understands him at once, smiles sweetly on the *massier*, and goes out for the things.

In half an hour he comes back, heavy

STUDY FROM LIFE. (FRANK FOWLER.)

laden. There is everything eatable and uneatable, including in the last category cheap French cheese. His entry is heralded with a great shout, which is the signal for the suspension of work in the *atelier*.

They drink his health, the health of George Washington, and the health of Mrs. Clarkson—the heroine of one of Dumas's plays, and about the only other person, with the exception of Mr. Barnum, of whose name they have ever heard in connection with the United States.

"He is a good *nouveau*," says one, without looking at the unhappy giver of the feast; "at least, I should judge so by his sardines."

"I don't like his nose," says another, with the same absolutely impersonal air. "There's crime in it; he might go wrong at any moment."

"And to think he was once a savage."

"Hush! They carry knives in their boots."

"Now, *Nouveau*," says the *massier*, as the

feast is in its last stage of sour apples, and the pupils are going back to their easels, "you must sing a song."

"You would not understand it."

"*Nouveau*, we understand everything here; go on."

"I will see you hanged first. I am tired of this foolery; the play's played out."

This in English—probably because he means it so much.

"What does he say?" shriek a dozen men at once. "We don't speak Iroquois."

"He says he will do it with the greatest pleasure in life," says that good angel in the corner, coming forward and looking the freshman steadily in the face.

"Do it properly, *Nouveau*," shouts the *massier*. "Get up on the model stand."

He gets up.

"Oh, he's singing with his coat on!" says somebody. "That's pretty cool."

He takes off his coat.

"If you will only turn your back on us,

Nouveau," says another, "that will be perfect. I'm a believer in the evil eye."

In this way the freshman sings the first three stanzas of "Johnny comes Marching Home."

"Very good, *Nouveau*," says the *massier*. "Now go and fetch some black soap to clean the brushes, and that will do for to-day."

In less than a month from that time, the *nouveau* is helping to serve another *nouveau* in the same way.

But the morning's work at the *atelier* is not enough for a man who wants to get on, and so, to fill up time, the student often goes to a private school outside; a well-known one is Julian's, where Boulanger, Lefebvre, and Tony Fleury teach. At such schools you can enter for a part of the day, or all day, just as you like, at fees ranging from about three or four dollars a month to eight dollars. Many leading artists, like Bonnat, Laurens, Munkacsy, and Carolus Duran, take pupils at about the same moderate rate. This meets the wants of men who cannot get into the Beaux-Arts, or who do not care to try, because they think it too academical, or object to its many holidays, or fancy a particular master outside. The man who has reached this stage should be happy if he lead a life without events for the next six or seven years. He ought to go on steadily as though he were working out a mere apprenticeship to some common trade. No one would wonder at his toiling at tailoring for something like this period without beginning to sell. But it is not so easy to make people

understand that he must show at least as much patience in the infinitely more difficult trade of an artist. The want of a steadily pursued early training, gone through day by day, like a school-boy's task, generally means sure failure in art. Most men have to begin to sell too early, and they drift from pupilage into mastership on wretchedly insufficient preparation. They seldom recover themselves. Their work hereafter is labor and sorrow to themselves at least, if not to the world as well, being wholly without that spontaneous ease of execution which a great thinker on canvas must attain if he is to think in peace. It will be useless to try to make good the loss later on, when the painter is in the open market of production. A soldier cannot learn his drill on the field of battle. Gustave Doré has all his life been trying to do this, and, of course, he never will do it. He was led into a revolt against the school system, as a boy, by his own fatal facility. He only half-learned to draw, and he did not learn to paint even so much as that. The consequence is, that every penny-whipster of the Beaux-Arts may "take his sword" in both. Some men are not misled by vanity, as he was, but by hard necessity, and at one time the Americans contributed most largely to this class. They were stimulated to production by premature demands from home for a "picture." Their call to art was not always believed in by fathers who had won their money in other ways, and only a grudging consent was given to their trying the experiment at all. It was usually accompanied by

OLD FARM-HOUSE IN SWITZERLAND: A VACATION STUDY. (C. E. DU BOIS.)

the condition that within one or two years they should begin to earn their own living by the brush. Men in the Quarter used sometimes—do sometimes still—read the most heart-breaking letters from extremely well-meaning people at home, urging them to commit what is virtually suicide in art by rushing into this crude production. The worst thing in the letters was the eminent good meaning with which they were written. It was not that the writers themselves were unable to keep up their remittances for the board of a lad in Paris; they simply thought that for his sake they ought to be unwilling; they were steadily killing him as an artist in the firm faith that they were saving him as a man. The French are rarely so foolish; their worst Philistines know and admit that art-teaching must take its time. They derive this conviction in part from their national tradition of taste, in part from that larger belief that nothing grows of itself—a belief which, for good and for evil, has shaped their whole history as a nation. Even the poor old *concierge* and his wife, who scrape a few hundred francs together out of their savings to keep their “boy with a gift” at the Beaux-Arts, never think of asking him for any pecuniary account of himself till he has studied to manhood at their expense. By this system, and by this alone, can we get such astonishing successes as that of Bastien Lepage, who, from the first, stormed the art-world with master-work, and left the deepest obscurity for a blaze of renown. No one outside of his student circle could remember all the stages of his growth as an artist; no one could trace him from mere pot-hooks and hangers to his free running hand. The public had a wonder and a miracle placed before it at the beginning.

It is a proud day for the young fellow when he gives up his lodging to take a studio—a place which has everything a dwelling should not have except a top-light, and that makes up for all. The studio is so professional that no self-respecting youth can long live without it. The moment it is opened, the minor professionals soon find out the tenant. Models thrust cards under the door—Angelo Carpino, who announces that his line is the heads of apostles, and Salem, of Timbuctoo, who stands for sultans or other miscreants of the East. Those who could not afford a model used, at one time, to join the four-o'clock sketch-class, where students of both sexes met to pose for one another in turn. Home magazines, newspapers, and books lay on a side-

table in the class-room: it was a regular American institution *in partibus*. The time allowed for the sketch was just one hour, and sometimes fairly good work was done. The elected manager posed the model, and called a short rest every quarter of an hour. The proceedings were conducted with railway punctuality; and the model's mute appeal for relief was never allowed to take effect until the very second-hand had completed its

A BIT IN THE CHAPEL. (K. COX.)

journey. But this was, after all, too much of an American institution: some of the best men kept out of it for fear of missing the influences for which they came to France; and it is now no more.

Once a month comes the exciting *concours de place*—a keen competition for the best place in the *atelier*. Men send in life-studies made since the last trial, and the professor looks over and numbers them according to merit. Then the men assemble, and as their

VACATION DAYS. (C. E. DU BOIS.)

numbers are called, they walk in and choose the places they mean to occupy for the rest of the month. At the end of July, the Beaux-Arts breaks up for the summer holiday, to spread all over Europe. Some of the men go to Switzerland, not to look for mountains, but for quiet lowland landscape worthy of England or the south of France. The artist's horror of the conventional is gradually leading to rather gross ill-treatment of the Swiss peaks, the Swiss goats, the Swiss peasants, and the *Ranz des Vaches*. There is a whole world of quiet rural life in the valleys, as yet unexplored by the tourist, and therefore dear to the painter. But most men do not go even so far as Switzerland for a subject, and the limit of their wanderings is but a two hours' journey from Paris—Barbizon. So much has been written of Barbizon, that once quiet artists' retreat in the forest of Fontainebleau, that it is hardly necessary to attempt a detailed description of it. It is fast becoming like one of the Cities of the Miracle of Italy or South America: every house in it is more or less of a shrine. Even Siron's eating-house, which was once simply a house in which to eat, and no more, has now that semi-sacred character, and in a few years it may become something of profanation to eat there at all. Many great men have broken bread at Siron's—often the bread of sorrow, for the shades of rural Barbizon could tell their tale of artistic want, poverty, neglect. The sketches with which its walls are covered are, in many instances, part of this tale, and not a few of them

have been left as payment of tavern-scores. Others are contributions of gratitude from men who have passed out of Siron's poor and unknown, and who have come back in the maturity of fame to leave their mark on the wall in some brilliant improvisation. This French trick of mural decoration by genius is not confined to Barbizon, nor to one art. Wherever painters assemble amid the dozens of villages outside Paris, you will find such traces of them in the local restaurant; and in the neighborhood of Étretat, where poets have met as well as painters, quite a volume of first-rate album-verse has been left in the visitors' books of a farm-house, by men who now hold the highest places in literature. It is a pretty custom, and long may it last; but one could wish to see it brought to an end at Siron's, where recent contributions have not been up to the high level of the past. With too many men, now, the sketch on the wall is rather the object than the accident of their visit. This is only another way of saying that Barbizon has become very self-conscious—as self-conscious as modern Rome in regard to the value of its ruins and its rags. Barbizon lives on art, and the peasants' wits have become so sharpened in consequence, that the simplicity which made them famous is now becoming little more than a pose. There may be *figurants* of the forest as well as of the theater. They still contrive to dress with some success for threadbare effects of the picturesque, but, do what they may, they can hardly give themselves the heavy, ox-like gaze of their fathers that Millet drew.

These had it by nature; their sons often preserve it only as a tradition of a good trick in trade. They have been to the village school; they read the "Petit Journal"; they have seen the world,—that is to say, Paris during the *fête* of the 14th of July,—and the glare of its illuminations has made them forever wide-awake. In a few years, their whole generation will be as unreal constituents of the rural scene as were the courtiers of Versailles sitting to Watteau.

Millet's home is interesting as a reminiscence of simplicity's golden age. It would hardly be possible now for a painter to live in such a house, even at Barbizon. There would be sure to be more of Paris in his surroundings.

simply lodged, and it may be questioned whether Millet could have done a single stroke of work under such a roof.

The school re-opens in October, and the student whose heart is in his work will find that the holiday has been too long. It is, in fact, a professor's rather than a student's holiday, for the young men are generally working all the time they play. The holiday is only work out-of-doors; and when they tire of the quiet of Nature's work-room, it is about time to return to the excitement of the school. And the Beaux-Arts, remember, is, in its way, just as exciting as Wall street. The number of prizes offered by individuals or by the Government is legion, and it covers in its

MILLET'S STUDIO AND HOUSE AT BARBIZON. (C. A. VANDERHOOF.)

Rosa Bonheur's retreat at Thomery, near Fontainebleau, is a mansion fit for a retired millionaire. One bit of it dates from the end of the seventeenth century, and all the rest very much from the end of the nineteenth, though this looks, in point of style, the oldest of all. The lady's aim is the same as poor Millet's—quiet; but she secures it in a far different way. Her artistic independence is intrenched behind a large court-yard and front gates, flanked by a porter's lodge, where man or mastiff is on duty night and day. In fact, her lines of defense are the best known to modern social fortification. Art is no doubt well, and in a sense becomingly, lodged there; but it is not

list of subjects every detail of artistic merit. There are monthly competitions, as we have seen, in each *atelier*; and each *atelier*, before the break-up for the summer holiday, gives medals for the work of the whole year. Then there is the struggle for admission to Yvon's class. This class is purely for drawing; they do not paint there, but the drawing is the very rigor of the game. The competition is one of the largest at the Beaux-Arts: it is open to all comers, and sometimes as many as five hundred men enter the lists. Their numbers are soon thinned by successive examination in perspective, anatomy, history, and ornament until only seventy remain for

IN THE COURT OF THE BEAUX-ARTS. (T. ROBINSON.)

the final heat—a drawing from the figure, which has to be finished from head to foot in six days, of two hours' work a day. The seventy drawings are afterward rated according to merit, and to be rated number one is no empty honor.

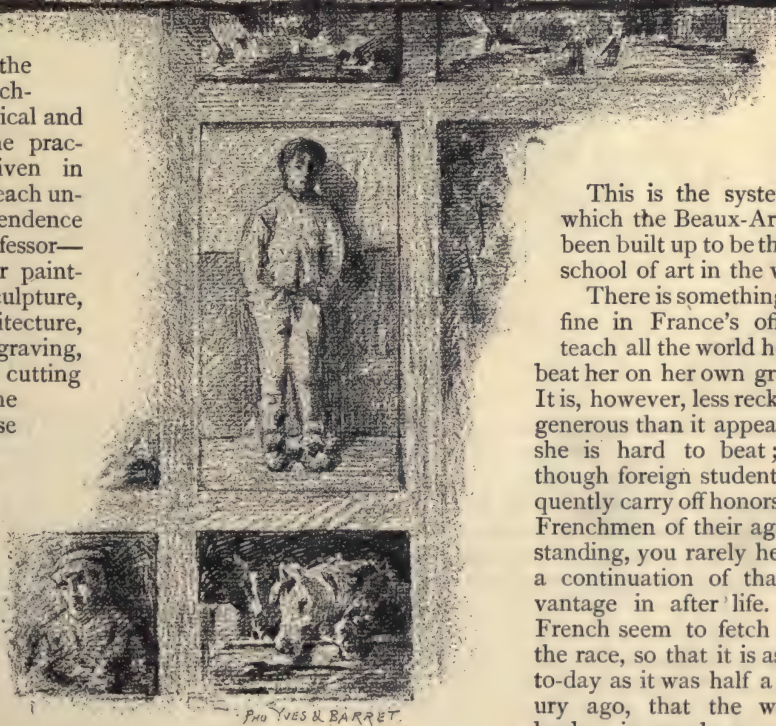

By and by the medalist of Yvon will be competing for the Grand Prize of Rome—the full if not the final flower of state aid. The competition is restricted to Frenchmen who have taken medals in the school, and its object is to discover the absolutely best man of the year, in the academical sense. The weeding-out process begins in the very first stage, the crowd of competitors being reduced to manageable proportions of twenty or thirty by giving them a subject to sketch in oils, and rejecting all but the best sketches. Then the chosen few compete again among themselves on a figure in oils, and this brings down their number to ten. Then the ten men, neither more nor less, enter the decisive stage of the fight. The first thing is to go *en loge*—in other words, into a studio provided at the school for each competitor, where he is to live and work for the next three months. This is supposed to insure the requisite privacy and seclusion. The moving-in day is one of the sights of the Quarter. The ten, with the better part of their earthly belongings,—easels, painting-tools, books, and bedding,—laboring like nomadic Kirghiz across

the court-yard, once *en loge*, their final subject is given to them, and in one day they must sketch out their idea of the treatment, and from this idea they must not depart. Then they settle down to work the rough sketch into a finished picture, and for three months each studio is as a monk's cell, shut to the world, until the name of the man who has done the best picture is announced as the winner of the Grand Prize of Rome. This is no barren honor; it gives the holder four years in Rome to study the masterpieces of ancient art, his studio and models being paid for by the state, and 4000 francs a year for other expenses. He must stay in Rome all the time, except under special leave of absence, and he must send every year something done by his own hand—either a copy or an original—to the Beaux-Arts. If these *envois de Roma* are very good, they are bought by the state. Even on his return, the artist still has the state by his side. He may compete for the honorable mentions and medals of the *Salon*, or for its prize, which gives him another monetary recompense, not by any means to be despised.

Of the nine hundred and seventy students at the Beaux-Arts at the time of a recent numbering, two hundred and sixty-three were painters, one hundred and seventy-one sculptors, and five hundred and thirty-six architects. In addition to these, there were three hundred “aspirants” trying to qualify for

admission to the school. The teaching is both practical and theoretical. The practical part is given in eleven studios, each under the superintendence of a noted professor—three studios for painting, three for sculpture, three for architecture, one for line-engraving, and one for the cutting of gems. The theoretical course consists of lectures on subjects useful to artists, such as history, literature, archæology, æsthetics, anatomy, perspective, mathematics, mechanics, descriptive geometry, physics, chemistry, and even the building laws. French students must be between fifteen and thirty, but for foreigners there is no limit of age.

SKETCHES IN SIRON'S DINING-ROOM. (FRANK C. JONES.)

This is the system by which the Beaux-Arts has been built up to be the first school of art in the world.

There is something very fine in France's offer to teach all the world how to beat her on her own ground. It is, however, less recklessly generous than it appears, for she is hard to beat; and though foreign students frequently carry off honors from Frenchmen of their age and standing, you rarely hear of a continuation of that advantage in after life. The French seem to fetch up in the race, so that it is as true to-day as it was half a century ago, that the world's leaders in nearly every department of fine art are of this nation. If we divide Art into two great branches—the way of doing the thing and the thing to be done, we shall find no pos-

A CORNER OF SIRON'S DINING-ROOM. (C. A. VANDERHOOF.)

sibility of dispute as to the superiority of the French in the first. The other question, as to what picture they paint, is still open to considerable discussion. But they certainly teach a man the whole grammar and rhetoric of his art to perfection. They will not put up with slovenly drawing; they will not put up with careless composition; they will insist on knowledge and purpose in every stroke—in a word, on thoroughness. In so many other schools, and notably in the English, right tendency is too often allowed to stand for right method. Critics look too much at the sentiment of the picture, apart from its execution, and painters accordingly get their vicious practice of painting wholly “for the heart.” The French abhor the word, at least in their

art-course; and, oddly enough, while no nation is so prone to excess of sentiment on other subjects, on this one, where the temptation would seem to be greatest, it shows a most exemplary self-control. In this Stoic virtue, indeed, French art goes rather too far, for to tell the plain truth about the Beaux-Arts, the man who has faithfully followed its six or seven years’ course is likely to come out a terrible scorner of every human emotion. But we ought to be glad, after all, that the French have still some faults in art, or other nations would have no opportunities. And who knows? America’s road to peculiar distinction may one day be found in the union of a perfect sentiment with a perfect technique.

THROUGH ONE ADMINISTRATION.*

BY FRANCES HODGSON BURNETT,

Author of "That Lass o' Lowrie's," "Haworth's," "Louisiana," "A Fair Barbarian," etc., etc.

CHAPTER IV.

"How is Bertha?" Tredennis asked.

The professor sat down in his chair and took up the poker quite carefully.

"She is at a party to-night," he said, poking the fire, "though it is late in the season for parties. She generally is at a party—oftener than not she is at two or three parties."

"Then she must be well," suggested Tredennis.

"Oh, she is well," the professor answered. "And she gets a good deal out of life. She will always get a good deal out of it—in one way or another."

"That is a good thing," remarked Tredennis.

"Very," responded the professor, "if it's all in the one way and not in the other."

He changed the subject almost immediately, and began to discuss Tredennis's own affairs. His kindly interest in his career touched the younger man's heart. It seemed that he had taken an interest in him from the first, and, silent as he had been, had never lost sight of him.

"It used to strike me that you would be likely to make something of your life," he said in his quiet, half-abstracted way. "You looked like it. I used to say to myself that if you were my son I should look forward to being proud of you. I—I wish you *had* been my son, my boy."

"If I had been," answered Tredennis, earnestly, "I should have felt it a reason for aiming high."

The professor smiled faintly.

"Well," he said, "you aimed high without that incentive. And the best of it is that you have not failed. You are a strong fellow. I like—a—strong—fellow," he added, slowly.

He spoke of Bertha occasionally again in the course of their after conversation, but not as it had been his habit to speak of her in her girlhood. His references to her were mostly statements of facts connected with her children, her mode of life, or her household. She lived near him, her home was an attractive one, and her children were handsome, healthy, and bright.

"Amory is a bright fellow, and a handsome fellow," he said. "He is not very robust,

but he is an attractive creature—sensitive, poetic temperament, fanciful. He is fanciful about Bertha, and given to admiring her."

When he went away at the end of the evening, Tredennis carried with him the old vague sense of discomfort. The professor had been interesting and conversational, and had given him the warmest of welcomes, but he had missed something from their talk which he had expected to find. He was not aware of how he had counted upon it until he missed it, and the sense of loss which he experienced was a trouble to him.

He had certainly not been conscious of holding Bertha foremost in his mind when he had turned his steps toward her father's house. He had thought of how his old friend would look, of what he would say, and had wondered if he should find him changed. He had not asked himself if he should see Bertha or hear of her, and yet what he had missed in her father's friendly talk had been the old kindly, interested discussion of her, and once out in the night air and the deserted streets he knew that he was sadder for his visit than he had fancied he should be. The bright, happy, girlish figure seemed to have passed out of the professor's life also—out of the home it had adorned—even out of the world itself. His night's sleep was not a very peaceful one, but the next morning when he rose, the light of day and the stir of life around him seemed to have dispelled the reality of his last night's fancies. His mind had resolved itself into a condition with which he was familiar, and he was aroused to interest and pleasure in his surroundings. His memory was once more the ghost of a memory which he had long accustomed himself to living without. During the morning, his time was fully occupied by his preparations for his new duties, but in the afternoon he was at liberty, and remembering a message he was commissioned to deliver to the sister of a brother officer, he found his way to the lady's house.

It was a house in a fashionable street, and its mistress was a fashionable little person who appeared delighted to see him, and to treat him with great cordiality.

"I am so glad you were so good as to call to-day," she said. "Mr. Gardner heard that

you had arrived, but did not know where you were, or he would have seen you this morning. What a pity that you were not in time for the inauguration! The ball was more than usually successful. I do hope you will let us see you to-night."

"To-night?" repeated Tredennis.

"Yes. We want you so much," she continued. "We give a little party,—only a little one,—and we shall be so glad. There will be several people here who will be delighted to meet you,—the gentleman who is spoken of as likely to be the new Secretary of the Interior, for instance. He will be charmed. Mr. Gardner has told me what interesting things you have been doing, and what adventures you have had. I shall feel quite sure that my party will be a success, if you will consent to be my lion."

"I am afraid my consenting wouldn't establish the fact," said Tredennis. "You would want a mane, and a roar, and claws. But you are very kind to ask me to your party."

The end of the matter was that, after some exchange of civilities, he gave a half-promise to appear, mentally reserving the privilege of sending "regrets" if he did not feel equal to the effort when night arrived. He was not fond of parties. And so, having delivered the message with which he had been commissioned, he made his adieux and retired.

When night came, he was rather surprised to find lurking in his mind some slight inclination to abide by his promise. Accordingly, after having taken a deliberate, late dinner, read the papers, and written a letter or so, he dressed himself and issued forth.

On arriving at his destination, he found the "little party" a large one. The street was crowded with carriages, the house was brilliantly lighted, an awning extended from the door to the edge of the pavement, and each carriage, depositing its brilliant burden within the protection of the striped tunnel, drove rapidly away to give place to another.

Obedying the injunctions of the servant at the door, Tredennis mounted to the second story and divested himself of his overcoat, with the assistance of a smart mulatto who took it in charge. The room in which he found himself was rather inconveniently crowded with men—young, middle-aged, elderly, some of them wearing a depressed air of wishing themselves at home, some bearing themselves stolidly, and others either quietly resigned or appearing to enjoy themselves greatly. It was not always the younger ones who formed this last class, Tredennis observed. In one corner a brisk gentleman with well-brushed, gray beard laughed delightedly over a story just

related to him with much sprightliness by a companion a decade older than himself, while near them an unsmiling youth of twenty regarded their ecstasies without the movement of a muscle.

Tredennis's attention was attracted for a moment toward two men who stood near him, evidently awaiting the appearance of some one at the door of the ladies' cloak-room, which they could see from where they stood.

One of them leaned in a nicely managed labor-saving attitude against the door-post. He was a rather tall, blonde young man, with a face eminently calculated to express either a great deal or absolutely nothing at all, as he chose to permit it, and his unobtrusive evening dress had an air of very agreeable fitness and neatness, and quite distinguished itself by seeming to belong to him. It was his laugh which called Tredennis's attention to him. He laughed in response to some remark of his companion's—a non-committal but naturally sounding baritone laugh, which was not without its attractiveness.

"Yes, I was there," he said.

"And sang?"

"No, thank you."

"And she was there, of course?"

"She?" repeated his friend, his countenance at this moment expressing nothing whatever, and doing it very well.

"Oh, Mrs. Amory," responded the other, who was young enough and in sufficiently high spirits to be led into forgetting to combine good taste with his hilarity.

"You might say Mrs. Amory—if you don't object," replied his companion, quietly. "It would be more civil."

Then Tredennis passed out and heard no more.

He made his way down the stairs, which were crowded with guests going down and coming up, and presented himself at the door of the first of the double parlors, where he saw his hostess standing with her husband. Here he was received with the greatest warmth, Mrs. Gardner brightening visibly when she caught sight of him.

"Now," she said, "this is really good of you. I was almost afraid to let you go away this afternoon. Mr. Gardner, Colonel Tredennis is really here," she added, with frank cordiality.

After that, Tredennis found himself swallowed, as in a maelstrom. He was introduced right and left, hearing a name here and seeing a face there, and always conscious of attaching the wrong names to the faces as he struggled to retain some impression of both in his memory. Mrs. Gardner bore him onward, filled with the most amiable and hospi-

able delight in the sensation he awakened as she led him toward the prominent official in prospective before referred to, who leaned against a mantel-piece and beguiled his time by making himself quite agreeable to a very pretty young *débutante* who was recounting her experience at the inaugural ball. Here Tredennis was allowed to free himself from the maelstrom and let it whirl past him, as he stood a little aside and conversed with his new acquaintance, who showed deep interest in and much appreciation of all he had to say, and evidently would have been glad to prolong the interview beyond the moment, when some polite exigency called him away in the midst of an animated discussion of the rights of Indian agents and settlers.

When he had gone, Tredennis still remained standing where he had left him, enjoying his temporary seclusion and the opportunity of looking on with the cool speculation of an outsider.

He had been looking on thus for some moments,—at the passing to and fro, at the well-bred elbowing through the crush, at the groups gathering themselves here and there to exchange greetings and then breaking apart and drifting away,—when he suddenly became aware of a faint fragrance in the atmosphere about him which impressed itself upon him with a curious insistence. On his first vague recognition of its presence he could not have told what it was, or why it roused in him something nearer pain than pleasure. It awakened in him a queer sense of impatience with the glare of light, the confusion of movement and voices, and the gay measure of the music in the next room. And almost the instant he felt this impatience, a flash of recognition broke upon him, and he knew what the perfume was, and that it seemed out of place in the glare and confusion simply because his one distinct memory of it associated itself only with the night when he had sat in the fire-light with Bertha, and she had held the heliotrope in her hand. With this memory in his mind, and with a half-smile at his own momentary resentment of the conditions surrounding him, he turned toward the spot near him from which he fancied the odor of the flowers came, thinking that it had floated from some floral decoration of the deep window. And so, turning, he saw—surrounded by what seemed to be the gayest group in the room—Bertha herself!

She was exquisitely dressed, and stood in the prettiest possible pose, supporting herself lightly against the side of the window; she had a bouquet in her hand and a brilliant smile on her lips, and Tredennis knew in an instant that she had seen and recognized him.

She did not move—she simply retained her pretty pose, smiling and waiting for him to come to her, and, though she said nothing to her companions, something in her smile evidently revealed the situation to them, for, almost immediately, the circle divided itself, and room was made for him to advance within it.

Often afterward Tredennis tried to remember how he moved toward her, and what he said when he found himself quite near her, holding the pretty, gloved hand she gave him so lightly, but his recollections were always of the vaguest. There scarcely seemed to have been any first words—he was at her side, she gave him her hand, and then, in the most natural manner, the group about her seemed to melt away, and they were left together, and he, glancing half-unconsciously down at her bouquet, saw that it was made of heliotrope and *Maréchal Niel* roses.

She was so greatly and yet so little changed that he felt, as he looked at her, like a man in a dream. He tried to analyze the change and could not, and the effort to do so was a pain to him. The color in her cheeks was less bright than he remembered it, but her eyes were brighter; he thought also that they looked larger, and soon recognized that this was not only because her face was less girlishly full, but arose from a certain alertness of expression which had established itself in them. And yet, despite their clear brightness, when she lifted them to his own, his sense of loss was for the instant terrible. Her slight, rounded figure was even prettier than ever—more erect, better borne, and with a delicate consciousness and utilizing of its own graces—but it was less easy to connect it mentally with the little gray gown and lace kerchief than he could ever have believed possible.

Her very smile and voice had changed. The smile was sometimes a very brilliant one and sometimes soft and slow, as if a hidden meaning lay behind it; the voice was low-pitched, charmingly modulated, and expressed far more than the words it gave to a listener, but Tredennis knew that he must learn to know them both, and that to do so would take time and effort.

He never felt this so strongly as when she sat down on the cushioned window-seat, and made a little gesture toward the place at her side.

"Sit down," she said, with the soft smile this time—a smile at once sweet and careless. "Sit down, and tell me if you are glad to be stationed in Washington; and let me tell *you* that papa is delighted at the prospect of your being near him again."

"Thank you," answered Tredennis; "and

as to the being here, I think I like the idea of the change well enough."

"You will find it a great change, I dare say," she went on, "though, of course, you have not devoted yourself to the Indians entirely during your absence. But Washington is unlike any other American city. I think it is unlike any other city in the universe. It is an absorbingly interesting place when you get used to it."

"You are fortunate in finding it so," said Tredennis.

"I?" she said, lightly. "Oh! I do not think I could resign myself to living anywhere else; though, when you reflect, of course you know that is a national quality. All good Americans adore the city they confer distinction on by living in, and asperse the characters of all other places. Englishmen believe in London, and Frenchmen in Paris; but in America, a New-Yorker vaunts himself upon New York, a Bostonian glories in Boston, and a Washingtonian delights in the capital of his country; and so on, until you reach New Orleans."

"That is true enough," said Tredennis, "though I had not thought of it before."

"Oh, it is true," she answered, with an airy laugh. Then she added, with a change of tone, "You have been away for a long time."

"Eight years," he replied.

He thought she gave a slight start, but immediately she turned upon him with one of the brilliant smiles.

"We have had time to grow since then," she said,—"not older, of course, but infinitely wiser—and better."

He did not find it easy to comprehend very clearly either her smile or her manner. He felt that there might be something hidden behind both, though certainly nothing could have been brighter or more inconsequent than her tone. He did not smile, but regarded her for a moment with a look of steady interest, of which he was scarcely conscious. She bore it for an instant, and then turned her eyes carelessly aside, with a laugh.

"I do not think you are changed at all," she said.

"Why?" he asked, still watching her, and trying to adjust himself to her words.

"You looked at me then," she said, "just as you used to when you were with us before, and I said something frivolous. I am afraid I was often frivolous in those days. I confess I suspected myself of it, and one day I even made a resolution——"

She did start then—as if some memory had suddenly returned to her. She lifted her bouquet to her face and let it slowly drop upon her knee again as she turned and looked at him.

"I remember now," she said, "that I made that resolution the day you brought me the heliotrope." And now it seemed for the instant to be her turn to regard him with interest.

"I don't know what the resolution was," he said, rather grimly, "but I hope it was a good one. Did you keep it?"

"No," she answered, undisturbedly, "but I kept the heliotrope. You know I said I would. It is laid away in one of my bureau drawers."

"And the first party?" he asked. "Was it a success?"

"Oh, yes," she replied, "it was a great success. I am happy to say that all my parties are successes, inasmuch as I enjoy them."

"Is this a success?" he inquired. She raised her bouquet to her face again and glanced over it at the crowded room.

"It is an immense success," she said. "Such things always are—in Washington. Do you see that little woman on the sofa? Notice what bright eyes she has, and how quickly they move from one person to another—like a bird's. She is 'our Washington correspondent' for half a dozen Western papers, and 'does the social column' in one of our principal dailies, and to-morrow you will read in it that 'One of the most brilliant receptions of the season was held last night at the charming home of Mrs. Winter Gardner, on K street.' You will also learn that 'Mrs. Richard Amory was lovely in white brocade and pearls,' and that 'noticeable among even the stateliest masculine forms was the imposing figure of Colonel Tredennis, the hero of Indian adventure and ——'"

She had been speaking in the quietest possible manner, looking at the scene before her and not at him, but here she stopped and bent toward him a little.

"Have you," she said softly, "such a thing as a scalp about you?"

He was by no means prepared for the inquiry, but he sustained himself under it in his usual immovable manner. He put his hand up to his breast and then dropped it.

"I am afraid not," he said. "Not in this suit. I forgot, in dressing, that I might need them. But I might go back to the hotel," he added, suggestively.

"Oh, no, thanks," she said, returning to her former position. "I was only thinking how pleased she would be if you could show her a little one, and tell her the history of it. It would be so useful to her."

"I am very sorry," said Tredennis.

"You would be more sorry," she went on, "if you knew what an industrious little person she is, and with what difficulty she earns her ten

dollars a column. She goes to receptions, and literary and art clubs, and to the White House, and the Capitol, and knows everybody and just what adjectives they like, and how many; and is never ill-natured at all, though it really seems to me that such an existence offers a premium to spitefulness. I am convinced that it would make me spiteful. But she never loses control over her temper—or her adjectives. If I weighed two hundred pounds, for instance, she would refer to my *avoidsupois* as ‘matronly *embonpoint*,’ and if I were a skeleton, she would say I had a ‘slight and reed-like figure,’ which is rather clever, you know, as well as being Christian charity.”

“And she will inform the world to-morrow that your dress,” glancing down at it, “was white——”

“And that my hair was brown, as usual,” she ended for him. “And that I carried a bouquet of heliotrope and roses.”

“I hope you like it,” he said.

“Oh, very much indeed, thank you,” was her response. “And if I did not, somebody else would, or it is plain that she would not get her ten dollars a column. It has struck me that she doesn’t do it for amusement, or with the deliberate intention of annoying people. For my part, I admire and envy her. There is no collection so valuable as a collection of adjectives. Everything depends on adjectives. You can begin a friendship or end it with one—or an enmity, either.”

“Will you tell me,” said Tredennis, “what adjective you would apply to the blonde young man on the other side of the room, who has just picked up a lady’s handkerchief?”

She looked across the room at the person indicated, and did not reply at once. There was a faintly reflective smile in her eyes, though it could scarcely be said to touch her lips. The man was the one who had attracted Tredennis’s attention at the door of the cloak-room, and since coming down-stairs he had regarded him with some interest upon each occasion when he had caught sight of him as he moved from room to room, evidently at once paying unobtrusive but unswerving attention to the social exigencies of his position, and finding a decent amount of quiet entertainment in the results of his efforts.

“I wish you would tell me,” said Bertha, after her little pause, “what adjective you would apply to him.”

“I am afraid,” said Tredennis, “that our acquaintance is too limited at present to allow of my grasping the subject. As I don’t chance to know him at all——”

Bertha interposed, still watching the ob-

ject of discussion with the faintly reflective smile.

“I have known him for six years,” she said, “and I have not found his adjective yet. He is a cousin of Mr. Amory’s. Suppose,” she said, turning with perfect seriousness and making a slight movement as if she would rise, “suppose we go and ask Miss Jessup?”

Tredennis offered her his arm.

“Let us hope that Miss Jessup can tell us,” he said.

His imperturbable readiness seemed to please her. Her little laugh had a genuine sound. She sat down again.

“I am afraid she could not,” she said. “See! he is coming to speak to me, and we might ask him.”

But she did not ask him when he presented himself before her, as he did almost immediately. He had come to remind her that dancing was going on in one of the rooms, and that she had promised him the waltz the musicians had just struck into with a flourish.

“Perhaps you will remember that you said the third waltz,” he said, “and this is the third waltz.”

Bertha rose.

“I remember,” she said, “and I think I am ready for it; but before you take me away you must know Colonel Tredennis. Of course you do know Colonel Tredennis, but you must know him better. Colonel Tredennis, this is Mr. Arbuthnot.”

The pair bowed, as civility demanded. Of the two, it must be confessed that Tredennis’s recognition of the ceremony was the less cordial. Just for the moment, he was conscious of feeling secretly repelled by the young man’s well carried, conventional figure and calm, blonde countenance,—the figure seemed so correct a copy of a score of others, the blonde countenance expressed so little beyond a carefully trained tendency to good manners, entirely unbiassed by any human emotion.

“By the time our waltz is finished,” said Bertha, as she took his arm, “I hope that Mr. Amory will be here. He promised me that he would come in toward the end of the evening. He will be very glad to find you here.”

And then, with a little bow to Tredennis, she went away.

She did not speak to her companion until they reached the room where the dancers were congregated. Then, as they took their place among the waltzers, she broke the silence.

“If I don’t dance well,” she said, “take into consideration the fact that I have just

been conversing with a man I knew eight years ago."

"You will be sure to dance well," said Arbuthnot, as they began. "But I don't mind acknowledging an objection to persons I knew eight years ago. I never could find any sufficient reason for their turning up. And, as to your friend, it strikes me it shows a great lack of taste in the Indians to have consented to part with him. It appeared to me that he possessed a manner calculated to endear him to aboriginal society beyond measure."

Bertha laughed—a laugh whose faintness might have arisen from her rapid motion.

"He's rather rigorous-looking," she said, "but he always was. Still, I remember I was beginning to like him quite well when he went West. Papa is very fond of him. He turns out to be a persistent, heroic kind of being—with a purpose in life, and the rest of it."

"His size is heroic enough," said Arbuthnot. "He would look better on a pedestal in a public square than in a parlor."

Bertha made no reply, but after having made the round of the room twice, she stopped.

"I am not dancing well," she said. "I do not think I am in a dancing mood. I will sit down."

Arbuthnot glanced at her and then looked away.

"Do you want to be quiet?" he asked.

"I want to be quieter than this," she answered; "for a few minutes. I believe I am tired."

"You have been going out too much," he said, as he led her into a small side-room which had been given up to a large, ornate punch-bowl, to do reverence to which occasional devotees wandered in and out.

"I have been going out a great deal," she answered.

She leaned back in the luxurious little chair he had given her, and looked across the hall into the room where the waltz was at its height, and, having looked, she laughed.

"Do you see that girl in the white dress, which doesn't fit," she said,—“the plump girl who bags at the waist and is oblivious to it—and everything else but her waltz and her partner?"

"Yes," he responded, "but I hope you are not laughing at her—there is no need of it—she is having a fascinating time."

"Yes," she returned. "She is having a lovely time. And I am not laughing at her, but at what she reminds me of. Do you know I was just that age when Colonel Tredennis saw me last. I was not that size or that shape, and my dresses used to fit,—but I

was just that age, and just as oblivious, and danced with just that spirit of enjoyment."

"You dance with just as much enjoyment now," said Arbuthnot, "and you are quite as oblivious at times, though it may suit your fancy just at the present moment to regard yourself as a shattered wreck confronted with the ruins of your lost youth and innocence. I revel in that kind of thing myself at intervals, but it does not last."

"No," she said, opening her fan with a smile, and looking down at the Cupids and butterflies adorning it, "of course, it won't last, and I must confess that I am not ordinarily given to it—but that man! Do you know it was a curious sort of sensation that came over me when I first saw him. I was standing near a window, talking to half a dozen people, and really enjoying myself very much,—you know I nearly always enjoy myself,—and suddenly something seemed to make me look up—and there he stood!"

"It would not be a bad idea for him to conceal his pedestal about him and mount it when it became necessary for him to remain stationary," said Arbuthnot flippantly, and yet with a momentary gravity in his eyes somewhat at variance with his speech.

She went on as if he had not spoken.

"It was certainly a curious feeling," she said. "Everything came to me in a flash. I suppose I am rather a light and frivolous person, not sufficiently given to reflecting on the passage of time, and suddenly there he stood, and I remembered that eight years had gone by, and that everything was changed."

"A great many things can happen in eight years," commented Arbuthnot.

"A great many things have happened to me," she said. "*Everything* has happened to me!"

"No," said Arbuthnot, in a low, rather reflective tone, and looking as he spoke not at her, but at the girl whose white dress did not fit and who at that moment whirled rather breathlessly by the door. "No—not everything."

"I have grown from a child to a woman," she said. "I have married, I have arrived at maternal dignity. I don't see that there is anything else that could happen—at least, anything comfortable."

"No," he admitted. "I don't think there is anything comfortable."

"Well, it is very certain I don't want to try anything uncomfortable," she said. "‘Happy the people whose annals are tiresome.’ Montesquieu says that, and it always struck me as meaning something."

"I hope it does not mean that you consider your annals tiresome," said Arbuthnot. "How

that girl does dance! This is the fifth time she has passed the door."

"I hope her partner likes it as much as she does," remarked Bertha. "And as to the annals, I have not found them tiresome at all, thank you. As we happen to have come to retrospect, I think I may say that I have rather enjoyed myself, on the whole. I have had no tremendous emotions."

"On which you may congratulate yourself," Arbuthnot put in.

"I do," she responded. "I know I should not have liked them. I have left such things to—you, for instance."

She said this with a little air of civil mocking which was by no means unbecoming, and to which her companion was well used.

"Thank you," he replied, amiably. "You showed consideration, of course—but that's your way."

"I may not have lived exactly the kind of life I used to think I should live—when I was a school-girl," she went on, smiling, "but who does?—and who would want to when she attained years of discretion? And I may not be exactly the kind of person I—meant to be, but I think I may congratulate you on that—and Richard. You would never have been the radiant creatures you are if I had ripened to that state of perfection. You could not have borne up under it."

She rose from her seat and took his arm.

"No," she said, "I am not the kind of person I meant to be, and Colonel Tredennis has reminded me of the fact and elevated my spirits. Let us go and find him, and invite him to dinner to-morrow. He deserves it."

As they passed the door of the dancing-room she paused a moment to look in, and as she did so caught sight of the girl in the white dress once more.

"She is not tired yet," she said, "but her partner is—and so am I. If Richard has come, I think I shall go home."

CHAPTER V.

TREDENNIS dined with them the next day, and many days afterward. On meeting him, Richard Amory had taken one of his rather numerous enthusiastic fancies to him, and in pursuit and indulgence of this fancy could not see enough of him. These fanciful friendships were the delights of his life, and he never denied himself one, though occasionally they wore themselves out in time to give place to others.

Tredennis found him as the professor had described him, "a bright fellow, and a handsome fellow." He had thought that when he

came forward to introduce himself, as he had done at the Gardners' reception, he had never seen a brighter or more attractive human being. He had a dark, delicate, eager face, soft, waving hair, tossed lightly back from a forehead whose beauty was almost feminine; a slight, lithe figure, and an air of youth and alertness which would have been attraction enough in itself. He was interested in everything—each subject touched upon seeming to awaken him to enthusiasm—the Indians, the settlers, the agencies, the fort life—equally interested in each, and equally ready to confront, in the most delightfully sanguine mood, the problems each suggested.

"It is worth a great deal to have an opportunity to judge of these things from the inside," he said. "There are a thousand questions I want to ask, but we shall see you often, of course. We must see you often. It will be the greatest pleasure to us."

His first entrance into their house, the following evening, was something which always set itself apart in Tredennis's memory.

A gay burst of laughter greeted him as the parlor door was thrown open,—laughter so gay that the first announcement of his name was drowned by it, and, as he paused for a moment, he had the opportunity to take in fully the picture before him. The room was a pretty and luxurious one, its prettiness and luxury wearing the air of being the result of natural growth, and suggesting no oppressiveness of upholstery. Its comforts were evidently the outcome of the fancies and desires of those who lounged, or read, or talked in it, and its knickknacks and follies were all indicative of some charming whim carried out with a delightful freedom from reason which was their own excuse.

In the open fire-place a bright wood-fire burned, and upon the white wolf-skin before it Richard Amory lay at unconventional full length, with his hands clasped lightly under his head, evidently enjoying to the utmost the ease of his position, the glow of the fire, and the jest of the moment, while near him, in an easy-chair, sat Arbuthnot. Both of them looked at Bertha, who stood with one hand resting on the low mantel.

"I have been waiting for a long time," Tredennis heard her say, and then as the servant announced his name again she stopped speaking, and came forward to meet him, while Richard sprang lightly to his feet.

"I will tell you at the outset," she said, "that it is not one of the time-honored customs of Washington for people to receive their guests with this ingenuous and untrammelled freedom, but——"

"But she has been telling us a story," put

in Richard, shaking hands with him; "and she told it so well that we forgot the time. And she must tell it again."

"It is not worth telling again," she said, as they returned to the fire; "and, besides, I told it to you in the strictest confidence. And if that is not reason enough, I don't mind confessing that it is a story which doesn't exhibit me in an amiable light. It shows a temper and viciousness that you count among your home comforts, and don't feel it decent to display for the benefit of any one but your immediate relatives."

Tredennis looked down at her curiously. His first glance at her had shown him that to-night she was even farther removed from his past than she had seemed before. Her rich dress showed flashes of bright color, her eyes were alight with some touch of excitement, and her little wrists were covered with pretty barbarities of bangles and charms which jingled as she moved.

"I should like to hear the story," he said.

"It is a very good story," commented Arbuthnot, laughing; "I think I would tell it over again."

"Oh, yes," said Richard; "Colonel Tredennis must hear it."

Bertha looked across at Tredennis, and as she did so he saw in her eyes what he had seen the night before and had not understood, but which dawned upon him now—a slight smiling defiance of his thoughts, whatsoever they might be.

"You won't like it," she said; "but you shall hear it, if you wish. It is about a great lady——"

"That will add to the interest," said Tredennis. "You have great ladies in Washington?"

"It is infinitely to our credit that they are only occasional incidents," she answered, "and that they don't often last long. When one considers the number of quiet, domesticated women who find themselves launched suddenly, by some wave of chance, into the whirl of public life, one naturally wonders that we are not afflicted with some very great ladies indeed, but it must be confessed we have far less to complain of in that respect than might be expected."

"But this particular great lady?" said Tredennis.

"Is one of the occasional incidents. Some one said that our society was led by bewildered Europeans and astonished Americans—Americans astonished to find themselves suddenly bearing the responsibility of the highest positions, and Europeans bewildered by being called upon to adjust themselves to startling novelties in manners and customs. This great

lady is one of the astonished Americans, and, privately, she is very much astonished, indeed."

Arbuthnot laughed.

"You will observe," he commented, "that Mrs. Amory's remarks are entirely unbiased by any feminine prejudices."

"You will observe," said Bertha, "that Mr. Arbuthnot's remarks are entirely unbiased by any prejudice in favor of my reliability of statement. But," she added, with a delusive air of amiable candor, "I am sure you cannot deny that I was very civil to her."

"I have not a doubt of it," responded Arbuthnot. "And I don't mind adding that I should like to have been there to see."

"Colonel Tredennis shall judge," she said, "whether it would have been really worth while. I will make the story brief. Last season the great lady gave me cause to remember her. We had not met, and to please a friend, I called upon her. We found her in her drawing-room, engaged in entertaining two newly arrived *attachés*. They seemed to interest her. I regret to say that we did not. She did not hear our names when the servant announced them, and the insignificance of our general bearing was against us. I think it must have been that, for we were comparatively well dressed—at least, Miss Jessup's description of our costumes in the 'Wabash Times' gave that impression the following week. Perhaps we looked timid and unaccustomed to 'the luxurious trophies from many climes' (Miss Jessup again) surrounding us. The ingenuous modesty of extreme youth which you may have observed——"

"Repeatedly," replied Arbuthnot.

"Thank you. But I suppose it told against me on this occasion. Our respectable attire and air of general worthiness availed nothing. The great lady rose, stared at us, gave us her finger-ends, called us by names which did not belong to us, and sat down again, turning her back upon us with much frankness, and resuming her conversation with the *attachés*, not interrupting it to address six words to us during the three minutes we remained. That is the first half of the story."

"It promises well for the second half," said Tredennis.

"The second is *my* half," said Bertha. "Later, she discovered our real names and the fact that—shall I say that Miss Jessup knew them, and thought them worthy of mention in the 'Wabash Times'? That would perhaps be a good way of putting it. Then she called, but did not see me, as I was out. We did not meet again until this afternoon. I was making the Cabinet calls, and had the pleasure of encountering her at the house of

the Secretary of War. Perhaps Miss Jessup had sent her a copy of the 'Wabash Times' yesterday, with the society column marked—I don't know. But she was pleased to approach me. I received her advances with the mild consideration of one who sees a mistake made, but is prevented by an amiable delicacy from correcting it, and observing this, she was led into the indiscretion of saying, with graceful leniency, that she feared I did not know her. I think it is really there that my half begins. I smiled with flattering incredulity, and said: 'That would be very strange in a Washingtonian.'

"When you called ——" she began.

"I looked at her with a blush, as of slight embarrassment, which seemed to disturb her.

"You have not forgotten that you called?" she remarked, chillingly.

"It would have been impossible for me to forget anything so agreeable," I said, as though in delicately eager apology. 'I am most unlucky. It was some more fortunate person.'

"But," she said, 'I returned the visit.'

"I received your card," I replied, smiling ingenuously into her eyes, 'and it reminded me of my delinquency. Of course I knew it was a mistake.'

"And after I had smiled into her eyes for a second or so longer, she began to understand, and I think by this time it is quite clear to her."

"There must be a moral to that," commented Tredennis.

"There is," she responded, with serene readiness. "A useful one. It is this: It is always safe—in Washington—to be civil to the respectably clad. If the exigencies of public position demand that you receive, not the people you wish to see, or the people who wish to see you, but the respectably clad, it is well to deal in glittering generalities of good manners, and even—if you choose to go so far—good feeling. There are numbers of socially besieged women in Washington who actually put the good feeling first, but the Government cannot insist on that, you know, so it remains a matter of taste."

"If you could draw the line ——" began Richard.

"There is no line," said Bertha, "so you can't draw it. And it was not myself I avenged this afternoon, but—the respectably clad."

"And before she became an astonished American," put in Arbuthnot, "this mistaken person was possibly ——"

Bertha interposed, with a pretty gesture which set all the bangles jingling.

"Ah," she said, "but we have so little to do with that, that I have not even the pleasure

of using it in my arguments against her. The only thing to be reasonably required of her now is that she should be sufficiently well-mannered during her career. She might assume her deportment with her position, and dispose of it at a sacrifice afterward. Imagine what a field in the way of advertisement, for instance: 'For sale. A neatly fitting suit of good manners. Used through one administration. Somewhat worn through active service, but still equal to much wear and tear.'"

That which struck Tredennis more forcibly than all else was her habit of treating everything lightly, and he observed that it was a habit Arbuthnot shared with her. The intimacy existing between the two seemed an unusual one, and appeared to have established itself through slow and gradual growth. It had no ephemeral air, and bore somehow the impress of their having shared their experiences in common for some time. Beneath the very derision which marked their treatment of each other was a suggestion of unmistakable good fellowship and quick appreciation of each other's moods. When Bertha made a fanciful speech, Arbuthnot's laugh rang out even before Richard's, which certainly was ready enough in response; and when Arbuthnot vouchsafed a semi-serious remark, Bertha gave him an undivided attention which expressed her belief that what he said would be worth listening to. Amory's province it seemed to be to delight in both of them—to admire their readiness, to applaud their jests, and to encourage them to display their powers. That he admired Arbuthnot immensely was no less evident than that no gift or grace of Bertha's was lost upon him.

His light-hearted, inconsequent enjoyment of the pleasure of the moment impressed Tredennis singularly. He was so ready to be moved by any passing zephyr of sentiment or emotion, and so entirely and sweet-temperedly free from any fatiguing effect when the breeze had once swept over him.

"All that I have to complain of in you two people," he said gayly, in the course of the evening, "is that you have no sentiment—none whatever."

"We are full of it," said Arbuthnot, "both of us—but we conceal it, and we feel that it makes us interesting. Nothing is more interesting than repressed emotion. The appearance of sardonic coldness and stoicism which has deceived you is but a hollow mockery; beneath it I secrete a maelstrom of impassioned feeling and a mausoleum of blighted hopes."

"There is a fashion in emotions as in everything else," said Bertha. "And sentiment is 'out.' So is stateliness. Who would

submit to stateliness in these days? It was the highest aim of our great-grandmothers to be stately, but stateliness went out with ruffles and the minuet, and a certain kind of Roman nose you find in all portraits taken in the reigns of the Georges. Now we are sprightly. It is imperative that we should be sprightly. I hope you are prepared to be sprightly, Colonel Tredennis."

He was very conscious of not looking so. In fact, the idea was growing upon him that upon the whole his grave face and large figure were rather out of place among all this airy *badinage*. His predominant feeling was that his unfortunate tendency to seriousness and silence was not a Washingtonian quality, and augured poorly for his future. Here were people who could treat lightly, not only their subjects, but themselves and each other. The fire-lit room, with its trifles and knickknacks and oddities; the graceful, easy figure of Richard Amory lounging idly in his chair, Bertha with her bright dress and fantastic little ornaments flashing and jingling, Arbuthnot smiling faintly, and touching his mustache with a long fair hand—each and all suggested to him in some whimsical, vague fashion that he was too large and not pliable enough for his surroundings, and that if he moved he might upset something, or tread upon some sparkling, not too substantial theory.

"I am afraid I am not as well prepared as I might be," he answered. "Do you always find it easy?"

"I!" she returned. "Oh, perfectly! it is only Mr. Arbuthnot who finds it difficult—being a prey to his feelings. In his moments of deep mental anguish, the sprightliness which society demands of him is a thing from which his soul recoils."

Shortly after dinner, Arbuthnot went away. He had a final call to make upon some friends who were going away, after having taken an active part in the inaugural ceremonies and ball. It appeared that they had come from the West, with the laudable intention of making the most of these festivities, and that he had felt it his duty to do his utmost for their entertainment.

"I hope they enjoyed themselves," said Bertha, as he stood making his adieux.

"Well," was his reply, "it strikes me they did. I took them to the Treasury, and the Patent Office, and the Army and Navy Department, and up into the dome of the Capitol, and into the Senate and the House, and they heard the inaugural address, and danced at the ball, and saw the ex-President and bought photographs of the new one, and tired themselves out, and are going home a party of total wrecks, but without a thing on their

consciences, so I think they must have enjoyed themselves. I hope so. I didn't. I don't grudge them anything, but it is the ninetyeth time I have been through the Treasury, and the twentieth time I have climbed to the dome—and the exercise has lost its freshness."

After he had left the room, he returned, drawing from the pocket of his rather dandyish light overcoat three small packages, which he laid on a side table.

"This is for Janey, and this for Jack, and this for Marjorie," he said. "I told them they would find them there in the morning."

"Thank you," answered Bertha, as if the proceeding was one to which she was well accustomed.

When he was fairly gone, Richard Amory broke into a half-laugh.

"What a queer fellow he is!" he said.

Bertha returned to her place by the fire, taking from the mantel a little screen of peacock feathers and shading her face with it.

"Do you know," she said, "that he rarely leaves the house without one of us making that remark, and yet it always has an illusive air of being entirely new."

"Well," remarked Richard, "he is a queer fellow, and there's no denying it. Imagine a fellow like that coolly rambling about with neat packages of bonbons in his fastidious overcoat pocket, to be bestowed on children without any particular claim on him. Why does he do it?"

"It doesn't exactly arise from enthusiasm awakened by their infant charms," said Bertha, "and he never professed that it did."

"But he must care for them a little," returned Richard.

"The fact is that you don't know what he cares for," said Bertha, "and it is rather one of his fascinations. I suppose that is really what we mean by saying he is a queer fellow."

"At all events," said Richard, amiably, "he is a nice fellow, and one can manage to subsist on that. All I complain of is that he hasn't any object. A man ought to have an object—two or three, if he likes."

"He doesn't like," said Bertha, "for he certainly hasn't an object—though, after all, that belongs to his mode of life."

"I should like," said Tredennis, "to know something of the mode of life of a man who hasn't an object."

"You will gain a good deal of information on the subject if you remain long in Washington," answered Bertha. "We generally have either too many objects or none at all. If it is not your object to get into the White House, or the Cabinet, or somewhere else, it is probably

your fate to be installed in a 'department,' and, as you cannot hope to retain your position through any particular circumspectness or fitness for it, you have not any object left you."

"The fact is," said Richard, "it would have been a great deal better for Larry if he had staid where he was and fought it out."

"The fact is," said Bertha, "it would be a great deal better for nine out of ten of the rest if they staid where they were. And when Larry came, he did not come under specially exhilarating circumstances, and just then I suppose it seemed to him that the rest of his life was not worth much to him."

"It has struck me," said Richard, reflectively, "that he had a blow of some sort about that time—something apart from the loss of his fortune. I am not sure but that I once heard some wandering rumor of there being a young woman somewhere——"

"Oh!" said Bertha, in a low, rather hurried voice, "he had a blow. There is no mistake about that—he had a blow, and there was a good deal in him that did not survive it."

"And yet he doesn't strike you as being that sort of fellow," said Richard, still in reflection. "You wouldn't think of him as being a fellow with a grief?"

Bertha broke into delighted laughter.

"A grief!" she exclaimed. "That is very good. I wish he had heard it. A grief! I wonder what he would do with it in his moments of recreation—at receptions, for instance, and *musicales*, and *germans*. He might conceal it in his opera hat, but I am afraid it would be in the way. Poor Larry! Grievances are as much out of fashion as stateliness, and he not only couldn't indulge in one if he would, but he wouldn't if he could."

"Well, how would you put it," said Richard, "if you did not call it a grief?"

Bertha laughed again.

"If I put it at all," she answered, "I would say that he had once been very uncomfortable, but had discreetly devoted himself to getting over it, and had succeeded decently well—and last, but not least, I would add that it would be decidedly difficult to make him uncomfortable again."

Tredennis found it impossible to avoid watching her with grave interest each time she spoke or moved. He was watching her now with a sort of aside sensibility to her bright drapery, her flashing, tinkling wrists, and her screen of peacock feathers.

"She is very light," he was saying inwardly.

She turned to him with a smile.

"Would he strike *you* as 'a fellow with a grief'?" she inquired.

"No," he answered; "I cannot say he would."

"No," she said, "that is certain enough. If you went away and never saw him again, you would remember just this of him—if you remembered him at all: that his clothes fitted him well, that he had an agreeable laugh, that he had a civil air of giving you his attention when you spoke, and—nothing else."

"And that is not all there is of him?" Tredennis asked.

She looked down at her feather screen, still smiling slightly.

"No," she answered, rather slowly, "not quite all, but even I don't quite know how much more there is, and Richard, who has known him at intervals all his life, lapses into speaking of him as 'a fellow with a grief.'"

Richard rose from his chair.

"Oh," he said, with much cheerfulness, "there is no denying that you two are the outgrowth of an effete civilization. You are always arriving at logical deductions concerning each other, and you have a tendency to the derision of all the softer emotions. You are a couple of world-worn creatures, and it is left to me to represent the youth and ardor of the family."

"That is true," said Bertha, in her soft, mocking voice. "We are battered and worldly-wise—and we have no object."

"But I have," said Richard, "and if Colonel Tredennis will come upstairs with me, I will show him what a few of them are, if he takes an interest in such things."

"What," said Bertha, "the laboratory, or the library, or ——"

"All of them," he answered, "including the new collection." And he turned upon Tredennis the brightest imaginable smile.

Tredennis left his chair in response to it.

"I am interested in all collections, more or less," he said.

"So am I," said Bertha—"more or less." And they went out of the room with this little gibe in their ears.

Before the conclusion of his visit to the domains upstairs, Tredennis had learned a great deal of Richard Amory. He had found that he had a taste for mechanics, a taste for science, a taste for literature. He had a geological cabinet, an entomological collection, a collection of coins, of old books, of old engravings, all in different stages of incompleteness. He had, even, in his small work-room, the unfinished models of an invention or two, each of which he was ready to explain with an enthusiasm which flamed up as the demands of the moment required, in the most delightful and inspiring manner.

"I shall finish them all, one of these days,"

he said, blithely. "I am always interested in one or the other, and they give me an object. And, as I said down-stairs, what a man wants is an object. That is what Larry stands in need of. Give him an object, and he would not indulge in that cold-blooded introspection and retrospection. Bertha has told him so herself."

"They are very good friends," said Tredennis.

"Oh, yes! They are fond of each other, in their way. It is their way to jeer a good deal, but they would stand by each other, I fancy, if the time came when it was needful."

He referred, in the course of the conversation, to his profession, and his reference to it caused Tredennis to class it in his mind, in some way or other, with the unfinished models and incomplete collections.

"I can't say I like the law," he said, "but it was a sort of final resource. I tried medicine for a while,—took a course of lectures,—but it didn't suit me. And then two or three other things turned up, but I didn't seem to suit them. And so it ended in my choosing law, or letting it choose me. I don't know that I am exactly a success at it. It's well we don't depend on it. Bertha——" He broke off rather

suddenly, and began again at once. "I have plans which, if they are as successful as they promise to be, will change the aspect of affairs." And he laughed exultantly.

On their way down-stairs, they came upon an open door, which had been closed as they went up. It opened into a large, cheerful room, with gay pictures on the walls, and a high brass fender guarding the glowing fire, before which a figure sat in a low rocking-chair, holding a child in its arms.

"That is the nursery," said Richard. "Bertha, what is the matter with Janey?"

It was Bertha who sat in the rocking-chair, and as she turned her face quietly toward them, Tredennis felt himself betrayed into a slight start. Neither her eyes nor her color were as bright as they had been down-stairs. She had taken off her ornaments, and they lay in a small glittering heap upon the stand at her side. The child's head rested upon her breast, and her bare arm and hand held its body in an easy position with a light, close, accustomed touch. She spoke in a soft, lowered voice.

"Janey is nervous to-night," she answered. "She cannot go to sleep, and I am trying to quiet her. Will you excuse me if I do not come down? She really needs me."

(To be continued.)

THE FOUNTAINS OF THE RAIN.

THE merchant clouds that cruise the sultry sky,
As soon as they have spent their freight of rain,
Plot how the cooling thrift they may regain:
All night along the river-marsh they lie,
And at their ghostly looms swift shuttles ply
To weave them nets wherewith the streams to drain;
And often in the sea they cast a seine,
And draw it, dripping, past some headland high.
Many a slender naiad, with a sigh,
Is in their arms uptaken from the plain;
The trembling myrmidons of dew remain
No longer than the flash of morning's eye,
Then, back unto their misty fountains fly:—
This is the source and journey of the rain.

NEW ROADS TO A TRADE.

MANUFACTURES and commerce require capital; the professions imply a costly education; a trade is easily learned, and demands only enough money to buy a kit of tools. Besides, nearly every successful farmer, manufacturer, railroad officer, and sailing-master has been first a laborer, mechanic, railway hand, or sailor. The trades lead to high places; they are the most secure foundation of wealth. The average income in the United States is estimated to be about six hundred dollars, and on this the majority of our people bring up their families and save money. Any common workman in the trades can earn this; the majority of journeymen earn about twice as much.

Something of this is now recognized, and many young people are asking how they may learn a trade. It is the purpose of the writer to show how and where a young man or woman may learn enough to win a first-rate position in the trades. Two facts make it very difficult to learn a trade: first, the old apprentice system, where the beginner lived with the master and was really a trade-pupil, has completely disappeared, and, second, the division of labor caused by machinery makes it very difficult for the young workman to get a liberal trade education. To compensate for this there have been established, both in America and in Europe, what are called schools of industry. These include schools of design, schools of forestry, mines, and navigation, railroad, dairy, and agricultural schools, schools of mechanics, technical schools, and trade schools. The methods of teaching pursued in these schools vary greatly. They all have one common aim—to enable their pupils to earn a living and become capable workmen, to reduce the number of possible paupers, and to place in the hands of the scholars power to subdue the earth and contribute to the wealth and honor of the nation. Four such schools have recently come under the observation of the writer, and brief accounts of these may serve to show how a trade may be learned.

THE WORCESTER (MASS.) FREE INSTITUTE.

THE Free Institute, located at Worcester, Massachusetts, is a school of technology. It aims to teach mechanical and civil engineering, physics, and chemistry, and, in addition, drawing, mathematics, and modern languages. In every study there must be actual manual labor in the shop or field. Ten hours a week, and the month that follows the second exam-

ination, must be spent at the bench or in the laboratory. The aim of the school is to make first-class engineers and chemists; but it does more, for in the department of mechanics it seeks to create practical workmen, capable of earning a living as journeymen as soon as they are graduated. This feature of the school is of most interest to us.

Six months before commencing the regular course, the pupil must enter a regular commercial shop and work there, as pupil and apprentice, ten hours a day. Thirty-nine hours a week must be given to this shop-work, ten hours to instruction in drawing, and five to recitation. The instruction in the shop begins with the use and care of the hand-tools used in carpentry. Wood is provided, and, under competent instruction, the pupils are required to make some given form of wood-work. From this making of mere forms they proceed to the union of different parts, and this means construction. They are next given a pattern of some article of wood regularly made and sold in the market. This may be such a thing as a hanging hat-rack for the wall, and each pupil is expected to make a dozen, all exactly alike, and fit for actual use and sale. He at once learns the difference between making an article for the sake of learning how it is made, and manufacturing it. In the drawing-class, he makes a working-pattern of the article he is to manufacture in the shop. He thus learns the language of drawing, and how to make it express practical work, and, at the same time, he learns to work from drawings. The making of a dozen hat-racks teaches the idea of manufacture, and he learns that every one of the dozen must be equally good. He also learns that to insure the ready sale of any manufactured article, the price must be low. He realizes the necessity of economy of time, labor, and materials. He very quickly sees the aim and value of machine tools. He quickly gets to see the essential parts of things, learns to make the parts separately, and to assemble them in the finished whole. If each piece of wood is to receive two saw-cuts, he learns that all these cuts may be made at one time at high speed on a band-saw. If there are six screws to be put in each piece of wood, he learns to arrange the work so as to save time and labor by doing all the screw-driving at once. Next to this manufacturing of simple things comes the construction, from drawings, of more elaborate articles, each employing the use of every hand and machine tool used in a wood-working shop.

At the end of six months he is ready to enter upon his studies. He has at this time learned enough to keep from starving in a clerkship or as a telegraph operator. He knows the labor value of a dollar, and something of the commercial value of education.

All the pupils of the institute, except those studying chemistry and physics, also work in a regular commercial machine-shop attached to the school. No pupil can be graduated unless he has made the working-drawing, and put together and finished a practical working machine, tool, or motor of some kind. Each pupil in every class must work ten hours a week in the machine-shop, and, after the second examination, work a whole month of ten hours a day. They must really work, and not only experiment. They must take their turn at firing the boilers, oiling the engine, and doing everything that may need to be done in the shop.

What are the advantages of such a school as the Worcester Free Institute over the apprentice system? In the first place, in the study of mechanics comes the preliminary six months' daily work in a wood-shop, and under constant instruction. The aim is not solely to make hat-racks or cabinets, but to teach the use of tools and the art of manufacturing. The pupil may get to be a bridge-builder or railroad man, yet there is no position in which he may be placed in after life in which the knowledge of hand-craft he acquires in the apprentice class may not be of use. He may never again lift a tool; yet he knows their use, and is a judge of good work and methods. If, on leaving the school, he has only his hands and his time for capital, he can earn a living. He has a good trade. He can enter a shop knowing far more of the theory and science of the work than his fellows, and yet not wholly unfamiliar with modern tools. There is no danger that he will join the incapables on the road to pauperism or jail.

NEW YORK TRADE SCHOOLS.

It is not every young man who can give three years to a course of study in such schools, or even spend six months in an apprentice class. He must earn money the moment he leaves the grammar school. He must, in some fashion, become a workman—stone-cutter, plumber, carriage-maker, painter, or whatever seems best to his liking. He cannot attend any day school, even if it is a free school. For such young men, who really desire to learn and to be educated in their trade, there has been recently opened in New York a series of evening trade schools.

These schools do not aim to be industrial universities, but places where the young workman may attend lectures and drawing-classes at night, and at very low rates. A portion of these schools are under the charge of the New York Trade Schools, the others are controlled by the Metropolitan Museum of Art; and during the short time they have been opened have been attended by a very desirable class of pupils. The classes meet two to three times each week during the winter season, and the terms range from five dollars for five months' instruction, to three dollars a month. For carpenters, masons, and machinists, there are classes in free-hand drawing three evenings a week, for two and a half hours each evening, and the terms are five dollars for five months. For architectural carvers, there is a class in modeling, meeting at the same hours, the terms being one dollar more. In the carriage-building class, drawing with a special view to carriage work is taught three times a week for five months, at a dollar a month. For fresco-painters, instruction is given in the practical work of mixing colors; stenciling, design, and composition are taught three times a week, at three dollars a month. In the class in sanitary engineering, instruction is given by lectures in the art of plumbing, in the application of mathematics to practical work, and in planning and laying out work. Instruction is also given in drawing applied to plumbing, together with practical demonstrations of work and methods. There are also classes in sign-painting and wood-polishing. In addition to these evening classes, which have already been well attended, it is proposed to teach in other schools the science and practice of brick-laying, with lectures and practical demonstrations in brick-work. This school will be open in the day-time, and the charge for tuition will be quite low. These trade schools are designed to benefit those already employed, to help them to do better work, and to raise the standard of workmanship in these trades. Such schools cannot fail to be of value both to the young workman and to his trade. Whatever tends to raise the standard of excellence in any trade, and makes it easy for the workman to earn more money, is a benefit both to the man, the trade, and the public. In this, these trade schools have a wide field of usefulness, and it would be well if they were opened in every large city.

THE MASSACHUSETTS INSTITUTE OF TECHNOLOGY.

THE criticism commonly made in workshops against the education given in technical

schools is that, while the pupils may be first-rate draughtsmen, and well up in the theory of the mechanic arts, they are utterly unable to do any real work in the shop, not being ready to use the most simple tool or perform the most common labor. The young man is a student, and not a workman. He may be theoretically able to take charge of a machine-shop, yet no man will trust him with work, for he would not know whether it were done well or ill. To meet this criticism, the Massachusetts Institute of Technology has opened, in connection with its great school at Boston, a school of mechanic arts. Any one can enter this department who can pass an examination in the common grammar-school studies. The course is for two years, and the plan of study includes instruction in carpentry and joinery, wood-turning, pattern-making, and foundry work in the first year, and iron-forging, vice work, and machine-tool work during the second year. There is also instruction in the regular schools of the Institute, including algebra, mechanical drawing, geometry, physics, and English composition. Four hours a day must be given to study, and three hours every other day must be spent in the shops attached to the Institute.

The system of instruction in this school is entirely different from that followed at the Worcester Free Institute or the Trade Schools in New York. The school-room instruction is not important, as we wish to see only the shop instruction. The pupils are all taught the use of the same tool at the same time. For instance, in wood-turning there are sixteen lathes, and at each is a pupil working from the same pattern and under the same instructor. In the blacksmith work, a number of forges are used at the same time, all the students doing the same piece of iron-work at once. The object is to teach manual skill by classes. The articles must be well made, but it is not essential that they have any commercial value. The thing desired is the knowledge of implements and processes, and a reasonable degree of skill in handling the tools and materials. It is not expected that the pupil shall become a high-class workman, as such a degree of skill could only be obtained at the sacrifice of instruction. The graduates of such a school have a knowledge of the more simple tools used in carpentry, iron-forging, foundry work, machine-shop work, and pattern-making. When they go out to earn their living, they are not wholly at sea regarding the aim and use of the tools they see in shops and foundries. They may not be first-rate journeymen carpenters and machinists, but they are advanced beginners, and have a better general idea of

the theory and practice of their trade than the average workman in it.

THE STEVENS INSTITUTE OF TECHNOLOGY.

THE Stevens Institute of Technology, at Hoboken, New Jersey, is a school of mechanical engineering. In addition to the usual courses in physics, chemistry, drawing, mathematics, and mechanics, there is also a thorough course in shop work. Every pupil must work in the shop two afternoons a week, and eight hours a day for thirty days in each term. In this school, the aim of the shop instruction is to give the student a great number of exercises in the use of hand and machine tools, that he may obtain as wide as possible a knowledge of methods and materials. It is not intended that he shall be particularly skillful in the use of tools, but that he shall have a liberal education in the trades allied to engineering. It is not intended to make workmen, or to enable the pupils to earn journeymen's wages, or even to give a knowledge of commercial methods. The student is to become an engineer in the broadest sense, and to do so he must know something of every kind of work performed in shops and foundries. To understand this, we may briefly examine the courses of instruction in the shop work. There are no classes, and each student takes up one exercise after the other. As soon as he makes it clear that he understands the tool or process, he goes on at once to the next exercise. Those who are quick of eye and hand advance quickly. The slower pupil simply covers less ground. They have equal knowledge as far as they go.

In carpenter work, there are thirty exercises, progressing from the care of tools to the practical construction of a roof-truss. By following each in turn, the pupil covers the entire range of carpentry work. He sees and performs, at least once, every kind of work performed in commercial carpentry shops. He may not be able to turn out a very nice piece of work, and it may have no commercial value whatever, yet he knows the how and the why, and if in after years he wishes similar work done, the knowledge will be of use to him. In wood-turning there are twenty-seven exercises with a power lathe, beginning with the starting and stopping of the lathe. As each student takes every exercise in turn, and spends no more time over any one than is needed to get a clear knowledge of the work, one lathe answers for the whole class, each in turn performing the exercise for the day.

In machinists' work, there is a course in vice work, in chipping and filing, of eleven exercises, advancing from simple filing to the most elaborate work in finishing iron by hand. In the use of the planer there are ten exercises, on the milling machine eighteen exercises, from the simple setting the machine in order for work, up to intricate problems in the art of gear-cutting. There are sixteen exercises in drilling-press work, and in the use of the metal lathe thirty-six exercises, including all the work done with this tool. All of these exercises in the shop are based on drawings made by the students.

In addition to the foregoing, each class, before its graduation, makes working-drawings, and constructs from them some piece of machinery which implies a knowledge of pattern-making, casting, blacksmith's work, millwright work, and steam-fitting. There are also exercises at the forge, in pattern-making, in molding, and founding, and in all the work required in fitting up a mill, and in erecting steam and gas pipe of all kinds. Each pupil must, either alone or with others, go through these exercises till he shows that he has a clear knowledge of the subject, and that, if he had the practice, he could become a skilled workman in a very short time.

This school has recently greatly increased its facilities for instruction by the erection of a fine machine-shop, which includes a Buckeye high-speed engine, and at least one type of every class of machine-tool used in manufact-

ures. The shop and tools were the gift of Professor Henry Morton, the president of the Institute. This shop certainly gives the Institute great advantages in the practical teaching of the trades connected with mechanical engineering.

These four schools are not all the industrial or technical schools in the United States: there are several others aiming to occupy more or less of the same field; but these show the methods pursued in teaching the trades, and they are the best we have in the country. For the young man who must at once earn money, the Trade Schools in New York offer excellent opportunities to study drawing, which is the universal mechanical language, and to get a better insight into the science of work than can be obtained in the shop. For those wishing to learn the trades in their relation to business, the methods of the Free Institute at Worcester seem best. For the student aiming higher than to be a mere workman, the Massachusetts School and the Stevens Institute offer the best advantages. Each is a university of the trades connected with engineering—the first giving perhaps the most hand skill, the second giving in its school course a wider field of study, with less actual manual skill. The influence of such schools is already great, both upon the standard of excellence in these trades and in raising the dignity of labor. Such schools are the new roads to a trade and a competence.

AMONG THE THOUSAND ISLANDS.

THE misty air like amber seems,
Like melting gold the sky o'erhead.
Athwart the ivory gate of dreams
Surely our bark is piloted.

For this is the enchanted realm,
The fairy-palace reared by sleep;
Through emerald chambers glides our helm,
And in our wake flame-opals leap.

I need but lift my heavy eyes
To South or North, to East or West,
To see, as at my bidding, rise
A wave-charmed island's tufted crest.

Here a tall headland draped with fern,
Pine-crowned and honey-combed with
caves;
There, just above the river's urn,
A low, soft nest of grasses waves.

Now narrowing cliffs inclose our prow,
Fantastic rocks streaked blue and rose;
The channel eddies swift,—and now
Broad as a sea the river flows.

Thrilled by the water's long embrace,
The slender silver reeds are stirred,
And sway with slow, voluptuous grace,
Like dancers to a waltz unheard.

There where the crystal floor scarce shines,
So thick the velvet leaves unfold,
Superb the lily-queen reclines,
A miracle of snow and gold.

Here is Miranda's island—look!
'Twixt tree and cloud still Ariel flies,
Behind the hill, beyond the brook,
The whelp of Sycorax yet lies.

But duke and princess, clown and seer,
Have voyaged forth to other seas,
And fathom deep, since many a year,
Are buried book and wand and keys.

On! we shall find in sober sooth,
From some clear well-head bubbling up,
The fountain of eternal youth
To brim the thirsty pilgrim's cup.

No ribboned grass is floating there,
Along our smooth, pearl-paven path,
But hidden faces' pale green hair
Of nymphs and nereids at the bath.

Enchanted world! enchanted hour!
Hail and farewell, enchanted stream,
That hast the unimagined power
To make the real surpass the dream!

BUCHANAN'S LOYALTY.

I HAVE often regretted that I did not keep a complete diary of the more important events at Washington during the fall and winter of 1860-1; but the truth is, I had not the requisite time and strength to do it, so onerous were the official duties then devolving upon me. I did, however, find time to make some brief notes, and these, with some of my private letters hastily thrown off in connection with my official correspondence, serve to refresh my recollection of many of the startling occurrences of that appalling epoch. Many of these private notes were addressed to General Dix and Mr. Capen, the postmasters of New York and Boston, through whose kindness I obtained copies of them—those from General Dix having been received about a year before his death. Of others of my letters I fortunately retained copies; and all, together with the answers to some of them, have been shown to a few friends, who have earnestly advised me to allow them to be published. To this I have consented, hesitatingly, with the assurance that any seeming egotism will be pardoned, if not overlooked, since it is apparent that I am not actuated by any selfish motive.

I have put the letters as nearly in their order of date as practicable, introducing only such explanatory remarks as may seem necessary to their correct understanding. That of ex-President Pierce, of November 26, 1860, and the Hon. Edward Everett's, were published in "Lippincott's Magazine" of April, 1872.

"P. O. DEPT., WASHINGTON, D. C., Oct. 16, 1860.

"MY DEAR SIR: * * * Politically the signs look dark. It is painful to hear so many sound and conservative men give it as their decided opinion that there will certainly be resistance to Lincoln's administration of the government. Property holders in this district are greatly concerned.

"Very respectfully and truly,

"HORATIO KING.

"Hon. John A. Dix, P. M., New York."

VOL. XXIII.—25.

"P. O. DEPT., Nov. 7, 1860.

"MY DEAR SIR: * * * I write this [on the business of the Dept.] early in the morning, before seeing hardly any one. The bright sun is shining into my office window, and everything is quiet, but a weight presses on my heart, which I never felt so sensibly before—all foreboding 'breakers ahead!'

"Very resp'ly and truly,

"HORATIO KING.

"Hon. John A. Dix, New York."

"P. O. DEPT., APPT. OFFICE, Nov. 7, 1860.

"MY DEAR SIR: As indicating how I feel to-day, I take the liberty of inclosing a copy of a letter I sent to the President this forenoon.

"The article in the 'Constitution' referred to will do infinite mischief, and I am not certain that the writer of it ought not to be stretched up. * * * I presume, however, it is the result only of bad judgment.

"Very truly,

"HORATIO KING.

"Hon. John A. Dix, New York."

"WASHINGTON, Nov. 7, 1860.

"MY DEAR SIR: The die is cast, and Lincoln is elected.

"Shall we now fan the flame of disunion, or shall we exert our influence toward calming the already excited sentiment of the South?

"What course should we, here in the District of Columbia, pursue? Should we join hands with the disunionists and help on the storm, or should we not rather pour oil on the troubled waters? * * *

"My own will illustrate the condition of thousands in this district. With us everything depends on the Union being preserved.

"What, then, was my indignation on learning that men holding office here under your administration were parading the streets here this morning with disunion cockades on their hats! and the leading article of the 'Constitution' to-day can have no other effect than to encourage and fan the flame of disunion, both here and at the South.

"You will bear me witness that I have never intruded myself upon your counsels. But may I not, in the most respectful, yet in the most earnest manner, now appeal to you—for if you are silent your enemies will, I am sure, attempt to hold you responsible for these things—to use your power in at once checking this dread spirit of disunion here in our midst?

"With great respect,

"Very sincerely your friend,

"HORATIO KING.

"His Excellency, James Buchanan."

The editorial article of the "Constitution" referred to in the preceding letter concludes as follows :

"We can understand the effect that will be produced in every Southern mind when he reads the news—that he is now called on to decide for himself, his children, and his children's children, whether he will submit tamely to the rule of one elected on account of his hostility to him and his, or whether he will make a struggle to defend his rights, his inheritance, and his honor."

"CONCORD, N. H., Nov. 7, 1860.

"MY DEAR SIR: Your note of the 5th inst. has just been received, and I must thank you for your prompt attention to my little request, in which I, of course, had no personal interest.

"So far as returns of the election have reached us, I can discern but one green spot, and that the Fifth Massachusetts District. Mr. Appleton's election is important in several aspects, but under the circumstances it could have been predicted with no confidence.

"Indeed, it is singular, considering the sweep of this foul current, that the only signal defeat should have met a man who has floated so long and securely upon its surface as Mr. Burlingame. As the overthrow of a party merely, the result [of the presidential election] is comparatively of little moment. As a distinct and unequivocal denial of the co-equal rights of these States, I cannot help regarding it as fearful.

"My apprehensions, I confess, are stronger than my hopes, but I will trust in that good Providence which has hitherto held together these confederated States. Will you present my very kindest regards to Mr. Holt? I shall never cease to prize his friendship.

"Yours truly,

"FRANKLIN PIERCE.

"Hon. Horatio King, 1st Asst. P. M. Gen'l, Washington, D. C."

"(Private.)

"NEW YORK, Nov. 22, 1860.

"MY DEAR SIR: * * * We have divers reports of disagreements in the Cabinet in regard to the disunion movements in the South. I hear nothing from Cobb in reply to my letter.

"There is a great fallacy at the basis of all the secession movements. It is this, that the violation of a compact by one of the parties releases all, assuming our federal system to be identical with a contract between individuals for certain purposes. It is totally different, and is not subject to the same reasoning and conclusions. The States have organized a central government and ceded to it a part of their sovereignty. The violation of the compact, to warrant a release of the parties, must be on the part of the central government, and not of one of the associates. Mr. Cushing, in his late letter, loses sight of this distinction—a vital one, as I think, in all our reasonings concerning the present disunion movements. In haste, I am

"Truly yours,

"JOHN A. DIX.

"Hon. Horatio King."

"(Confidential.)

"P. O. DEPT., APPT. OFFICE, Nov. 23, 1860.

"MY DEAR SIR: Your private note of yesterday is received. I have shown it to the Postmaster-General. I am told both the President and Mr. Cobb are under a good deal of excitement. I have no doubt the friends of the President are determined to know whether there is secession in the Cabinet * * * and all you can do to this end will be a public benefit. * * *

"Things are looking a little better in Georgia to-day. Very respectfully and truly,

"HORATIO KING.

"Hon. John A. Dix, New York."

"WASHINGTON, Nov. 25, 1860.

"MY DEAR SIR: I would call and report to you what I know of the feelings of your friends whom I met recently in a flying visit to my native State, but that I know you are much occupied. May I not, therefore, be allowed to say to you briefly, in writing, that their most anxious desire is that the President will cast the whole weight of his influence against the secession movements at the South, and in support of the Union? Among those whom I met was General Dix, who, of course, is greatly concerned with reference to the present excitement. He had written both to Mr. Cobb and Mr. Breckinridge, pressing them to come out boldly against secession. The inclosed note from him may be interesting to you. You need not trouble yourself to return it.

"I hope I shall not be deemed obtrusive. My great desire is that the Union may be preserved, and that, in your noble efforts to that end, you may know that all your *true friends* will stand by you to the last.

"I have the honor to be,

"Very sincerely, your friend,

"HORATIO KING.

"His Excellency, James Buchanan."

"(Confidential.)

"P. O. DEPT., Nov. 25, 1860.

"MY DEAR SIR: I have good reason to believe that the President is beset by secessionists, who are almost exclusively occupying his attention; and it is important that the *true friends* of the Union should do all in their power to strengthen his hands. Why will you not either write or come and see him, and get all the strong men of your city to do the same? I cannot call names; but rest assured what I tell you is true. The course of the 'Constitution' is infamous, but the President, I presume, has no means of controlling it. Pray let him hear from you all in the most decided manner on this subject. Let him know how much the paper and suspicions of disunion influences near him are injuring him.

"Stephens's speech is admirable; but you observe that you do not see it, or anything like it, in the 'Constitution.' Get the papers to come out and denounce the 'Constitution.' You may rely upon it, all its secession articles are directly against the feelings of the President.

"As the existence of the Department depends on the stability of the Union, I shall treat this as 'on official business.' Yours truly,

"HORATIO KING.

"Hon. John A. Dix, New York."

"(Unofficial.)

"P. O., NEW YORK, Nov. 27, 1860.

"MY DEAR SIR: It is impossible for me to leave here at this moment, and I have an insuperable repugnance to a visit to Washington. On receipt of your letter, I sat down to write to the President, but constant interruptions prevented me from finishing it. Besides, I have some doubt whether it would do good. I have made some inquiry in regard to the editor of the 'Constitution,' and incline to the belief that he cannot be influenced from this quarter. At all events, those who might influence him think as he does. I am, in a quiet way, doing all I can to promote a better feeling at the South. I am sorry to say that nothing I have yet done has met with a response from any of our Southern friends. I believe we shall have to rely entirely on the efforts of our conservative friends there. They seem at the present to be overborne by the general excitement. I cannot think this will last. There must, at least, be an effort to prevent a dissolution. I trust events here may aid the conservative movement there. Vermont is moving to repeal her personal liberty bills, with what success remains to be seen.

Massachusetts will follow her lead, and, I think, will repeal.

"I shall send my letter to the President this evening or to-morrow.

"With sincere regards, yours,

"JOHN A. DIX.

"Hon. Horatio King."

"P. O. DEPT., APPT. OFFICE, Nov. 27, 1860.

"MY DEAR SIR: * * * Our chief clerk, Mr. Clements, and myself had an hour with the President last evening, and our interview was most satisfactory. Mr. C. has just returned from Tennessee, and brings good news from that State, to the effect that nearly everybody there is opposed to the hasty action of South Carolina, and is in favor of one more effort to preserve their rights in the Union. The President appeared to be much gratified to be reassured of this. He is, as I supposed, a firm Union man. I told him about your writing to and not receiving any answer from Mr. Cobb, and he remarked that it would not do the slightest good to write to him. I expressed myself freely to him about the course of the 'Constitution' newspaper, and told him how much it had injured him, etc., etc. I have no doubt he will take strong ground in his message against secession, as well as the right of secession; but, were I allowed to guess, I would say that he will not be in favor of using force unless the property of the United States is interfered with, such as the taking of the forts, etc., when he would be obliged to act.

Very truly,

"HORATIO KING.

"Hon. John A. Dix, P. M., New York."

"(Confidential.)

"P. O. DEPT., APPT. OFFICE, Nov. 25, 1860.

"MY DEAR SIR: I am well assured that the President is beset by men who are for breaking up the Union,—secessionists, who strongly advocate the right of secession,—while the true friends of the Union seem, to a great extent, to keep aloof. Why they keep away I cannot comprehend, unless it be that they think the 'Constitution' newspaper speaks the sentiments of the President, which is certainly not the fact. Rest assured, the President will stand firmly for the Union; and what I think is now important is that his hands should be strengthened from every quarter. You can do much to this end by writing him briefly and pointedly on this subject, and you can get other strong men in Boston to do the same. You will know best whom to call on; but let this be strictly confidential so far as my name is concerned.

"Don't hesitate to denounce the disunion course of the 'Constitution,' and speak of the reports of secession feelings in the Cabinet as most unfortunate for the country, and highly injurious to the President's reputation.

"Act immediately. Things look worse and worse every day.

"Very truly yours,

"HORATIO KING.

"Nahum Capen, Esq., P. M., Boston, Mass."

"BOSTON, Nov. 28, 1860.

"MY DEAR SIR: I have read your note to several gentlemen of note, and all agree as to the importance of your views and agree with you; but they have a delicacy about writing to the President unasked. I inclose a note which I received last evening from Mr. Everett, and though I do not exactly agree with him, yet I can understand how he and others may entertain such opinions and have such feelings.

"Of course, I did not mention your name, because you requested me not to do so. I simply stated that the

letter was from a distinguished person—one who was fully advised of what was going forward.

"The feeling here is decidedly that the New England States will repeal their nullification enactments. Vermont has the subject up, and I am told to-day that Connecticut will do it by a large majority. The same is expected of Massachusetts.

"Very sincerely,

"NAHUM CAPEN.

"Hon. Horatio King, Washington."

"BOSTON, 27th Nov., 1860.

"MY DEAR SIR: I share the opinion of your unknown correspondent as to the very critical state of public affairs, and I feel it to be the duty of every good citizen, by word and deed, to contribute his mite, however small, to rescue the country from the impending peril—by far the greatest that ever threatened it.

"The cause assigned by your correspondent as that which prevents Union men from affording their support and counsel, in this crisis, will not prevent my doing it; but ordinary self-respect, under the notorious circumstances of the case, requires that my views should not be obtruded upon him unasked. Whenever they are specifically invited by the President himself, or any one in his confidence, they shall be cheerfully and respectfully given.

"I remain, dear sir, with much regard,

"Very truly yours,

"EDWARD EVERETT.

"Nahum Capen, Esq."

A word, further, of explanation here. I saw how the President was beset by the leading secessionists, and I was most anxious to have earnest Union men come to his relief. I felt sure, too, that the latter were kept away on account of the very fact that the former were known to occupy a large part of his time and attention. It was unquestionably owing in a great degree to the persistency of these determined disunionists, in this regard, that the President's health and strength were so nearly exhausted toward the last, that it was only with great and painful effort that he was enabled to perform the fearful duties devolving upon him. Some days, I remember, the Cabinet sessions were held in the library, because he was too unwell to come into his office. No sooner were the members of his Cabinet dismissed than one or more of these leaders stood ready to be ushered into his presence; and, one after another, often several together, they came, keeping him up until late in the night. No one can tell what torture he must have been thus subjected to by them in their efforts to attain their ends. Never before, I imagine, was a president more rejoiced to be relieved from the responsibilities of office than James Buchanan, on the 4th of March, 1861.

"ANDOVER, MASS., Nov. 28, 1860.

"MY DEAR SIR: I have received your kind, earnest letter, and participate strongly in your apprehensions. To my vision, the political horizon shuts down close and darkly. It may be that light is to break through somewhere, but I do not discern the quarter whence it is to come. I had occasion to write a friendly letter

to Secretary Thompson [of the Interior] a day or two since, and expressed to him briefly my convictions, and fears, and hopes in relation to the present state of public affairs. I did not expect that letter to be published, but the blackness of darkness is gathering so fast that, if anything can be done to save our glorious Union, it must be done speedily, and in my judgment at the North chiefly. If you call on the Secretary he will show you that letter, and if he thinks the publication of it would be useful, he can use it as he pleases. The truth must appear that it was written in the course of friendly correspondence and not with a view to publication. Among intelligent, reflecting men, alarm is evidently increasing here daily. One decisive step in the way of coercion will drive out all the slave-labor States. Of that I entertain no doubt. My suggestion about the tone and temper of Congress, and the importance of temperate words and action, might possibly have some degree of good influence, and there is, perhaps, more hope that the letter might be serviceable just at this juncture at the North; but it was hastily written, and my friend, the Secretary, must judge. If you call on him, show him this note.

"In haste, your friend,

"FRANKLIN PIERCE.

"Hon. Horatio King, 1st Asst. P. M. General, Washington, D. C."

I immediately called on Secretary Thompson, as suggested, and in the "Constitution" of the following morning General Pierce's letter appeared, prefaced as requested. Here it is:

"LOWELL, MASS., Nov. 26, 1860.

"MY DEAR SIR: Your letter was received at Concord on Saturday, and I should have answered it while there if I could have found a little interval of leisure. I am here to-day on business, and can therefore do scarcely more than to thank you; but let so much, at least, be said. The apprehensions which you so forcibly express did not increase mine. You know how sincerely and earnestly I have for years deprecated the causes which, if not removed, I foresaw must produce the fearful crisis which is now upon us; and I know how ineffectual, in this section, have been all warnings of patriotism and ordinary forecast. Now, for the first time, men are compelled to open their eyes, as if aroused from some strange delusion, upon a full view of the nearness and magnitude of impending calamities. It is worse than idle—it is foolhardy—to discuss the question of probable relative suffering and loss in different sections of the Union. In case of disruption we shall all be involved in common financial embarrassment and ruin, and, I fear, in common destruction so much more appalling than any attendant upon mere sacrifice of property, that one involuntarily turns from its contemplation. To my mind one thing is clear—no wise man can, under existing circumstances, dream of coercion. The first blow struck in that direction will be a blow fatal even to hope.

"You have observed, of course, how seriously commercial confidence, and consequently the price of stocks, etc., have already been shaken at the North, and yet there is in the public mind a very imperfect apprehension of the danger. Still, there are indications of a disposition to repeal laws directed against the constitutional rights of the Southern States,—such as 'personal liberty bills,' etc.,—and if we could gain a little time, there would seem to be ground of hope that these just causes of distrust and dissatisfaction may be removed. I trust the South will make a large draft on their devotion to the Union, and be guided by the wise moderation which the exigency so urgently calls for. Can it be that this flag, with all the stars in their places, is no longer to float, at home, abroad, and always, as an em-

blem of our *united* power, common freedom, and unchallenged security? Can it be that it is to go down in darkness, if not in blood, before we have completed a single century of our independent national existence? I agree with you that madness has ruled the hour in pushing forward a line of aggressions upon the South, but I will not despair of returning reason, and of a re-awakened sense of constitutional right and duty. I will still look with earnest hope for the full and speedy vindication of the co-equal rights and co-equal obligations of these States, and for restored fraternity under the present Constitution—fraternity secured by following the example of the fathers of the Republic—fraternity based upon admission and cheerful maintenance of all the provisions and requirements of the sacred instrument under which they and their children have been so signally blessed. When that hope shall perish, if perish it must, life itself, my friend, will lose its value for you and me. It is apparent that much will depend upon the views expressed, and the tone and temper manifested during the early days of the session of Congress now near at hand. May the God of our fathers guide the counsels of those who, in the different departments of Government, are invested in this critical epoch with responsibilities unknown since the sitting of the Convention which framed the Constitution.

"Your friend,

FRANKLIN PIERCE."

"CONCORD, N. H., Dec. 6, 1860.

"MY DEAR SIR: Your letter of Nov. 30 I found here on my return from Hillsboro yesterday, and also several Northern papers containing my letter to Secretary Thompson.

"Since the action of the Vermont Legislature upon the report of the Judiciary Committee of the House of Representatives, declaring the 'personal liberty bill' of that State to be clearly unconstitutional, I am in despair with regard to any amendment of errors at the North, so far as the question of slavery is concerned. Reason has surrendered its throne, all sense of patriotism, justice, and right seems to me to have departed forever * * * If the Legislature of this State were convened to-day, I do not believe that they would repeal their unconstitutional laws. When I say this, you will understand that I think the Union has already reached its termination.

"It seems to me that few men in this crisis suffer so keenly as I do. With regard to pecuniary loss, it is nothing. I do not take it into the account. It is not worth considering. We can all have bread, if we will work for it, but we shall never have again the glorious ensign of our country, which has been the object of our just admiration—the type of our power and the shield of our protection the world over.

"Your friend,

"FRANKLIN PIERCE.

"Hon. Horatio King, Washington, D. C."

"P. O. DEPT., APPT. OFFICE, Dec. 10, 1860.

"MY DEAR SIR: * * * Madness still rules the hour. Would it not be well to call public meetings at the North to give expression to the conservative sentiment, and show the true men of the South the importance of standing by their Northern friends, *in the Union*?"

Very truly,

"HORATIO KING.

"Nahum Capen, Esq., P. M., Boston, Mass."

"WASHINGTON, Dec. 10, 1860.

"MY DEAR SIR: * * * Things look at present very dark; but some of the mad and drunken spirits from the South are acting so outrageously that the better disposed Southern men are becoming disgusted. * * *

"Cobb has resigned. Very truly,

"HORATIO KING.

"Gen. Dix, New York."

"NEW YORK, Dec. 11, 1860.

"DEAR SIR: * * * Alas for the Union! I fear its safety is hopeless, if it depends on such as your note describes. But I will not cease to hope.

"Very sincerely,

"JOHN A. DIX.

"Hon. Horatio King."

"(Private.)

"P. O. DEPT., APPT. OFFICE, Dec. 12, 1860.

"MY DEAR SIR: Your note of yesterday is received.

"It is becoming every day more and more apparent that there is quite a large party at the South, who * * * are resolved on effecting a dissolution of the Union, even though the North were to yield to the utmost of their former demands; and these men are now in the lead. One of them kept his place in the Government till forced to resign from very shame, and there are others, of smaller calibre, who are still retained. * * *

"And we are to allow the best government in the world to be destroyed in the first hour of danger, without an effort to demonstrate that if statesmen, or those filling the places intended for statesmen, will but do their duty, it is capable of withstanding far more serious shocks than that with which it is now threatened. What mockery of statesmanship! What imbecility! What culpable wickedness! * * *

"It seems now to be pretty generally conceded that the cotton States will secede, and the next thing is to avoid a conflict on that account, or the whole country will be ablaze with civil war!

"Very resp'ly and truly,

"HORATIO KING.

"Hon. John A. Dix, New York."

"(Private.)

"NEW YORK, 14 Dec., 1860.

"MY DEAR SIR: Your note, received yesterday, is confirmed to-day in its worst anticipations. I did not answer, because I have been busy preparing an address to the people of the South, to be submitted this evening to a committee, and passed upon to-morrow at a larger, but not a public, meeting. I do not know that any appeal, in whatever fraternal feeling it may be made, will be of any avail. But I think we have the right to ask our Southern friends to pause and listen to us. If they refuse, I see no issue out of the present darkness but in darker strife.

"Yours cordially,

"JOHN A. DIX.

"Hon. Horatio King."

"WASHINGTON, Dec. 14, 1860.

"MY DEAR SIR: It may seem presumptuous in me, a humble subordinate, to address you on great matters of state; but my apology, if any is necessary, must be that I am an American citizen, with all that ardent love for my country and its government which should ever animate the true patriot, and especially in times of danger like the present.

"I am amazed that some decided action is not taken by the Government to cut itself entirely loose from disunion and disunionists. Look at the 'Constitution' newspaper of to-day—and indeed, I may say, of every issue since the Presidential election. *Its whole bearing is for disunion*; and, say what you will, the Government is held, and will be held, in a great degree responsible for it. It was the organ to which the message was confidentially intrusted, and its columns are daily filled with advertisements which it receives, and can receive, *only by the favor of the President*, for its circulation would not secure them to it by law.

"I saw, as every person of observation must have seen, the very day after the election, that its influence was directed toward secession, and I felt myself compelled immediately to call the attention of the President to it, as I did in a letter, a copy of which I herewith inclose for your perusal.

"I know how the President is pressed by the secessionists, and I sympathize fully in all reasonable measures to be taken *within the Union* to secure the rights of the South and consign to infamy the leaders of * * * at the North; but, as his devoted friend and the friend of every member of his Cabinet, I cannot restrain myself from the expression of the deepest astonishment and mortification that the Government should for one moment allow itself to occupy such a position as to afford even its enemies a pretext to charge it with giving the slightest countenance, either directly or indirectly, to secession or secessionists.

"Is it not possible to relieve the administration from the *infamy* which must attach to it for all time, so far as it is made responsible for the course of the 'Constitution,' and for keeping men in responsible positions who are known and avowed disunionists? For God's sake, let us see the Government placed squarely and unequivocally on the side of the Union! With great respect,

"Very sincerely your friend,

"HORATIO KING.

"Hon. J. S. Black, Att'y-General U. S."

"P. O. DEPT., APPT. OFFICE, Dec. 15, 1860.

"MY DEAR SIR: Your letter to Jefferson Davis is excellent, and I have sent it forward through the P. O.

"You will see the President's proclamation and the address of the disunionists in the 'Constitution' (the secession organ) of to-day.

"I need hardly say that I am desponding to the last degree.

"Very truly,

"HORATIO KING.

"Nahum Capen, Esq., P. M., Boston, Mass."

"P. O. DEPARTMENT, APPT. OFFICE,

"Dec. 17, 1860.

"MY DEAR SIR: Your private letter of the 14th inst. came duly to hand. * * * I inclose, for your private eye and that of any of our friends, the copy of a letter I was addressing to General Cass at the very moment I heard of his resignation. I therefore sent it to Judge Black. You may think it injudicious; but I am determined to sustain the Union until not a hope for its continuance remains.

"The papers state the main reason of General Cass's resignation; but I *know* that he has long felt as I have about the course of the 'Constitution' newspaper.

"Very respectfully and truly,

"HORATIO KING.

"Gen. Dix, New York."

"P. O. DEPT., APPT. OFFICE, Dec. 18, 1860.

"MY DEAR SIR: I have read your address with great pleasure. It is cheering to read such a paper in the midst of the infamous articles and speeches * * * that have of late been so common. The 'Intelligencer' of to-day has a stinging article, which I wish you would read.

"Very respectfully and truly,

"HORATIO KING.

"Hon. J. A. Dix, New York."

"NEW YORK, 19 Dec., 1860.

"MY DEAR SIR: I thank you for your excellent letter to Judge Black. I am as much disgusted as you are at the encouragement given to the secessionists. I am for making all reasonable concessions * * * But the Government should quietly and firmly maintain the central authority.

"I am glad you like the address. I have written to leading Southern men—some of them secessionists—against the right of secession, and especially against an attempt to break up the Union on the grounds assumed by South Carolina. But in a fraternal appeal intended to gain time for re-adjusting existing differences, I thought it not wise to introduce any topic on which our Southern brethren are sensitive. * * *

"I am very truly yours,

"JOHN A. DIX.

"Hon. Horatio King."

"P. O. DEPT., APPT. OFFICE, Dec. 20, 1860.

"DEAR SIR: Yours of the 18th inst. is received. I have not had time to read the proceedings or address of the solid men of Boston, but have heard it spoken of with great satisfaction.

"I think the disunionists are not having everything quite so much their own way as at first. The true friends of the country are beginning more generally to denounce the disunion 'Constitution,' and to protest against disunionists being retained in office.

"To show you how I feel, I inclose the copy of a letter which I had nearly finished and intended to send to General Cass, when I heard of his resignation—so I addressed it to Judge Black. It is for the private eye of friends only, of course.

"Very truly,

"HORATIO KING.

"Nahum Capen, Esq."

"(Confidential.)

"P. O. DEPT., Dec. 28, 1860.

"MY DEAR SIR: I feel as though we were on the verge of civil war, and I should not be surprised if this city is under the military control of the disunionists in less than one month! There can be no doubt that the Cabinet is divided, and rumor has it that the sympathizers of the President, as well as of Mr. Toucey, are with the disunionists in reference to the question of sustaining Major Anderson! Holt, Black, and Stanton are firm for the Union, there can be no doubt.

"Is there no way to bring a healthful influence to bear on the President and Gov. Toucey? Northern men all seem to be dumb and paralyzed!

"In haste, yours truly,

"HORATIO KING.

"Nahum Capen, Esq."

"(Private.)

"NEW YORK, 29 Dec., 1860.

"MY DEAR SIR: Yours is received. I see fully, without any power to prevent it, the danger in which the country is placed. I have had little faith in the conciliatory action of the Republicans in Congress, though I know there are some who think rightly. It was for this reason that I moved, in conjunction with others here, in favor of a strong appeal to our Southern friends in the States on the Gulf of Mexico and the lower Mississippi to await the issue of the change which is going on in public opinion in the North. Our appeal is to go to the Southern conventions about to assemble in Georgia, Alabama, and Mississippi. There seems but little prospect that any good will be accomplished. At Washington I fear I can do nothing. I have written to several leading Southern men, but I get no response. There is a determination on the part of leading Republicans here that a conciliatory course shall be pur-

sued, and that reasonable compromises shall be made. It remains to be seen whether they can influence the action of their friends in Congress.

"Maj. Anderson, who was my lieutenant when I was a captain in the army, I have no doubt acted as any military man, responsible for the lives of those under his command, would have done. His conduct is approved here by all parties—even by the warmest advocates of Southern rights.

"My great fear is that the masses, North and South, who have been indoctrinated into secession views on the one hand and abolitionism on the other, will not follow their leaders in a retrograde movement. But I have less anxiety for the North than the South. We can make things right here if we can have time. * * *

"I am, dear sir,

"Yours truly,

"JOHN A. DIX.

"Hon. Horatio King."

"WASHINGTON, Dec. 30, 1860.

"MY DEAR SIR: I rejoice to learn that the disunionists failed yesterday in their impudent and insulting demand that the administration should remove Major Anderson or otherwise degrade him.

"It is every day becoming more and more apparent that they are determined, as far as lies in their power, to make use of the administration to strengthen themselves in their rebellious position, and, if necessary for their purpose, to break up the Government. Does it require any close discernment to see that it would be fatal to follow their counsels?

"They commenced, long before the election, by getting possession of the 'Constitution' newspaper, which, from the announcement of Lincoln's election, has been openly for a dissolution of the Union, and some of them have continued, and still continue, to hold office here in the Government, although known to be hostile to that very Government which feeds them!

"In a letter to the President on the 7th of November,—the day after election—I called attention to these startling facts; and, from that day to the present, my amazement has increased until I am, at times, almost paralyzed to see such things go unrebuked. It is all folly for the editor of that paper to issue his pronouncements that he alone is responsible * * * so long as it is supported and kept alive by Government advertisements which it receives solely through the favor of the Administration, for it is not entitled to them by law. Has not this fact been overlooked in the pressure of the great troubles now threatening our destruction?

"The question now is union or disunion. An article in that paper to-day advises that Lincoln's inauguration be prevented by armed force! Can the Government give such a paper patronage and escape the charge of treason? We must now take sides either for or against the continuance of the Union; and the sooner we know where we stand the better.

"I wrote you yesterday hastily what I regard as the clear duty of the Government in reference to Maj. Anderson, and I am confirmed in my opinions by everybody to whom I have spoken since, as well as by the press, several extracts of which I beg to inclose for your perusal.

"The duty of the Administration, it seems to me, is very plain. It is simply to see that the laws are executed, thus maintaining, with a firm hand, the integrity of the Union. In this, rest assured, every friend of the Union will sustain you.

"I have the honor to be

"Very truly your friend,

"HORATIO KING.

"Hon. I. Toucey, Sec'y Navy."

"(Private.)

"P. O. DEPT., APPT. OFFICE, Dec. 31, 1860.

"MY DEAR SIR: I am rejoiced to hear you express yourself as you do in regard to sustaining Major Anderson. But I greatly fear the Cabinet now in session may take some action against him, although, if he is not sustained, you may expect to see the resignations of Black, Holt, and Stanton. The most intense excitement is felt here on the subject; and disunion men are raising heaven and earth to get the President to degrade Major Anderson. To-day we have a most unpleasant rumor that Floyd is to go back into the Cabinet. If this rumor is true, all is lost! It is known that he sent a most savage message of inquiry to Major Anderson; but the answer he got in return had the true ring to it of the *veni, vidi, vici* stamp.

"It is said there is a secret society forming here to prevent Lincoln's inauguration!

"Very truly,

"HORATIO KING.

"Hon. John A. Dix, New York."

"(Private.)

"P. O. DEPT., APPT. OFFICE, Dec. 31, 1860.

"MY DEAR SIR: In answer to your note of the 29th inst., I am sorry to say that I cannot give any assurance that 'the Jackson policy' in the present crisis will be pursued. Up to this time (12. M.), however, I believe no order has been made against Major Anderson, except that the Secretary of War (since resigned, thank God!) sent him a savage dispatch, inquiring why he removed his command. But this was not sustained by the majority of the Cabinet, and he got a regular soldier's answer back, full of the true mettle. The Cabinet is now in session on this subject, and the most intense interest is felt here for fear that Major Anderson will not be sustained.

"The President is borne down by the disunionists, and, as well as Governor Toucey, needs support from all true friends of the Union. Pray see that letters are poured in upon them. On Saturday, however, Governor Toucey was right, and I cannot think it possible that he will flinch. General Scott, I fear, does not have the influence he should in the counsel touching his command. * * *

"Very respect'ly and truly,

"HORATIO KING.

"Nahum Capen, Esq., Boston, Mass."

"BINGHAMTON, Dec. 31, 1860.

"MY DEAR SIR: * * * I am filled with anxious solicitude for the fate of our country. May God avert the threatened evil!

"Sincerely yours,

"D. S. DICKINSON.

"Hon. H. King, 1st Asst. P. M. Gen'l."

"(Confidential.)

"P. O. DEPARTMENT, APPT. OFFICE, Jan. 3, 1861.

"MY DEAR GENERAL: * * * Things are being brought to a point here, I think. I understand the 'Commissioners' [from South Carolina] sent an insulting communication to the President, and that he sent it back to them. We shall soon know who is for and who against the Union. At present, we know not whom to trust.

"Very truly,

"HORATIO KING.

"Gen. Dix, New York.

"P. S.—That was most infamous business of Floyd at Pittsburgh. One of the 'forts' for which the guns were intended is a bare sand-bar, and the other has been just commenced, having a wall about two or three feet high. * * * Floyd's orders will be countermanded."

"(Private.)

"NEW YORK, 3 Jan., 1861.

"MY DEAR SIR: I have been so pressed with outside business during the last ten days (trying to save the Union) that I have been unable to write to you.

"The first time we began to breathe freely was when Mr. Holt took Gov. Floyd's place in the War Dept. The feeling here is strong and undivided in regard to sustaining the Administration in its determination to stand by Maj. Anderson, to protect the public property, and to enforce the revenue laws. On these points the people of the Northern States are as one man; and I am satisfied the President will have with him the conservative men of all sections of the country.

"I have been very busy corresponding with prominent men in and out of Congress. We *must* preserve the Union. Congress should do what is right, and the rest will be easy. Why cannot enabling acts be passed admitting Kansas and New Mexico, and like enabling acts dividing the residue of our territory by 36° 30', and admitting two more States at once, with no other restriction than that of 'a republican form of government,' which Congress under the Constitution is bound to guaranty. This will dispose of the whole territorial question; and all may support it without a surrender of principle. What if New Mexico has a very small population? This fact should weigh nothing against the restoration of harmony and the preservation of the Union.

"Do not things look better? Let me hear from you.

Yours very truly,

"JOHN A. DIX.

"Hon. Horatio King."

"(Private.)

"P. O. DEPT., Jan. 4, 1861.

"MY DEAR SIR: I am obliged for your favor of yesterday. I feel as though there is a slight improvement in the state of things here; but the disunionists—*conspirators*—are doing their utmost to head off the Government in its present efforts to right itself. Things will not go entirely satisfactory so long as Thompson and Thomas are retained in the Cabinet, and especially the latter * * * I am glad to hear that there is a committee here from your city to make a representation to the President in regard to him. For Thompson I have more compassion. He is not willingly a disunionist; and I *guess* he sustained the President in sending back their insulting communication to the S. C. 'Commissioners.'

"Let us press forward till we clear the Government of every disunionist.

"Very respect'ly and truly,

"HORATIO KING.

"Gen. Dix, New York."

"(Private.)

"NEW YORK, 5 Jan., 1861.

"MY DEAR SIR: Facts that have come to my knowledge give me strong hopes that the Union will be preserved. I look for a speedy movement on the part of the Republicans in Congress, and an effective one.

"In the meantime the authority of the Gov't *must* be maintained. I have written to several members of Congress, among others Gov. Seward, urging the adoption of the plan I suggested to you yesterday, as one involving no sacrifice of principle or surrender of position. We can do nothing unless the Republicans act with us, and I have for the last week been pressing them here and in Congress.

"Yours sincerely,

"JOHN A. DIX.

"Hon. Horatio King."

"P. O. DEPT., Jan'y 7, 1861.

"MY DEAR SIR: I have yours of the 5th, and am glad to see that you are laboring in the right direction. The Republicans must yield, or all is lost.

"But the South must be reasonable * * * Many good Union men are disgusted with their arrogance.

"Very resp'ly and truly,

"HORATIO KING.

"Hon. John A. Dix."

"(Confidential.)

"NEW YORK, 8 Jan., 1861.

"MY DEAR SIR: Why is money to very large amounts being transferred to Washington? It may be all right, but it is unusual. Nearly a million of dollars has been sent on in specie within the last week. I write you in confidence. Are these transfers made by order of the President? Is he aware of them? These questions have suggested themselves to me. There is a good deal of uneasiness in regard to the Treasury Dept. The Secretary and his Asst. are known to be secessionists; and our capitalists, who furnish the Government with money, naturally feel a solicitude in regard to the disposition made of it. The transfers in specie have attracted attention and produced a good deal of unpleasant speculation. The Asst. Treas. office is in Wall St., and any considerable quantity of gold cannot be moved without being known. I met, a few days ago, a large number of boxes going out, and on inquiry I found \$400,000 were going to Washington.

"In haste, very truly yours,

"JOHN A. DIX.

"Hon. Horatio King."

"P. O. DEPT., Jan'y 12, 1861.

"MY DEAR SIR: Yours of the 8th came duly to hand. I am glad to know that you have been active in your efforts to head off the conspirators here. We are progressing slowly, but surely, as I trust. The appointment of Gen. Dix to the Treasury, and the discarding of the 'Constitution' [newspaper] in the last two days, are two things most gratifying. What is doing now, however, should have been done two months ago, as you know I have been decided upon from the start.

"Who will be nominated for Sec'y of War and Sec'y of the Interior remains to be seen. You will have seen Slidell's attack on Mr. Holt. Nevertheless, I believe if his name is sent in they will not be able to reject him. One thing I hope there will be no mistake about, and that is, that none but Union men will be allowed to go into the Cabinet, even if they have all to be taken from the North.

"Matters at Charleston are bad enough; but it is gratifying to know that Maj. Anderson will not need any assistance, probably, for four months to come. This was not known to Gov't when the *Star of the West* was sent for his relief.

"Very truly,

"HORATIO KING.

"Nahum Capen, Esq., P. M., Boston, Mass."

"P. O. DEPT., Jan'y 21, 1861.

"MY DEAR SIR: Yours of the 19th inst. is received.

"I presume I shall continue to act as P. M. G., as I have been doing since the first inst. I do not anticipate that any appointment will be sent to the Senate, at least for the present.

"I cannot see that there is much if any improvement in the state of things. Yet if the Republicans would only present some reasonable proposition, and vote upon it with anything like unanimity to show that they are willing to do *something*, it would at once take the wind out of the sails of secession in

all the border States, and this would dampen the ardor * * * further South.

"Very resp'ly and truly,

"HORATIO KING.

"Nahum Capen, Esq., P. M., Boston, Mass."

"P. O. DEPT., March 5, 1861.

"MY DEAR SIR: I have only time in this, doubtless my last communication from the 'P. O. Department,' to thank you for your kind letter of the 2d inst., and in reply to your question, to say that I fear the proceedings of the Peace Convention will result in little, if any, good; yet it is quite possible that they may be of use at an early day before a called session of Congress. The aspect of affairs is gloomy, and it will not surprise me if we are engaged in a civil war before the end of this month, unless all the forts in the seceding States are peaceably given to the revolutionists.

Very sincerely your friend,

"HORATIO KING.

"Nahum Capen, Esq., P. M., Boston, Mass."

On the appointment of General Dix to the Treasury, January 11, 1861, our correspondence, of course, ceased. As the more important of his letters were read by Postmaster-General Holt, who in turn showed them to the President, I have always thought they led the way to that appointment. Eminent as a patriotic statesman, his selection for the position was hailed with marked satisfaction, and he filled it with distinguished ability. With none but kindly sentiments toward the South, he at the same time held it to be the imperative duty of the Government to "quietly and firmly maintain the central authority." This, it may as well be said here, is what President Buchanan endeavored to the utmost of his power to do, while at the same time he deemed it prudent, in the cause of peace and to avoid bloodshed, to pursue a conciliatory policy toward the South. It was this forbearance that for a time led even some of his best friends to harbor slight misgivings in respect to him as well as Secretary Toucey; and to this day we sometimes hear him censured because he did not at once come down on the secessionists as General Jackson did on the nullifiers of South Carolina in 1832. These critics seem to forget that, whereas President Jackson had but a solitary little State to deal with, in President Buchanan's case all the cotton States were united in the rebellion, and only anxious for the Government to strike the first blow, as in their view the surest and most speedy means of inducing all the border States to join them. Mr. Buchanan fully understood this, hence his extreme caution—with which it must, however, be admitted some of his nearest friends did not always sympathize, although it is now far from certain that his was not the wiser course. Said Joseph Holt, in 1865: "Looking at the glorious results of the war, and remembering how wondrously Providence has dealt with us in its progress, and how sublimely the firing

upon instead of *from* Fort Sumter seemed to arouse, instruct, and unite the nation, and to inflame its martial and patriotic spirit, we stand awe-struck and mute; and that man would be bold indeed who, in the presence of all that has occurred, should now venture to maintain that the policy of forbearance was not at the moment the true policy."

It is well known, and should be borne in mind when Mr. Buchanan's policy of forbearance is assailed, that, for several weeks after his inauguration, President Lincoln, still "hoping [we have the testimony of Gideon Welles, his Secretary of the Navy] for a peaceful solution of the pending questions," the greatest forbearance was observed, and "a calm and conciliatory policy" pursued toward the South.

President Buchanan stood on the defensive, and, true to his oath, strove by every means in his power to protect the rights and property of the Government. He held it to be his duty to see that the laws were obeyed; but this was impossible where the local authorities were all in rebellion, and officers could not be found to enforce the execution of the laws. For instance, there was no collector of customs at Charleston, and he sent to the Senate the name of a gentleman to fill

the place; but his nomination was not confirmed. In a letter to me of September 18, 1861, Mr. Buchanan said: "Had the Senate confirmed my nomination of the 2d January of a collector for the port of Charleston, the war would probably have commenced in January instead of May."

As a further indication of his true sentiments, and as due to his memory, I venture to infringe the salutary rule (which has been so often violated since Mr. Buchanan's time in revealing what takes place in Cabinet session), by relating a little incident that happened in Cabinet on the 19th of February, 1861. I copy from my diary made on that day:

"19 Feb. In Cabinet to-day the principal matter presented was an inquiry from Maj. Anderson, in charge of Fort Sumter, at Charleston, what he should do in the event of the floating battery understood to have been constructed at Charleston being towed toward the fort with the evident purpose of attack. The President wished time to consider. Mr. Holt asked what he would do, or rather what Maj. Anderson ought to do, in case he were in charge of a fort and the enemy should commence undermining it. The President answered that he should 'crack away at them.' The President, however, is very reluctant to fire the first gun. The Peace Convention, he said, was now in session in this city, and its president, ex-President Tyler, had this morning assured him that no attack would be made on the fort. The President expressed the opinion that the fort would eventually be taken."

TO AMERICA.

Sept. 19, 1881.

Now the hard fight is done,
Manfully striven,
And the strong life is gone,
Asked for of heaven:
Droop all your banners low,
Toll the bell sad and slow,
All that your grief can show
Let it be given.

One there is more than all
Bids you have patience,—
Sends at your sorrow's call
Sad salutations,
Comforts your grievous need:
First-born of England's seed,
England by fate decreed
Mother of nations.

So to the little isle
Fragrant of heather,
Where the sweet roses smile
'Mid the wild weather,
Stretch out a constant hand,
Linking, by God's command,
Daughter and motherland
Closer together.

OXFORD, ENGLAND.

AN AUTOGRAPH OF PRESIDENT GARFIELD.*

James A. Garfield
Strangulatus pro
Republîcâ

It was not until several weeks after the death of President Garfield that it began to be generally known that, during his long martyrdom, he had written something of even greater historic value than the affectionate and hopeful letter to his mother. Thousands of readers will learn for the first time of this interesting piece of writing from the fac-simile of it which, by the courtesy of Col. Rockwell, we are enabled to give above. To all reflecting persons it must bring a new conviction that "the calmest man on that terrible 2d of July" was not long ignorant of the real significance of his assassination. That he was "slaughtered for the Republic" is as true of him as of Lincoln, and that he himself was aware of it, adds only another awful feature to the summer's tragedy. This autograph might fitly be placed upon his monument, as a sorrowful reminder of the national loss and a perpetual reproof to political greed.

As yet, the most diligent search and inquiry has failed to discover an earlier use of the Latin phrase.

We append a letter from Col. Rockwell on the subject of the President's writing during his illness:

WASHINGTON, D. C., Oct. 17, 1881.

EDITOR OF THE CENTURY MAGAZINE.

DEAR SIR: The late President Garfield took pen or pencil in hand four times during his last illness.

1. On Sunday, July 17, at noon, at his request for writing materials, I placed in his hand a clip and pencil. Lying on his back, and holding up the clip in his left hand, he then wrote his name and the prophetic words, "Strangulatus pro Republicâ," the fac-simile of which I now authorize you to publish. What epitaph more significant, eloquent, and truthful than this—his own!

2. On August 10th, with a fountain pen, he wrote his name on a clip.

3. Immediately after, he signed an extradition paper, sent from the Department of State, first requesting me to read the document,—the old habit of thoroughness asserting itself.

4. On August 11th, he wrote, on a larger clip, with a pencil, the brief letter to his mother, a copy of which has been widely circulated.

Very truly yours,
A. F. ROCKWELL.

THE STORY OF PRESIDENT GARFIELD'S ILLNESS,

TOLD BY THE PHYSICIAN IN CHARGE.

[THERE have been so many and such varying reports concerning the events of President Garfield's illness that we believe our readers will be interested to see the following authentic and untechnical record of it by the physician in charge, containing, as it does, some points of interest which have not hitherto been published.—
ED. CENTURY MAGAZINE.]

AT the earnest solicitation of friends whose claims cannot be disregarded, I attempt a description of the illness and death of the late President, James A. Garfield. While I crave no indulgence, it is but just to say that brain and heart have not yet rallied from the strain to which they have been subjected. In trying to attend to long-neglected duties, I have found no rest. My words, therefore, must be spontaneous, and, perhaps, not always best chosen. Those of my great audience who desire mere literary excellence, may veil their eyes at sight of our common sorrow.

The record which I wish to make now is not that of the surgeon, so much as that of the man who loved his patient. The official and professional reports are presumably complete. There can be little to add to them, save what unprofessional criticism may furnish.

My present story is of a very different kind. During the terrible ordeal through which the nation, and a large part of the civilized world, have recently passed, I have found but little rest, and still less time for any notes, other than those which the rigid rules of surgery require as matters of record. With feelings of no ordinary affection, respect, and sorrow, I dictate this account, believing that if I shall not entirely fail in manner of statement, the story will stand as the legend of a great soul sorely stricken, and of patience under suffering at which the world watched and wondered.

Of all that constitutes moral and physical courage, and that high self-poise which found examples in the annals of Christian martyrdom, President Garfield and his heroic wife were the embodiments. The sad story of those dreadful eleven weeks exhibits the beauty and consistency of the true Christian character as I never, in a long and eventful experience, witnessed before. While the perusal of these pages will start many tears of sympathy, let us thankfully draw consolation from the beautiful lesson of strength, bravery, and devotion which is taught.

In the plenitude of mental and bodily power, having gained the proudest station to which a man can aspire, happy in every rela-

tion of life, with a loving and devoted wife, a family growing with promise toward manhood and womanhood, with every prospect of happiness and peace, this great man became the victim of an assassin, at a moment when, freed in part from cares of state, he was starting upon a journey which should give him rest and renewed vigor. Yet no murmur escaped him. Neither on the day of the dastardly act, nor during the long history of sorrow, agony, and death, did he manifest by word or look aught but thankfulness for attention, and kind consideration for all about him. I may safely say that I do not believe physician ever had such a patient before. His calm obedience and cool courage would possibly have secured recovery without scientific aid, had not the injury, as we now know, been fatal from the first. The incidents of the case which I am about to record are by no means exceptional or selected, but rather such as recur to my mind in the few moments of leisure which I am able to command for this purpose. My desire is to avoid, as far as possible, all technical reference, and to give such an account of the case as may best describe its progress, and in some measure illustrate the character of the great dead.

My first acquaintance with the late President was as a lad, at Chagrin Falls, Ohio, about the year 1844. His mother's farm was about two miles from my father's residence. I knew him as an earnest, industrious boy, a little younger than I, whose ambitions were evidently far above his apparent advantages. His faithfulness and high purposes not only gave assurance of future success, but were also a stimulus to his boyish associates. While our paths of life diverged, I still followed him with watchful confidence, fully assured that he would prove himself worthy. His successes as teacher, soldier, and statesman followed one another more rapidly than his most sanguine friends could have anticipated. Knowing, as I did, his private worth and public greatness, few can appreciate my feelings on receiving Secretary Lincoln's message which summoned me to the care of the wounded President.

Passing over the scenes at the depot, where

the chief magistrate lay helpless,—feebly asking to be transferred to the Executive Mansion; the anxious consultations of surgeons regarding the safety of removal before reaction; his descent from the second story, borne upon the strong arms of men who would have died for him; the transit through a dense crowd whose only voice was that of subdued weeping; the arrival at the south front of the Executive Mansion; the safe placing of the prostrate form in the family room,—we come next to the first formal consultation, in which some of the most prominent medical men in Washington took part. These gentlemen have received the thanks of the President, but I cannot refrain from expressing here my high sense of their skillful, earnest, and valuable aid. Feeling thus deeply, I append their names as a part of this simple record.

Dr. Smith Townshend, Health Officer, D. C.

Dr. C. M. Ford.

Dr. P. S. Wales, Surgeon-General, U. S. N.

Dr. C. B. Purvis.

Dr. C. C. Patterson.

Dr. Basil Norris, U. S. A.

Dr. N. S. Lincoln.

Dr. J. B. Hamilton, Surgeon-General, Marine Hospital Service.

Our patient lay on the wounded side, for reasons known to surgery. A sighing respiration, feeble and almost imperceptible pulse, the lines of the face hippocratic, frequent movements of the lower limbs, indicating severe pain, grave apprehensions of approaching dissolution evidenced by the anxious and even tearful faces of his official and professional attendants—these constitute an imperfect picture of the scene on Saturday afternoon. Mrs. Garfield was absent. The President having left, as was understood, for a journey, the force of attendants was unorganized, save as good sense and devotion regulated their conduct. They stood in watchful silence, endeavoring to read the faces of the physicians for indications of hope or disaster, listening eagerly for the roll of the carriage-wheels which should announce the arrival of the absent wife, and without spoken word, perfectly understanding that it was feared that she would never see her husband alive. Our anxieties increased each hour. No indications of reaction could be discovered, even by the most sanguine. The regurgitations from the stomach were more and more frequent, indicative of the profound collapse which all the other symptoms showed. We measured the time with beating hearts, hoping that the illustrious sufferer might again in life see the face he loved so well. The President several times made inquiry as to the

cause of Mrs. Garfield's delay, and, appreciating the gravity of his injury, was extremely anxious lest she should, be too late for an intelligent interview. Upon her arrival, he requested that their interview should be entirely private. Thus the prostrate and apparently dying husband met his wife. She remained by his side not more than five minutes. The words of love, hope, and cheer given him are known only to themselves and to God. It is a fact, however, that within an hour the President's symptoms began to indicate reaction.

The President rarely spoke of his condition, seldom expressed a want, and only once, in my hearing, referred to the circumstance of his shooting. He asked of the Secretary of State, in the afternoon, the name of the assassin. On being told, he said:

"Why should he have wished to shoot me?"

It was explained that he had probably been disappointed in seeking some office.

The hourly bulletins of this first day, which, in the absence of an organized force of physicians, were issued by me, are a record of the early fears and anxieties of those near the President, until, reaction being decided, hope sprang exulting in our breasts. During the night of suspense which followed, Doctor Reyburn and myself did not close our eyes in sleep. Colonel Rockwell, General Swaim, several members of the Cabinet, Miss Edson, and Steward Crump were also at hand to render any needed aid. The President enjoyed, upon the whole, considerable refreshing sleep, broken about every half-hour by regurgitation of the contents of the stomach. The morning of the 3d of July found him comparatively cheerful and hopeful, and with a full appreciation of his surroundings. At this time he inquired of me what his chances of recovery were, saying, in his bright and cheerful way, that he desired a frank and full statement—that he was prepared to die, and feared not to learn the worst. He added that personally he was willing to lay down the heavy burden thrust upon him. I replied:

"Mr. President, your injury is formidable. In my judgment, you have a chance for recovery."

He placed his hand upon my arm, and, turning his face more fully toward me, said, with a cheerful smile:

"Well, Doctor, we'll take that chance."

After the morning consultation, and the dressing of the wound, having at my request decided upon his permanent professional attendance, he desired me to thank individually the physicians who came to his assistance so promptly. While the condition of the President continued critical, the day was compara-

tively uneventful. In the evening it was decided to summon the distinguished counsel from Philadelphia and New York, Doctors D. Hayes Agnew and Frank H. Hamilton. The excessive heat caused great discomfort to the President and anxiety to all. One of our first cares was to avert the dangers thus threatened. When we at last succeeded in procuring for him an adequate supply of cold and dry air, his relief was shown by some of the most touching displays of gratitude that I ever witnessed. I cannot recur to this period without feelings of mingled pain and satisfaction. Crippled, helpless, yet gallantly enlisted in a desperate fight for life, my heroic patient turned upon me such glances of approving thankfulness as I can never forget. Here I remark that, during his whole illness, I never approached him without meeting an extended hand, and an expression of thankful recognition of the efforts being made for his comfort and recovery. The time which passed until the 23d of July, when the first rigor occurred, was remarkable chiefly for the quiet, cool determination of the sufferer. Quite ready for, and evidently expecting, the worst, his demeanor was that of the man whose great intellect and wonderful will enabled him to give the most intelligent aid to the physician. Apparently indifferent as to the result, so far as it should affect him alone, he still watched every symptom, even making inquiry after each examination as to the temperature, pulse, and respiration, and every measure of relief adopted, with evidently firm determination to live for others, if possible. At this time, as is known, a simple but painful operation was rendered necessary by the formation of a superficial pus-sac. When, after consultation, I informed the President of the intention to use the knife, he, with unflinching cheerfulness, replied: "Very well; whatever you say is necessary must be done." When the physicians entered the room, I handed the bistoury to one of the counsel, with the request that he make the incision. Without an anæsthetic, and without a murmur, or a muscular contraction by the patient, the incision was made. He quietly asked the results of the operation, and soon sank into a peaceful slumber. This operation, though simple in itself, was painful, and the manner in which it was borne by the President in his enfeebled condition was, perhaps, as good an instance as any of the wonderful nervous control which characterized his whole illness. This power of mind over body was also daily exhibited at the dressings of his wound, which were unavoidably painful, and yet invariably borne without indication of discomfort; and also at subsequent operations, always painful.

Nearly all the nutriment received by the President during his illness was administered by the physicians, but up to within an hour of his death he almost invariably took the glass in his hand and drank from it without assistance; he took pride in his ability to do this. We watched every indication which gave hope of possible assimilation without cloying. He did not draw a breath which was not heard by those incomparable nurses, General Swaim, Colonel Rockwell, Doctor Boynton, Miss Edson, Steward Crump, or by Doctors Reyburn, Woodward, or myself. We knew that as complete alimentation as possible was the primary indication. When the stomach failed, resort was had to other modes of administering food, which were repeated at proper intervals for four or five days, at several periods of his illness. We saw him slipping from our hands through inanition. We suspected and dreaded some internal injury which no mortal could have dared to explore. We sought every available means of supplying waste known to modern physiological science. Why we could not finally succeed, is shown by the autopsy. During all, the President intelligently discussed each condition with me. He often spoke with feeling wonder of the marvelous aids which science could and did give a sufferer in his condition, saying on one occasion, "What relief these so-called artificial methods of nourishment have given me! We should be thankful that science has so advanced that we can avail ourselves of it in this crisis."

About ten days after the first subscription was made to the fund for Mrs. Garfield, some one of the household informed him that a large sum of money was being raised for her in the event of his demise. At this he was very much surprised and said, "What?"—adding with evident emotion, as he turned his face to the pillow, "How kind and thoughtful! What a generous people!" He was then silent and absorbed for a long time, as if overwhelmed with the thought. I never heard him allude to the subject afterward.

Shall I try to describe the days and nights of incessant watching, the incredible patience of this great man in the weariness of constrained position, and the monotonous silence of the sick-room? Shall I attempt to phrase the terrible sense of responsibility which rested upon each and all of us who had charge of him, feeling, as we did, that the pulse of the nation was under our fingers? Removed from the affectionate regard ripened in a life acquaintance, and from that professional loyalty which had budded and blossomed in the sick-chamber, was the keen sense that not only our own, but all civilized nations, were prayerfully, tearfully watching. For my own part,

I can assert that the cares and responsibilities of a life-time were compressed into the narrow limits of those eventful eighty days.

To illustrate his persistent cheerfulness, as well as his desire for relief from the terrible monotony of his situation, it may be remarked that on several occasions he expressed a desire to be able to play a game of cards—an amusement which had been one of the minor attractions of his home-life. On the very evening of his death, with a significant look at Colonel Rockwell, he made a motion with his right hand as if dealing cards.

Hundreds of letters and telegrams daily, containing urgent advice as to the treatment of a patient never seen by the writers,—threats of death if he should die, and similar ones if he should live; in short, every imaginable communication from every quarter of the globe,—all these formed a necessary part of our ordeal. It is very gratifying to remember that, in all this mass of correspondence, nothing excelled the manly and heartfelt expressions received from the South, in most instances from ex-Confederates. One, from Texas, said:

"If you need or desire it, I can furnish a corps whose loving hearts and loyal arms shall bear the wounded President to Elberon as tenderly as mother ever carried babe."

There can, in my judgment, be no stronger evidence than this that sectional jealousies and animosities, if not entirely healed, are in the certain road to cure.

Among the events of the outer world which came to his knowledge was the termination of the memorable political struggle at Albany. On receiving the information of Mr. Lap-
ham's election, he said with great earnestness, in the presence of Colonel Rockwell and myself:

"I am glad it is over. I am sorry for Conkling. He has made a great mistake, in my judgment. I will offer him any favor he may ask, or any appointment he may desire."

The President early expressed a desire to be removed to his old home. His dislike to formal attendance became more and more apparent. The retinue of professional and personal attendants, the sense that he was in some sort a state patient, and the desire for a more quiet, home-like convalescence, where the presiding genius should be his devoted wife, daily grew stronger. He said to me on one occasion: "Doctor, how soon do you think we can take our wives and go to Mentor?" I comforted him with the hope that he might soon be so far recovered as to make the journey, though in my inmost heart I feared he never would.

When the journey to Elberon was decided upon, no man ever had more efficient

and consistent aid than was afforded me by Colonel Rockwell, General Swaim, and those already named, in carrying out its details. It had been suggested to extend the railroad track from the Washington Monument to the White House. After due consideration, this was decided unnecessary, as we preferred that the supplementary track should be laid at Elberon, in order to avoid the possible detention by a rain-storm. Here, in Washington, we were in no danger from such conditions, and, moreover, the perfectly even surface of Pennsylvania Avenue really rendered such an expenditure needless. The train intended for the trip was duly equipped and sent to Washington, and a trial trip was made of nearly twenty miles, to determine the amount and nature of the motion of the bed. The attendants who were to bear the enfeebled sufferer to the wagon were so drilled as to make a mistake almost impossible. Every movement had been studied over and again, so as to preclude the possibility of an accident. For the transfer to the depot, we thought best to use a huge express wagon. A vehicle of this size, weight, and solidity would not only afford ample room, but be far less liable to sudden and unpleasant motion than a lighter one.

At six o'clock, on the morning of the 6th of September, I quietly stepped to the bedside of the President and said:

"Mr. President, we are ready to go."

He replied:

"I am ready."

He was carried by no strange hands. Those nearest to him lifted him upon the sheet on which he lay, placed him upon the stretcher, and gently bore him to the great vestibule of the White House. Twice, in the passage, he waved his hand in recognition to those of his household whom he was leaving behind. The bed he had just left had preceded him. He was immediately placed upon it, and, without the least apparent discomfort, raised into the wagon. Every precaution was taken to avoid exposure.

Of this procedure Mrs. Garfield was a silent spectator. She refused to enter her carriage until she had seen the President safe upon his bed in the wagon. This being accomplished, with a long-drawn sigh of relief, she too departed, to meet him on the train. He seemingly enjoyed the proceedings until the car was reached. The hour was too early for any great congregation of people, yet many who expected the movement were present on the streets. In perfect silence, with men guarding the heads of the horses (which, by the way, were not attached until the President was safely in the wagon, and were

detached the moment the car was reached), we slowly wended our anxious way to the waiting train. Twelve soldiers grasped the wheels of the wagon, as the horses were detached, and rolled it to the car containing the bed, to which the President was then transferred without the slightest disturbance. The word was given to the master of the train, and we began our journey to the sea.

I must now say that this whole journey was a marvel even to myself. I had arranged that if prostration occurred, the train might stop at any given point. These arrangements were so perfect that, at any place on the whole route, the President could have been immediately removed to a private dwelling. The rate of speed varied from twenty to seventy miles per hour, and when it was the greatest, I asked the President if the motion was uncomfortable. He smiled and said, "Let them go," evidently meaning to quiet any anxiety I might feel, and to assure me that his vital force was still to be relied upon.

While stopping at a coaling station, I think in Delaware, we gave him a bath. About an hour before we reached Elberon, I suggested a second, but he replied, with a sparkle of the eye, "Let us reach the end of our journey first. That is most important." I mention this as showing how close an observer of his own condition the President was, yet, save when questioned, he never made a remark relating to his own feelings. The journey, as all know, ended safely. Under no other circumstances could this have been accomplished. Through those miles of strained attention and anxious doubt, while train hands vied with one another in quiet transmission of the doctor's orders as to speed and motion, no sound of bell or whistle was heard, either from our own or from the large number of trains passed. At every station crowds of men and women appeared, the former uncovered, with bowed heads, the latter often weeping. When not engaged with the President, I saw and wondered at these sights.

Mrs. Garfield sat by the side of her husband during the first part of the trip, cheering and re-assuring him as no one else could, and visited him afterward, frequently, from her car. On arriving at the track recently laid to the Francklyn Cottage, we were surrounded by a large concourse of people, who braved the heat of the day in their anxiety lest the journey might have resulted disastrously. The engine had not weight and power sufficient to push us up the steep grade. Instantly hundreds of strong arms caught the cars, and silently, but resistlessly, rolled the three heavy coaches up to the level. Arriving at the cot-

tage, the President was placed upon a stretcher, and borne, under the canopy previously arranged, to the room wherein the remainder of a noble life was spent. The admirable arrangements at the Francklyn Cottage, as well as the details of agreement with the great railroad companies, owe their completeness to the sagacious and liberal management of Attorney-General MacVeagh. I shall always remember with thankfulness his quiet energy, thoughtfulness, and zeal, by which this great journey was rendered possible.

The fatigues of the trip were shown in the pulse and also in the facial expression, but the President expressed himself as glad to be at the sea-shore, and was inclined to think he ought to have been moved before. His satisfaction was evident to all. The sound of the waves, the salt and bracing air, all afforded him the greatest delight. For eight or ten days, his condition visibly and continuously improved. Upon the evening of the 15th of September, a noticeable change took place,—a more frequent pulse, higher temperature, and increasing feebleness all indicated deep-seated mischief, which his physicians could not localize, but could only recognize symptomatically, as due to the general septic condition.

On this day I was absent from him for five hours, the only occasion on which I left him during the eighty days. I left him comfortable, and on returning from New York, found him only presenting the signs of fatigue usual at that hour (5 P. M.). Upon my return he held out his hand, and attempted the familiar smile. I said:

"Mr. President, I have been away for a few hours, as you know, but they seemed like an age."

He answered:

"Doctor, you plainly show the effect of all this care and unrest, and I am glad you were forced to take this temporary relief. Your anxious watching will soon be over."

The history of the next four days was that of anxious apprehension. All the symptoms pointed to profound disturbance, which might at any time cause a fatal result. The disposition to converse was not so marked. The wandering mind, easily and instantly recalled by a word, or the touch of a hand; the occurrence of occasional rigors,—sometimes severe,—and the almost entire failure to assimilate food, all indicated the inevitable, fatal end. I think that then, and probably long before, the President fully believed that he could not survive. Perfectly calm, sentient,—even inclined to be jocose and humorous,—there was still an under-current of conviction which all our optimism could not stem.

This opinion is borne out by the remark already related, made to me, and by the incident of the 17th of July, when, signing his name upon a tablet held in his left hand, he added "Strangulatus pro Republicâ." Later, upon the day before his death, he addressed Colonel Rockwell as follows:

"Old boy! do you think my name will have a place in human history?"

The colonel answered:

"Yes, a grand one, but a grander place in human hearts. Old fellow, you mustn't talk in that way. You have a great work yet to perform."

After a moment's silence he said, sadly and solemnly:

"No; my work is done."

And now we approach the fatal hour. After a comparatively comfortable afternoon, having taken and retained the usual quantity of nourishment, restful and cheerful, comforted and supported by the presence of his wife during most of the day and all of the evening, we had hopes of a better night than the previous one. Here I must again allude to a most touching trait of this illustrious man. The thoughtfulness shown for all about him endured even to the end. Often during his sickness, in his great care for her rest, after the fatigues of the day, he gently urged Mrs. Garfield to retire from the bedside, even when she herself could scarcely bear to leave. His heart was not only great, but tender as that of a child.

Upon this last evening I had just inquired of her if she was not in danger of too great fatigue. She replied:

"The General seems so comfortable and quiet that it has rested me to remain."

After making some arrangements for the President's comfort, and after the arrival of General Swaim, who was the nurse for the first part of the night, she left the sick-room and retired. I afterward reëntered the room, took the pulse, and left the President quietly sleeping. I then returned to my room to prepare the directions for the night, where I was visited by Colonel Rockwell, who earnestly discussed with me the probability of a favorable night. The colonel was to relieve General Swaim at 2:30 A. M. I myself did not intend to sleep until after twelve o'clock, as I had some special observations to make at that hour, should the President be awake and his condition favorable. Colonel Rockwell left the room to seek his much-needed rest. At 10:10 I was looking over some of the wonderful productions of the human imagination which each mail brought me, when the faithful Dan suddenly appeared at the door of communication, and said:

"General Swaim wants you, quick!" He preceded me to the room, took the candle from behind the screen near the door, and raised it so that the light fell full upon the face, so soon to settle in the rigid lines of death. Observing the pallor, the upturned eyes, the gasping respiration, and the total unconsciousness, I, with uplifted hands, exclaimed, "My God, Swaim! the President is dying!" Turning to the servant, I added, "Call Mrs. Garfield immediately, and on your return, Doctors Agnew and Hamilton." On his way to Mrs. Garfield's room, he notified Colonel Rockwell, who was the first member of the household in the room. Only a moment elapsed before Mrs. Garfield was present. She exclaimed, "Oh! what is the matter?" I said, "Mrs. Garfield, the President is dying." Leaning over her husband, and fervently kissing his brow, she exclaimed, "Oh! why am I made to suffer this cruel wrong?" Meantime, by what seemed some mysterious means of communication, the whole household was present at once. Mrs. Garfield, Mrs. Rockwell, Miss Mollie Garfield, Miss Rockwell, Mr. C. O. Rockwell, Mr. J. Stanley Brown, Dr. Agnew, Dr. Boynton, the servants, and myself, were the witnesses of the last sad scene in this sorrowful history.

While summoning Mrs. Garfield, I had in vain sought for the pulse at the wrist, next at the carotid artery, and last by placing my ear over the region of the heart. Restoratives, which were always at hand, were instantly resorted to. In almost every conceivable way it was sought to revive the rapidly yielding vital forces. A faint, fluttering pulsation of the heart, gradually fading to indistinctness, alone rewarded my examinations. At last, only a few moments after the first alarm, at 10:35, I raised my head from the breast of my dead friend, and said to the sorrowful group, "It is over." So gradual was the final passage across the dark river, that for a few moments I doubted the accuracy of my senses. The President's worn face changed but little in death.

"We thought him dying when he slept,
And sleeping when he died."

I cannot describe this scene. The vital spark had gone. No human skill or courage of heart could longer avail. The once magnificent physique, which had been so constantly and tenderly watched, lay untenanted before us. There was no sound—not even of weeping. All hearts were stilled.

Noiselessly, one by one, we passed out, leaving the broken-hearted wife alone with her dead husband. Thus she remained for

more than an hour, gazing upon the lifeless features, when Colonel Rockwell, fearing the effect upon her health, touched her arm and begged her to retire, which she did.

In closing this brief account of suffering, so long and patiently borne, I should fail in duty to myself, as well as to others, if I omitted the tribute of my heart to those to whose untiring devotion and vigilant help so much is owed. The fidelity and loyalty of the President's attendants can never be surpassed.

First, to Mrs. Garfield—brave, self-contained, helpful, always superior to considerations of self. I can, perhaps, best illustrate her character by relating an incident which occurred just before the suppurative period of the parotid gland was complete. The problem had been to sustain the President until the gland should break down. On the 26th of August, the situation was exceedingly grave. According to custom, Mrs. Garfield was informed at 6 A. M., by her maid, of the condition of her husband. She arose and quickly presented herself at his bedside. Without suggestion from any one, and with a quiet imperturbability all her own, she at once spoke to him words of cheer and hopefulness. He looked earnestly at her, to see if she were not dissembling, but her heart never failed. Her radiant face and perfect control of feature aided the innocent deception. It succeeded. She then entered the surgeons' room, and with a very different countenance, asked: "How do you feel about the General this morning?" I replied that his condition was unpromising and critical, giving specific reasons for the opinion. She said he was evidently low-spirited and apprehensive, and that she had just tried to cheer him up. I went into the room to supplement her efforts. His appearance had already visibly improved. The brave, quick-witted wife had given him by her words and looks a stimulus which medicine knows not. Two hours afterward, at the morning con-

sultation, it was found that the pus-discharge had taken place, and the long-wished-for relief had been obtained. Thus the ruse of the loving wife was swiftly justified by actual improvement.

Next, to Colonel Rockwell, his classmate and devoted friend, generous and noble-hearted; General Swaim, equally attached, and a close friend of many years; Doctor Boynton, his cousin, alert, disciplined, quick to learn a want or to descry a danger; Miss Edson, the devoted friend of the family, thoughtful, earnest, and intelligent; Mr. C. O. Rockwell, always judicious and faithful, and Steward Crump, whose unceasing and loving work early disabled him; and lastly, Mr. J. Stanley Brown, the President's private secretary, who, with a ready judgment superior to his years, in a thousand ways guarded and aided those who were watching the President,—to these proved and trusty aids in our great labor of love, I desire to express my sense of the value of their services.

The professional counsel, who rendered skilled and generous help, were always harmonious. The gravity of the problem hushed all possible discord. Every bulletin, even, was carefully and thoughtfully considered, every sentence, every statement of fact was weighed, in the attempt to convey to the public the unanimous views of the council.

This will readily be seen to be but a very imperfect record of the incidents of this most dreadful affliction. Much which might be said must remain forever unspoken. Can we picture the anguish of a husband at thought of leaving his wife and children, just at that period of life when honored and happy years yet lay before him? Can we portray in language the nobly repressed sorrow of the loving wife? Can we delineate the grief of those children, whose filial love and ambitions centered in the great heart now stilled? We enshrine in our memories this sorrow, for the expression of which mere words are inadequate.

THE LAST WORDS.

[LAST words written by Dr. Holland, October 11th, 1881,—referring to President Garfield.]

*His sympathy with the human
drew to him the hearts of the world*

I.

WE may not choose! Ah, if we might, how we
Should linger here, not ready to be dead,
Till one more loving thing were looked, or said,—
Till some dear child's estate of joy should be
Complete,—or we, triumphant, late, should see
Some great cause win for which our hearts had bled,—
Some hope come true which all our lives had fed,—
Some bitter sorrow fade away and flee,
Which we, rebellious, had too bitter thought;—
Or even,—so our human hearts would cling,
If but they might, to this fair world inwrought
With heavenly beauty in each smallest thing,—
We would refuse to die till we had sought
One violet more, heard one more robin sing!

II.

WE may not choose; but if we did foreknow
The hour when we should pass from human sight,
What words were last that we should say, or write,
Could we pray fate a sweeter boon to show
Than bid our last words burn with loving glow
Of heart-felt praise, to lift, and make more bright
A great man's memory, set in clearer light?
Ah yes! Fate could one boon more sweet bestow:—
So frame those words that every heart which knew,
Should, sudden, awe-struck, weeping turn away,
And cry: "His own hand his best wreath must lay!
Of his own life his own last words are true,—
So true, love's truth no truer thing can say,—
'By sympathy, all hearts to him he drew.'"

October 12th, 1881.

J. G. H.

"Multis ille bonis flebilis occidit."

—HOR., CARM. I., 24.

Who knew him, loved him. His the longing heart
For what his youth had missed, his manhood known,—
The haunts of Song, the fellowship of Art,—
And all their kin he strove to make his own.

But his the good, true heart not thus content:
The words that fireside groups at eve repeat
He spoke, or sang; and far his sayings went,
And simple households found his music sweet.

So Heaven was kind and gave him naught to grieve.
Among his loved he woke at morn from rest,—
One smile—one pang—and gained betimes his leave,
Ere Strength had lost its use, or Life its zest.

HAIL AND FAREWELL.

MOUNTAIN, that watchest down the vale
Most like a couchant lion,—
Wide, winding river, whose fair breast
Soft south winds gently die on,—
Lift up the head; flow still and slow;
Let no chill blast now chide you;
For one who loved you long ago
Lies down to sleep beside you.

You nursed within his boyish heart
The springing love of beauty;
You taught him, by your steadfast ways,
The deeper lore of duty;
Your shade and shine about him lay
In life's abundant labor;
And now the mound that holds his dust
Shall be your lowly neighbor.

A good, brave man, a blameless man,
He lived and wrought among us;
The truth he taught, the tales he told,
The heart-songs that he sung us,
All shine with white sincerity,
All thrill with strong conviction;
His words were seeds of honest deeds,
His life a benediction.

The art he loved was not the art
That finds its end in pleasing;
He loved to help and serve and bless
With toil and care unceasing;
No gift, he said, its fruit hath borne
Until with love 'tis mated;
No art is high, no art is pure,
That is not consecrated.

And thus, with kindly souls, who pass
Through Baca's vale of weeping,
Beside whose way the fountains play,
Joy-bringing, verdure-keeping,
From strength to strength this pilgrim went,
With grace that ne'er forsook him,
Till suddenly, at break of day,
He was not, for God took him.

We tell our loss, we bear our pain,
Still thankful hearts upraising,—
For life so large and fruit so fair
Our God the giver praising.
The heart must bleed, the tears must fall,
But smiles through tear-drops glitter;
We drink the cup, and grateful find
The sweet within the bitter.

O mountain, guard his precious dust!
O river, seaward flowing,
By night your softest dews bestow
To keep the grasses growing
That ever, with the bitter-sweet,
His sacred grave shall cover,—
Servant of man and friend of God,
Brave thinker, steadfast lover.

Two Times.

I hasten homeward, through the gathering mighs,
Toward the dear ones who in expectation sweet
Await the coming of my weary feet;
What faces in the hearth-fire glancing bright;
And please my heart with a lovely sight
Of my own neighbors, stepping from the street
Through doors thrown wide and bursts of light. That greet
Their entrance, painting all their paths with white,
And then I think, with a great thrill of bliss,
That all the world join all of life's things,
Tell our tales of other realms than this,
As faithful types of spiritual things;
And so I know that home's rewarding kiss
Assumes the hope of heaven that in me springs.

R. J. Wallace

TOPICS OF THE TIME.

[We print below two editorials, entitled "The Lesson of the Year" and "Poverty as a Discipline," written by Doctor Holland for the December number of THE CENTURY MAGAZINE. That on "Poverty as a Discipline" is unfinished and unrevised, but we print it just as it was written, adding a quotation from President Garfield, of which Doctor Holland intended to make use.]

The Lesson of the Year.

THE assassination of President Garfield was, without question, the most impressive event of the year, and one of the most impressive that has occurred within the memory of men now living. Never, perhaps, from so small a motive was a man struck down from so high a place. All the accompaniments of his death were impressive in the most profound degree.

The open attack upon his life; his long suffering, borne with heroic patience; the intense interest in the progress of his illness felt all over the civilized world; his removal to the ocean amid the hushed hearts and voices of millions of men; his death and burial amid symbols of mourning that blackened a continent and even darkened the air across the sea; the unprecedented expressions of grief and sympathy that came from other governments and peoples,—all contributed to make this death of our chief magistrate one of the most striking events of history. There are some points of this great tragedy which may profitably be recalled, with reference to the lesson they convey, and we propose to do this here.

First, we suppose it is true that there was never so much and such earnest prayer offered for one man's life as was offered, during his illness, for that of the President. And it did not avail anything. Let us have a word about this. The people did not know that they were praying for a dead man. There was undoubtedly never a moment, from the time the President was shot until he died, that he could have been saved without the performance of a miracle, and this was not prayed for. The people did not dream of asking for the performance of a miracle. They would have presumed to ask for nothing more than the illumination of the minds of those who had the President in their care and under their treatment, and for the forwarding of all those processes of healing established by nature and exercised within an organization not injured beyond the possibility of restoration. There is no doubt that many of the earnest petitioners for the President's cure were disappointed, and received a shock to their faith, on the denial of their prayers; and to these so much, at least, as this ought to be said: the earnest prayers of a great nation that turned unitedly to God in its distress are certain of an answer.

In the first place, the universal turning of the eyes Godward for help is an invaluable good in itself. The death of the President, or, rather, his long dying, was the cause of the revivification of the relig-

ious life of the country. Men were taught to pray by their great desire and their conscious helplessness. What every Christian man is bound to believe and assert is that all this tide of earnest prayer shall return to the nation in blessings equivalent to that which was sought. How this sad event has unified the national feeling! How can we be sufficiently grateful for this? The North and South came nearer together over the coffin of the lamented President than they had done since the war. It is quite possible that death has accomplished this much-desired result more surely than life would have done.

When the assassination took place we were in the beginnings of a fierce factional strife, instituted to break down the President's power. How far this strife would have gone in breaking the influence of the Administration we can never know, of course, but we can see that the prime mover in this most inexcusable factional strife has been politically slain, and that he who proposed to control the Senate of the United States, the Administration, and his own State, could make no headway against a dying man.

If he ever enter politics again, it will not be as dictator to his party, but as a humble and loyal servitor. If this death of the President shall serve, in any notable degree, to kill the power of the political machine, as represented by such men as Roscoe Conkling, he will not have died in vain, and the people who prayed for the President's life will have received a large installment of the equivalent of that life.

Again, the foreign participation in the profound interest excited by this calamity was a great good, not easily to be measured in all its relations and bearings. President Garfield was a man of the people, who rose, by sheer force of genius and character, to the highest place a human being can occupy. He was not the tool of a party. He had not sought the place to which he was elected. He was thoroughly educated for any political position, and he became President because he was our best man.

These facts had come to be recognized all over Europe, so that when he was stricken down the shock was felt from highest to humblest, from the heads of governments to the lowest of their peoples. The expressions of grief and sympathy that came from all these were an honor alike to the great Republic, and to the manhood which that Republic, in harmony with its ideal standards and theories, had elevated to its highest place. The death of the President has turned the hearts of the nations to us as no other event has done during the last century, so that his months of suffering may have won for us more than a life of service would have done.

A most valuable part of the lesson conveyed by the President's death relates to the vice-presidential office. It is devoutly to be hoped that Vice-President Arthur will follow loyally in the footsteps of his great predecessor. If he shall do so, we may practically have our President with us during the period of this Administration, so that we shall be deprived of no great

blessing by his death. The Being to whom we prayed so earnestly could not give us back a life destroyed, but he could, and we believe He will, perpetuate its influence through the term of the President's successor. Still we have had a great scare, and the circumstances from which it rose are not likely to be repeated. This one lesson we have learned—that the nomination of a vice-president by a party convention is no light matter. Such a nomination is never to be made to satisfy a faction, or to oil the wheels of a party machine. Just as much care should be taken to get a first-class man for the second place on the ticket as for the first. No man ever took the presidential chair with a fairer prospect of long life than President Garfield, but he was no proof against the assassin's bullet, and his work passed over to a man who began his term of office without the slightest expectation of ever occupying the White House. We have no wish to be offensive to a man who has undertaken to bear a great burden, to which he has been unexpectedly, and, we believe, unwillingly called, but, as a people, we have learned from him and the circumstances by which he is surrounded that too much care in the choice of a vice-president cannot possibly be taken. If the death of the President has impressed this important truth upon the country, then another great good has been bestowed upon it. Of this thing we are certain, viz. : that no nation can pray for a great good, as ours has done, and be refused.

The nation did not get just what it asked for, because it could not be granted, but we believe it has secured by its prayers an equivalent good, and that out of the death of the President will come a great treasure of peace, harmony, and prosperity. The nation is better for this death, which has so stirred and affected it, and in a sense the great, good man has died for us. Death alone could have sufficiently emphasized the lesson of his life, harmonized our jealousies and strifes, attracted to us the sympathy of the world, and brought some of our political methods to the test which proves their unworthiness.

Poverty as a Discipline.

WE often hear it said of a man that he has had great advantages. We have meant by this simply the advantages which wealth could buy—university training, travel, high society, unlimited books, etc. It is not often that we hear poverty spoken of as an advantage, yet we believe it to be demonstrably true that, of all the advantages which come to any young man, this is the greatest. The young man who is saved from the effort of making his own way in the world and the necessity of establishing his own position, is denied the most powerful stimulus to labor and development. The young men who are coming every year out of the colleges and the professional schools of the country, and starting into active life, will win success or sink into failure mainly in accordance with the amount of stimulus under which their education has been acquired. If they have been obliged to labor until they have learned the value of money; if they have been forced into close economies, and learned, also, how difficult it is to keep it; if they have grown up with the consciousness upon them that everything they hope

for in the world must be won by their own unaided force and industry; if they have acquired thrifty habits and self-helpfulness and self-trust,—they enter life with great and most assuring advantages. No amount of wealth given to a young man can possibly give him so good a prospect of a true success as poverty that has secured such advantages as these.

Twice within the easy memory of this generation a man who started at the lowest extreme of the social scale has risen to be the President of the United States. Abraham Lincoln rose from his nest of leaves in a Western log-cabin to be twice the elected ruler of the nation, at a most momentous period of the national history, traversing in the passage every degree of the social scale. The poor frontiersman's child, the flat-boatman, the day-laborer, the indigent student, the humble country lawyer, the politician, the stump-speaker, the legislator, the statesman, the President, and chief of one of the greatest armies the world has ever seen,—who believes for a moment that, had he been rich at the start, he would have ended where he did? It was the discipline of poverty that made him what he was. It gave him a profound sympathy with the people, most of whom are engaged in a struggle with poverty from the cradle to the grave. It stimulated and trained his powers to their highest development, and it helped him to form those habits of industry and economy that are essential to the best success.

James A. Garfield, whom we have just laid in the tomb with tears of affectionate reverence, was another instance of the beneficent influences of poverty. He rose from as low a place as Lincoln, and took even a higher flight than he. The most brilliant man who ever occupied the Presidential chair, and rapidly becoming the most admired and best beloved ruler in the world, he was mourned when, in realizing one of the many coincidences that existed between his life and that of Lincoln, he was murdered by an assassin, as man was never mourned before. His marvelous accomplishments and powers won for him the respect of the great, and his sympathy with the humble drew to him the hearts of the world. * * *

"Poverty is uncomfortable, as I can testify; but nine times out of ten, the best thing that can happen to a young man is to be tossed overboard and compelled to sink or swim for himself. In all my acquaintance, I never knew a man to be drowned who was worth the saving."—JAMES A. GARFIELD.

Doctor Holland.

DOCTOR HOLLAND's death, though occurring at a time when years of mental vigor and usefulness might fairly have been hoped for, was still delayed till his life had reached a singular completeness. He had accomplished nearly every desire of his heart. His life had grown broader and richer to its close. Though keenly sensitive to sharp criticism, and often suffering from it, still he was buoyed up through all his busy career by the grateful affection of untold thousands and the love of all who were near him. He lived long enough not only to be able to say honestly that he had forgiven all his en-

emies, but long enough also to gain the reverence and attachment of those who had planted the deepest thorns in his side. While retiring from all business control, and from a very large part of his editorial labors, he lived to see the magazine in which he was interested start afresh on its new career, in its new quarters, and under its new name. The first number of *THE CENTURY MAGAZINE* was placed in his hands not many days before his death.

Knowing during the last few years that his end might come at any time, he had set his house in order, and, while still enjoying life to the utmost, and clinging to it with almost passionate fondness, he had made ready to depart at a moment's notice. It is a thought to be cherished that at the last he was not separated, either by distance or by wasting illness, from his congenial work and from his daily companions.

It is hard to do here, in these columns, for our lamented chief what he so often has done for his own comrades stricken down at his side. Though Doctor Holland was thoroughly prepared in his own mind for a sudden taking off, the shock was one for which those nearest to him could not, though ever so well warned, be really prepared; and, besides, he had been so much stronger of late—so much more busy, cheerful, and hopeful. Enough for us to say that that spirit of sympathy and helpfulness, that courtesy and gentle consideration which were so deeply characteristic of his published writings and of his dealings with all—friends or utter strangers—with whom he came in contact,—enough to say that these qualities of his heart had endeared him to his editorial and business associates in a peculiar manner. Every one of them remembers not only the uniform and unfailing gentleness of his manner, but also many acts of especial and extraordinary tenderness and forbearance. Even in cases where the springs of action must have been hard for him to understand, he still trusted; never once did he knowingly give pain to those beneath him in authority. He trusted his associates and all employed in the work of the magazine with a completeness that not only helped each to develop to the utmost his individual capacity, but which attached all of them to him in the bonds of personal affection and devoted loyalty. His quick sympathy, his warm encouragement, the inspiration of his generous confidence, his winning and fatherly presence,—all these we shall miss beyond words.

We think there can be few who doubt the sincerity of Doctor Holland's moral writings. No one could have been as near to him as we have been without feeling that these were the spontaneous expression of a big-hearted and genuinely helpful nature. He wished every man well. More than this, he could not do otherwise than extend his hand to help every man who came near him. The gratitude of thousands of hearts to whom, even by means other than his published writings and lectures, he has done good,—by a pressure of the hand, by a word fitly spoken, by a letter of good cheer,—all these attest that to which we also wish to bear our testimony—the sincerity of his utterances and the unconquerable desire to serve his fellows in everything that he undertook. His writings show little interest in and little knowledge of theology. If in them

he preached in season—and, as it is charged, sometimes out of season also—the religion of Jesus Christ, the world may be sure that it was in no perfunctory, dogmatic, or Pharisaical spirit, but that he bore honest witness to an experience that had taken possession of his heart, and had given peace and inspiration to his life.

For years Doctor Holland had shaped the affairs of his office so that his own retirement might make as little break as possible in the conduct and spirit of the magazine. But in one sense Doctor Holland neither will nor can have a successor. There is, in fact, no one man who stands in the same relation as he to the great masses of American readers. One motive of his in going into a magazine enterprise was the desire to have a mouthpiece through which to express his own thoughts on current events. With a few exceptions, he wrote with his own hand every article which has appeared, during the last eleven years, under the head of "Topics of the Time." He announced there his personal opinions, and announced, as well, the changes that occurred in them. He wrote occasionally for other unsigned departments, but allowed in these considerable latitude of opinion. Hereafter the department of "Topics of the Time," like other unsigned departments, will be written by various pens, besides those connected with the editorial corps. In addition to this it should be said that, when Doctor Holland's name disappears from the cover, no other will take its place there.

In endeavoring to carry on the work before us in the spirit in which it was begun, we—and our associates, both editorial and business—shall be as grateful as Doctor Holland always was for right-minded and intelligent criticism, from whatever source it may come, and as unmoved as he by unjust and jealous aspersion. We believe that the best memorial we can build for our beloved chief and our friend is the honorable future of this magazine,—an enterprise which owes, and always will owe, so much to his far-sighted, courageous, and large-hearted management.

Memorial Meeting at Springfield.

A MEETING was held in the Memorial Church at Springfield, Mass., on Sunday evening, October 16, 1881, the day after the funeral, to do honor to the memory of Doctor Holland. We are indebted mainly to the report of "The Springfield Republican" for the following record:

"It was a deeply sympathetic audience which filled the Memorial Church . . . to listen to the just and tender words of tribute paid to the memory of Doctor Holland. Fitting, too, was it that this last service should be held in the church with the founding of which he was so intimately identified, and its name henceforth takes on a double appropriateness and significance."

Rev. Dr. Eustis, pastor of the church, conducted the services, and was assisted in the religious exercises by Rev. Dr. Terhune, Rev. J. W. Harding, and Rev. Dr. Gladden. A poem, read by the latter on this occasion, appears in this number of *THE CENTURY MAGAZINE*. A letter of regret from Rev. Dr. R. H. Seelye of Haverhill, and a telegram from President Porter of Yale, both former pastors of Dr. Holland,

were read. Among the hymns sung was the thanksgiving hymn from "Bitter-Sweet," to the tune of Duke Street. Doctor Eustis said that Doctor Holland was a remarkably successful man; that during his life he had accomplished nearly every desire of his heart. But there was one desire that was not gratified, namely, that he might write a hymn which should be sung in all the churches. He thought that, if the congregation would sing this hymn at this time, it would be proved to be one worthy of such use.

"For Summer's bloom and Autumn's blight,
For bending wheat and blasted maize,
For health and sickness, Lord of light,
And Lord of darkness, hear our praise!

"We trace to Thee our joys and woes,—
To Thee of causes still the cause,—
We thank Thee that Thy hand bestows;
We bless Thee that Thy love withdraws.

"We bring no sorrows to Thy throne;
We come to Thee with no complaint;
In Providence Thy will is done,
And that is sacred to the saint."

REV. DR. BUCKINGHAM'S ADDRESS.

"IN speaking of Doctor Holland's relations to the churches of this city, I will say that when I came here in '47 I found him a member of my church. He was a young physician trying to get into practice. I remember he came to my study one day, and said he had an invitation to go to Vicksburg to superintend the city's schools. I expressed my surprise that he should be willing to go to a city with such a bad reputation, and his reply was that it was a matter of necessity—that he was obliged to renounce his profession and devote himself to something else. At the end of two years he returned, and found the way opened for him to become connected with the 'Republican,' a paper which had just been founded, and which I have always regarded as one of the two remarkable productions of this small inland town—this paper and Webster's Dictionary. Had it been some wonderful machinery it would not have been surprising, for such skill is what we cultivate. But this was a literary production, and all the more remarkable because started here in the smallness of the town, and with so little to encourage an enterprise of such a nature.

"We all regard, as Christians, every man's life as planned for him by God. Doctor Holland was unfitted to be a physician; God had made him to be a journalist and he couldn't change that plan, just as Doctor Bushnell undertook to be a journalist when God had made him and ordained him, if anybody ever was in these later days, to preach the Gospel. And, as he used to say, it was the weight of a wafer that turned him from journalism to the ministry. And so circumstances, providentially arranged, prepared the way for Doctor Holland to become connected with the 'Republican.'"

Passing from the story of Mr. Bowles's engagement of Doctor Holland on the "Republican," Dr. Buckingham told of his relations with the Springfield churches.

"After his return from Vicksburg he became connected with the North Church, in accordance with my advice, for he said it was a church that he could help, and where I thought he would find a freer and

better development than in the older church. In addition to his faithful work here in the social and religious life of the church, he made himself especially valuable as the leader of the choir. You should have seen him sing, as well as hear him, to understand what he meant by the service of song in the house of the Lord! His noble mien, his reverent and exultant manner, as he carried the praises of the congregation up to heaven! The picture of the choir boys is a pleasant one, but commonplace in comparison with this magnificent specimen of manhood and Christian service.

"But we come now to his connection with this church. There was no church of any denomination in this part of the city. He, with a few others, conceived the idea of having one that, while it was evangelical, should be undenominational. He found no sympathy, I am ashamed to say, among some of our church members and ministers, for obstacles were thrown in his way and he was needlessly perplexed; and if he had not loved the cause of Christ more than most, he never would have sacrificed his peace of mind, and continued to push on to success as he did this enterprise.

"And here let me give you an idea of Doctor Holland's cast of mind, to explain his mode of thinking upon religious subjects. He once said to me: 'Christianity, in the form of abstract statement and in the shape of a creed, has not any particular interest nor very much meaning. I have to test things through my heart and best feelings. If they seem good and true and like Christ, it satisfies me, and nothing else does.' This will explain the little regard he had in his writings for formal orthodoxy. He followed the dictates of his heart rather than the teachings of any theological school, and, keeping his heart warm with love to God and love to man, and drinking in continually the spirit of Christ, he never was guilty of heresy. But he was all his life having a richer and more abundant experience of divine grace in his own soul, and it was conveyed, through his writings and through his personal intercourse, to the hearts of others. It is a striking fact in this connection, as his friend Mr. Eggleston will tell you, perhaps, that while he was so jealous of the religious liberty of others, and championed their claims so manfully, he never needed indulgence for heresy of his own. He believed in the Bible, and he adored and trusted in Jesus Christ as the only saviour of men, and he was always true to such a Christianity, whether in his Sunday-school teachings, or daily newspaper, or monthly periodical, or in his novels or poems. He was a pure-minded, conscientious, and useful church-member, and all who have ever been associated with him in such relations can bear the freest testimony in this respect to his singular simplicity, to his tender piety, to his conscientious fidelity and generous liberality in all the relations he sustained to these churches and to religious efforts in this city."

GEORGE S. MERRIAM'S ADDRESS.

"DOCTOR HOLLAND was essentially a preacher. He was ordained by natural endowment, and by steady, enthusiastic purpose, to the ministry of moral guidance and inspiration. So long as a man's highest business is to shape his life to the noblest ends, and so long as some men can, out of their own larger experience and

proficiency, throw light on the path of others, giving them wisdom and heart for the great work, so long the preacher's vocation will endure.

"That vocation has hitherto been largely exercised by personal speech from pulpit or platform, and largely through the instrumentality of the church. Doctor Holland was an able and successful speaker. His relation to the church was one of loyalty and friendship. But his life fell at a time when a new engine of influence was largely supplementing the old. While those who speak from the pulpit are glad to number their hearers by the hundreds, the daily editor counts his by tens of thousands. While the church is anxiously debating how it can reach and hold the people, every man looks on his door-step for his morning paper before he goes to his breakfast. It is the newspaper that, beyond any other influence, now comes home to men's business and bosoms. The limitation upon that influence is that it too often lacks that clearness and emphasis of moral purpose which has largely characterized, with whatever defects and drawbacks, the ministry of the pulpit. It was the especial distinction of Doctor Holland that he used the newspaper's power to serve the preacher's purpose. As a moral teacher, he found a weapon superior to the old as a rifle is superior to a cross-bow, or a locomotive to a stage-coach. No less did he enlarge and ennoble the function of journalism, by putting it to a new and higher use. He showed that a newspaper might do something more than tell the news; something besides discuss what is doing at Washington; something more, even, than to act as guide and judge in literature, and art, and public affairs. He used the daily or the monthly journal to purify and sweeten the fountains of personal and family life. He spoke continually the word that should inspire young men to be pure, and women to be strong; the word that shed poetry over the home life; the word that threw on every interest the light of conscience and the warmth of moral feeling.

"I do not mean, of course, that Doctor Holland was the first or the only one to direct the power of the press to the conduct of personal life. Nor probably did it come to him at first as a distinct and deliberate plan. Said Cromwell, 'A man never rises so high as when he knows not whither he is going.' It was without premeditation that Doctor Holland began the series of writings in which was his first great success as a popular moralist. He had written on local history and light social satires when, one morning, Mr. Bowles suggested to him that he should write a series of letters in a familiar and popular style. On that hint, and before leaving the office, he wrote the first of the Timothy Titcomb letters. It was his good fortune to be allied with a man, Samuel Bowles, who won the unique distinction of creating in a provincial town a newspaper of the first class, and whose enlarging conception of journalism welcomed and incorporated that specific function of personal moral teaching which Doctor Holland introduced. So, in his later career, he was fortunate in being associated with men skillful and strong to unite with his talents the other requisites for building up a great periodical. So he accomplished his work, not by conceiving and creating a career, but, so to speak, by meeting the hand of Providence half-way. He was faithful to the light

that was in him; he was open-eyed and sensitive to the conditions of the time; he met the opportunity as it offered. And thus he did the work that was given him to do. He did a work large in itself; large in the impress it left on two great periodicals; large as an omen of the nobler work to be done by the press, an instance of the new and greater channels through which God fulfills his purposes.

"I do not attempt to speak of the elements of his intellectual power—to dwell on his observation, his reading of human nature, his sympathy, imagination, eloquence. But one element of his success and merit is to be noted—he could think the thoughts and speak the speech of the common people. He represented that democratic quality in literature which our social conditions demand and are only beginning to get. Take from your shelf at random a standard author, other than a novelist, and read a page to the first man you chance to meet. Ten to one he listens with a sort of uncomprehending look; the voice comes to him muffled, as of some one speaking in the next room. For most authors write out of a mental habit and equipment which is unfamiliar to the common people; they use a literary dialect—the dialect of a class, as much as is the dialect of science or theology. But, take almost any book of Doctor Holland, and read from it to any man or woman of common intelligence: the eye responds; they understand what he means; they agree or deny; they comprehend, they are moved, influenced. He was a man of the people, and the common people heard him gladly.

"It is fit that we should honor his memory as we are doing. But already his monument is built—built, as must be every monument that is worth anything, by his own life. He has that memorial which we all desire beyond any other—the love of a few hearts, in which he will never become a memory, but live in that nobler, tenderer, more sacred relation which death brings. He has that distinction, given to the fortunate few, to be remembered by thousands with a warmer emotion than admiration—with personal gratitude for some high impulse given when perhaps the will was faltering, some clear light shed when the path was dark. His influence remains, invisible but powerful, upon the newspaper and the magazine that owed so much to him—the influence of a generous humanity, a regard for moral ends. In a hundred thousand homes his books are lying—not dust-covered, but in familiar use; and in each home he is a companion, counselor, friend. A great and sacred gift was intrusted to him. He used it faithfully, reverently, gratefully. The story has reached a worthy end; the poem is finished; and we thank the Creator and Giver."

DOCTOR EDWARD EGGLESTON'S ADDRESS.

DOCTOR EGGLESTON traced the connection between the later growth of Doctor Holland and the vicissitudes of his early life, saying with the poet Herder, "My whole life has been but the interpretation of the oracles of my childhood." When Doctor Holland went to a wider field in the metropolis and founded the leading magazine of America, he went with his character already molded by his life in this community. He had despairingly thought in his young manhood that the world had no place for him; he had tried several

things and failed—like many a young man passing through similar struggles to-day who is destined to play an important part in the world. People afterward wonder they have not recognized such men before. It is always perfectly safe to be kind and not to snub a young and ambitious man. We should make a little smoother and a little sweeter and better, if we can, the pathway of a struggling, ambitious, and sensitive young man as Doctor Holland was in those earlier years. The trials of this period, however, only served to strengthen and develop the man.

As Doctor Eggleston expresses most of the sentiments of his address more fully in his article in this number of *THE CENTURY*, it is not necessary to give any further report here.

ROSSELL SMITH'S ADDRESS.

MR. ROSWELL SMITH, Doctor Holland's business associate since the foundation of the magazine, said that he was not here to pronounce a eulogy upon Doctor Holland, but to give some expression to the affection in which he was held by his associates. He told in brief the story of his acquaintance with the Doctor, and of the foundation of the magazine. Doctor Holland, he said, was a man who decided the most important questions with almost lightning rapidity; he never saw a man whose decisions upon important questions were so instantaneous. He used to say that he put his confidence in men rather than in things.

Doctor Holland knew that he had been often charged with a want of orthodoxy. The speaker had heard him repeat with zest the story of a clergyman of Springfield who, when absent from home, was asked by some one what were Doctor Holland's religious opinions. He replied: "Have you read Doctor Holland's books, and can you not learn his beliefs there?" The answer was: "Yes, I have read his books, but first I come across something which makes me think he is a Unitarian, and then I read on and find something which leads me to think that he is a 'Christian'!" His orthodoxy was of the type of the apostle James, rather than that of Paul; but his writings sometimes reminded one of the story of the young minister who preached to the students of Union College. The venerable Doctor Nott complimented him very much on his sermon, saying, "The first half was pure Calvinism, and the last half pure Arminianism, and I liked it, for that is just the way it is in the Bible." Doctor Holland appreciated the fact that he was a misunderstood man, and that he was credited with the holding of sentiments and the advocating of views which he thoroughly abhorred; and one motive, he said, in starting a literary magazine was that he might set himself right on the record. Furthermore, he wished to "round out," as he expressed it, his literary life.

No man held the clerical profession in higher esteem than Doctor Holland. Indeed, his estimate of it was so high, and his desire that it should attain the highest usefulness was such, that it led him to be impatient with its defects; and the same is true of his love for the church and his respect for the prayer-meeting. He felt that these were the hope of the world, and he could not tolerate stupidity or intolerance in either the one or the other. Ministers had no truer friend than he, and very many of them recog-

nized it and held him in the highest regard. No minister ever came to him to consult him about leaving his chosen profession and going into literature, or into any other pursuit, but Doctor Holland turned him back and exhorted him, with the greatest earnestness, to stick to the preaching of the Gospel as the highest earthly calling.

"The whole generation of men of the age of Doctor Gladden, Doctor Eggleston, and myself, who were ten years younger than Doctor Holland, read his earlier works with the greatest interest, and we feel that we owe to him a debt of gratitude which we can never repay, for the influence he exercised upon our lives.

"You have heard here to-night how Doctor Holland was interested in the work of, and had helped to build up, three churches in this city. His love for this Memorial Church is well known to this audience. In New York he united with the Brick Church. And now, during the last summer of his life, he has been engaged in the work of enlarging and almost rebuilding the church at Alexandria Bay, on the St. Lawrence, originally built by Rev. Dr. Bethune."

The speaker then read a statement by one of the editors of the magazine, describing Doctor Holland's last day at his office, which was the last day of his life:

"Doctor Holland was at his post till the very last. His last day was a busy one, and one full of interest and pleasure. He was writing his editorials; he was talking over new projects; he had time to go out to see some beautiful stained-glass windows, whose rich and exquisite tones gave him the greatest delight; but especially the day was devoted by him to thoughts of our late President, whom he knew personally. The first thing he said in the morning when he came in was something about Garfield; he burst out with an ejaculation of 'What a magnificent man the President was—what a knight-errant!' He went on to describe his appearance in the House of Representatives, the hush that went over the House when he arose to speak, and the ease and courtliness of his bearing.

"Doctor Holland was engaged that day in writing an editorial (which remains unfinished) on poverty as a means of developing character; and his illustrations were taken from the lives of Lincoln and Garfield. While writing this a book was handed to him, entitled 'Garfield's Words.' For an hour or so he pored over its pages, reading aloud to one of his associates the passages that struck him as most telling. He laughed his approval at one bit after another of sententious humor; his voice trembled at every passage made pathetic by the President's tragic fate. Among the quotations he was greatly pleased to find one peculiarly appropriate to the subject of which he was at that very moment treating.

"The last poem that was submitted to him as editor, and accepted by him, was a poem on Garfield, written by one of the younger members of the editorial staff; and the last words that he himself wrote, in the unfinished editorial, were about the President, and might almost be used as his own epitaph."

Other Tributes to Doctor Holland.

IN a number of churches sermons have been preached on Doctor Holland, or fitting allusions have

been made to his character and his life-work. We quote the following from the sermon by the Rev. Dr. Gladden, preached on the morning of October 16th, in the North Church, Springfield :

"Doctor Holland's methods of preaching were various and well chosen. Upon the platform, so long as he had strength for such service, he lifted up his voice in behalf of truth and righteousness ; and if the lyceum had kept to such straightforward and wholesome talk as he always dealt in, the lyceum would not have ceased to be a power in the land. When it demitted the function of teaching and went into the show business, exhibiting for an admission fee all sorts of literary and unliterary monstrosities, then its days were numbered. But Doctor Holland's lyceum lectures, gathered into two snug volumes, are all instinct with sound morality and wholesome common-sense, and all aglow with the author's hearty purpose to help his hearers into cleaner and brighter and larger living. He was a pleasant speaker, too, as we remember him,—dignified, direct, convincing; with the living voice he was no mean preacher.

"His earlier essays, those in the Titcomb Letters, 'Gold Foil,' in 'Lessons in Life,' in 'Letters to the Joneses,' as well as his later editorials, were, of course, in great part ethical or religious in their character. In those earlier volumes such titles as 'Providence,' 'Alms-giving,' 'Does Sensuality Pay?' 'The Sins of Our Neighbors,' 'The Canonization of the Vicious,' 'The Food of Life,' 'Unnecessary Burdens,' 'Faith in Humanity,' 'Truth and Truthfulness,' show the bent of the author's mind ; and all recent readers of SCRIBNER know how often the 'Topics of the Time' are topics of the very highest human concernment—themes with which the pulpit is appointed to deal. I think that the service rendered by Doctor Holland to public morality by his editorial discussions in SCRIBNER'S MONTHLY, by his hot indignation against the rascalities of politics, by his trenchant assaults upon the vices of the time, by his hearty advocacy of the old-fashioned virtues of temperance and thrift and self-help ; by his unfaltering assertion of the supremacy of the values of character above the values of art,—has been worth to this generation more than this generation will ever know till it measures the harvests of time in the garner of eternity.

"Of Doctor Holland's novels, substantially the same thing may be said. Most, if not all, of them were novels with a purpose. It was not merely for the sake of telling a pleasant story, not merely for the sake of describing real life, that he wrote, but also with the ulterior purpose of exposing and redressing some wrongs, of helping forward some good causes, of making social life better than it is. There are those who say that this is not good art. The fact is, that there are not a few people, nowadays, without a purpose, and these are not apt to take kindly to novels with a purpose. But when they set up their standard of purposelessness, and call on the world to conform to it, we must beg to demur. The history of literary art does not warrant their canons. The classics of fiction comprise many tales whose conscious end was service. Shall we say that Brooke's 'Fool of Quality,' and Goldsmith's 'Vicar of Wakefield,' and George Eliot's 'Felix Holt,' and Charles Kingsley's 'Alton

Locke,' and Dickens's 'Nicholas Nickleby' and 'Bleak House,' and Mrs. Stowe's 'Uncle Tom's Cabin,' and Charles Reade's 'Put Yourself in His Place,' are not legitimate fiction, because they try to do a little good, while they give a little pleasure? Doctor Holland had thought this matter all over early in his career, as he shows us in 'Kathrina,' and his judgment upon it never wavered. An editorial of his in a late number of his magazine deals with it vigorously. He speaks of this doctrine, that art has no higher end than pleasure, with strong dissent. 'We claim for the novel,' he says, 'the very broadest field. It may illustrate history, like the novels of Walter Scott, or philosophy, like those of George Eliot, or religion, like those of George MacDonald, or domestic and political economy, like those of the late Mrs. Sedgwick, or it may represent the ludicrous side of human nature and human society, like many of those of Dickens and Thackeray, or it may present the lighter social topics and types, like those of James and Howells, or it may revel in the ingenuities of intricate plots, like those of Collins and Reade. Every novel and every sort of novel is legitimate if it be well written.' I think that this doctrine of art is vastly higher and more catholic than that which he is confuting. And when he goes on to say, in good round words, 'The man who denies to art any kind of service to humanity which it can perform is either a fool or a trifler,' I confess that he carries with him my sympathy.

"At any rate, it is enough to say that he understood what he was about, when he wrote novels with a purpose. And it must be admitted by everybody that his purposes were high and pure ; that the blows he struck with this good weapon of fiction were telling blows.

"And the same thing is true of his poems. All of his principal poems take hold of great themes, deal with the great interests of character, and the great spiritual laws. We may not agree with him in all the lessons that he seeks to teach in these poems ; I own that I do not ; but we cannot deny the lofty purpose and the earnest thought that pulsate through them all. Whatever we may say of their philosophy, the spirit that breathes through them is large and free.

"When I thus exalt the moral and religious element that characterizes all that Doctor Holland wrote, I would not wish to be understood as denying to his stories and poems that quality which the pagan critics insist upon—the power of giving pleasure. Not only in the felicitous and picturesque rhetoric, and the stirring music of his words, but also in his quick insight into character, and his happy delineations of men and manners, he has delighted a great multitude of readers. In his stories, especially, while he has always aimed at some high purpose, he has succeeded in imparting a great deal of pleasure, not only to those who read for the plot, but also to those who enjoy the unfolding of character and the representation of life. It was never Doctor Holland's doctrine that one who would do men good must study to displease them,—quite otherwise; and he has honestly striven, and not without success, not only to leave the world better than he found it, but also to leave it happier."

THE following is from a sermon preached October 16th, in Grace Church, New York, by Rev. Henry C. Potter, D. D. :

"And here it is, in the light of these words of His own, that we come to understand the meaning of the cross of Christ. If love is to be the king of your life and mine, my brothers, if with us here, amid all the strife and rivalry that make up our week-day world, the voice that bids us love is to be regnant over all other voices, somewhere or other there must be the spell that compels us to do so. An apostle had found that spell when he wrote 'The love of Christ constraineth me,' and other men than he, aye, a mighty multitude whom no man can number, have looked also into the face crowned with thorns, and have learned there how to love !

"More than any other, it is the lesson for which our time is waiting. Oh, how clever, how persistent, how aggressive we Americans are ! It is simply true that there is no conceivable enterprise demanding capital, courage, the sacrifice of time and strength, which would not, if it were proposed to-morrow, find a host of investors and followers. But the quieter, larger courage that, deep in the love of God and man, gives itself to brighten and enrich and purify the sum of human life—that is not so common. The apostolic spirit that sent men forth aflame with a love of souls that would not let them rest—it is this that we need to have rekindled. Not by capital, not by culture, not by conquest, does any nation or any character become really noble or enduringly great, but rather by alliance with His life who gave the world, anew, the great commandment, and then translated it by His cross.

"One such character I desire to mention here this morning, just because, to so many of us, its influence has perhaps been so little known and so imperfectly appreciated. A man of letters died in this city during the past week who, though he came here ten years ago from New England, was perhaps known personally to but few of this congregation. I speak of the late Dr. J. G. Holland, for some time the editor of a monthly magazine in this city, and for the greater part of his life an assiduous and prolific writer.

"He was a man of good gifts, consecrated by a great motive. Of clear and vigorous intellect, he was best of all, like Noah of old, a preacher of righteousness, and one of rare power and singular sweetness. Writing of plain and homely themes, he never touched one of them that he did not ennoble; and over all that he wrote there breathed the spirit of one who loved God, and who, therefore, like Ben Adhem, "loved his

fellow-man." His writings found an acceptance which has often puzzled the critics, and confounded the literary prophets. But their secret was not far to seek. They helped men. They lifted them up. They rebuked meanness. They encouraged all nobler aspirations. They were always a word for "God and the right," spoken with courage, but spoken most of all in a tone of manly and brotherly sympathy that could not be misunderstood. In a word, this large influence (to which for one I gladly own to having been a debtor) owed its power for good,—a power steadfast and wide-spreading, I believe, as yet beyond adequate estimate,—to a character touched itself by the spell of a divine love, and lifted by that spell into a throne of happy and wholesome influence over the hearts and lives of other men."

Communication.

"THE SO-CALLED VENUS OF MELOS."

TO THE EDITOR OF THE CENTURY MAGAZINE.

DEAR SIR: Since writing the article on this subject in the November number of your magazine, I have visited the museum at Naples to examine the statue called the Capuan Venus, and find, as I had supposed, that the arms are a modern restoration, having been broken off nearly at the same points as those of the Melian statue. I found, also, a terracotta statuette which very closely corresponds with the latter, holding an apple in the left hand, but with the wings of Victory.

No critic of my theory can be more aware of the gaps in my demonstration than I am, but, in all investigations where the actual proof is wanting, the highest probability stands its next friend; and this, I confidently maintain, ranges itself on my side. No other theory so fully accounts for all the facts. I do not ignore the known fact that the original Niké Apteros, like the original Athena Polias, was in wood; but there is no evidence that, like that sacred image, it was taken from the Acropolis on the Persian invasion, and it was probably, therefore, destroyed at that time with the temple. The latter, we know by the frieze, was reconstructed after the victories over the Persians, and, if we may judge from the style of the frieze, after the Parthenon. The substitution of a new statue for the wooden one lost would most naturally fall on the school of Scopas. Pausanias mentions the temple, but says nothing of the statue in his enumeration of those he saw on the Acropolis—conclusive proof that neither the original nor a substitute was there at the time of his visit.

Yours truly,

W. J. STILLMAN.

LITERATURE.

Garfield's Words.*

IMMEDIATELY after the death of Abraham Lincoln, the wise and witty sayings of the man who had been,

* Garfield's Words: Suggestive Passages from the Public and Private Writings of James Abram Garfield. Compiled by William Ralston Balch. Boston: Houghton, Mifflin & Company.

before he became President, a sort of Socrates of the prairies, were gathered and printed with the title: "The President's Words." That book is in some regards the raciest and most truly American thing that has been printed, not excepting the "Biglow Papers." What was done for Lincoln, Mr. Balch has done for Garfield. Lincoln's sayings have more

humor and a deeper pathos, Garfield's are naturally more philosophical, are broader in their range, and have more rhetorical poise. There are, however, strong points of resemblance. Both speak sententiously, wittily, and with marked common-sense. Garfield has the finish of the schools, Lincoln the laconic terseness of the up-country. Lincoln appeals oftener and more directly to feeling, Garfield touches profounder questions and sheds more light on principles.

If James A. Garfield had had the good luck to represent a district fronting on Massachusetts Bay, instead of one on the south shore of Lake Erie, he would not have had to wait for the presidency and martyrdom to bring into relief his gift for "saying things." It is hard for us here, in the sea-board cities, to realize that the good gifts of broad statesmanship and the genius for felicitous utterance may come from the Galilee beyond the mountains. Athens holds the pen, but she records few heroes besides those of Athens. For a decade, at least, Garfield has been making perhaps the wisest, broadest, and most influential speeches uttered in either house of Congress; but his recognition was tardy. His speeches always attracted attention, but how few of us, here in the centers of thought, recognized the fact that one of the most highly cultivated men in the nation, the peer of our best statesmen, was the representative from the Western Reserve! Some of the sentences in this most valuable little book seem to shine with General Garfield's own experience of the world. "Things don't turn up in this world until somebody turns them up," he says, and we hear the echo of his boyish perseverance in the sentence. There are maxims here that indicate the very secret of his success. "Be fit for more than the thing you are now doing." "If you are not too large for the place you are too small for it." "Do not, I beseech you, be content to enter upon any business which does not require and compel constant intellectual growth." "If the power to do hard work is not talent, it is the best possible substitute for it." He says: "I never meet a ragged boy in the street without feeling that I may owe him a salute, for I know not what possibilities are buttoned up under his coat." And here is a generalized confession: "To every man of great original power there comes, in early youth, a moment of sudden discovery—of self-recognition—when his own nature is revealed to himself, when he catches for the first time a strain of that immortal song to which his own spirit answers, and which becomes thenceforth and forever the inspiration of his life—

"Like noble music unto noble words."

And the following extract from his oration on the death of Mr. Starkweather is strangely pathetic when we remember the revelation of character which Garfield's own sufferings brought to the nation: "I have sometimes thought that we cannot know any man thoroughly well while he is in perfect health. As the ebb-tide discloses the real lines of the shore and the bed of the sea, so feebleness, sickness, and pain bring out the real character of a man."

These pages are full of disclosures of Garfield's knightly spirit, as, for instance, the saying: "If there be one thing upon this earth that mankind love and admire better than another, it is a brave man—it is a

man who dares to look the devil in the face and tell him he is a devil." And this: "I am glad to have the opportunity of standing up against a rabble of men who hasten to make weathercocks of themselves." "I have always said that my whole public life was an experiment to determine whether an intelligent people would sustain a man in acting sensibly on each proposition that arose, and in doing nothing for mere show or demagogical effect." "It is not manly to lie even about Satan." "I would rather be defeated than make capital out of my religion." "The men who succeed best in public life are those who take the risk of standing by their own convictions." "The great Carlyle has said that the best gift God ever gave to man was an eye that could really see; I venture to add that an equally rare and not less important gift is the courage to tell what one sees."

What an insight we get into his character from this sentence out of a private letter, written on the first day of 1867, in the exciting times of Andrew Johnson!—"I am trying to do two things: dare to be a radical and not be a fool, which, if I may judge by the exhibitions around me, is a matter of no small difficulty." So do we find the secret of his freshness and continual growth in his constant self-culture, as here disclosed. "I must do something to keep my thoughts fresh and growing. I dread nothing so much as falling into a rut and feeling myself becoming a fossil." This last is from a private letter, and contains the only confusing juncture of different metaphors that we have met in Garfield's writing.

In the very interesting but all too brief sketch with which the editor introduces the book, we see the steady widening of his vision under the influence of his growing culture. He read James Freeman Clarke's "Ten Great Religions" several times, and felt then that he had hitherto seen religion too narrowly. But he writes to Dr. Boynton: "I hope I have lost none of my desire to be a true man, and keep ever before me the character of the great Nazarene." His recipe for cheerfulness, in a private letter in 1874, is: "To look upon life with a view of doing as much good to others as possible, and, as far as possible, to strip ourselves of what the French call egoism." We remember that when Garfield went into the war the soldiers called him "the praying colonel," and if his religious life was less in people's eye at a later period, it was none the less a strong force in molding him to a high ideal. "The worst days of darkness through which I have ever passed have been greatly alleviated by throwing myself with all my energy into some work relating to others." This is true Christian consolation. And again: "It is one of the precious mysteries of sorrow that it finds solace in unselfish thought."

But it is in his statesmanship that we recognize the real largeness of the man. The roots of his arguments take hold of the history of the race, and the whole nature of men. "There can be no permanent disfranchised peasantry in the United States," he said more than twenty years ago. How swiftly does his honest heart and clear head go to the root of the financial question when he denounces "all methods of paying debts by sleight-of-hand." "Financial subjects," he says, "are nuts and clover for demagogues." The argument for governmental education is put into seven

words: "School-houses are less expensive than rebellions." And the economical relations of the working-man are all in this: "The laborer has but one commodity to sell—his day's work. It is his sole reliance. He must sell it to-day, or it is lost forever."

His views of our history were large, untouched with partisan or sectional narrowness, and going straight to the core of the matter. "Virginia and Massachusetts were two focal centers from which sprang the life-forces of this republic. They were, in many ways, complements of each other, each supplying what the other lacked, and both uniting to endow the republic with its noblest and most enduring qualities." Here, again, is a truth proven by American history in the earliest colonial times as strongly as by recent events: "Emigration follows the path of liberty." A general principle of statesmanship of the most far-reaching application is this: "Whatever the people can do without legislation will be better done than by the intervention of the State or nation."

He judges all things largely. Of John Stuart Mill, he says: "I can't see that he ever came to comprehend human life as a reality." His views of education were exceedingly broad—abreast those of the foremost and wisest educational reformers of our time. The sharp criticisms of some prevalent methods to be found in the extracts under this head would be most wholesome if the men who need them were likely ever to see them. We have room for but one significant remark: "It is to me a perpetual wonder that any child's love of knowledge survives the outrages of the school-house."

Gladden's "The Lord's Prayer."*

MR. RUSKIN, in some pithy letters addressed to the English clergy, made the inquiry, "Can this Gospel of Christ be put into such plain words and short terms that a plain man can understand it?" and suggested that this might be reached by "explaining in their completeness and life the terms of the Lord's Prayer." Mr. Gladden has acted upon this suggestion, and the result is an admirably simple and effective presentation of what may be called the substance of religion. Few preachers speak the speech of the common people as he does. His sermons have in a rare degree the quality of genuineness. Not one word has the false ring of cant or sentimentality. He uses illustrations freely, and always to illustrate, never to adorn. There is plainness of style, but there is richness of substance—the richness which comes from carrying the great simple truths of religion into the boundless field of individual and social conduct. As to the substance of the teaching, it may be described as the doctrine of the Sermon on the Mount closely applied to American communities in this present year of grace.

* The Lord's Prayer. Seven Homilies. By Washington Gladden. Boston: Houghton, Mifflin & Co.

The stress is thrown upon practical conduct, but there is a pervading atmosphere of reverence and trust; the ethical and the spiritual quality are closely blended. It is a strong, manly, helpful book.

In the break-up of old beliefs, it is the men who in their own lives dig down afresh to the springs of faith, hope, and love who can speak the living word to the people. Such preachers are necessarily few, and their most effective access to the great constituency who need them is no longer by the voice, but through the press. Mr. Gladden is one of the most effective and most useful of these pen-preachers. There may be men more eminent for originality, for philosophical and poetical genius, but he unites the great qualities of absolute sincerity, near and first-hand acquaintance with spiritual realities, and the simple, direct way of speech which the multitude understands.

We should also note that Mr. Gladden's theological position is in the ranks of liberal orthodoxy, and that he illustrates the best characteristic methods prevalent among that school of teachers. They have felt the influences of modern thought, and accepted new conclusions to an extent which they seldom define with much exactness to their hearers, or perhaps to themselves. Their general aim is to draw both from older and newer ways of thought those elements which, in their immediate application, are practical and fructifying. Their concern is almost wholly with the practical conduct of life, using the phrase in its large sense to include obedience and trust toward a higher power. They are apt to speak with a good deal of positiveness, as of things certain and indisputable. By this strongly affirmative quality they sometimes go rather one side of the more thoughtful and inquiring class of minds, but they exactly hit the want of the average man. The mass of mankind, whether they acknowledge it or not, rest in religion, as in most other things, upon authority. They must of necessity take the word of some one who they suppose knows better than they do. Men are at this time more sensitive than ever to the voice of a teacher which rings with the clear tones of a deep personal confidence in his own message. It is a most trying combination of functions which requires a preacher to be at once a student of truth and a guide to his flock, at a time when so profound a recasting of thought is going on, and so much uncertainty rests upon its ultimate issues. To the mind of the preacher who is both thoughtful and earnest, there is at times something like a conflict between love of truth and love of his people. If he speaks too positively, he misrepresents his own mind; if with too much qualification, he perplexes those whom he wants to help. The best of the liberal orthodox, like Phillips Brooks and Washington Gladden, extend their emphasis not only to the ethical and spiritual realities of earthly life, but to the personality and fatherhood of God, the providential government of the world, the life beyond death, and the authority of Jesus Christ.

THE WORLD'S WORK.

Pneumatic Bell-Call.

A SYSTEM of pneumatic call-bells and annunciators that has been in use for some time in England has been recently modified and improved for introduction into America. It consists essentially of a small bellows, an air-tube, and a second bellows, that may be used to strike a gong-bell or control the dials of an annunciator. The bellows, which is quite small and intended to be operated by hand, is closed by pressure of the finger on a push-button, by pulling a handle, or by pressing on a rubber bag that forms the tassel or end of a cord hung from the wall. The closing of the bellows sends an impulse of compressed air through a small tube, and causes a circular bellows to expand. At the end of this bellows is an upright rod that moves a segment of a geared wheel. A smaller wheel geared to this segment moves with it, and causes the hammer of a gong-bell to give a series of rapid strokes. The bell "chatters" like an electric bell for a moment, and the pressure being removed, the ringing mechanism returns to its original position by its own weight. No clock-work or spring is required, all the parts being self-acting. The invention, in its present condition, seems likely to be of value in dwellings, small hotels, and on board steam-boats.

The Secondary Battery.

THIS battery—which, in a modified form and under a new name, was brought out a few months since—does not seem to have realized the very high estimates that were put upon it at the time. It can hardly be said to store electricity as a holder stores gas, or a tank stores oil. After it has been connected with a dynamo machine, it will continue for some time to give out a current, even if it is removed from its source of supply. The battery, however, has been made the subject of experiment as a source of power for electric lamps that must be used in difficult or dangerous situations. The experiments were made in connection with the Swan incandescent light. A single lamp of two-candle power has been kept lighted at the bottom of a fiery coal-mine for six hours, by the aid of a secondary battery weighing about five kilograms (ten pounds). To renew the light, the battery must be again connected with a dynamo machine for a short time. This, it was suggested, could be done by bringing it to the wires from the machine that lead down the shaft to the bottom of the pit. On being charged, the battery could then be carried to a distant and more dangerous part of the mine, where the light was needed. It may be remarked, in passing, that the Swan light is under experiment as a light for mines, the dynamo machine being at the surface, by the pit's mouth, and the wires laid down the shaft and along the galleries. So far, the experiments appear to be highly successful, though the question of the absolute safety of any form of incandescent light in mines liable to take fire is still under debate. The secondary battery, it has been suggested, may yet find a useful field in connection with windmills. While the wind moves the mill, the battery could be charged,

and the energy thus obtained be afterward utilized when the mill is idle in calm weather.

New Photographic Convenience.

THE dark cloth thrown over the head of the operator while adjusting the focus of his camera has several serious disadvantages. Unless very carefully placed it fails to exclude the light. Out-of-door work is impeded by the flapping of the cloth in the wind, while the way in which it must be used is a source of great annoyance to ladies and young people who wish to use the camera. Several devices have been brought out that are designed to take the place of the focusing cloth. These have taken the forms of hoods for the eyes and face, and resemble the old wooden stereoscopes. A new apparatus consists of two leaves of card-board joined together by some soft, dark fabric and open at each end. One end is designed to fit over the back of the camera, and the other end is cut out on one leaf to fit the forehead just above the eyes; the other leaf fits the nose and face just below the eyes. In use, the larger end is fitted over the camera, a fringe of the cloth excluding the light at the edges of the box, and the smaller end serves as an eye-piece through which to view the darkened glass-plate. The two leaves fold together like a thin book, and take up very little room. The size of the apparatus depends on the size of the camera; its length is determined by the distance between the eyes and the glass-plate best suited for a good view of the picture, and this is easily determined by experiment. This invention will not be patented, and is a free gift to all who care to use it; and this notice also prevents any one from applying for a patent on it.

Slow-burning Construction.

SO LONG as wood must be used for floors and roofs there can be no such thing as fire-proof building. It is therefore proposed by one of the leading fire insurance companies that all new structures, and particularly factories and shops where wood is be used, shall be made fire-resisting or slow-burning. The plan suggested is worthy of attention, because it often happens that, if the fire can only be confined to the interior of the building for even a few moments, much property, and perhaps many lives, can be saved. For the floors it is proposed to use heavy timbers 30.5 centimeters by 30 centimeters (12 by 14 inches), and on these to lay matched planks 7.6 centimeters (3 inches) thick. Over these planks is to be a layer of roofing-felt or mortar, and in this mortar is to be bedded flooring-boards of the usual thickness. Such a floor would burn, but so slowly that fire would be a long time in eating its way through. The aim is to gain time, for time is the one element of safety at all fires. For the roof, the supporting beams are to be of the same size, and the top is to be of matched planks 7.6 centimeters thick, and covered on the outside with any form of roofing that may be desired. The ends of the beams are to pass through the outer walls, and to be finished as brackets to support the planking that is carried to the ends of the beams.

BRIC-À-BRAC.

Lip Service.

IN YORKTOWN CHURCH A HUNDRED AND FIFTY YEARS AGO :
MODERNIZED FROM AN OLD MANUSCRIPT.

OUTSIDE the church the breezes blow,
And wave the summer trees :
The fans within go soft and slow
To stir a fainter breeze.
The clerk doth shrill with high voice cracked
His keen falsetto strain ;
While in the family pew high-backed
Behold our lovers twain.

Arrayed in filmy furbelows,—
Cool things of fluffy white,—
Shod with high heels and pointed toes,
She is a winsome sight.
A blue-cocked hat bewrought with braid
Her dandy sweetheart bears,
With shorts, high hose, and coat. Well-made
The raiment that he wears.

"Good sooth," he thinks, his love beside,
"When such a hap shall be,—
This bonny flesh and blood my bride,—
What gladder heaven for me?"
The well-closed door from gossip's view
Doth shut them—saints be praised!
This fashion of her father's pew
His seven wits hath dazed.

He holds the corner of her book,
The while she bends in prayer :
"What matter if one kiss I took—
A trifle light as air?"
Her breast scarce heaves, her face is meek,
Her eyes are in eclipse :—
"Or shall I touch it to her cheek,
Or lay it on her lips?"

She little knoweth what rash thought
His bosom doth possess ;
Her soul, on heavenly pinions caught,
Forgets earth's earthiness.
All wordly love and wordly dreams
Are lapsed in heavenborn bliss,—
A most unmeetful time, it seems,
For our bold lover's kiss.

Thoughts heavenward borne on wings of prayer
Slight hap to earth may draw ;
The soft salute doth miff our fair,
And on his nearer jaw
With mittened hand she plants a thwack
Which kindles all his rage ;—
Forth pew and church to good steed's back
His anger to assuage!

No Sabbath ever more shall see
Our lovers, in yon pew,
From self-same book the Litany
Lovingly going through.

No fee from them of Spanish-eight,
Stowed in a buckskin glove,
The parson ever shall elate
To preach their wedded love.

L'ENVOI.

A time for all things, ladies gay—
Times, gallants, for each thing ;
Since Love may go, or Love may stay,
Who hath a fickle wing.
Lip service fellows not with prayer—
Ye may not woo in church,
Lest kisses, welcome elsewhere,
Here leave you in the lurch!

The Sea.

SHE was rich and of high degree ;
A poor and unknown artist he.
"Paint me," she said, "a view of the sea."

So he painted the sea as it looked the day
That Aphrodite arose from its spray ;
And it broke, as she gazed on its face the while,
Into its countless-dimpled smile.
"What a poky, stupid picture!" said she ;
"I don't believe he *can* paint the sea!"

Then he painted a raging, tossing sea,
Storming, with fierce and sudden shock,
Wild cries, and writhing tongues of foam,
A towering, mighty fastness-rock.
In its sides, above those leaping crests,
The thronging sea-birds built their nests.
"What a disagreeable daub!" said she ;
"Why, it isn't anything like the sea!"

Then he painted a stretch of hot, brown sand,
With a big hotel on either hand,
And a handsome pavilion for the band,—
Not a sign of the water to be seen
Except one faint little streak of green.
"What a perfectly exquisite picture!" said she ;
"It's the very *image* of the sea!"

The King's Quest.

THE king rode fast, the king rode far :
"Now, by my crown," quoth he,
"If I, in all the land, shall find
A maiden of contented mind,—
Be she of high or low degree,
By Pagan rite or Christian signed,—
My consort she shall be."

But when he chanced the maid to meet,
So well content was she,
She would not wed,—but, deaf and blind,
Went on her way : "Alack, I find
I'm caught in my own web," quoth he ;
"This maiden of contented mind
Is too content for me."

THE CENTURY MAGAZINE.

VOL. XXIII.

JANUARY, 1882.

No. 3.

A PROVINCIAL CAPITAL OF MEXICO.

THE first morning after our arrival at the picturesque old stone barrack called the Hotel Michoacan, we woke with the impression that it was a *fiesta* in the city. A confused jangle of innumerable church-bells, deep and near, far and faint, mingled with the alert sounds of drum-taps and bugle-calls, and the shuffle of leisurely footsteps along the sidewalks; the sunlight, streaming in between the heavy inside shutters, lay warm on the red-tiled floor. From the balcony, the city looked as mellow and rich in color as one's dreams of Italy; figures draped in *sarapes* leaned in the portals of courts, or against the stained stuccoed walls, and the smoke of the national cigarette went up like a matutinal invocation from every masculine lip. It was not a *fiesta*; in this way Morelia wakes every morning, the church-bells calling her to prayer, and the cavalry bugles appealing briskly to her military sentiment. It is chiefly the women who respond to the former. There are many of them abroad at this hour, gliding with soft steps, black-shawled, or folded in dark *rebozos*, through the streets, and climbing the steps of the clamorous churches. The men were not visibly responding to anything.

The domes and towers of the city are white—old white, with a great deal of color in it. The dense olive-green cypresses, which the wind scarcely stirs, have an ecclesiastical heaviness and dignity well suited to the character of the place. The *paséo* and the Park of San Pedro, at the end of the *Calle Real*,—the principal street of the city,—show from a distance as a soft cloud of gray twigs tinged with the faint green of budding foliage. The mountains encircle the plain with a noble, quiet sweep of outline—the church spire rising just above it against the sky, whose impalpable

depth and breadth of color make the most perfect relief for their solid whiteness.

We looked out over the city that morning with an aroused, expectant sense of delight, as in the early stages of an acquaintance which promises rich and peculiar satisfaction. We felt that here we could turn back to the unread pages of those other alluring old cities we had left behind us on our diligence journey. Here were the narrow side-streets climbing and ending in the sky, shadow and sunlight sharply dividing them; here the soft-footed figures in unfamiliar draperies, gliding past high white walls—moving pictures out of another century; the silence of the streets, the air of suspended activity, the poverty and the state.

A few days after our arrival in Morelia, A—— set out with a party of gentlemen to the mines he had come to visit, leaving me to the very kind and stately hospitality of the Casa G——.

The expedition took its departure from the court of a neighboring house of one of the principal families. It has a staircase of beautiful form turning at the juncture of an arch with the main wall, and following its curve upward to the corridor. The court looked, on the morning of the start, very like a cavalry head-quarters. Booted and spurred footsteps clanked up and down the stone staircase, past the dim picture of the Virgin on the landing; about twenty-five pack-mules and light saddle-horses were being made ready for the journey by the Mexican servants, with all the picturesque paraphernalia of the road. The baggage included a brass camp-bedstead, mattress, and pillows with embroidered covers, boxes of provisions, cases of old Spanish wines, and a variety of luxuries which a mining engineer is not in the habit of associating with

camp-life. A young son of the house escorted us through the confusion of the court to the corridor where the ladies were leaning over the railing, watching the preparations below. Don P—— wore the characteristic dress of a Mexican gentleman for a journey of this kind—a pair of dark goat-skin overalls, called *chapareras* (from *chaparral*, the low, thorny oak-scrub as a protection against which they are worn); a leather jacket, richly embroidered; huge Mexican spurs, not as cruel as they look, the blunt rowels inflicting a bruise instead of a stab (they are often decorated with little bells, whose jingle keeps the horse on the alert, and saves him from a more severe reminder); a wide-brimmed light felt hat, heavy with silver cord and braid and buttons; a sword and sash and a beautiful *sarape*, from the looms of Northern Mexico, worn as only a Mexican can wear this most graceful and dignified garment.

There were good-byes in English and Spanish in the corridor, a bustle of clattering hoofs in the court, as horses were wheeled round and *cinchas* tightened; cigarettes were lighted, Winchesters steadied at the saddletrees, and the queer little cavalcade, prepared alike for peace or war,—so romantic in appearance, so commonplace in reality,—rode

out through the shadow of the deep portal, which always gives an air of importance to the entrances and exits to a Mexican private house. From the balcony of the *sala* we watched them, a few minutes later, riding down the street, where they appeared to excite no particular interest—certainly no surprise. In a provincial New England town they would have rivaled a traveling circus, but the Morelianos abroad that morning saw nothing more exciting than one of their first citizens riding out to his *hacienda*, possibly, with his friends and servants, armed and equipped as befitted a journey of some thirty miles into the country. Letters from the City of Mexico, preceding us, had opened to us the hospitable doors of the Casa G——, one of the most distinguished houses in Morelia. Its cosmopolitan character made the life of a stranger within its gates much easier than it would have been in a local Mexican family. Our host, a Prussian gentleman's son, of liberal expectations, had married in Mexico a beautiful Spanish creole, of a family from the northern provinces of Spain, where the fair type is preserved. The life of the house kept the best traditions of both races; Spanish was its language, but French, German, and English were also spoken. It is with my host's

THE OVEN IN THE CASA G——.

MONUMENT TO MORELOS (MORELIA).

permission that I describe some of the domestic details.

The house had been originally built for an ecclesiastical college, and, as may be imagined, was a very easy fit for a family of three. There was an agreeable sense of unexplored space in the vistas of high, airy rooms opening one into another, and all opening on the corridors which surround the front and rear courts. The house might have served for a municipal palace without overtaxing its capabilities. The great and lesser drawing-rooms had rows of French windows, with stone balconies commanding a view of the principal *plaza*, the Cathedral, and the life of the *Calle Real*—not a very exciting panorama, but intensely characteristic and peculiar. I never tired of it: by morning sunlight, the budding ash-trees sifting their light shadows across the pavement; at noon, hot and silent, blotches of motionless shadow, sheltering figures as motionless; the monument to Morelos, on the corner of the *plaza*, embracing in the angles of its pedestal the perpetual group of loungers who contribute themselves to the artist's design as a gratuitous illustration of another phase of the national character—the men crowded together in the shadow, and generally a meek old woman, or a young one with a baby, sitting on the sunny side without question of prerogative. But by moonlight

the *Calle Real* is most beautiful. The lamps are not frequent enough to discolor the white light which lies on one side of the street, or penetrate the darkness which covers the other. The proportions of the city are fine, and at night its stateliness is more apparent than those subtle gradations of ruin which are stealing away its angles and dimming its colors. In a dream of its past, as one of the great cathedral cities of New Spain, with an almost more than royal dynasty of priests and prelates heaping up treasure on earth for the church, and, it is to be hoped, treasure in heaven for the people,—a dream of revolution, and pillage, and crime, and of bitter, sullen reactions after spasms of patriotic ecstasy,—the old city of Valladolid, which has taken the name of Morelos, one of the bravest of her children, for her own, awaits her latest epoch.

One afternoon, when we walked at sunset through a weedy, ruinous gate of the city to the hills beyond,—hills covered with short, dry, winter pasture, and traversed by many diverging trails,—we met a barefooted Indian lad carrying the red signal-flag of the railroad engineers, and over the crest of the hill we saw a little troop of horsemen riding in—a detachment of the advance of the nineteenth century. It will be curious to see how the importunate guest will be received by the

CORRIDOR OF THE CASA G—.

priests, by the passive poor, by the stately *familias principales* of the city, who have all that "sluggish, suicidal pride" of the creole and a shrewd eye for the practical advantages of modern civilization besides. One shudders to think of street-cars in the *Calle Real*, of sharp American voices among the sunset shadows of the *paséo*, of American boot-heels on the sandal-worn pavement, of American Spanish!

Morelia, from the point of view of the Casa G—, is a very different experience from the same place viewed from the Hotel Michoacan. Instead of the bedside tray of coffee and rusks served by the waiter with the impenetrable head of hair, who never knocked at the door, one awakened to the luxury of a bath, a daintily served cup of chocolate or a bumper of hot milk, fresh eggs, fresh fruit, in the flower-scented dining-room, at whatever hour one chose to ask for it. The air of early morning was indescribably pure and cool,—cool enough to suggest an open fire to an English or American constitution,—but the sunny side of the corridor was a very good substitute. The flowers were freshly watered and fragrant. All the galleries in Mexico surrounding the inner courts are lined with flowers. It is one of the prettiest features of their domestic architecture. The vines festooned along the arches stirred a little in the

breeze which lifted and let fall the heavy leaves of the banana-tree near the dining-room door. Clear shadows slanted across the pale-tinted stone façade of the cloistered gallery. There was a hammock of Panama grass, swinging empty, or cradling the little daughter of the house, always attended by a fluffy white poodle, whom she addressed as "*Enrique! mi Alma!*" (My Soul!)

A man-servant, of the shade of complexion called *moreno*,—chocolate with a little milk in it,—and eyes of chocolate, unmixed; in a white linen blouse, with a red sash girding the waist, shuffled listlessly about the gallery at this hour, watering the plants or sweeping the red-tiled pavement with a broom made of palm splints. There was a parrot, like a great jewel, on his perch in the sun. The gray turtle-doves are regarded by the Mexican servants as harbingers of evil to the house where their soft guttural note is heard, but the Casa G— rejected this superstition of the country, and gave shelter to the doves. The noises of the house were very pleasant; loud, harsh voices or footsteps were unheard; no bell ever rang. If the young mistress had need of a servant, she stepped into the corridor and clapped her hands. The signal was answered by Leonarda, or Rita, or Michaela, or

the disconsolate Ascension, who did everything with a fine gloomy air, even to the carrying about on his shoulders of the little José, the child of Leonarda, the Camarista. Their mediæval associations reconciled one to the only loud noises of the house—the deep, echoing bay of the two gaunt young bloodhounds chained to the wall of the court below, and the stamping of the horses' feet on the pavement of their stalls under the arches. The rear court was called the corral. It was here the steeds—two saddle-horses, and a pair of very large and solemn white mules, who drew the family carriage to the *paséo* every afternoon—were watered, at the stone tank built against the high wall and overshadowed

most beautiful and valiant of the game-cocks were translated to the corridor above the corral—a kind of Walhalla, where, from the solitude of a hero's seat, they looked down on the domestic cares and small, bustling lives of their kindred below. The days began with much life and cheerfulness—the dogs baying in the court, excited by the coming and going of their master's footsteps; loud discussions among the hens in the corral; the cocks calling to each other in the corridor; the porters washing down the pavement of the courts. There was practicing in the *sala*, or recitations, audible through the open doors of the school-room, presided over by the German governess; my hostess in the "dispensary,"

TANK IN THE REAR COURT OF CASA G—

by a bamboo thicket—all smooth brown stems, leaning in graceful curves, supporting or letting fall a shimmer of pale green leaves over the brown water. Ysabel, the coachman, with his *sarape* over his shoulder, sitting on the edge of the tank while the white mules drank, suited well this corner of the court, rich in color and shadow. A little community of fowls inhabit a part of the corral, and the care of them was one of my host's pastimes. There was not a plebeian among them; almost all were creoles of purest foreign blood; a few of foreign birth also, as the gallant English game-cock, the prince consort to a small clipper built Spanish hen of flawless extraction. The

giving out the household stores for the day to the women-servants, or inspecting the attractive basket Ysabel brings from the market—as picturesque as a fruit-and-game "piece" with its miscellaneous heaped contents, including fruits from the Tierra Caliente, brought on donkeys up the slopes of the Sierra Madre, strange herbs and vegetables, and always a mass of flowers for the table. The first ceremonious meal at which the family assembled was the midday breakfast, *almuerzo*. There was a succession of courses, chiefly meats, in surprising quantity and variety in a climate where a very little animal food is sufficient, ending with *dulces* and coffee. After the soup,

rice, cooked in the Mexican fashion, was invariably served and eaten with bananas. The game and poultry had the advantage of the most perfect cooking over a charcoal fire. A spit is used in roasting, and every Mexican kitchen is well provided with a multitude of pottery vessels, even to pottery griddles, light and clean, which seemed to me far preferable to our heavy, unappetizing metal ones.

From time to time a national dish appeared, rather to humor the guests' fancy for their novelty than for a preference for them on the part of the family. One called *turco*, I was told, is of Moorish origin. It is composed of chicken, cooked slowly in a paste made of the flour of a very small and delicate dried pea, and served with a sauce of complex flavor. Raisins and olives are an incidental feature of it, and the whole dish tastes of the Arabian Nights. The famous sweetmeat of Michoacan, *guaravate*, made from the fruit of the *guayaba*, but less cloying than guava jelly, was generally a part of the dessert. There were *meringues* called *suspiros de la monja* (nuns' sighs), and a very rich custard, "golden cup," made by vigorous beating of eggs, sugar, and flour of almonds, which was said to be a fleshly temptation to the *padres*, and sometimes, alas! offered as such, by naughty little lambs of their flock who wished to be let off easy at confession. We made the acquaintance of several strange tropical fruits: the *chirimoya*, a delicate custard, with black seeds inclosed in a rough green rind; the *granadita*, which is eaten like an egg out of its beautifully colored shell. The contents is slippery, seedy, sweet, with a faint aromatic sub-flavor. The *almuerzo* corresponds to our dinner in social significance. One is not asked to dine in Mexico, but literally to "take soup at this, your house" (*su casa de Vd.*), and you are told, with other complimentary phrases, that your host is your servant. The *siesta* follows the *almuerzo*. It was not the custom with the active ladies of the house, but my shaded bed-chamber opening on the corridor was very inviting, and the softness of the air, May following February, undermined the best resolutions in regard to letter-writing, sketching, and the study of Spanish. The light brass bedstead was exquisitely furnished with the finest of linen and the painful hand-embroidery of the country, taught originally by the nuns, and considered a necessary part of a Mexican lady's education. The long, narrow pillows were covered with "ticking" of crimson Chinese *crêpe*, which glowed through the sheer linen-lawn cases and the interstices of the embroidery and "drawn work" with which they were lavishly trimmed. The bed had a canopy of brass

bars, but it was uncurtained; in Mexico as few draperies as possible are used, because of the constant warfare housekeepers wage against fleas, moths, and insects of all kinds.

Opposite the bed, with its dainty feminine fittings, hung a complete fencing outfit, arranged on a green-baize-covered shield against the wall. It included both the light French foil and the heavy German-student sword. The door-way was flanked on one side by a tall case of weapons, containing some beautiful Toledo swords, an old blunderbuss with its bell-shaped barrel, all the modern rifles, elegant, wicked-looking dueling pistols; and among the mementoes of warlike passages in my host's varied life was a box containing seven bullets that had at different times been taken from his body. The book-case on the other side of the door was filled with well-selected books in German, French, and Spanish—the remains of his fine library, the most of which, while being moved in boxes during one of the political crises of the country, went to make part of a barricade. The ladies in Mexico who "dress" always dress for the *paséo*—the public promenade where the youth and romance of the old city enact the subtle dramas of a society where mediæval barriers still exist. It is by no means permitted that young men and women should meet freely before marriage: they may look at each other on the *paséo*, or from convenient balconies.

You observe a youth sitting for hours motionless on a stone bench in the *plaza*, or leaning in a door-way, his eyes fixed on an upper window or balcony of the opposite houses. The object of his gaze is probably not visible, unless the affair has prospered, and happiness already "blooms like a lusty flower in June's caress"; but, however coy the hidden eyes may be, they are doubtless cognizant of the patient figure of their adorer in the street below. This is Mexican courtship. The eyes of mamma and papa are also carefully cognizant, and this is Mexican marriage.

At five o'clock the carriage rolls out of the court, with Ysabel on the box in his best *sarape*, a gray, braided jacket, and a wide-brimmed gray felt hat, ornamented with silver cord and braid. Rubio, the ancient *portero*, shuts the carriage door, and Roberto at the gate rises and takes off his great hat.

Señor G——, who, after twenty years of the Mexican climate, keeps his Northern habits of exercise, generally walks to the *alameda*, and meets the carriage at the entrance, where the vista of black-ash trees, the rows of stone benches, and the broad paved walk begin. As the white mules pace sedately down the roughly paved streets, the ladies keep a hand ready to make the customary signal of greet-

FANNING THE FIRE.

ing from the carriage windows to their friends at the windows and balconies of the street. It is an indescribably fascinating gesture—so swift and subtle, almost like a fleeting expression across the face. It is made by a quick flutter of the second finger, the hand being raised, palm inward, to a level with the eyes. How much its charm is enhanced by the beauty of those dark Southern eyes it half conceals, it would take a very stolid observer to decide. It seemed to me excessively intimate; in Morelia I believe it is kept for one's friends only, but in the capital it is the usual greeting at a distance between acquaintances. I have seen nothing prettier in their social customs, except the way the ladies meet and lean their cheeks together, and pat each other softly on the back of the shoulder. The *paséo* bounds the *alameda* on either side, and joining beyond it, goes rambling through the wooded park of San Pedro, which gives it its

name. If you are driving, it is very pretty to look in across the high-backed stone benches at the little parade of wives and daughters under the ash-trees. All classes are there: the bare-footed Indian girls in *rebozos*, their long black hair smoothly braided or flowing loose over their shoulders, sit beside the ladies of the chief families in crisp silks and muslins. The classes are so distinct that there is no need to insist on the distinctions in public. The young girls walk two or three abreast, the light falling on their uncovered heads and shining, undulating braids. The women are sometimes dull-looking, and by no means always beautiful, but they have a quality which is exciting to the imagination. It may be presumed that it is not for the enjoyment of sylvan beauty alone that the young Morelianos who display their horsemanship on the *paséo* get themselves up magnificently in braided jackets and trowsers, tight as long hose, and buttoned

from hip to ankle with silver, and set off their dark glances with a halo of silver-braided hat-brim. One regrets to see that many of the most fashionable young gentlemen have abandoned the national dress, wear "chimney-pot" hats, and ride tall English horses, while French bonnets and elaborately trimmed walking-dresses are replacing the trailing skirt and the graceful feminine shawl. Powder is used without reserve or the slightest consideration for that subtle harmony which nature preserves between hair, eyes, and complexion. The effect is that of being surrounded by feminine masks, with beautiful human eyes looking out from them with an intensity of expression very startling in its contrast to the blank, soulless surface of faintly rouged white which the face presents.

At the end of the *alameda*, where the *paséo* turns into the lovely wild park of San Pedro, illumined with the low sunset light, and gorgeously dim as a painted window, stands one of the most perfect bits of church architecture we saw in Mexico—the Convent of San Diego. A screen of tall cypresses weave their long shadows across the green close before its low, arched entrance. A few lean wearily upon their comrades, but their general air is of guarded and somber dignity—a grave com-

pany of dark-robed priests silently pointing upward to the tall white bell-tower, and the Holy Family in pale blue stucco, raised in rich relief below the light arches of the bell-tower. It is so high up, this mass of figures in pale blue, that one cannot be quite sure of its significance beyond its nobly decorative character. Deep, narrow, barred windows make spots of shadow on the clear pale spaces of the front elevation, which is long and low rather than lofty. San Diego has been secularized, and is now rented in apartments to families; but one can only imagine sober, ecclesiastic figures in black and white walking under the cypresses or entering the low, deep portal. The colors of sunset begin to glow through the trees as we enter the woods by the *paséo*. We pass a circular fountain with a paved walk surrounding it, and stone benches facing the walk, inclosing the fountain in a greater circle. This ancient rendezvous is called the *Glorieta*: it keeps a pathetic suggestion of a social life in the city's past much more crowded and gay than anything San Pedro now exhibits. The roomy, colloquial benches are empty, and grass is growing in the chinks of the pavement. One may often see a group of Indian women filling their water-jars at the fountain, or following the winding footpaths through the wood, with a

THE LAUNDRY OF THE CASA G—

THE AQUEDUCT IN SAN PEDRO (MORELIA).

cántara supported on one shoulder by a bare uplifted arm.

Wild roses are in blossom among the untrimmed and neglected hedges; the trees are leafing out; the wood-dove's *coo, coo, coo!* comes from one cannot see where—it pervades the wood, like the low sunset light. The *paséo* is enlivened only by a few private carriages rolling along at lonely intervals—there is a separate road for riders. We saw very few ladies riding—in fact, I remember but two, and both of them sat their horses very ineffectually, in a helpless sidelong fashion. Often we left the carriage, and walked with a wistful pleasure through those old trodden foot-paths that lead away into the dim days before the Conquest, when San Pedro was the site of a populous Indian village, with a history of its own reaching back and losing itself in other dim days of traditional conquest before the advent of the Spaniards. The aqueduct crosses the *paséo* diagonally from the city; at the edge of the wood it bends and swings off across the green valley toward the hills that feed the city fountains. When the bells of the city strike the hour of *oracion*, we reënter the carriage and drive slowly homeward. By this time the *alameda* is nearly deserted, the brief Southern twilight has suddenly faded, and the lamps are beginning to

shine in the streets. The Indian women who sit in a row along the sidewalk opposite the entrance to the *alameda*, with bunches of lettuce, dressed with poppies, for sale, have rolled up their strips of matting and camped farther up the street, near the *plaza*. Their little fires, shining at intervals along the street, supplement the scattering lamps. They are cooking supper over a few coals of charcoal in a copper brazier; or they have kindled a lightwood torch to ward off the chill of night and advertise their heaps of *dulces*; or are boiling a kind of sweetmeat, made of molasses, in a shallow pottery dish; or, over the brazier of charcoal, are making and frying *tortillas*—the kind that are spread with meat and *chile* and rolled together like an omelet. All the bells of all the churches, from the great cathedral with its dome and triple towers to the little church with a single tower and a single cypress-tree beside it, rising together as if equally a part of the architect's design, are sounding at this hour. The bells of the cathedral strike the hours and quarter-hours of the day and night, and all the churches unite at the services of morning and evening. The cavalry regiment stationed in the town contributes its mysterious bugle-calls and drum-taps.

There are lonely cries of street-venders, the dull bumping of wooden cart-wheels,

drawn by oxen, and, at the hour of the *paséo*, a roll of carriage-wheels and a stirring clatter of hoofs along the streets; but all these sounds throb upon a stillness as deep and restful as the shadow of the cypress on the yellow gable of the little church. By the time we arrive at home the court is dimly lighted by the moon, and Rubio has placed a lamp in the sconce at the head of the staircase. He opens the carriage door, and shuffles slowly up the stairs behind us with the wraps. He always reminded me of that "ancient beadsman" in the "Eve of St. Agnes." We were very fortunate in regard to the moon. We had the last of the old moon on the steamer, the new moon tempered the darkness of our evening rides in the diligence, and its full splendor lent the last touch of enchantment to the corridor at night. The plants inclosing the black well of the court below were bathed in moonlight, the deep red blossoms of the *flor de noche buena* (flower of Christmas Eve) still held a suggestion of their vivid color, and the broad, drooping banana-leaves took a silvery gleam. The doves were asleep, the blood-hounds, roused by noises from the street, from time to time woke the echoes of the *patio* with their deep note. Two lamps high up on the wall of the corridor, augmented by spaces of lamp-light streaming across the tiles from open doors, still left long, dim promenades where restless feet might wander; but even the corridor, shadowy and spacious under its dome of sky, seemed a prison with the limitless beauty of the tropical night outside. I wearied myself with speculations about the faces we had seen on the *paséo*—women's faces with eyes that permitted you one moment to look into a heart as deeply dyed as the *flor de noche buena*, and then shut you out with a sweep of the long lashes, and left you gazing at a dull, pretty, expressionless, powdered face. Now, when the play is over and the masks are laid aside, and the little feet in their tight French shoes are prowling about the bare stone-floored rooms and moonlit galleries, what measure of content dwells with those cloistered lives, submitting to and helping suicidally to preserve the conventions of a society which holds toward all women a consistent attitude of suspicion. The habit of generations, and the inborn conservatism of a woman's nature, aided by the influence of religion, may make submission easy; but I used to wish with all my heart that it might be my privilege to transplant one or two of those unconsciously pathetic girls into a freer, happier society and a broader training. Such gayety as an American girl of the most reserved type enjoys, a Mexican girl could not

conceive of. Nor could an American girl understand how it is possible to be as bright and sweet-tempered and patient as many—almost all—young Mexican girls are upon such frugal spiritual and mental cheer.

Supper is served at eight o'clock—a heavy meal with courses of meat, but not so elaborate as the breakfast. There is very little evening afterward. We sat in the large, dimly lighted *sala*, or leaned over the balcony railings, and listened to the music which burst forth in an irrelevant way from the band of the regiment, like their unaccountable bugle-calls and drum-taps. One evening they gave an entertainment, to which all the first families of the city were invited—the only occasion of any public festivity which occurred while I was in Morelia, with the exception of the perennial bull-fights. The occasion of the entertainment was the distribution of prizes for scholarship among the privates of the regiment, many of whom, I was told, had been enlisted two years ago from the Indian villages by the persuasive means of a lasso (thé Republic must have soldiers), and, to the credit of their officers, now exhibit a neat, cheerful, soldierly bearing, and the rudiments of a practical, if not a liberal, education. They were small, thick-set, dark, with the stolid movements and heavy features of the Indian,—the type of the mass of the insurgents who fought under Hidalgo and Morelos—the men who tried to stop the cannons' mouths with their straw hats. The pretty little unused theater of the city was ingeniously lighted with candelabras made of clusters of bayonets, supporting candles placed in their sockets. The chandelier suspended from the ceiling bristled with bayonet-points. I observed the people who sat beneath watched its descent rather uneasily while it was being lowered for the purpose of renewing the candles. The military music, orations, poems delivered by the soldier-students, and addresses by the officers, were received with enthusiasm by the audience. I found my entertainment chiefly in watching the latter—the dark, plebeian heads in the parquette, and the ladies of the first families in the boxes in full evening dress, looking impassively lovely behind their softly waving fans. Our experiment in Maravatio had satisfied me that the national amusement was "too strong" for me, as the Señorita Del M——, our fellow-traveler, had said. I did not attempt it in Morelia, though the Plaza de Toros was a much more imposing affair than that of Maravatio. Its two entrances bore the inscriptions, "*Entrada del Sol*," "*Entrada de la Sombra*." The seats in the shade were attainable at a price which only the comparatively rich could pay. The poor people sat unsheltered in the sun. Dur-

A MEXICAN BALCONY.

ing the Carnival, a burlesque of the bull-fight paraded the streets, and performed at intervals to promiscuous crowds gathered hastily in response to the music. It is a kind of Punch-and-Judy show on a large scale. The upper part of a bull is rather cleverly imitated in wood and rawhide, and plunges about supported on the head of a man, who is concealed by an exaggerated flounce of drapery depending from the body of the bull, rudely suggesting the housings of chivalry. This anomalous beast rushes around the ring formed by the spectators, in pursuit of the *toradores* in costumes and masks. The music is a monotonous *tum-tum* of guitars, interrupted by much shouting and rude joking and hustling of the crowd, the bull charging upon them from time to time, his horns lowered, his petticoat wildly flapping. It is indeed very laughable if one is in the mood for the crudest and most extravagant burlesque.

My sketching expeditions involved so much

assistance from the family and servants,—the customs of society forbidding any independence on my part,—that I made few attempts to extend them beyond the limits of the house. One morning I made a sketch in San Pedro, looking through the arches of the aqueduct from the Glorieta. As the result of the combined efforts of Ysabel, the coach and the white mules, a maid-servant, and the two ladies of the family and the artist, it could not be regarded with triumphant satisfaction. On our way home past the *alameda*, deserted at this hour, but lovely with its checkered pavement of light and shadow, and glimpses of the shadowless sky of noon between the dark columnar tree-boles, we came unexpectedly upon a characteristic bit of sentiment—a young girl leaning from a balcony, talking with a young man, whose place was properly on one of the distant stone benches, out of reach of all communication except by the eyes. He was her *novio* (betrothed), the *señorita* told me; but what a scandal! They were actually

A BIT OF THE MORELIAN MARKET.

talking together—he close beneath the balcony, with his dark pale profile uplifted; she with her pretty arms crossed upon the iron railing, her face not six feet from his! From the expression of the young girl's lips and eyes, and the lowering black brows of the youth, it struck me that they had reached, without the medium of many words, an unpleasant juncture in their passionate pilgrimage.

One other morning, in the hope of finding a quiet bench in the *plaza* from which I might make a sketch of the market, we set out, the two ladies and myself, in the care of Ysabel; but arrived at the *plaza*, it was evidently a hopeless quest—blazing sunlight everywhere, and everywhere curious, stolid black eyes observing the *Americana*, the only one of her species in the city. The gentle *señorita*, seeing my despair, bethought her of the Casa Montana, on the corner of the market-place. The Casa Montana was the residence of the Señor Doctor of that name. We were cordially admitted by his wife, and conducted through a pretty little court one story in height, surrounded by a corridor painted in the Pompeian manner. A number of singing-birds in cages among the plants were in full chorus, and a hideous monkey from the Tierra Caliente, winding and unwinding his long arms about his body, gave the note of discord, without which this little place of bloom and sunshine would have been almost monotonously fair. From the brightness of the court we entered the cool, dim study, the win-

dows of which commanded an excellent view of the market-place and its curious encampment of Indians, who move in on market-days from the country with their families and merchandise, which are equally on exhibition, if not for sale, under their awnings and umbrellas of palm matting. The doctor's study was a very professional-looking room, with a skeleton in a tall case and other grimly impressive details. The light was much concentrated, falling from a high, deep window, into which I climbed by means of a series of steps sunk in the thick adobe wall, which served also as seats. Once seated aloft above the heads of the ladies, as in a private box, between the shaded room and the view of the lively drama in the sunlit *plaza*, I occupied a semi-detached position in the conversation highly favorable to work. We walked home through the market, and bought flowers and pottery—the rich reddish-brown pottery of Michoacan—not so beautiful as that of Guadalajara, but fine in color as a ripe horse-chestnut, and with traditional simplicity and beauty of form. Occasionally we took a walk under the *portales*,—the arcaded sidewalks surrounding the principal *plaza* of the city,—where many articles, chiefly of native manufacture, are offered for sale. It was here we bought the curious little offerings in hammered silver laid by the peasants on the altars of patron saints, to ward off the evils to which their lives are peculiarly exposed. A *ranchero* offers a silver horse. A man with a broken arm or leg offers the same, crudely imitated in silver.

One with *dolor de la cabeza* offers a silver head. Here are the rosaries, the little guitars of cedar-wood, made by the Indians, and in skillful fingers giving forth a very sweet, thin tinkle; the toy *toros* of wood covered with calf's hide, with horns and tails of the most expressive fierceness—the arrogant arch of the shoulder decorated with *banderillas* of crimped tissue-paper. The multitude of rude but very effective toys, made by the Indians with the most pathetically poor materials, show the importance which the pleasures of the children have in their eyes; every pottery vessel or household utensil is imitated in miniature for the baby housekeepers. Here we found the palm-splint brushes, the fans for blowing up the charcoal fires in the chimneyless pottery stoves which are used in all Mexican kitchens. But all purchases from the main shops were made through the medium of the patient Rubio, who trotted back and forth between the street and the corridor with boxes and packages for inspection. If it was a question of a scarf or a mantle, the shops emptied their stocks of these articles into Rubio's hands; they were tried on at leisure, discussed before the mirrors, and if not approved, sent back without scruple. If the little daughter re-

quired a skein of wool for her knitting, Ascension must call Rubio, and Rubio must go into the street with a bit of red wool twisted about his dark finger to be matched. "*Encarnada, Rubio. No color de rosa!*" were her instructions to the old man. "*Si, si! Nina Encarnada,*" he repeated to himself on his way to the staircase. Life in the house was not gay, but serene as the sunny hours that wheeled their shadows around the corridors.

I had fallen easily into that helpless attitude toward the outer world which is like a spell over the lives of the women of the country. The return of the engineers, and the discussion of plans for our homeward journey on horseback, broke up the dream—one last drive in the *paséo* in the splendor of the low sunset light, then a bustle of packing, and talk of saddles and horses, servants for the road, and of steamer days and telegrams, last calls, and a sense of multiplied obligations which fate might never permit us fitly to recognize. When the railroad is completed, and the tides of travel ebb to and fro, if our friends of the Casa G——are among those northward bound, may they find as gracious and courteous a welcome as they gave the strangers within their gates.

THE REVIVAL OF BURANO LACE.

THE brevity of the guide-books admits of only a passing allusion to the outlying islands of Venice. Hence, many an enlightened and curious traveler sees nothing beyond the churches and palaces, the pictures and the mysterious water-streets of the most wonderful city of the world. True, this traveler has been made very happy, and, ignorant of what is left unseen, goes upon his way in a contented spirit, not knowing that he has lost some of

the best of Venice. For the initiated, however, these bits of dark green verdure scattered over the pale green lagoons have an indescribable charm. They seem to cluster around the old city like children about a mother. Some are so mature as to be graced by domes and spires. One, indeed, though long deserted, is truly older than the parent town, for who does not know that Torcello was the refuge of the people of the main-land from the

VIEW OF BURANO.

SAN FRANCESCO IN DESERTO.

conquering arms of the redoubtable Attila? The first place of Christian worship built by the refugees is still standing, a monument of early piety. Within the church is a great strange mosaic of the Last Judgment, which is said to have been an inspiration of the "Inferno" of Dante. San Francesco in Deserto is the lonely home of a few monks, who still remain in their silent retreat despite the stern decrees of United Italy. Murano is famous now, as it was three hundred years ago, for its glass factories, from the principal of which come the marvelous creations of taste and skill devised by Salviati, the world-renowned. The Lido is a long, narrow piece of land which forms a natural bulwark against the waves of the Adriatic, and preserves the city and lagoons from the shocks of stormy seas. On the island of San Lazzaro is the famous Arminian convent and school, whose printing-press sends forth to the world books in many languages, and where the relics and memory of Lord Byron are guarded even more jealously than in his own land. Santa Elena contains a deserted and partly ruined

Benedictine monastery. Among its bright flowers and beneath its tall, waving trees is the daily playground of the young heir to the throne of Italy, during the summer visits of his royal parents to Venice. Not far distant, looking westward, rise the high walls of the two islands of San Servolo and San Clemente, given up to those, the saddest of God's creatures, who yet must live, though bereft of all that makes life joyous; and farther on, a group of domes and spires, and lines of rose-colored wall, show the Venetian's final resting-place under the white crosses and dark cypress-trees of the island of San Michele.

Burano is one of the largest of these fairy islands that lift themselves, like those of a mirage, above the still lagoons. It lies about six miles from Venice. The inhabitants are fishermen and gardeners, who supply their excellent spoils and produce not only to the near city, but also to the markets of Trieste and distant Vienna: for the blue sea teems with fish, and the fair gardens are constantly enriched by the natural process that first formed them, and require none of those arti-

GONDOLA TO BURANO.

ficial aids which hasten the growth but impair the flavor of fruit and vegetables. That hardy race, the Buranelli, preserve more markedly than any other the customs and picturesque type of the ancient Venetian people. Here at least may be found a population of primitive ideas, with few requirements, patient and courageous under the heavy hardships of hunger and cold. Perhaps it were too much to say that "all the sons are brave and all the

turn should lead the workers into a more decorative class of productions.

No precise date can be assigned to the first appearance of lace, because the art of making lace, like all other arts, grew gradually until the latent skill given to men, like the statue within the marble block, became developed by that directing hand—the creative mind working in the creature—that is commonly known as time and circumstance.

THE WHARF AT BURANO.

daughters virtuous"; but it is certain that the men are stalwart and thrifty, and the women handsome and industrious. The occupation of many of the latter has again become, as it was in the old times, that of lace-making.

This might seem to be the natural bent of the women of a race of fishers. Lace is network on a finer scale, and we can easily conceive how the knitting of nets, first made strong, to assist in getting food, should teach them aptitude for intricate weaving, which in

Whether the love of ornament inherent in human nature excited first an imitation and then a rivalry of the embroideries in gold, silver, and colors brought to the shores of Italy by the Greeks, who took refuge there from the troubles of the Lower Empire, or whether lace is the direct descendant of gold and silver Saracenic ornament, may be left to the learned to decide. Of some facts we are sure: that the fabric we now call lace, fashioned laboriously by the needle, stitch by

WOMAN MAKING LACE. (DRAWN BY PRINCESS LOUISE, MARCHIONESS OF LORNE.)

stitch, was first made in the fifteenth century; that even then there were varieties of stitches and methods, and that to Venice belongs the invention of the two most perfect productions of this kind of hand-work—the *point coupé* and the Venetian point in relief. The received Venetian legend of the origin of flat Venetian point is as follows: A sailor youth, returning from southern seas, brought to his betrothed a bit of the sea plant familiarly known as “mermaid’s lace,” and called by Linnæus the

Kalimedia opuntia. The fond maiden saw with grief that the love-gift of her affianced was destined to crumble and perish, and, in order to preserve at least a record, succeeded after many efforts in copying it skillfully with her needle and thread. This graceful imitation of the sea-weed produced the charming fabric that was, destined later to be counted among the precious possessions of emperors and kings. And not only as the inventor of the masterpieces of lace, but also in all other branches of the art, Venice was supreme and first. In the fifteenth century, she had learned her lesson; in the sixteenth, she was the teacher of Europe. Her laces were the most esteemed, her pattern-books the most numerous, her designs the most varied and original. Some of these last may still be studied in a work by Cesare Vecellio, nephew of Titian, preserved in the archives of the Ducal Palace, which was published in 1591, and dedicated to the illustrious lady Viena Vendramin.* Pages might be filled with extracts from the various inventories of the German, French, and English courts describing Venetian lace, cited as royal gifts or purchases—from a wonderful cloak mentioned among the most precious possessions of Anne of France, in 1480, to a collar of unrivaled workmanship ordered for the coronation of the *grand monarque* during the minority of Louis XIV., that took two years to make, and was paid for with two hundred and fifty pieces of gold.

The art of lace-making probably attained its greatest perfection in Venice in the seventeenth century, and in 1664 we find the French ambassador to that republic reporting that the exports of the trade in lace amounted annually to 400,000 crowns, and that all the convents and the greater part of the poor families subsisted upon this work. Other countries then began to rival her excellence, and French workers, aided and directed by the genius of Colbert, made a successful struggle, first to imitate and then almost to equal the art of their unwilling instructor. After in vain endeavoring to exclude Venetian laces from France, Colbert adopted another expedient. By his order, a number of the most skillful work-women in lace were suborned from Venice, and distributed among the workshops already existing and in towns where he had established new ones. A correspondence of this sagacious minister, re-

* This valuable book, as well as sixteen others of various ancient authors, has been reproduced by one of the most patriotic of modern Venetians, the publisher F. Ongania, who has used the heliotype process to bring works hitherto unattainable within the reach of moderate means.

cently published,* gives interesting details of the opposition he encountered in introducing the foreign methods, even though the companies he established were liberally subsidized by the state and patronized by the king. But the result was the beautiful French laces of the seventeenth and eighteenth centuries, and an industry that continues to the present time.

Among French laces, one of the most beautiful and, as all well-dressed women know,

be made during the Austrian occupation of Venice. Mrs. Bury Palliser, in her "History of Lace," tells us that in 1866 the natives of Burano appeared to retain no tradition of what was once their principal occupation. To-day, however, Burano lace and Venice point made by Venetian workwomen in Burano, equaling the ancient fabric in fineness and finish, can again be purchased, and it is to draw attention to the

CENCIA SCARPAGLIOLA. (FROM PHOTOGRAPH FROM LIFE,
BY ANT. PERINI, VENICE.)

perhaps the most desirable for adorning purposes, is the *point d'Alençon*. This is a direct imitation of Burano point, and has probably never quite equaled the original, as rare specimens of the old lace prove. Burano lace, once so sought after and celebrated, ceased to

revival of this beautiful industry that the present article is written.

This revival of the art, after a cessation of nearly a century, has been effected by the exertions of the Countess Adriana Marcello and the Princess Giovanelli Chigi. These two ladies, who to their other graces add the charm of far-seeing charity, opened a school for lace-making in 1872, under the

* Quoted in the 1876 edition of Mrs. Bury Palliser's work on "The History of Lace."

POINT D'ALENÇON, OR VIRGINAL BURANO POINT.

special protection of Queen Margaret, to whom they are ladies of honor. Several specimens of old Venetian lace were found in the possession of an aged woman of Burano named Cencia Scarpagliola, who had wrought them in her youth, and who "awoke one day to find herself famous." In spite of her great age, she was made directress of the work-room, being the only person competent for the office, and more than two hundred girls have been taught by her. The most important work they have yet completed is the reproduction of the laces of Pope Clement XIII Rezzonico, born in Venice in 1693. The originals are in the possession of the Queen, who, with the generosity that distinguishes her, lent them to be copied by the

school. Fifteen work-women accomplished the task in two years' time. One piece of lace, three meters long and fifty-five inches wide, valued at six thousand francs, was exhibited by the Burano school in Paris in 1876.

The Countess Marcello kindly answers, in the following letter, my request for some details of her personal knowledge of this interesting enterprise:

"It was during the winter of 1872 that the island of Burano, populated for the most part by wretched fishermen, found itself in such a state of misery that people died of hunger. Almost every year some families were reduced to extremity by the winter season, that prevents fishing, but the cold of the year 1872

ROSE POINT.

was more intense than usual, and the number of famine-stricken people was greatly increased. Recourse was had to the Holy Father, who sent a certain sum of money; His Majesty our King deigned to send help in the same way. The Venetians were also asked to aid, and some artists gave representations for the benefit of Burano. When all moneys received had been accounted for, it was found that, after relieving the most pressing necessities, there remained a surplus with which some work might be begun that would return a sure profit. The greater part of the surplus fund had been invested in a business that returned no profit—the business of making nets for the fishermen; but alas! it was useless to make goods for men who could not buy.

“Other persons, more far-seeing, among whom was Mr. Fambri, thought it was possible to revive the ancient industry of the Buranese women, who for centuries had worked as lace-makers, and produced the celebrated point-lace of Burano.

“It was then that the Princess Chigi Giovannelli and I were asked to become patronesses of this school, and it was afterward that our Queen did us the honor to become president of the institution. For my own part, I undertook to realize this project all the more willingly because my husband, when mayor of Venice, in 1858, had made several efforts

THE SCHOOL-HOUSE.

TWO LACE-MAKERS.

to revive this industry—efforts that had no results in consequence of the political events of 1859, which caused him to leave Venice for a time.

“When I began to work in the lace-school, I found there one Cencia Scarpagliola, an old woman, who alone had preserved the traditional science of lace-making, and, in spite of her seventy years, was able to work the celebrated Burano point-lace stitch. As Cencia did not understand the routine of teaching, Madame Anna Bellorio d’Este, an energetic and intelligent woman, mistress of the girls’ schools of Burano, was joined with her, and was taught by Cencia in the intervals of lesson hours. She then transmitted the instruction thus received to eight pupils, who, being paid small wages by the day, were the first islanders who were induced to learn lace-making. I immediately arranged that Bellorio should be replaced in the elementary schools, and that she should devote herself entirely to teaching the lace-making, and since that time she has always admirably directed our work-women. Now the eight scholars paid by the day to induce them to accept instruction have

increased to three hundred and twenty work-women, paid, not by the day, but according to the quantity of the work produced.

"Living is cheap in Burano; a small apartment, where a young family can be lodged, may be bought for six hundred francs (one hundred and twenty dollars) or one thousand francs (two hundred dollars), and cases are not rare when a young work-woman has left

children that, much to his regret, he had to register nearly every year, last year but two children were born out of wedlock.

"Our school is not confined to making Burano point-lace only; it now undertakes to make any design or any kind of the different laces known as Burano point-lace, *point d'Alençon* lace, old Brussels needle-point, *point d'Argentin*, Venice point-lace, raised

MODERN BURANO POINT—VENTAGLIO.

her wages for months untouched, until she has succeeded in accumulating the small sum necessary to purchase the modest dwelling that she takes as a dower to her husband. Almost all the young men of Burano seek our work-women as wives, and the *curé* of the parish told me, with great satisfaction, that last year the number of marriages was double what it had been for some time past, and that instead of the twenty-five illegitimate

point-lace—lower relief, raised point-lace—high relief, and English point-lace.

"In order to assist our scholars to understand thoroughly the different patterns of lace, I arranged that once a week a drawing-master should give them lessons in design.

"The three hundred and twenty work-women are divided into seven sections. Nothing is more useful than to insist that each girl should confine herself to one kind

ANCIENT BRUSSELS NEEDLE POINT.

of work, and be employed as much as possible on the same patterns; by following this plan each one attains perfection in her own especial department: she learns more quickly and earns more, and the school receives better work and more cheaply made, although the question of price is always relative.

"The first section employs fifty work-women, who trace out each pattern with a strong thread.

"The second section has sixty work-women, who make the foundation for the lace in point of Burano stitch.

"The third section has twenty-five work-women, who make the round-point stitch, the foundation of *point d'Alençon* lace.

"The fourth section has one hundred

work-women, who make simple guipure lace, or guipure lace ornamented with flowers.

"The fifth section employs eighty work-women, who make the open-work and the joinings of all the lace. A girl must have learned the whole art to be admitted to this section.

"The sixth section employs ten work-women, who remove the patterns when the lace is finished, mend it if necessary, and make it ready for sale.

"The seventh section. Here are gathered and counted all our work-women who are married and have families, as it is impossible to exact from them the same punctuality and number of working hours required of the unmarried women. The first and the fifth

RAISED LEAF POINT.

MODERN BURANO POINT.

sections are especially devoted to lessons in design."

These concise facts, from the pen of the amiable and philanthropic patroness, give a clear idea of how lace-work progresses in the present day on the once neglected little

island, and if any reader would see with her own eyes the perfection of the system and its products, she will pass a Venetian day most agreeably among the poor fishermen and their busy wives and daughters on the picturesque island of Burano.

ENGLISH POINT.

COQUETTE.

"COQUETTE," my love they sometimes call, 'Tis thus the world doth see the brook;
For she is light of lips and heart; But I have seen it otherwise,
What though she smile alike on all, When following it to some far nook
If in her smiles she knows no art? Where leafy shields shut out the skies.

Like some glad brook she seems to be, And there its waters rest, subdued,
That ripples o'er its pebbly bed, In shadowy pools, serene and shy,
And prattles to each flower or tree, Wherein grave thoughts and fancies brood
Which stoops to kiss it, overhead. And tender dreams and longings lie.

Beneath the heavens' white and blue I love it when it laughs and leaps,
It purls and sings and laughs and leaps, But love it better when at rest—
The sunny meadows dancing through 'Tis only in its tranquil deeps
O'er noisy shoals and frothy steeps. I see my image in its breast!

IN NOVEMBER.

HERE is the water-shed of all the year,
Where, by a thought's space, thoughts do start anear
That fare most widely forth: some to the mouth
Of Arctic rivers, some to the mellow South.

The gaunt and wrinkled orchard shivers 'neath
The blast, like Lear upon the English heath,
And mossy boughs blow wild that, undistressed,
Another spring, shall hide the cheerful nest.

All things are nearer from this chilly crown,—
The solitude, the white and huddling town;
And next the russet fields, of harvest shorn,
Shines the new wheat that freshens all the morn.

From out the bursting milkweed, dry and gray,
The silken argosies are launched away,
To mount the gust, or drift from hill to hill
And plant new colonies by road and rill.

Ah, wife of mine, whose clinging hand I hold,
Shrink you before the New, or at the Old?
And those far eyes that hold the silence fast—
Look they upon the Future, or the Past?

THROUGH ONE ADMINISTRATION.*

BY FRANCES HODGSON BURNETT,

Author of "That Lass o' Lowrie's," "Haworth's," "Louisiana," "A Fair Barbarian," etc., etc.

CHAPTER VI.

WHEN Tredennis found himself standing out in the street, half an hour later, it was this picture which remained in his mind, and no other. If an effort had been required to retain the impression upon his mental retina, he would have made the effort with the deliberate intention of excluding all else, but no effort was needed.

"I suppose it is sentiment," he said, taking his cigar out of his mouth, and looking up at the starlit sky. "I have no doubt it is sentiment. A man who has lived mooning alone as long as I have, drifts in that direction naturally, I suppose. And I am a rigid, old-fashioned fellow. I don't fit in with the rest of it. But, with her child in her arms and her gewgaws laid on the table, I seemed to see something I knew. I'll think of that, and not of the other."

It was just at this moment that he caught sight of a figure approaching him from a distance of a few yards. It was the figure of a man, wrapped in a cloak and walking with bent head at a leisurely pace, which argued that he was deep in meditation. As it drew nearer, Tredennis recognized something familiar in its outlines, and before it had taken half a dozen steps forward, the head was raised suddenly, almost as if attracted by something in his gaze, and he recognized the professor, who, seeing him, came toward him at once, and laid a friendly hand on his shoulder.

"You are coming away from the house, are you?" he said. "I might have known I should have the chance of meeting you when I came out to take my ramble before going to bed. I do it every night. I find I sleep better for it. Perhaps Bertha told you."

"No," answered Tredennis; "I had not been told of it."

The professor gave him a little impetus forward with the hand he still kept on his shoulder.

"Walk on with me," he said: "What I like is the deserted look of things, and the silence. There is nothing more silent and deserted than such a street as this at night. There is a quiet and emptiness about it which impress themselves on you more than the stillness of a

desert. Perhaps it is the sleep around you in the houses,—the people who have lost their hold on the world and life for the time being. They are far enough away by this time, most of them, and we are no more certain where they are than we shall be after they have lain down for the last time. How did you find Bertha?"

His voice changed as he asked the question, dropping its key somewhat; and, quiet though its tone was, Tredennis thought he recognized a faint suggestion of consciousness in it.

"She looked very well," he answered. "And was very bright."

"She is generally that," said the professor. "Who was there?"

"A Mr. Arbuthnot."

"Arbuthnot! Yes; to be sure. He generally is there. He is a relative of Richard's. They are fond of him. I was to have been there myself, but I had a previous engagement. And I suppose they made light of each other, as usual?"

"You mean ——" began Tredennis.

"Arbuthnot and Bertha. They always do it, and Richard looks on and enjoys it. He is a queer fellow."

"Mr. Amory?" Tredennis questioned, uncertainly.

"No, no; Arbuthnot. He is a queer fellow, Arbuthnot."

Tredennis laughed.

"That is what they said in the house," he responded.

"Well, it's true," said the professor, reflectively, "and there is no denying it."

"They said that, too," said Tredennis. "And Mrs. Amory added that it was a habit they had."

"I don't know," said the professor, still keeping his hand on Tredennis's shoulder, and seeming to study the pavement as he walked.

"I don't know what the man has done with his past, and I don't know what he is going to do with his future. I don't think he knows about the future himself."

"It struck me," said Tredennis,—"I don't know why,—that he did not care."

"That's it," said the professor. "He doesn't care."

* Copyright, 1881, by Frances Hodgson Burnett. All rights reserved.

They walked a few steps in silence, and then he went on:

"He never will care," he said, "unless something happens to rouse him."

"I am obliged to confess," said Tredennis, "that I am afraid I am prepared to underrate him. And it seemed to me that there wasn't much in him to rouse."

"Oh, you'll underrate him," returned the professor, "at first. And you may never get over it; but there are also ten chances to one that you do. I did."

"You began by underrating him?"

"I don't overrate him now," said the professor. "I don't know that I am particularly fond of him, though there have been moments—just moments—when I have been threatened with it. But I have come to the conclusion that there is something in him to rouse, and that it wouldn't be the wisest thing in the world to rouse it."

"Do you mean," said Tredennis, slowly, "that it would take a woman to rouse it?"

"Yes," answered the professor, just as slowly, "it would take a woman. And there are circumstances under which it would be better for the woman if she let what she might rouse lie and sleep."

"For instance?" said Tredennis, with a fierce leap of every pulse in his body.

"If," said the professor, deliberately, "if she were not free to give what his feeling for her demanded."

He paused to turn Tredennis round.

"Confound him," he said, with a curiously irritable seriousness. "If he once reached a white heat,—that fellow with his objectless follies, and his dress-coat, and his white necktie, and his opera hat under his arm,—if he once forgot them and himself, it would be her fate to remember him as long as her life should last."

"Her fate?" said Tredennis.

"I said it would have to be a woman," said the professor. "I should not like it to be a woman I felt an interest in. We have reached the end of the block. Let us walk back again."

When he spoke again, it was of Richard Amory, not of Arbuthnot.

"You went upstairs into the Museum, as Bertha calls it?" he said.

"Yes," answered Tredennis; "and into the work-room."

"And saw the models, and the collections, and the books?"

"Yes."

"He has a good many enthusiasms, Richard," said the professor. "They might form a collection of themselves. He won't tire of life easily. He is a fine contrast to—the other."

They were nearing the house again by this time, and he glanced up at its front.

"There is a light in the nursery window," he said. "It must be one of Janey's restless nights."

"Yes," said Tredennis. "Mrs. Amory was with her when we came down-stairs, and she told us that the child was nervous and needed her."

"She has wonderful patience with them," said the professor, "and a sort of genius for understanding their vague young needs and desires. She never does them an injustice for want of thought, and never fails them. I have seen her spend half an hour half-kneeling, half-sitting on the nursery floor, by one of them, with her arm round it, questioning it, and helping it to tell its own story, in a way that was very motherly. There is a great deal of the maternal instinct in her."

Tredennis made no reply, but there rose before his mental vision the picture before the nursery fire, and he saw again the soft, close clasp of the fair hand and arm.

"It's curious how seldom we speak of paternal instinct," the professor went on. "It is always maternal instinct. Well, it is a great thing. And it is a great safeguard where—where life is not satisfactory. And as one grows older, one sees a good deal of that. It is pitiful sometimes, when one finds it, as one so often does, in young things who haven't got over their desperate mental insistence on their right to be happy."

He checked himself, with a faint laugh.

"I'm prosing, my boy," he said. "I always do it when I take my saunter at night. It is a sort of safeguard against doing it in the day. And I find I am specially given to it when I talk of Bertha. It is the paternal instinct, if there is such a thing. You remember how we talked of her when she came home from school. Do you find her much changed?"

"She has changed from a girl—a child, almost—to a woman," said Tredennis.

"Yes," said the professor, "from a child to a woman. And yet, when you look back upon it, eight years is a very short time. Sometimes it seems only yesterday that she startled me at the dinner-table by saying that she expected me to classify and label her."

"There have been times," said Tredennis, "when it seemed only yesterday to me; but to-night it is something far away."

The professor looked up at him quickly.

"Is it?" he said. "Well, well," rather vaguely, "it is a habit they have fallen into—that of making light of things. It is a kind of fashion nowadays. She did not treat things lightly then, did she? How she believed all

that she believed—how frankly she impugned your veracity in argument, without being at all conscious of the incivility. How bright her eyes and lips were when she asked me if she could not have the label without the pin. I wish ——”

He stopped suddenly once more.

“We have reached the end of the block again, my boy,” he said, “and I have walked long enough, and talked long enough. We must say good-night to each other.”

They were standing beneath a street-lamp, and having looked up at Tredennis to say this, he drew back a pace to look again, in whimsically gentle admiration of his stalwart proportions.

“What a soldierly fellow you are,” he said; “and how you stand out among the rest of us.” And then, with an odd change of manner, he drew nearer, and laid his hand on his shoulder once more. “I’ll say again,” he said, “what I have said before. I wish you had been a son of mine, my boy.”

And, as he said it, there fell upon the quiet of the street the sound of approaching footsteps ringing on the pavement, and, turning instinctively toward them, each saw an easily recognized masculine figure, which, reaching the house in which the Amorys lived, paused for a moment beneath the lighted window, and flung forth to the night, airily and by no means unmusically, a few bars of one of the popular airs from a gay French opera, and then crossing the street, applied a latch-key to the door of the opposite house, and entering, closed it.

“The fellow has a pleasant voice,” said the professor. “It is a voice you like to hear. And that is one of his whims.”

“I thought I recognized the figure,” said Tredennis. “It is ——”

“Arbuthnot,” said the professor. “Arbuthnot.”

And then they parted.

CHAPTER VII.

TO TREDENNIS the next three months were full of event. It was mostly quiet event, and yet, as day followed day, he was conscious that, in each twenty-four hours, he lived through some new mental experience which left its mark upon him. The first two weeks seemed to make his old regular, routine-governed life a thing of the far past, from which he was entirely separated by a gulf which it would be impossible to recross. He awakened to a recognition of this at the end of the second week, and told himself that the feeling was due to the complete novelty of his surroundings and their natural influences upon

him. He found himself placed among people whose lives, ambitions, and interests were all new to him, and of a kind with which he had never before been thrown into close contact for a length of time sufficient to allow of analysis. In his first visit to Washington he had regarded its peculiarities merely as an amateur and a visitor; now he saw and studied them from a different stand-point. The public buildings were no longer mere edifices in his eyes, but developed into tremendous communities, regulated by a tremendous system for which there could be no medium or indefinite standing, but which must either be a tremendous credit or a tremendous discredit to itself and the power it represented. The human side of the place grew and impressed itself upon him. He began to feel the full significance of the stream of humanity which ebbed and flowed to and from these buildings at stated hours in the day. After a few afternoon walks on the Avenue, he could recognize many a face that passed him, and comprehend something of what it typified. He could single out the young woman who supported her family upon her salary, and the young woman who bought her ribbons with it; the widow whose pay fed half a dozen children, and the husband whose earnings were appropriated by a wife of fashionable aspirations; the man of broken career, whose wasted ambitions and frustrated purposes were buried in the monotonous routine of a Government clerkship, and who asked and hoped for no greater boon than to be permitted to hold his place through as much of the future as remained to him. It was an orderly and respectably dressed crowd, as a rule, but there was many a sad face to be seen in it, and many an anxious and disappointed one. It never failed to interest Tredennis, and he took his afternoon walk so often at the same hour that the passers-by began to know his tall, soldierly figure and sunbrowned face, and rather expected to encounter them; and when the newspapers had referred to him on a dozen occasions or so, there were not a few who recognized him, and pointed him out to each other as something of a celebrity and a hero, and so worth seeing.

This general knowledge which people seemed to have of one another was one thing which struck him as peculiarly local. It was the rule, and not the exception, that in walking out he met persons he knew or knew of; and he found it at no time difficult to discover the names and positions of those who attracted his attention. Almost all noticeable and numerous unnoticeable persons were to be distinguished in some way from their fel-

lows. The dark, sinewy man he observed standing on the steps of a certain family hotel, was a noted New England senator; his companion was the head of an important department; the man who stood near was the private secretary of the President, or the editor of one of the dailies, or a man with a much-discussed claim against the Government; the handsome woman whose carriage drew up before a fashionable millinery establishment was the wife of a foreign diplomat, or of a well-known politician, or of a member of the Cabinet; the woman who crossed her path as she got out was a celebrated female-suffragist, or female physician or lawyer, or perhaps that much talked of will-o'-the-wisp, a female lobbyist; and eight persons out of every ten passing them knew their names and not a little of their private history. So much was crowded within a comparatively limited radius that it was not easy for any person or thing worthy of note to be lost or hidden from the public eye.

By the most natural gradations, Tredennis found the whole tenor of his existence changed in this atmosphere. His fixed habits of life gave way before the influences surrounding him.

One of the most subtle of these influences was that of his intimacy with the members of the Amory household, which grew as he had not at all anticipated that it would. He had thought of the acquaintance in the first place as one not likely to ripen into anything beyond its rather conventional significance. Perhaps, on the whole, he had been content to let it rest as it was, feeling only half-consciously that he should be in a quieter frame of mind and less liable to vague pangs and disappointments.

"It is all different," he had said to himself. "And it is all over. It is better that it should remain as it is."

But after his first visit, Richard did not choose to lose sight of him. It was his fancy to seek him out and make much of and take possession of him, with an amiability and frank persistence in the chase which were at once complimentary and engaging.

"Look here!" he would say, having followed him up to reproach him. "You don't suppose we intend to be treated in this manner? We won't hear of it. We want you. Your stalwart solidity is what we have been needing to give us weight and balance. Only yesterday Bertha was holding you up to Arbuthnot as a model of steadfastness of purpose. We thought we were going to see you every other day, at least, and you have not been near us for a week. Bertha wonders what we have been guilty of."

And then he would be carried up to lunch or dinner, or to spend the evening; and each visit resulted in another and another, until it gradually became the most natural thing in the world that he should drop in at odd hours, because it seemed that he was always expected, and he appeared to have a place among them.

"Do you know what we shall do with you if you remain here a year?" Bertha had said to him at the outset. "We shall domesticate you. We not only domesticated Mr. Arbuthnot, but we appropriated him. We feel that we have invested largely in him, and that he ought to respect our rights and pay interest. Sometimes I wonder how he likes it, and just now it occurs to me to wonder how you would like it."

"The question is," Tredennis answered, "how *you* would like it."

He was always conscious of a silent distaste for being compared to Mr. Arbuthnot, and he was also always conscious of the youthful weakness of the feeling.

"It is the kind of thing which belongs to a younger man," he used to say to himself. "It is arrant folly, and yet I am not fond of the fellow."

But, as Bertha had predicted, he became in a manner domesticated in the household. Perhaps the truth was that his natural tendency was toward the comfort and easy communion of home life. He was a little surprised to find himself develop a strong fancy for children. He had never been averse to them, but he had known nothing of them, and had never suspected himself of any definite disposition to fondness for them. After he had watched Bertha's during a few visits, he began to like them, and to be oddly interested in their sayings and doings. He discovered Jack to be a decidedly sturdy and masculine little fellow, with rather more than his share of physical strength and beauty; and, making amicable advances toward him, was met half-way with a fearless readiness which was very attractive. Then he made friends with Janey, and found himself still more interested. Her childish femininity was even better worth studying than Jack's miniature manhood. She was a small, gentle creature, with clinging hands and much faith, but also with a delightful sense of infantile dignity, and the friendship which established itself between them was a very absorbing sentiment. It was not long before it became an understood thing among the juvenile portion of the establishment that Tredennis was to be counted among the spoils. His incoming was greeted with rapture, his outgoing was regarded as a species of calamity only to be borne because

it was unavoidable. He could tell stories of Indians and bears, and on more than one occasion was decoyed into the nursery, and found to be not entirely without resources in the matter of building forts with blocks, and defending them against aboriginal warriors with tin soldiers. His own sense of enjoyment of the discovery of these accomplishments in himself filled him with a whimsical pleasure. He began to carry toys in his pockets, and became a connoisseur of such dainties as were considered harmless to the juvenile constitution; and after having been reproved by Janey, on two or three occasions, for the severity of his air, he began also to have a care that the expression of his countenance should be less serious and more likely to win the approval of innocent small creatures, who considered gravity uncalled-for and mysterious. At first he had seemed to learn but little of Bertha herself, notwithstanding that a day seldom passed without their meeting, and there were times when he fancied he had determined that there was but little to learn. The gayeties of the season over, she announced her intention of resting; and her manner of accomplishing this end was to inaugurate a series of small festivities, with a result of occupying each day until midnight. She gave small, informal dinners, suppers, and teas to the favored few who would be most likely to enjoy and find them exhilarating, and when she did not give a dinner or tea, her evenings were bestowed upon Arbuthnot and half a dozen of the inner circle, whose habit it was to drop in and talk politics, literature, or entertaining nonsense.

At such times it was not at all unusual for the professor to ramble in at about nine o'clock, and profess to partake of the cup of tea Bertha offered him, and which he invariably left more than half-full upon the small table by his chair. His old tender interest in her had not lessened in degree, Tredennis noticed, after seeing them together on two or three occasions, but it had altered in kind. Sometimes the look of curious speculation returned to his eyes, but oftener they expressed a patient, kindly watchfulness. It was not long before Tredennis began to observe that this quietly watchful look generally showed itself when Arbuthnot was present. The first time that he felt the full force of the truth of this was one evening when there had been only two or three callers, who had remained but a short time, going away early, and leaving no one in the parlors but himself, the professor, and Arbuthnot.

Arbuthnot had come in later than usual, and had appeared to be in an unusual mood. He was pale when he entered, and had no

jesting speech to make. He took his seat by Bertha, and replied to her remarks with but little of his customary animation, now and then lapsing into silence as if he had forgotten his surroundings. Bertha seemed inclined to let his humor pass without notice, as if it was not exactly a new experience, but Richard commented upon it.

"Something has gone wrong," he said. "What is it, Larry?"

"Nothing has gone wrong," Arbuthnot answered, with a short, cheerless laugh. "I have seen a ghost, that is all."

"A ghost!" said Bertha, in a low voice, and then sat silent, guarding her face from the fire with her favorite peacock-feather screen.

The professor began to stir his tea round and round, which exercise was his customary assistance to reflection or debate. He glanced at the peacock-feather screen, and then at Arbuthnot.

"A ghost is always an interesting scientific conundrum," he observed. "What form did it take?"

Arbuthnot laughed his short, cheerless laugh again.

"It took the form of a sanguine young man from the West," he said, "who has just come into a twelve-hundred-dollar clerkship, and feels that unending vistas of fortune lie before him. He was in such good spirits about it that I rather lost my hold on myself, and said things I might as well have left unsaid."

"What did you say?" Richard asked.

"I told him that if he had money enough left to buy a return ticket home he had better buy one, and that if he had not I would lend it to him. I told him that at his age it wasn't a bad idea for a man to devote his time to establishing himself in some career he could depend on, and that, in default of having the energy to do that, he might reflect on the alternative of blowing his brains out as a preparation for a peaceful old age. And I told him that I had seen young fellows like himself before, and that the end had been for them what it would be for him."

"Well?" said Richard, as he had stopped.

"It wasn't any use," he answered. "I knew it would not be when I began. I simply made a spectacle of myself in a quiet way to no purpose, and as a result I am uncomfortable. It was all nonsense, but he reminded me —"

"Of what?" said Richard, since he had paused again.

A peculiar expression crossed his face. Tredennis saw him glance at the peacock-feather screen, and as quickly glance away.

"Of—a young fellow of his age I—used to know," he answered.

"What was *his* story?" inquired Richard, with his usual desire for information. "Where is he now?"

"Dead," said Arbuthnot; and, singularly enough, he half laughed again as he tossed his cigar into the grate and went to the piano.

He began to sing in a rather low voice, and while he sang the rest listened. When he referred to his musical efforts it was his habit to treat them as but trivial performances; but he allowed them to lose none of their effectiveness through lack of care and culture. He knew wherein his power lay, and used it well. To-night, for some reason, this power was at its strongest, and, as he sang song after song, even Tredennis was compelled to acknowledge that, if it was his object to produce an emotional effect, he was in a fair way to succeed.

Richard threw himself upon a sofa and gave himself up to him with characteristic readiness to be moved, the professor stirred his tea slowly and mechanically, and Bertha sat still in the shadow of her screen. But it was she who moved first. In the midst of one of the songs she left her seat, slowly crossed the room to the piano, and stood near it, leaning against the dark wall, her slight white figure thrown into strong relief, her hands—one of them still holding the peacock-feather screen—fallen at her sides, her eyes resting on Arbuthnot's averted face. It seemed to Tredennis that she had moved in obedience to some impulse of whose power she was scarcely conscious. He saw that she also was pale, and looked worn with fatigue, and he was filled, as he had been more than once before, with secret resentment of the fact that no one but himself appeared to notice that she had changed even within the last month.

Arbuthnot continued playing. It was evident that she had not intended to distract his attention when she approached him, and he did not look at or speak to her. As she stood listening, it seemed as if she had forgotten everything but the influence his voice exerted over her for the time being, and that she allowed it to carry her whither it would. Something in the soft, absorbed expression of her face reminded Tredennis vaguely of the look she had worn when she turned to brood over his words on the night when he had felt nearest to her. He was thinking this when a movement from the professor attracted his attention—a jingling of the teaspoon, a little crash, an exclamation of dismay and confusion, and the little stand had mysteriously been overturned, and the professor

was ruefully bending down to pick up the fragments of his small cup and saucer.

"My dear child!" he said to Bertha, who had started forward to his rescue, "what a stupid old Vandal I am, and what an insecure little table to betray me with—and in the midst of Schubert's 'Serenade,' too, which Mr. Arbuthnot was giving us in his most effective manner! Suppose you take me up into the nursery, as an example to the children, while you dry my coat."

He went out of the room with her, his hand upon her shoulder, and Arbuthnot left the piano, and returned to the fire. The spell had been broken with the cup and saucer, and the "Serenade" remained unfinished. He produced a fresh cigar—which luxury was one of many accorded him in the household—lighted it, and, rather to Tredennis's surprise, resumed his conversation as if there had been no pause in it.

"The fellow will be an annoyance to me every day of his life," he said, faint lines showing themselves upon his forehead in spite of the half-smile which was meant to deprive them of their significance. "I know that, confound him! He is in my room, and I shall have the benefit of every change in him, and it will be a grind—there's no denying that it will be a grind."

"I should like to know," said Tredennis, "what the changes will be."

"The changes will depend upon the kind of fellow he chances to be," said Arbuthnot. "There are two varieties. If there is a good deal in him, he will begin by being hopeful and working hard. He will think that he may make himself of value in his position and create a sort of career for himself. He will do more than is required of him, and neglect nothing. He will keep his eyes open and make friends of the men about him. He will do that for a few months, and then, suddenly, and for no fault whatever, one of these friends will be dropped out. Knowing the man to be as faithful as himself, it will be a shock to him, and he will get anxious, and worry over it. He will see him stranded without resources—struggling to regain his place or get another, treated with amiable tolerance when he is not buffeted, snubbed, and put off. He will see him hanging about day after day, growing shabbier, more care-worn, more desperate, until he disappears and is heard of no more, and everybody is rather relieved than not. He may have been a family man, with a wife and half a dozen children all living decently on his salary. Somebody else wanted his place and got it, not because of superior fitness for it, but because the opposing influence was stronger than his. The new man will go through

the same experience when his turn comes—that is all. Well, my friend will see this and be anxious, and ask questions and find out that his chances are just the same—no more and no less. He will try not to believe it, being young enough to be betrayed into the folly, and he will work harder than ever, and get over his blow a little until he sees the same thing happen again and again. Then he will begin to lose some of his good spirits; he will be a trifle irritable at times, and lines will show themselves on his face, and he won't be so young. When he writes to the girl he is in love with,—I saw a letter addressed to some young woman out West, lying on his desk to-day,—she will notice a change in him, and the change will reveal itself more in each letter; but he will hang on and grind away, and each election will be a nightmare to him. But he will grind away. And, then, at last —”

He stopped and made a light, rather graceful gesture with his fingers.

“What then?” demanded Tredennis, with manifest impatience.

“There will be a new administration, and if he struggles through, it will be worse for him than if he were dropped, as in that case he throws away another four years of his life and all the chances for a future they might hold if he were free to avail himself of them.”

Tredennis stood up, looking very large under the influence of the feeling which disturbed him. Arbuthnot himself was not entirely unimpressed by his quick movement and the energy it expressed.

“You treat the matter coolly,” he exclaimed, as he rose.

Arbuthnot turned his attention to his cigar.

“Yes,” he replied. “I treat it coolly. If I treated it warmly or hotly the effect produced would be about the same. My influence upon civil service is just what it might be expected to be—and no more. Its weight is easily carried.”

“I beg your pardon,” said Tredennis, feeling the justice and adroitness of the speech.

“Not at all,” Arbuthnot answered. “It is not necessary. It makes you lose your hold on yourself to be brought face to face with the thing. It is quite natural. It has had the same effect on me, and I am a cold-blooded fellow, and a frivolous fellow into the bargain.”

“I have never thought of the matter before,” said Tredennis, disturbedly. “I feel as if my indifference is something to be ashamed of.”

“If you give your attention as a duty to such subjects,” was Arbuthnot's response, “you will be kept actively employed. If you take my advice, you will let them alone.”

“The trouble is,” said Tredennis, “that every one seems to let them alone.”

Richard regarded him, from his place on the sofa-cushions, delightedly.

“Here's an example for you, Larry,” he said. “Profit by him. Everything is an object to him—everything is worth while. He is an example to us all. Let us all profit by him.”

“Oh, he began right,” laughed Arbuthnot.

“He began where you began,” returned Richard.

“I?” was the airy answer—“I never began at all. That is my little difficulty. I am the other one. I told you there was another one. I represent him.”

Tredennis regarded him steadily. For the first time in the course of their acquaintance, he began to suspect him. His manner was too light altogether, and the odd shade which had fallen upon his eyes before during the evening showed itself again.

“Let us hear about the other one,” he said.

“He is easily disposed of,” was the answer. “There was nothing of him at the outset. He came to his place without an object. He liked the idea of living in Washington, and of spending his salary. We will say he was rather a well-looking young fellow, and could dance and sing a little, and talk decently well. He had no responsibilities, and never thought of the future. His salary clothed him, and allowed him little luxuries and ordinary pleasures. He spent it when he had it, and made debts when it was gone. Being presentable, he was invited out, and made himself useful and entertaining in a small way. When he thought of the possibilities of his career being brought suddenly to a close, he was uncomfortable, so he preferred not to think of it. It is not a pleasant thing to reflect that a man has about ten years in which to begin life, and that after that he is ending it; but it is true. What he does from twenty to thirty he will be likely to find he must abide by from thirty to seventy, if he lives that long. This man, like the better one, has thrown away the years in which he might have been preparing himself to end decently. When they are gone he has nothing to show for them, and less than nothing. He is the feather upon the current, and when all is over for him, he is whirled out of sight and forgotten with the rest. And, perhaps, if he had felt there was anything to be gained by his being a steady, respectable fellow, he might have settled down into one.”

He got up suddenly, with a gesture as if he would shake himself free of his mood.

“Here,” he said, “I'm going! It is quite time. It's all nonsense talking it over. It is the old story. I have made myself uncomfortable for nothing. Confound you, Dick,

why did you let me begin? Say good-night to the professor and Mrs. Amory for me."

"Come back!" called Richard. "Bertha will want to hear the rest of the 'Serenade' when she comes down."

"The 'Serenade'!" he said, derisively. "No, thank you. You have had enough of me, and I have had too much of myself."

He passed into the hall just as the professor descended from the nursery and through the open door. Tredennis heard what they said to each other.

"You did not finish the 'Serenade,'" said the professor.

"No," was the reply; "and I am afraid you were resigned to it, Professor."

"You were singing it very well, and with great effect," the professor responded, amicably.

"You are very kind to say so," Arbuthnot answered. "Good-night, sir."

"Good-night," replied the professor, as he entered the parlor.

As he did so, Tredennis heard the sound of feet upon the stairs, and caught a glimpse of Bertha's white figure as she came down.

"You are not going?" he heard her say.

"Yes."

She had reached the last step by this time, and stood with her hand resting upon the balustrade, and she was paler than she had been before.

"I—" she began—"I wanted to talk to you. What is it, Larry?"

Tredennis had never heard her call him by his first name before, and he felt, with a keenness which startled him, the soft naturalness with which it fell from her lips.

Arbuthnot's voice itself had altered when he answered her.

"It is nothing," he said, "but that I am not exactly in a presentable humor, and I want to go and conceal myself. It is the best thing I can do. Good-night."

He held out his hand, touched hers lightly, and then turned away, and the door opened and closed after him, and Bertha came into the parlor, moving slowly, as if she felt tired.

CHAPTER VIII.

WHEN Tredennis rose to take his leave, the professor rose also.

"I will go with you," he said. "And if you will, you shall give me a few minutes of your time before going home. I have some new books to show you."

They went out together, but, until they reached the other house and entered the library, very little was said. The catastrophe

of the broken tea-cup, or something of greater moment, seemed to occupy the professor's thoughts. By the time they took their accustomed chairs he appeared to have forgotten the new books. His thoughtful face wore so sadly perplexed a look that he even seemed older than usual.

Tredennis awaited his first words in silence. His quiet fondness for him had become a very warm and tender feeling during the past months. It had been his pleasure to try to be of use to him. He had studied his needs, and endeavored to supply them; he had managed to share hours with him which might otherwise have been lonely; he had brought to him the stir of the outside working world when he seemed to require its stimulant; he had placed his own vigor and endurance at his disposal without seeming to do so, and his efforts at making his rather lonely life a brighter and more attractive thing had not been in vain. It was to him the professor turned in his moments of fatigue and necessity, and it was to him he turned now.

"I am going to do a curious thing," he said,—*"I am going to do a curious thing, but I think it is the best thing and the simplest."*

"The simplest thing is always the best," said Tredennis, more because there was a pause than because he felt an answer was needed.

"Yes, yes," said the professor, seriously. "I think so. And it is easier to be simple with you, my boy, than with another man. It is your way to be direct and serious. You always had the habit. It never was your way to trifle. It is rather the fashion to trifle nowadays, you know, but you—I have always liked it in you that you were not a trifler."

"No," answered Tredennis, "I have not trifled much. It may have been against me. Sometimes I have thought it was. I cannot count it among my merits, at any rate. I am a grim fellow by nature."

"No," said the professor. "Not a grim fellow. A silent fellow, and rather unyielding with yourself, but —"

He stopped, and looked up at him with a simple affection which made the young man's heart beat as a woman's glance might have done.

"I think you know I love you," he said. "I have begun to depend on you and count you among my luxuries. I am an old man, and my luxuries are worth a great deal to me. No kindly, thoughtful act of yours has been unregarded, and I have liked your fancy for me almost as a girl likes the attentions of her first lover. Sometimes it has pleased me to be half sentimental over them, and half sentimental over you."

Tredennis flushed with pleasure and warm feeling. He rose impulsively and crossed the hearth.

"I never say things well," he said, "but I should like to try to put into words something of what I feel. You once said you wished I was your son, and I have been glad to remember it. I have no ties. Let your wish be a sort of tie between us. It is a tie I should be proud of, and glad to honor and make an object in my life. Give me what affection you can. I wish for it and need it. If I had been your son you would have counted on me: give me the pleasure and comfort of knowing you count on me now. It has somehow seemed my lot to have no place in the lives of others. Give me this, if I am worth it. I shall be better for it and happier."

The professor gave him a quiet, half-wistful glance.

"I gave it to you long ago," he said, at length. "The wish has been a tie between us from the first."

And he said it even with a touch of solemnity.

"If it had not been," he added, afterward, "I should not have come to you with my trouble to-night—feeling so sure that you would understand it."

He made a gesture with his hand.

"Go and walk up and down the room there, as I am used to seeing you," he said. "And I will tell you about it."

Tredennis did as he bade him—went to the other side of the room and began his measured march.

"We talked of Bertha in this very room years ago," he began. "It seems to be our lot to talk of Bertha. I am going to speak of her again."

Tredennis continued his measured tramp without speaking.

The professor rested his forehead upon his hand and sat so, looking downward. He went on in a quiet voice, and with a quiet, absorbed manner—the manner of a man who, having the habit of close and careful study, was giving his whole attention simply and carefully to his subject.

"I shall have to go back to that night and repeat something I said then," he went on. "It was that her only hope for happiness would lie in her marriage with a man she loved deeply."

"I remember it," Tredennis answered. "And I added that the chances were that, instead, she would marry the man who loved her."

"I remember that too."

The professor sighed heavily and wearily.

"The chances were too many," he said. "She married the man who loved her."

Tredennis had marched one length of the room before he continued:

"He did love her," he said, after his pause, "tempestuously—overwhelmingly. Overwhelmingly is a good word to use. He overwhelmed her in the end. At first she liked him, but when the nature of his feeling for her began to express itself, it is my impression that she felt a secret fear of and dislike to it. She tried to avoid him, but he absolutely refused to allow it. He followed her, and was picturesquely wretched before her eyes. There is no denying he was picturesque. That was his strong point. He was picturesque and pathetic—and poetic. She was only a girl, and she was tremendously at a disadvantage before him. When she treated him badly he bore it with tender patience, and he devoted himself to her with a faithfulness which might have touched a heart harder and more experienced than hers was, poor child! Of course his picturesque unhappiness and his poetic magnanimity told—I knew they would, and they did. Reaction set in, and she began to feel the fascination of making him happy."

He stopped, and suddenly lifted his head.

"My boy," he said, "one of the most damnable things in life is a fascination like that in the mind of a generous, ignorant creature!"

He dropped his head again.

"That is strong language," he said, "and I don't often use strong language. I—don't consider it gentlemanly, but I felt strongly at the moment, and the word is—expressive. Well, the time came when, in a moment when her mood being softer and more sympathetic than usual, and she herself, as a consequence, at a greater disadvantage than ever,—she committed herself; and then it was all over. The trouble is, that the experience of a woman of forty is what a girl needs when she chooses her husband at twenty, and, as the two things are incompatible, the chances are always against her. Bertha had the faults and follies that I told you go to make a martyr. When she had made her mistake, she was strong and weak enough to abide by it. It is mostly imagination in matters of this kind; it was imagination in hers. She was young enough to believe in everything. She believed that, if she broke her engagement, she would break Amory's heart and ruin his life for him. There was no danger of either catastrophe, but they were realities to her, and they terrified her. Then she had never been touched by any deeper feeling than the anxious tenderness he awakened in her. She had not been given to sentiments, and, I am afraid, had regarded them rather contempt-

uously in others. She had no conception of a feeling stronger than herself, and held curiously obstinate and lofty views of the conduct of women who did not hold their emotions neatly in check. Her girlish bigotry was touching to me sometimes, because it was so thorough, and revealed such ignorance. I wish—I wish I could hear something of it now!”

Tredennis had reached the end of the room. He turned sharply, but recovered himself and said nothing.

“Lately,” the professor added slowly, “she has been more silent on such subjects than she used to be.”

He lifted his head from his hand and looked at Tredennis again.

“Philip,” he said, “I—I wish to heaven chance had sent you to us that year.”

Tredennis stopped in his walk, a dark and rigid figure in the shadow.

“Had sent me?” he said, in a strained voice. “Me! What—could I have done?”

“I—I don’t know,” answered the professor, “but I solemnly believe, my boy, that *if* you had come, you would have averted an evil.”

“Then,” said Tredennis, “I wish to God I had!”

“I say it,” said the professor, “with all the more certainty, remembering, as I do, one day when she wished for you herself.”

“She!” said Tredennis. “Bertha! Bertha?”

“Yes, Bertha herself. It was a few weeks before her marriage, and she had not been exactly herself for a week and more. One evening, I came into the parlor and found the room full of the odor of flowers. Amory had been with her and had left her a bouquet of heliotrope. She had some on her knee as she sat on a low seat before the fire. When I seated myself near her, she looked up at me suddenly and said, in a rather unsteady voice: ‘Papa, I have been thinking about Philip Tredennis. I have not thought of him for a long time. I should like to see him. I—wish he could come back.’ She half laughed at herself as she said it, but her laugh was nervous, and when I said to her, ‘Why? Were *you* great friends? I did not know that,’ she tried to laugh again, and answered: ‘Yes—no—not exactly. But it seems to me that he was a strong sort of person, and sensible, and—and you might rely on his decisions. It is only a fancy, I suppose—but it just came into my mind that I should like to see him again.’ There is no doubt, in my mind, that she felt a need of your obstinate strength, which she did not comprehend wholly herself. I wish you had come—I wish from my soul you had!”

“I might have come if I had known,” said Tredennis, in a low tone. “There was nothing—*nothing* to have stood in my way.” And he turned and began his walk again.

The professor sighed, as he had sighed before—heavily and drearily.

“But you did not,” he said. “And she married Amory.”

“I should like to know,” asked Tredennis, “if you think she is unhappy now. Do not tell me if you do not wish.”

The professor’s reply was very simple and direct.

“She has never been given to taking sentimental views of herself,” he said, “and she is self-controlled and fond of her children, but she has never been happy for an hour since her marriage. I think the first year was very bitter to her. Amory has always been very fond of her; he is fond of her now, but her illusions concerning his passion for her soon died. She found out in two months that he would not have perished if she had discarded him. She had been his one object at first, but she was only one of a dozen others after they were married. He was amiable and delightful, but he was not always considerate. The picturesqueness of his attitude toward her was lost. He did not require her care and sympathy, and the sacrifices she made for him were very simple and natural matters in his eyes.

“In the beginning she was, perhaps, bewildered and desperate, but, girl as she was, she was too proud and just not to see that her youth and ignorance had led her into a folly, and that the result was its natural punishment. Once she said to me, ‘The worst punishments in life are the punishments for ignorance—the worst, the worst!’ And I knew what she meant, though she said no more. When her first child was born, she went down to the door of death, and her physicians said there seemed to be a lack of effort. And yet, I tell you she might have been the happiest young mother in the world. When she has been near happiness at all, it has been in her quiet moments with her children. If it had not been for her children, she might have been a harder and more heartless creature than she can ever be now. If she had been something less and slighter than fate made her, she might have been either a dull nurse and housekeeper or a vapid woman of society; in either case, she would have been happier than she is to-day. What a long story it is, and I did not think it would be so long when I began.”

“I want to hear it all,” broke in Tredennis,—“every word. I have not understood the changes I saw in her. I want to understand.”

"That brings me to the point of it all," was the reply. "If she had been a laborer's wife, she might have been too hard-worked to be restless, but she has had leisure, and social duties, and she has set herself deliberately the desperate task of making them her pleasures. She has found an exhilaration in them which has given her no time for regrets. She is a woman, young, attractive, and spirited. She was too full of spirit to permit herself to be subdued by her disappointment. As she cannot retrieve her mistake, she will make the best of it. She has reasoned herself into a belief that she is satisfied with what fortune has given her, and so long as that belief remains unshaken, she will be as happy as nine women out of ten are. Women are not happy, as a rule, Philip; they are not happy. I have learned that."

"But so long as her belief remains unshaken —" said Tredennis.

The professor interrupted him, gravely, sadly.

"That is the point," he said. "My fear is that it is shaken now."

Tredennis stopped in the middle of the room—stood quite still.

"She has had friends and admirers," said the professor, "scores of them. Perhaps all the more because she has cared less for them than they for her. She has a pretty trick of making the best of people, and it wins the public heart. She has friends, acquaintances, and even harmless devotees; but among them all, there is only one man who gauges her, and that man is the one who very naturally presents himself to your mind as a fair dandy, with a ready tongue and good manners."

"Arbuthnot!" exclaimed Tredennis. "Arbuthnot."

The professor smiled faintly.

"What," he said, "you recognize him at once! Well, my one vanity is my pride in my private knowledge of the thought of others. I am very proud of it, in a senile way. I have been studying and classifying all my life, and now I sit and look on, and treat human beings as I have treated insects. If it had not been so, I should not have known so much of Bertha. Yes, Arbuthnot. Among all the men she knows and has known—diplomates, literati, politicians, honest men—I have found only one to disturb me, and that one Laurence Arbuthnot."

Tredennis stood still, looking down at the floor, with folded arms.

"I—" he began, "I have thought —"

The professor started.

"What!" he exclaimed. "You have thought? If you have thought—it must be plainer than I feared."

"No," said Tredennis, hurriedly. "Do not let that trouble you. What I have thought is so trivial and vague that it should not weigh at all. It has only been because I remembered her girlhood, and—and I thought her changed—and did not understand."

"Ah!" said the professor, letting his face fall upon both his hands. "That is not *his* trouble—he understands—and that is his strength. He has had his evil hour, that composed, well-dressed fellow, and he did not come out of it without scars. He covers them well, with his light overcoat and the rose in his button-hole, but they are there and they have made him wise. He has been silent, but he has looked on too—as I have—and he has seen what others were blind to. She has never suspected him, but his knowledge has given him power. When her *mauvais quart d'heure* has come upon her he has known what to say and what to avoid saying, and while she has not comprehended his motives, she has been grateful to him. She has liked his songs and his readiness, and his unsentimental air, and she has unconsciously learned to rely on him. Her first sincere liking for him arose from her discovery of his inconsistent and incongruous knack with the children. She had thought of him as a rather clever, selfish, well-mannered creature, and once in a juvenile crisis he surprised her by developing natural gifts—somewhat cold-blooded, but still amazingly effective. The children began to be fond of him, and his path was smoothed. She began to be fond of him herself, genuinely and simply, and if it had ended there she would have been safer than before. But it could not end there, I suppose. The cup and saucer were not broken too soon this evening—they were not broken soon enough."

"It was not an accident?" exclaimed Tredennis.

"No, it was not an accident. I have heard his 'Serenade' before. There is the danger. He means no harm, but his 'Serenade,' and the moments when what is past gets the better of him, and the little touches of passion his overcoat wont always cover, and the bits of sincerity he struggles against and she ponders over, are good for neither him nor her. I have heard his 'Serenade' before, but to-night, when she got up and followed him as if he had called her, and—and she had only half heard his voice and yet must obey it; and when she stood there against the wall, with her pale face, and her soft eyes fixed on him, it was time for some common thing to happen to bring her back to life—and the cup and saucer were offered as the sacrifice."

He said it whimsically, and yet sadly.

"Poor child!" he added. "Poor child! I dare say it was hard enough."

He paused a moment, and then rose, went to Tredennis's side, and laid his hand on his shoulder.

"There—" he said,—“there is the confession, and I can make my appeal to you with fewer words.”

"Your appeal?" Tredennis repeated.

"I can ask you for your help."

"If there is any help I can give which is worth the asking and giving," said Tredennis, slowly, "you know it will be yours."

"Yes, I know it will be mine, and so I ask it easily. And what I ask is this. Let us walk slowly while we talk, and I will keep my hand on your shoulder—I like to feel your support. What I would say is this: if you had been my son, you would have watched over her and stood between her and any pain which could threaten her. You know that what I fear for her now is only the desperate, hopeless misery such an experience as this would be sure to bring her if it were allowed to ripen; for her, there is nothing else to fear. No, I know I need not have said that to you."

"No," answered Tredennis, "there was no need to say it."

"She does not know herself. I know her, and know what such an experience holds for her. Better that her life should be barren to the end than that she should bear what she must bear if her heart is once awakened."

"Better!" said Tredennis.

He felt the tremulous hand weigh heavily upon him.

"I am an old man," he was answered. "I have lived my life nearly to its close, and I say a *thousand* times better! I married a woman I did not love, and I loved a woman I could not marry."

"And you wished to ask me——" said Tredennis, breaking the short silence which followed.

"I ask you to defend her against this pain. If I were a younger and stronger man, I might do for her what I ask of you; but I cannot often be with her. You are with her day after day. She likes you."

"I have fancied," Tredennis said, "that she did *not* like me."

"It is only fancy. She sees in you the strength she vaguely longed for when she was at the turning-point of her life. Let her feel that it is always near her, and that she may rely upon it now. You are fond of her children,—talk to her of them. When you see her inclined to be silent and unlike herself, bring them to her mind; when that fellow is there, manage that she shall think of them. Her tenderness for them is your stronghold and mine. To-night, why did I take her to the nursery? Because they lay asleep there, and when she saw them she stopped to cover them more warmly, and touch them with her hand, and bend to kiss them, and forgot her 'Serenade.' She loves them better than she loves anything else on earth,—better than she could love anything else, perhaps. That's her woman's way. God made it so. That is the one help and safeguard he gave to women out of the whole bitter universe. Bring her back to her children at her saddest and weariest, and when the fight is hardest, and they will beat the rest back. It is Nature. You will do what I ask, I know.

"I shall be more at ease," he said next, "that I have asked this of you. When you are with her, I shall feel that she is safe. I trust her in your hands."

"I will try to be worthy of the trust."

"It is rather a strange one to repose in a man of your age, but I give it to you with the rest—it goes with the tie you wished for. It is a relief to me to share it with a strong fellow who can bear it well."

They talked a little longer, walking across the floor two or three times together, and then Tredennis went away. He was in a strange frame of mind. It was almost as if he had received a blow which had partially stunned him. When he reached the street, he stood for a moment looking up at the starlit sky.

"A strong fellow," he said. "*Am* I such a strong fellow? And *I* am to stand between you and your lover—*I*? That is a strange thing, Bertha—a strange thing."

And, rousing himself suddenly, he strode down the street, and the professor, who had gone to his room, heard his military tread ringing steady and measured upon the pavement, and felt a vague comfort in the sound.

(To be continued.)

ENGLISH AND AMERICAN SONG-BIRDS.

THE charm of the songs of birds, like that of a nation's popular airs and hymns, is so little a question of intrinsic musical excellence and so largely a matter of association and suggestion, or of subjective coloring and reminiscence, that it is perhaps entirely natural for every people to think their own feathered songsters the best. What music would there not be to the homesick American, in Europe, in the simple and plaintive note of our bluebird, or the ditty of our song-sparrow, or the honest carol of our robin; and what to the European traveler in this country, in the burst of the blackcap, or the red-breast, or the whistle of the merlin! The relative merit of bird-songs can hardly be settled dogmatically; I suspect there is very little of what we call music, or of what could be noted on the musical scale, in even the best of them; they are parts of nature, and their power is in the degree in which they speak to our experience.

When the Duke of Argyll, who is a lover of the birds and a good ornithologist, was in this country, he got the impression that our song-birds were inferior to the British, and he refers to others of his countrymen as of like opinion. No wonder he thought our robin inferior in power to the missal thrush, in variety to the mavis, and in melody to the blackbird. Robin did not and could not sing to his ears the song he sings to ours. Then it is very likely true that his Grace did not hear the robin in the most opportune moment and season, or when the contrast of his song with the general silence and desolation of nature is the most striking and impressive. The nightingale needs to be heard at night, the lark at dawn rising to meet the sun; and robin, if you would know the magic of his voice, should be heard in early spring, when, as the sun is setting, he carols steadily for ten or fifteen minutes, from the top of some near tree. There is perhaps no other sound in nature; patches of snow linger here and there; the trees are naked and the earth is cold and dead, and this contented, hopeful, re-assuring, and withal musical strain, poured out so freely and deliberately, fills the void with the very breath and presence of the spring. It is a simple strain, well suited to the early season; there are no intricacies in it, but its honest cheer and directness, with its slight plaintive tinge, like that of the sun

gilding the tree-tops, go straight to the heart. The compass and variety of the robin's powers are not to be despised either. A German who has great skill in the musical education of birds told me what I was surprised to hear, namely, that our robin surpasses the European blackbird in capabilities of voice.

The Duke does not mention by name all the birds he heard while in this country. He was evidently influenced in his opinion of them by the fact that our common sandpiper (*Totanus macularius*) appeared to be a silent bird, whereas its British cousin, the sandpiper of the lakes and streams of the Scottish Highlands, is very loquacious, and the "male bird has a continuous and most lively song." Either the Duke must have seen our bird in one of its silent and meditative moods, or else in the wilds of Canada, where his Grace speaks of having seen it, the sandpiper is a more taciturn bird than it is in the States. True, its call-notes are not incessant, and it is not properly a song-bird any more than the British species is, but it has a very pretty and pleasing note as it flits up and down our summer streams, or runs along on their gray, pebbly, and boulder-strewn shallows. I often hear its calling and piping at night during its spring migrations. Indeed, we have no silent bird that I am aware of, though our pretty cedar-bird has, perhaps, the least voice of all. A lady writes me that she has heard the humming-bird sing, and says she is not to be put down, even if I were to prove by the anatomy of the bird's vocal organs that a song was impossible to it.

Argyll says that though he was in the woods and fields of Canada and of the States in the richest moment of the spring, he heard little of that burst of song which in England comes from the blackcap, and the garden warbler, and the white-throat, and the reed warbler, and the common wren, and (locally) from the nightingale. There is no lack of a burst of song in this country (except in the remote forest solitudes) during the richest moment of the spring, say from the 1st to the 20th of May, and at times till near midsummer; moreover, more bird-voices join in it, as I shall point out, than in Britain; but it is probably more fitful and intermittent, more confined to certain hours of the day, and probably proceeds from throats less loud and vivacious than that with which our distinguished critic was familiar. The ear hears best and easiest what

it has heard before. Properly to apprehend and appreciate bird-songs, especially to disentangle them from the confused murmur of nature, requires more or less familiarity with them. If the Duke had passed a season with us in some *one* place in the country, in New York or New England, he would probably have modified his views about the silence of our birds.

One season, early in May, I discovered an English sky-lark in full song above a broad, low meadow in the midst of a landscape that possessed features attractive to a great variety of our birds. Every morning for many days I used to go and sit on the brow of a low hill that commanded the field, or else upon a gentle swell in the midst of the meadow itself, and listen to catch the song of the lark. The maze and tangle of bird-voices and bird-choruses through which my ear groped its way searching for the new song can be imagined when I say that within hearing there were from fifteen to twenty different kinds of songsters, all more or less in full tune. If their notes and calls could have been materialized and made as palpable to the eye as they were to the ear, I think they would have veiled the landscape and darkened the day. There were big songs and little songs, songs from the trees, the bushes, the ground, the air, warbles, trills, chants, musical calls and squeals, etc. Near by in the foreground were the cat-bird and the brown thrasher, the former in the bushes, the latter on the top of a hickory. These birds are related to the mocking-bird, and may be called performers; their songs are a series of vocal feats, like the exhibition of an acrobat; they throw musical somersaults and turn and twist and contort themselves in a very edifying manner, with now and then a ventriloquial touch. The cat-bird is the more shrill, supple, and feminine; the thrasher the louder, richer, and more audacious. The mate of the latter had a nest, which I found in a field under the spreading ground juniper. From several points along the course of a bushy little creek there came a song, or a melody of notes and calls, that also put me out—the tipsy, hodgepodge strain of the polyglot chat, a strong, olive-backed, yellow-breasted, black-billed bird, with a voice like that of a jay or a crow that had been to school to a robin or an oriole—a performer sure to arrest your ear and sure to elude your eye. There is no bird so afraid of being seen, or fonder of being heard.

The golden voice of the wood-thrush that came to me from the border of the woods on my right was no hinderance to the ear, it was so serene, liquid, and, as it were, transparent: the lark's song has nothing in common with

it. Neither were the songs of the many bobolinks in the meadow at all confusing—a brief tinkle of silver bells in the grass while I was listening for a sound like the sharp, continuous hum and rush of silver wheels upon pebbles and gravel. Certain notes of the red-shouldered starlings in the alders and swamp maples near by, the distant strong call of the great crested fly-catcher, the jingle of the kingbird, the shrill, metallic song of the savanna sparrow, and the piercing call of the meadow lark, all stood more or less in the way of the strain I was listening for, because every one had a touch of that burr or guttural hum of the lark's song. The ear had still other notes to contend with, as the strong, bright warble of the tanager, the richer and more melodious strain of the rose-breasted grosbeak, the distant brief and emphatic song of the chewink, the child-like contented warble of the red-eyed vireo, the animated strain of the goldfinch, the softly ringing notes of the bush-sparrow, the rapid, circling, vivacious strain of the purple finch, the gentle lullaby of the song-sparrow, the pleasing "wichery," "wichery" of the yellow-throat, the strong whistle of the oriole, the loud call of the high-hole, the squeak and chatter of swallows, etc. But when the lark did rise in full song, it was easy to hear him athwart all these various sounds, first, because of the sense of altitude his strain had,—its skyward character,—and then because of its loud, aspirated, penetrating, unceasing, jubilant quality. It cut its way to the ear like something exceeding swift, sharp, and copious. It overtook and outran every other sound; it had an under-tone like the humming of multitudinous wheels and spindles. Now and then some turn would start and set off a new combination of shriller or of graver notes, but all of the same precipitate, outrushing, and down-pouring character; not, on the whole, a sweet or melodious song, but a strong and blithe one.

The Duke is abundantly justified in saying that we have no bird in this country, at least east of the Mississippi, that can fill the place of the sky-lark. Our high, wide, bright skies seem his proper field, too. His song is a pure ecstasy, untouched by any plaintiveness, or pride, or mere hilarity—a well-spring of morning joy and blitheness set high above the fields and downs. Its effect is well suggested in this stanza of Wordsworth:

"Up with me, up with me, into the clouds!
For thy song, lark, is strong;
Up with me, up with me, into the clouds!
Singing, singing,
With all the heavens about thee ringing,
Lift me, guide me, till I find
That spot which seems so to thy mind!"

But judging from Gilbert White's and Barrington's lists, I should say that our bird-choir was a larger one, and embraced more good songsters, than the British.*

White names twenty-two species of birds that sing in England during the spring and summer, including the swallow in the list. A list of the spring and summer songsters, in New York and New England, without naming any that are, characteristically, wood birds, like the hermit thrush and veery, the two wagtails, the true warblers and the solitary vireo, or including any of the birds that have musical call-notes, and by some are denominated songsters, as the bluebird, the sandpiper, the swallow, the red-shouldered starling, the pewee, the high-hole, and others, would embrace more names, though, perhaps, no songsters equal to the lark and nightingale, to wit: the robin, the cat-bird, the oriole, the orchard starling, the song-sparrow, the wood-sparrow, the vesper sparrow, the social sparrow, the purple finch, the wood-thrush, the scarlet tanager, the indigo-bird, the goldfinch, the bobolink, the summer yellow-bird, the meadow lark, the house-wren, the brown thrasher, the chewink, the chat, the red-eyed vireo, the white-eyed vireo, the Maryland yellow-throat, and the rose-breasted grosbeak. Our bird-choir is far richer in sparrow voices than the British. There appear to be but two sparrows in that country that sing, the hedge-sparrow and reed-sparrow—both, according to Barrington, very inferior songsters; the latter without mellowness or plaintiveness, and with but little sprightliness, or compass, and the former evidently lower in the scale than either of our birds. What a ditty is that of our song-sparrow, rising from the garden-fence or the road-side so early in March, so prophetic and touching, with endless variations and pretty trilling effects; or the song of the vesper sparrow, full of the repose and the wild sweetness of the fields; or the strain of the little bush-sparrow, suddenly projected upon the silence of the fields, or of the evening twilight, and delighting the ear as a beautiful scroll delights the eye. The white-crowned, the white-throated, and the Canada sparrows sing transiently spring and fall, and I have heard the fox-sparrow in April when his song haunted my heart like some bright, sad, delicious memory of youth—the richest and most moving of all sparrow-songs. Our wren-music, too, is superior to anything of the kind in the Old World. Our house-wren is said to be a better songster than the British house-wren, while our winter wren, in sprightliness, mellowness, plaintiveness, and execution, is surpassed by but few songsters in the world. His summer haunts are our high, cool, northern woods,

where, for the most part, his music is lost on the primitive solitude.

The British fly-catcher, according to White, is a silent bird, while our species, as the phoebe-bird, the wood-pewee, the kingbird, the little green fly-catcher, and others, all have notes more or less lively and musical. The great crested fly-catcher has a harsh voice, but the pathetic and silvery note of the wood-pewee more than makes up for it. White says the golden-crowned wren (*Regulus cristatus*) is not a song-bird in Great Britain, but the corresponding species here (*R. satrapa*) has a rich, delicious, and prolonged warble. In the Northern States, its song is noticeable about the evergreens for a week or two in May, while the bird pauses to feed, on its way to Canada and beyond. In its breeding haunts the ruby-crowned kinglet, tiny as it is, fills the solitudes with music.

There are no vireos in Europe, nor birds that answer to them. With us, they contribute an important element to the music of our groves and woods. There are few birds I should miss more than the red-eyed vireo, with his cheerful musical soliloquy, all day and all summer, in the maples and locusts. It is he, or rather she, that builds the exquisite basket-nest on the ends of the low, leafy branches, suspending it between two twigs. The warbling vireo has a stronger, louder strain, often more continuous, but not quite so sweet. The solitary vireo is heard only in the deep woods, while the white-eyed is still more local or restricted in its range, being found only in wet, bushy places, whence its vehement, varied, and brilliant song is sure to catch the dullest ear.

The goldfinches of the two countries, though differing in plumage, are perhaps pretty evenly matched in song; while our purple finch, or linnet, I am persuaded, ranks far above the English linnet, or lintie, as the Scotch call it. In compass, in melody, in sprightliness, it is a remarkable songster. Indeed, take the finches as a family, they certainly furnish more good songsters in this country than in Great Britain. They furnish the staple of our bird-melody, including in the family the tanager and the grosbeaks, while in Europe the warblers lead. White names seven finches in his list, and Barrington includes eight, none of them very noted songsters, except the linnet. Our list would include the sparrows above named, and the indigo-bird, the goldfinch, the purple finch, the scarlet tanager, the rose-breasted grosbeak, the blue grosbeak, and the cardinal bird. Of these birds, all except the fox-sparrow and the blue grosbeak are familiar summer songsters throughout the Middle and Eastern States. The indigo-bird is a midsummer and an all-

summer songster of great brilliancy. So is the tanager. I judge there is no European thrush that, in the pure charm of melody and hymn-like serenity and spirituality, equals our wood and hermit thrushes, as there is no bird there that, in simple lingual excellence, approaches our bobolink.

The European cuckoo makes more music than ours, and their robin-redbreast is a better singer than the allied species, to wit, the blue-bird, with us. But it is mainly in the larks and warblers that the European birds are richer in songsters than are ours. We have an army of small wood-warblers,—no less than forty species,—but most of them have faint chattering or lisping songs that escape all but the most attentive ear, and these spend the summer far to the north. Our two wagtails are our most brilliant warblers, if we except the kinglets, which are northern birds in summer, and the Kentucky warbler, which is a southern bird; but they do not match the English blackcap, or white-throat, or garden warbler, to say nothing of the nightingale, though Audubon thought our large-billed water-thrush, or wagtail, equalled that famous bird. It is certainly a brilliant songster, but most provokingly brief; the ear is arrested by a sudden joyous burst of melody proceeding from the dim aisles along which some wild brook has its way, but just as you say "Listen!" it ceases. I hear and see the bird every season, along a rocky stream that flows through a deep chasm amid a wood of hemlock and pine. As I sit at the foot of some cascade, or on the brink of some little dark eddying pool above it, this bird darts by me up or down the stream, or alights near by upon a rock or stone at the edge of the water. Its speckled breast, its dark olive-colored back, its teetering, mincing gait, like that of a sandpiper, and its sharp *chit*, like the click of two pebbles under water, are characteristic features. Then its quick, ringing song, which you are sure presently to hear, suggests something so bright and silvery that it seems almost to light up, for a brief moment, the dim retreat. If this strain were only sustained and prolonged like the nightingale's, there would be good grounds for Audubon's comparison. Its cousin, the wood wagtail, or golden-crowned thrush of the older ornithologists, and golden-crowned accenter of the later,—a common bird in all our woods,—has a similar strain, which it delivers as it were surreptitiously, and in the most precipitate manner, while on the wing high above the tree-tops. It is a kind of wood-lark, practicing and rehearsing on the sly. When the modest songster is ready to come out and give all a chance to hear his full and completed strain, the European wood-lark

will need to look to his laurels. These two birds are our best warblers, and yet they are probably seldom heard, except by persons who know and admire them. If the two kinglets could also be included in our common New England summer residents, our warbler music would only pale before the song of Philomela herself. The English redstart evidently surpasses ours as a songster, and we have no bird to match the English wood-lark above referred to, which is said to be but little inferior to the sky-lark; but, on the other hand, besides the sparrows and vireos already mentioned, they have no songsters to match our oriole, our orchard starling, our cat-bird, our brown thrasher (only second to the mocking-bird), our chewink, our snow-bird, our cow-bunting, our bobolink, and our yellow-breasted chat. As regards the swallows of the two countries, the advantage is rather on the side of the American. Our chimney-swallow, with his incessant, silvery, rattling chipper, evidently makes more music than the corresponding house-swallow of Europe; while our purple martin is not represented in the Old World avi-fauna at all. And yet it is probably true that a dweller in England hears more bird-music throughout the year than a dweller in this country, and that which, in some respects, is of a superior order.

In the first place, there is not so much of it lost "upon the desert air," upon the wild, unlistening solitudes. The English birds are more domestic and familiar than ours; more directly and intimately associated with man; not, as a class, so withdrawn and lost in the great void of the wild and the unclaimed. England is like a continent concentrated—all the waste land, the barren stretches, the wildernesses left out. The birds are brought near together and near to man. Wood birds here are house and garden birds there. They find good pasturage and protection everywhere. A land of parks, and gardens, and hedge-rows, and game preserves, and a climate free from violent extremes—what a stage for the birds, and for enhancing the effect of their songs! How prolific they are, how abundant! If our songsters were hunted and trapped, by bird-fanciers and others, as the lark, and goldfinch, and mavis, etc., are in England, the race would soon become extinct. Then, as a rule, it is probably true that the British birds, as a class, have more voice than ours have, or certain qualities that make their songs more striking and conspicuous, such as greater vivacity and strength. They are less bright in plumage, but more animated in voice. They are not so recently out of the woods, and their strains have not that elusiveness and plaintiveness that ours have. They sing

with more confidence and copiousness, and as if they, too, had been touched by civilization.

Then they sing more hours in the day, and more days in the year. This is owing to the milder and more equable climate. I heard the sky-lark singing above the South Downs in October, apparently with full spring fervor and delight. The wren, the robin, and the wood-lark sing throughout the winter, and in midsummer there are perhaps three times as many vocal throats as here. The heat and blaze of our midsummer sun silence most of our birds.

There are but four songsters that I hear with any regularity after the meridian of summer is past, namely, the indigo-bird, the wood or bush sparrow, the scarlet tanager, and the red-eyed vireo, while White names eight or nine August songsters, though he speaks of the yellow-hammer only as persistent. His dictum, that birds sing as long as nidification goes on, is as true here as in England. Hence our wood-thrush will continue in song over into August if, as frequently happens, its June nest has been broken up by the crows or squirrels.

The British songsters are more vocal at night than ours. White says the grasshopper lark chirps all night in the height of summer. The sedge-bird also sings the greater part of the night. A stone thrown into the bushes where it is roosting, after it has become silent, will set it going again. Other British birds, besides the nightingale, sing more or less at night.

In this country the mocking-bird is the only regular night-singer we have. Other songsters break out occasionally in the middle of the night, but so briefly that it gives one the impression that they sing in their sleep. Thus I have heard the hair-bird, or chippie, the kingbird, the oven-bird, and the cuckoo, fitfully in the dead of the night, like a school-boy laughing in his dreams.

On the other hand, there are certain aspects in which our songsters appear to advantage. That they surpass the European species in sweetness, tenderness, and melody I have no doubt, and that our mocking-bird, in his native haunts in the South, surpasses any bird in the world in compass, variety, and execution is highly probable. That the total effect

of his strain may be less winning and persuasive than the nocturne of the nightingale, is the only question in my mind about the relative merits of the two songsters. Bring our birds together as they are brought together in England, all our shy wood-birds—like the hermit thrush, the veery, the winter wren, the wood wagtail, the water wagtail, the many warblers, the greenlet, the solitary vireo, etc.—become birds of the groves and orchards, and there would be a burst of song indeed.

I append parallel lists of the better-known American and English song-birds, marking in each with an asterisk those that are probably the better songsters; followed by a list of other American songsters, some of which are not represented in the British avifauna:

Old England.

- * Wood-lark.
- Song-thrush.
- Wren.
- Willow wren.
- * Red-breast.
- Redstart.
- Hedge sparrow.
- Yellow-hammer.
- * Sky-lark.
- Swallow.
- * Blackcap.
- Titlark.
- * Blackbird.
- White-throat.
- Goldfinch.
- Green finch.
- Reed-sparrow.
- Linnet.
- Chaffinch.
- * Nightingale.
- Missal thrush.
- Great titmouse.
- Bulfinch.

New England.

- Meadow-lark.
- * Wood-thrush.
- * House-wren.
- * Winter wren.
- Bluebird.
- Redstart.
- * Song-sparrow.
- * Fox-sparrow.
- Bobolink.
- Swallow.
- Wood wagtail.
- Titlark (spring and fall).
- Robin.
- * Maryland yellow-throat.
- Goldfinch.
- * Wood-sparrow.
- * Vesper sparrow.
- * Purple finch.
- * Indigo-bird.
- Water wagtail.
- * Hermit thrush.
- Savanna sparrow.
- Chickadee.

New England song-birds not included in the above:

- | | |
|-----------------------|-------------------------|
| Red-eyed vireo. | Orchard oriole. |
| White-eyed vireo. | Cat-bird. |
| Brotherly love vireo. | Brown thrasher. |
| Solitary vireo. | Chewink. |
| Blue-headed vireo. | Rose-breasted grosbeak. |
| Scarlet tanager. | Purple martin. |
| Baltimore oriole. | Mocking-bird. |

—besides a dozen or more species of the *sylvicolidae*, or wood-warblers, some of which, like the black-throated green warbler, the speckled Canada warbler, the hooded warbler, and the mourning ground-warbler, and the yellow warbler, are fine songsters.

A MODERN INSTANCE.*

BY W. D. HOWELLS,

Author of "Venetian Life," "A Chance Acquaintance," "The Undiscovered Country," etc.

v.

THE house seemed too little for Marcia's happiness, and after dinner she did not let Bartley forget his last night's engagement. She sent him off to get his horse at the hotel, and ran up to her room to put on her wraps for the drive. Her mother cleared away the dinner things; she pushed the table to the side of the room, and then sat down in her feather-cushioned chair and waited her husband's pleasure to speak. He ordinarily rose from the Sunday dinner and went back to his office; to-day he had taken a chair before the stove. But he had mechanically put his hat on, and he wore it pushed off his forehead as he tilted his chair back on his hind legs, and braced himself against the hearth of the stove with his feet.

A man is master in his own house generally through the exercise of a certain degree of brutality, but Squire Gaylord maintained his predominance by an enlightened absenteeism. No man living always at home was ever so little under his own roof. While he was in more active business life, he had kept an office in the heart of the village, where he spent all his days, and a great part of every night; but after he had become rich enough to risk whatever loss of business the change might involve, he bought this large old square house on the border of the village, and thenceforth made his home in the little detached office.

If Mrs. Gaylord had dimly imagined that she should see something more of him, having him so near at hand, she really saw less: there was no weather, by day or night, in which he could not go to his office, now. He went no more than his wife into the village society; she might have been glad now and then of a little glimpse of the world, but she never said so, and her social life had ceased like her religious life. Their house was richly furnished according to the local taste of the time; the parlor had a Brussels carpet, and heavy chairs of mahogany and hair-cloth; Marcia had a piano there, and since she had come home from school they had made company, as Mrs. Gaylord called it, two or three times for her; but they had held aloof from the festivity, the Squire in his office, and Mrs.

Gaylord in the family-room where they now sat in unwonted companionship.

"Well, Mr. Gaylord," said his wife, "I don't know as you can say but what *Marcia's* suited well enough."

This was the first allusion they had made to the subject, but she let it take the argumentative form of her cogitations.

"M-yes," sighed the Squire, in long, nasal assent, "most too well, if anything." He rasped first one unshaven cheek and then the other, with his thin, quivering hand.

"He's smart enough," said Mrs. Gaylord, as before.

"M-yes, most too smart," replied her husband, a little more quickly than before. "He's smart enough, even if she wasn't, to see from the start that she was crazy to have him, and that isn't the best way to begin life for a married couple, if I'm a judge."

"It would killed her if she hadn't got him. I could see 'twas wearin' on her every day, more and more. She used to fairly jump, every knock she'd hear at the door; and I know sometimes, when she was afraid he wasn't coming, she used to go out, in hopes 't she sh'd meet him: I don't suppose she allowed to herself that she did it for that—*Marcia's* proud."

"M-yes," said the Squire, "she's proud. And when a proud girl makes a fool of herself about a fellow, it's a matter of life and death with her. She can't help herself. She lets go everything."

"I declare," Mrs. Gaylord went on, "it worked me up considerable to have her come in some those times, and see by her face 't she'd seen him with some the other girls. She used to *look* so! And then I'd hear her up in her room, cryin' and cryin'. I shouldn't cared so much, if *Marcia'd* been like any other girl, kind of flirty, like, about it. But she wa'n't. She was just bowed down before her idol."

A final assent came from the Squire as if wrung out of his heart, and he rose from his chair, and then sat down again. Marcia was his child, and he loved her with his whole soul.

"M-well!" he deeply sighed, "all that part's over, anyway," but he tingled in an anguish of sympathy with what she had suffered. "You see, Miranda, how she looked

at me when she first came in with him—so proud and independent, poor girl! and yet as if she was afraid I *mightn't* like it?"

"Yes, I see it."

He pulled his hat far down over his cavernous eyes, and worked his thin, rusty old jaws.

"I hope't she'll be able to school herself, so's t' not show out her feelings so much," said Mrs. Gaylord.

"I wish she could school herself so as to not have 'em so much; but I guess she'll have 'em, and I guess she'll show 'em out." They were both silent; after a while he added, throwing at the stove a minute fragment of the cane he had pulled off the seat of his chair: "Miranda, I've expected something of this sort a good while, and I've thought over what Bartley had better do."

Mrs. Gaylord stooped forward and picked up the bit of wood which her husband had thrown down; her vigilance was rewarded by finding a thread on the oil-cloth near where it lay; she whipped this round her finger, and her husband continued:

"He'd better give up his paper and go into the law. He's done well in the paper, and he's a smart writer; but editing a newspaper aint any work for a *man*. It's all well enough as long as he's single, but when he's got a wife to look after, he'd better get down to *work*. My business is in just such a shape now that I could hand it over to him in a lump; but come to wait a year or two longer, and this young man and that one 'll eat into it, and it wont be the same thing at all. I shall want Bartley to push right along, and get admitted at once. He can do it, fast enough. He's bright enough," added the old man, with a certain grimness. "M-well!" he broke out, with a quick sigh, after a moment of musing. "It hasn't happened at any very bad time. I was just thinking, this morning, that I should like to have my whole time, pretty soon, to look after my property. I sha'n't want Bartley to do *that* for me. I'll give him a good start in money and in business; but I'll look after my property myself. I'll speak to him, the first chance I get."

A light step sounded on the stairs, and Marcia burst into the room, ready for her drive.

"I wanted to get a good warm before I started," she explained, stooping before the stove, and supporting herself with one hand on her father's knee. There had been no formal congratulations upon her engagement from either of her parents; but this was not equisite, and would have been a little affected: they were perhaps now ashamed to mention it outright before her alone. The Squire, however, went so far as to put his hand over the

hand she had laid upon his knee, and to smooth it twice or thrice.

"You going to ride after that sorrel colt of Bartley's?" he asked.

"Of course!" she answered, with playful pertness. "I guess Bartley can manage the sorrel colt! He's never had any trouble yet."

"He's always been able to give his whole mind to him before," said the Squire. He gave Marcia's hand a significant squeeze, and let it go.

She would not confess her consciousness of his meaning at once. She looked up at the clock, and then turned and pulled her father's watch out of his waistcoat pocket, and compared the time. "Why, you're both fast!"

"Perhaps Bartley's slow," said the Squire, and having gone as far as he intended in this direction, he permitted himself a low chuckle.

The sleigh-bells jingled without, and she sprang lightly to her feet. "I guess you don't think Bartley's slow," she exclaimed, and hung over her father long enough to rub her lips against his bristly cheek. "Bye, mother," she said, over her shoulder, and went out of the room. She let her muff hang as far down in front of her as her arms would reach, in a stylish way, and moved with a little rhythmic tilt, as if to some inner music. Even in her furs she was elegantly slender in shape.

The old people remained silent and motionless till the clash of the bells died away. Then the Squire rose, and went to the wood-shed beyond the kitchen, whence he re-appeared with an armful of wood. His wife started at the sight. "Mr. Gaylord, what *be* you doin'?"

"Oh, I'm going to make 'em up a little fire in the parlor stove. I guess they wont want us round a great deal, when they come back."

"Well, I never did!" said Mrs. Gaylord. When her husband returned from the parlor, she added, "I suppose some folks'd say it was rather of a strange way of spendin' the Sabbath."

"It's a very good way of spending the Sabbath. You don't suppose that any of the people in church are half as happy, do you? Why, old Jonathan Edwards himself used to allow 'all proper opportunity' for the young fellows that came to see his girls, 'and a room and fire, if needed.' His 'Life' says so."

"I guess he didn't allow it on the Sabbath," retorted Mrs. Gaylord.

"Well, the 'Life' don't say," chuckled the Squire. "Why, Miranda, I do it for Marcia! There's never but one first day to an engagement. You know that as well as I do." In saying this, Squire Gaylord gave way to his repressed emotion in an extravagance. He

suddenly stooped over and kissed his wife; but he spared her confusion by going out to his office at once, where he staid the whole afternoon.

Bartley and Marcia took the "Long Drive," as it was called, at Equity. The road plunged into the darkly wooded gulch beyond the house, and then struck away eastward, crossing loop after loop of the river on the covered bridges, where the neighbors, who had broken it out with their ox-teams in the open, had thickly bedded it in snow. In the valleys and sheltered spots it remained free and so wide that encountering teams could easily pass each other, but where it climbed a hill, or crossed a treeless level, it was narrowed to a single track, with turn-outs at established points, where the drivers of the sleighs waited to be sure that the stretch beyond was clear before going forward. In the country, the winter which held the village in such close siege was an occupation under which Nature seemed to cower helpless, and men made a desperate and ineffectual struggle. The houses, banked up with snow almost to the sills of the windows that looked out, blind with frost, upon the lifeless world, were dwarfed in the drifts, and seemed to founder in a white sea blotched with strange bluish shadows under the slanting sun. Where they fronted close upon the road, it was evident that the fight with the snow was kept up unrelentingly; spaces were shoveled out, and paths were kept open to the middle of the highway, and to the barn; but where they were somewhat removed, there was no visible trace of the conflict, and no sign of life except the faint, wreathed lines of smoke wavering upward from the chimneys.

In the hollows through which the road passed, the lower boughs of the pines and hemlocks were weighed down with the snow-fall till they lay half-submerged in the drifts, but wherever the wind could strike them, they swung free of this load and met in low, flat arches above the track. The river betrayed itself only when the swift current of a ripple broke through the white surface in long, irregular, grayish blurs. It was all wild and lonesome, but to the girl alone in it with her lover, the solitude was sweet, and she did not wish to speak even to him. His hands were both busy with the reins, but it was agreed between them that she might lock hers through his arm. Cowering close to him under the robes, she laid her head on his shoulder and looked out over the flying landscape in measureless content, and smiled, with filling eyes, when he bent over, and warmed his cold red cheek on the top of her fur cap.

The moments of bliss that silence a woman rouse a man to make sure of his rapture.

"How do you like it, Marsh?" he asked, trying at one of these times to peer round into her face. "Are you afraid?"

"No—only of getting back too soon."

He made the shivering echoes answer with his delight in this, and chirruped to the colt, who pushed forward at a wilder speed, flinging his hoofs out before him with the straight thrust of the born trotter, and seeming to overtake them as they flew.

This set him off again. "I should like this ride to last forever!"

"Forever!" she repeated. "That would do for a beginning."

"Marsh! What a girl you are! I never supposed you would be so free to let a fellow know how much you cared for him."

"Neither did I," she answered, dreamily. "But now—now the only trouble is that I don't know *how* to let him know." She gave his arm to which she clung a little convulsive clutch, and pressed her head harder upon his shoulder.

"Well, that's pretty much my complaint, too," said Bartley, "though I couldn't have expressed it so well."

"Oh, *you* express!" she murmured, with the pride in him which implied that there were no thoughts worth expressing to which he could not give a monumental utterance. Her adoration flattered his self-love to the same passionate intensity, and to something like the generous complexion of her worship. "Marcia," he answered, "I am going to try to be all you expect of me. And I hope I shall never do anything unworthy of your ideal."

She could only press his arm again in speechless joy, but she said to herself that she should always remember these words.

The wind had been rising ever since they started, but they had not noticed it till now when the woods began to thin away on either side, and he stopped before striking out over one of the naked stretches of the plain—a white waste swept by the blasts that sucked down through a gorge of the mountain, and flattened the snow-drifts as the tornado flattens the waves. Across this expanse ran the road, its stiff lines obliterated here and there, in the slight depressions, and showing dark along the rest of the track. It was a good half-mile to the next body of woods, and midway, there was one of those sidings where a sleigh approaching from the other quarter must turn out and yield the right of way. Bartley stopped his colt, and scanned the road.

"Anybody coming?" asked Marcia.

"No, I don't see any one. But if there's any one in the woods yonder, they'd better

wait till I get across: No horse in Equity can beat this colt to the turn-out."

"Oh, well, look carefully, Bartley. If we meet any one beyond the turn-out, I don't know what I should do," pleaded the girl.

"I don't know what *they* would do," said Bartley. "But it's their lookout, now, if they come. Wrap your face up well, or put your head under the robe. I've got to hold my breath the next half-mile." He loosed the reins, and sped the colt out of the shelter where he had halted. The wind struck them like an edge of steel, and catching the powdery snow that their horse's hoofs beat up, sent it spinning and swirling far along the glistening levels on their lee. They felt the thrill of the go as if they were in some light boat leaping over a swift current. Marcia disdained to cover her face, if he must confront the wind, but after a few gasps she was glad to bend forward, and bury it in the long hair of the bear-skin robe. When she lifted it, they were already past the siding, and she saw a cutter dashing toward them from the cover of the woods. "Bartley!" she screamed, "the sleigh!"

"Yes," he shouted. "Some fool! There's going to be trouble, here," he added, checking his horse as he could. "They don't seem to know how to manage— It's a couple of women! Hold on, hold on!" he called. "Don't try to turn out: I'll turn out!"

The women pulled their horse's head this way and that, in apparent confusion, and then began to turn out into the trackless snow at the road-side, in spite of Bartley's frantic efforts to arrest them. They sank deeper and deeper into the drift; their horse plunged and struggled, and then their cutter went over, amidst their shrieks and cries for help.

Bartley drove up abreast of the wreck, and saying, "Still, Jerry! Don't be afraid, Marcia," he put the reins into her hands, and sprang out to the rescue.

One of the women had been flung out free of the sleigh, and had already gathered herself up, and stood crying and wringing her hands: "Oh, Mr. Hubbard, Mr. Hubbard! Help Sally! She's under there!"

"All right! Keep quiet, Mrs. Morrison! Take hold of your horse's head!" Bartley had first of all seized him by the bit, and pulled him to his feet; he was old and experienced in obedience, and he now stood waiting orders, patiently enough. Bartley seized the cutter, and by an effort of all his strength righted it. The colt started and trembled, but Marcia called to him in Bartley's tone, "Still, Jerry!" and he obeyed her.

The girl who had been caught under the overturned cutter, escaped like a wild thing

out of a trap, when it was lifted, and plunging some paces away, faced round upon her rescuer with the hood pulled straight and set comely to her face again, almost before he could ask: "Any bones broken, Sally?"

"No!" she shouted. "Mother! Mother! Stop crying! Don't you see I'm not dead?" She leaped about, catching up this wrap and that, shaking the dry snow out of them, and flinging them back into the cutter, while she laughed in the wild tumult of her spirits. Bartley helped her pick up the fragments of the wreck, and joined her in her making fun of the adventure. The wind hustled them, but they were warm in defiance of it with their jollity and their bustle.

"Why didn't you let me turn out?" demanded Bartley, as he and the girl stood on opposite sides of the cutter, re-arranging the robes in it.

"Oh, I thought I could turn out, well enough. You had a right to the road."

"Well, the next time you see any one past the turn-out, you better not start from the woods."

"Why, there's no more room in the woods to get past than there is here," cried the girl.

"There's more shelter."

"Oh, I'm not cold!" She flashed a look at him from her brilliant face, warm with all the glow of her young health, and laughed, and before she dropped her eyes, she included Marcia in her glance. They had already looked at each other without any sign of recognition. "Come, mother! All right, now!"

Her mother left the horse's head, and heavily plowing back to the cutter, tumbled herself in. The girl, from her side, began to climb in, but her weight made the sleigh careen, and she dropped down with a gay shriek.

Bartley came round to her, and lifted her in; the girl called to her horse, and drove up into the road and away.

Bartley looked after her a moment, and continued to glance in that direction when he stood stamping the snow off his feet, and brushing it from his legs and arms, before he remounted to Marcia's side. He was excited, and talked rapidly and loudly, as he took the reins from Marcia's passive hold, and let the colt out. "That girl is the pluckiest fool, yet! Wouldn't let me turn out because I had the right of way! And she wasn't going to let anybody else have a hand in getting that old ark of theirs afloat again. Good their horse wasn't anything like Jerry! How well Jerry behaved! Were you frightened, Marsh?" He bent over to see her face, but she had not her head on his shoulder, and she did not sit close to him, now. "Did you freeze?"

"Oh, no! I got along very well," she answered, drily, and edged away as far as the width of the seat would permit. "It would have been better for you to lead their horse up into the road, and then she could have got in without your help. Her mother got in alone."

He took the reins into his left hand, and passing his strong right around her, pulled her up to his side. She resisted, with diminishing force; at last she ceased to resist, and her head fell passively to its former place on his shoulder. He did not try to speak any word of comfort; he only held her close to him; when she looked up as they entered the village, she confronted him with a brilliant smile that ignored her tears.

But that night, when she followed him to the door, she looked him searchingly in the eyes. "I wonder if you really do despise me, Bartley?" she asked.

"Certainly," he answered, with a jesting smile. "What for?"

"For showing out my feelings so. For not even trying to pretend not to care everything for you."

"It wouldn't be any use, your trying: I should know that you did, any way."

"Oh, don't laugh, Bartley, don't laugh! I don't believe that I ought to. I've heard that it makes people tired of you. But I can't help it—I can't help it. And if—if you think I'm always going to be so; and that I'm going to keep on getting worse and worse, and making you so unhappy, why you'd better break your engagement now—while you have a chance."

"What have you been making me unhappy about, I should like to know? I thought I'd been having a very good time."

She hid her face against his breast. "It almost *killed* me to see you there with her! I was so cold,—my hands were half-frozen, holding the reins,—and I was so afraid of the colt I didn't know what to do; and I had been keeping up my courage on your account; and you seemed so long about it all; and she could have got in perfectly well—as well as her mother did—without your help —" Her voice broke in a miserable sob, and she clutched herself tighter to him.

He smoothed down her hair with his hand. "Why, Marsh! Did you think that made me unhappy? I didn't mind it a bit. I knew what the trouble was, at the time; but I wasn't going to say anything. I knew you would be all right as soon as you could think it over. You don't suppose I care anything for that girl?"

"No," answered a rueful sob. "But I *wish* you didn't have anything to do with her. I know she'll make trouble for you, somehow."

"Well," said Bartley, "I can't very well turn her off as long as she does her work. But you needn't be worried about making me unhappy. If anything, I rather liked it. It showed me how much you *did* care for me." He bent down toward her with a look of bright raillery, and took her into his arms for the parting kiss. "Now then: once, twice, three times—and good-night it is!"

VI.

THE spectacle of a love-affair in which the woman gives more of her heart than the man gives of his is so pitiable that we are apt to attribute a kind of merit to her, as if it were a voluntary self-sacrifice for her to love more than her share. Not only other men, but other women look on with this canonizing compassion; for women have a lively power of imagining themselves in the place of any sister who suffers in matters of sentiment, and are eager to espouse the common cause in commiserating her. Each of them pictures herself similarly wronged or slighted by the man she likes best, and feels how cruel it would be if he were to care less for her than she for him; and for the time being, in order to realize the situation, she loads him with all the sins of omission proper to the culprit in the alien case. But possibly there is a compensation in merely loving, even where the love given is out of all proportion to the love received.

If Bartley Hubbard's sensations and impressions of the day had been at all reasoned, that night as he lay thinking it over, he could unquestionably have seen many advantages for Marcia in the affair—perhaps more than for himself. But to do him justice he did not formulate these now, or in anywise explicitly recognize the favors he was bestowing. At twenty-six one does not naturally compute them in musing upon the girl to whom one is just betrothed; and Bartley's mind was a confusion of pleasure. He liked so well to think how fond of him Marcia was, that it did not occur to him then to question whether he were as fond of her. It is possible that as he drowsed, at last, there floated airily through the consciousness which was melting and dispersing itself before the approach of sleep, an intimation from somewhere to some one that perhaps the affair need not be considered too seriously. But in that mysterious limbo, one cannot be sure of what is thought and what is dreamed; and Bartley always acquitted himself, and probably with justice, of any want of seriousness.

What he did make sure of when he woke was that he was still out of sorts, and that he

had again that dull headache; and his instant longing for sympathy did more than anything else to convince him that he really loved Marcia, and had never, in his obscurest or remotest feeling, swerved in his fealty to her. In the atmosphere of her devotion yesterday, he had so wholly forgotten his sufferings that he had imagined himself well; but now he found that he was not well, and he began to believe that he was going to have what the country people call a fit of sickness. He felt that he ought to be taken care of, that he was unfit to work; and in his vexation at not being able to go to Marcia for comfort—it really amounted to nothing less—he entered upon the day's affairs with fretful impatience.

The "Free Press" was published on Tuesdays, and Monday was always a busy time of preparation. The hands were apt also to feel the demoralization that follows a holiday even when it has been a holy day. The girls who set the type of the "Free Press" had by no means foregone the rights and privileges of their sex in espousing their art, and they had their beaux on Sunday night like other young ladies. It resulted that on Monday morning they were nervous and impatient, alternating between fits of giggling delight in the interchange of fond reminiscences and the crossness which is pretty sure to disfigure human behavior from want of sleep. But ordinarily Bartley got on very well with them. In spite of the assumption of equality between all classes in Equity, they stood in secret awe of his personal splendor, and the tradition of his achievements at college and in the great world, and a flattering joke or a sharp sarcasm from him went a great way with them. Besides he had an efficient lieutenant in Henry Bird, the young printer who had picked up his trade in the office, and who acted as Bartley's foreman, so far as the establishment had an organization. Bird had industry and discipline which were contagious and that love of his work which is said to be growing rare among artisans in the modern subdivision of trades. This boy—for he was only nineteen—worked at his craft early and late out of pleasure in it. He seemed one of those simple, subordinate natures which are happy in looking up to whatever assumes to be above them. He exulted to serve in a world where most people prefer to be served, and it is uncertain whether he liked his work better for its own sake, or Bartley's, for whom he did it. He was slight and rather delicate in health, and it came natural for Bartley to patronize him. He took him on the long walks of which he was fond and made him in some sort his humble confidant, talking to him of himself and his plans with large and braggart

vagueness. He depended upon Bird in a great many things, and Bird never failed him; for he had a basis of constancy that was immovable. "No," said a philosopher from a neighboring logging-camp, who used to hang about the printing-office a long time after he had got his paper, "there aint a great deal of natural push about Henry; but he stays put." In the confidences which Bartley used to make Bird, he promised that when he left the newspaper for the law, he would see that no one else succeeded him. The young fellow did not need this promise to make him Bartley's fast friend, but it colored his affection with ambitious enthusiasm; to edit and publish a newspaper—his dreams did not go beyond that: to devote it to Bartley's interest in the political life on which Bartley often hinted he might enter—that would be the sweetest privilege of realized success. Bird already wrote paragraphs for the "Free Press," and Bartley let him make up a column of news from the city exchanges, which was partly written and partly selected.

Bartley came to the office rather late on Monday morning, bringing with him the papers from Saturday night's mail, which had lain unopened over Sunday, and went directly into his own room, without looking into the printing-office. He felt feverish and irritable, and he resolved to fill up with selections and let his editorial paragraphing go, or get Bird to do it. He was tired of the work, and sick of Equity; Marcia's face seemed to look sadly in upon his angry discontent, and he no longer wished to go to her for sympathy. His door opened, and without glancing from the newspaper which he held up before him, he asked:

"What is it, Bird? Do you want copy?"

"Well, no, Mr. Hubbard," answered Bird, "we have copy enough for the force we've got this morning."

"Why, what's up?" demanded Bartley, dropping his paper.

"Lizzie Sawyer has sent word that she is sick, and we haven't heard or seen anything of Sally Morrison."

"Confound the girls!" said Bartley, "there's always something the matter with them." He rubbed his hand over his forehead, as if to rub out the dull pain there. "Well," he said, "I must go to work myself, then." He rose, and took hold of the lapels of his coat, to pull it off; but something in Bird's look arrested him. "What is it?" he asked.

"Old Morrison was here, just before you came in, and said he wanted to see you. I think he was drunk," said Bird, anxiously. "He said he was coming back again."

"All right; let him come," replied Bartley. "This is a free country—especially in Equity. I suppose he wants Sally's wages raised, as usual. How much are we behind on the paper, Henry?"

"We're not a great deal behind, Mr. Hubbard, if we were not so weak-handed."

"Perhaps we can get Sally back, during the forenoon. At any rate we can ask her honored parent, when he comes."

Where Morrison got his liquor was a question that agitated Equity from time to time, and baffled the officer of the law empowered to see that no strong drink came into the town. Under conditions which made it impossible even in the logging-camps, and rendered the sale of spirits too precarious for the apothecary, who might be supposed to deal in them medicinally, Morrison never failed of his spree when the mysterious mechanism of his appetite enforced it. Probably it was some form of bedevilled cider that supplied the material of his debauch; but even cider was not easily to be had.

Morrison's spree was a movable feast, and recurred at irregular intervals of two, or three, or even six weeks, but it recurred often enough to keep him poor, and his family in a social outlawry against which the kindly instincts of their neighbors struggled in vain. Mrs. Morrison was that pariah who in a village like Equity cuts herself off from hope by taking in washing; and it was a decided rise in the world for Sally, a wild girl at school, to get a place in the printing-office. Her father had applied for it humbly enough at the tremulous and penitent close of one of his long sprees, and was grateful to Bartley for taking the special interest in her which she reported at home.

But the independence of a drunken shoemaker is proverbial, and Morrison's meek spirit soared into lordly arrogance with his earliest cups. The first warning which the community had of his change of attitude was the conspicuous and even defiant closure of his shop, and the scornful rejection of custom, however urgent or necessitous. All Equity might go in broken shoes, for any patching or half-soling the people got from him. He went about collecting his small dues, and paying up his debts, as long as the money lasted, in token of his resolution not to take any favors from any man thereafter. Then he retired to his house on one of the by-streets, and by degrees drank himself past active offense. It was of course in his defiant humor that he came to visit Bartley, who had learned to expect him whenever Sally failed to appear promptly at her work. The affair was always easily arranged. Bartley instantly assented,

with whatever irony he liked, to Morrison's demands; he refused with overwhelming politeness even to permit him to give himself the trouble to support them by argument; he complimented Sally inordinately as one of the most gifted and accomplished ladies of his acquaintance, and inquired affectionately after the health of each member of the Morrison family. When Morrison rose to go he always said, in shaking hands: "Well, sir, if there was more like you in Equity a poor man could get along. You're a gentleman, sir." After getting some paces away from the street-door, he stumbled back up the stairs to repeat "You're a gentleman!" Sally came during the day, and the wages remained the same: neither of the contracting parties regarded the increase so elaborately agreed upon, and Morrison, on becoming sober, gratefully ignored the whole transaction, though by a curious juggle of his brain, he recurred to it in his next spree, and advanced in his new demand from the last rise: his daughter was now nominally in receipt of an income of forty dollars a week, but actually accepted four.

Bartley, on his part, enjoyed the business as an agreeable excitement and a welcome relief from the monotony of his office life. He never hurried Morrison's visits, but amused himself by treating him with the most flattering distinction, and baffling his arrogance by immediate concession. But this morning when Morrison came back, with a front of uncommon fierceness, he merely looked up from his newspapers, to which he had recurred, and said coolly, "Oh, Mr. Morrison! Good-morning. I suppose it's that little advance that you wish to see me about. Take a chair. What is the increase you ask this time? Of course I agree to anything."

He leaned forward, pencil in hand, to make a note of the figure Morrison should name, when the drunkard approached and struck the table in front of him with his fist, and blazed upon Bartley's face, suddenly uplifted, with his blue crazy eyes.

"No, sir! I won't take a seat, and I don't come on no such business! No, sir!" He struck the table again, and the violence of his blow upset the inkstand. Bartley saved himself by suddenly springing away.

"Hullo, here!" he shouted. "What do you mean by this infernal nonsense?"

"What do *you* mean," retorted the drunkard, "by makin' up to my girl?"

"You're a fool," cried Bartley, "and drunk!"

"I'll show you whether I'm a fool, and I'll show you whether I'm drunk," said Morrison. He opened the door and beckoned to Bird with an air of mysterious authority. "Young man! Come here!"

Bird was used to the indulgence with which Bartley treated Morrison's tipsy freaks, and supposed that he had been called by his consent to witness another agreement to a rise in Sally's wages. He came quickly to help get Morrison out of the way the sooner, and he was astonished to be met by Bartley with:

"I don't want you, Bird."

"All right," answered the boy, and he turned to go out of the door. But Morrison had planted himself against it, and he waved Bird austere back.

"I want you," he said, with drunken impressiveness, "for a witness—wick—witness—while I ask Mr. Hubbard what he means by —"

"Hold your tongue!" cried Bartley. "Get out of this!" He advanced a pace or two toward Morrison, who stood his ground without swerving.

"Now you—you keep quiet, Mr. Hubbard," said Morrison, with a swift drunken change of mood, by which he passed from arrogant denunciation to a smooth, patronizing mastery of the situation. "I wish this thing all settled amic—ic—amelcably."

Bartley broke into a helpless laugh at Morrison's final failure on a word difficult to sober tongues, and the latter went on: "No casion for bad feeling on either side. All I want know is, what you mean?"

"Well, go on!" cried Bartley, good-naturedly, and he sat down in his chair, which he tilted back, and clasping his hands behind his head, looked up into Morrison's face. "What do I mean by what?"

Probably Morrison had not expected to be categorical, or to bring anything like a bill of particulars against Bartley, and this demand gave him pause. "What you mean," he said, at last, "by always praising her up, so?"

"What I said. She's a very good girl, and a very bright one. You don't deny that?"

"No—no matter what I deny. What—what you lend her all them books for?"

"To improve her mind. You don't object to that? I thought you once thanked me for taking an interest in her."

"Don't you mind what I object to, and what I thank you for," said Morrison, with dignity. "I know what I'm about."

"I begin to doubt. But get on. I'm in a great hurry this morning," said Bartley.

Morrison seemed to be making a mental examination of his stock of charges, while the strain of keeping his upright position began to tell upon him, and he swayed to and fro against the door.

"What's that word you sent her by my boy, Sat'day night?"

"That she was a smart girl, and would be sure to get on if she was good—or words to that effect. I trust there was no offense in that, Mr. Morrison?"

Morrison surrendered himself to another season of cogitation, in which he probably found his vagueness growing upon him. He ended by fumbling in all his pockets, and bringing up from the last a crumpled scrap of paper.

"What you—what you say to that?"

Bartley took the extended scrap with an easy air. "Miss Morrison's handwriting, I think." He held it up before him and read aloud, "'I love my love with an H because he is Handsome.' This appears to be a confidence of Miss Morrison to her Muse. Whom do you think she refers to, Mr. Morrison?"

"What's—what's the first letter your name?" demanded Morrison, with an effort to collect his dispersing severity.

"B," promptly replied Bartley. "Perhaps this concerns you, Henry. Your name begins with an H." He passed the paper up over his head to Bird, who took it silently. "You see," he continued, addressing Bird, but looking at Morrison, as he spoke, "Mr. Morrison wishes to convict me of an attempt upon Miss Sally's affections. Have you anything else to urge, Mr. Morrison?"

Morrison slid at last from his difficult position into a convenient chair, and struggled to keep himself from doubling forward. "I want know what you mean," he said with dogged iteration.

"I'll show you what I mean," said Bartley with an ugly quiet, while his mustache began to twitch. He sprang to his feet and seized Morrison by the collar, pulling him up out of the chair till he held him clear of the floor, and opened the door with his other hand. "Don't show your face here again—you, or your girl either!" Still holding the man by the collar, he pushed him before him through the office, and gave him a final thrust out of the outer door.

Bartley returned to his room in a white heat: "Miserable tipsy rascal!" he panted. "I wonder who has set him on to this thing."

Bird stood pale and silent, still holding the crumpled scrap of paper in his hand.

"I shouldn't be surprised if that impudent little baggage herself had put him up to it. She's capable of it," said Bartley, fumbling aimlessly about on his table, in his wrath, without looking at Bird.

"It's a lie!" said Bird.

Bartley started as if the other had struck him, and as he glared at Bird, the anger went out of his face, for pure amazement. "Are you out of your mind, Henry?" he asked

calmly. "Perhaps you're drunk too, this morning? The devil seems to have got into pretty much everybody."

"It's a lie!" repeated the boy, while the tears sprang to his eyes. "She's as good a girl as Marcia Gaylord is, any day!"

"Better go away, Henry," said Bartley with a deadly sort of gentleness.

"I'm going away," answered the boy, his face twisted with weeping. "I've done my last day's work for *you*." He pulled down his shirt-sleeves, and buttoned them at the wrists, while the tears ran out over his face: helpless tears, the sign of his womanish tenderness, his womanish weakness.

Bartley continued to glare at him. "Why, I do believe you're in love with her yourself, you little fool!"

"Oh, I've *been* a fool!" cried Bird. "A fool to think as much of you as I always have—a fool to believe that you were a gentleman, and wouldn't take a mean advantage. I was a fool to suppose you wanted to do her any good, when you came praising and flattering her, and turning her head!"

"Well, then," said Bartley, with harsh insolence, "don't you be a fool any longer. If you're in love with her, you haven't any quarrel with me, my boy. She flies at higher game than humble newspaper editors. The head of Willett's lumbering gang is your man; and so you may go and tell that old sot, her father. Why, Henry! You don't mean to say you care anything for that girl?"

"And do you mean to say you haven't done everything you could, to turn her head, since she's been in this office? She used to like me well enough at school." All men are blind and jealous children alike, when it comes to question of a woman between them, and this poor boy's passion was turning him into a tiger. "Don't come to *me* with your lies, any more!" Here his rage culminated, and with a blind cry of "Ay!" he struck the paper, which he had kept in his hand, into Bartley's face.

The demons, whatever they were, of anger, shame, pride, were at work in Bartley's heart too, and he returned the blow as instantly as if Bird's touch had set the mechanism of his arm in motion. In contempt of the other's weakness he struck with the flat of his hand; but the blow was enough. Bird fell headlong, and the concussion of his head upon the floor did the rest. He lay senseless.

VII.

BARTLEY hung over the boy with such a terror in his soul as he had never had before.

He believed that he had killed him, and in this conviction came, with the simultaneity of events in dreams, the sense of all his blame, of which the blow given for a blow seemed the least part. He was not so wrong in that as he was wrong in all that led to it. He did not abhor in himself so much the wretch who had struck his brother down as the light and empty fool who had trifled with that silly hoyden. The follies that seemed so amusing and resultless in their time had ripened to this bitter effect, and he knew that he and not she was mainly culpable. Her self-betrayal, however it came about, was proof that they were more serious with her than with him, and he could not plead to himself even the poor excuse that his fancy had been caught. Amidst the anguish of his self-condemnation, the need to conceal what he had done occurred to him. He had been holding Bird's head in his arms, and imploring him, "Henry! Henry! Wake up!" in a low husky voice; but now he turned to the door and locked it, and the lie by which he should escape sprang to his tongue. "He died in a fit." He almost believed it, as it murmured itself from his lips. There was no mark, no bruise, nothing to show that he had touched the boy. Suddenly he felt the lie choke him. He pulled down the window to let in the fresh air, and this pure breath of heaven blew into his darkened spirit and lifted there a little the vapors which were thickening in it. The horror of having to tell that lie, even if he should escape by it, all his life long, till he was a gray old man, and to keep the truth forever from his lips, presented itself to him as intolerable slavery. "Oh, my God!" he spoke aloud, "how can I bear that?" And it was in self-pity that he revolted from it. Few men love the truth for its own sake, and Bartley was not one of these; but he practiced it because his experience had been that lies were difficult to manage, and that they were a burden on the mind. He was not candid; he did not shun concealments and evasions; but positive lies he had kept from, and now he could not trust one to save his life. He unlocked the door, and ran out to find help; he must do that at last; he must do it at any risk; no matter what he said afterward. When our deeds and motives come to be balanced at the last day, let us hope that mercy and not justice may prevail.

It must have been mercy that sent the doctor at that moment to the apothecary's, on the other side of the street, and enabled Bartley to get him up into his office, without publicity or explanation other than that Henry Bird seemed to be in a fit. The doc-

tor lifted the boy's head, and explored his bosom with his hand.

"Is he—is he dead?" gasped Bartley, and the words came so mechanically from his tongue that he began to believe he had not spoken them, when the doctor answered.

"No! How did this happen? Tell me exactly."

"We had a quarrel. He struck me. I knocked him down."

Bartley delivered up the truth, as a prisoner of war—or a captive brigand, perhaps—parts with his weapons one by one.

"Very well," said the doctor. "Get some water?"

Bartley poured some out of the pitcher on his table, and the doctor, wetting his handkerchief, drew it again and again over Bird's forehead.

"I never meant to hurt him," said Bartley. "I didn't even intend to strike him when he hit me."

"Intentions have very little to do with physical effects," replied the doctor sharply. "Henry!"

The boy opened his eyes, and muttering feebly, "My head!" closed them again.

"There's a concussion here," said the doctor. "We had better get him home. Drive my sleigh over, will you, from Smith's."

Bartley went out into the glare of the sun, which beat upon him like the eye of the world. But the street was really empty, as it often was in the middle of the forenoon at Equity. The apothecary, who saw him untying the doctor's horse, came to his door, and said jocosely, "Hello, Doc! who's sick?"

"I am," said Bartley, solemnly, and the apothecary laughed at his readiness. Bartley drove round to the back of the printing-office, where the farmers delivered his wood. "I thought we could get him out better, that way," he explained, and the doctor, who had to befriend a great many concealments in his practice, silently spared Bartley's disingenuousness.

The rush of the cold air, as they drove rapidly down the street, with that limp shape between them, revived the boy, and he opened his eyes, and made an effort to hold himself erect, but he could not, and when they got him into the warm room at home, he fainted again. His mother had met them at the door of her poor little house, without any demonstration of grief or terror; she was far too well acquainted in her widowhood—bereft of all her children but this son—with sickness and death, to show even surprise, if she felt it. When Bartley broke out into his lamentable confession, "Oh, Mrs. Bird! This is *my* work!" she only wrung her hands and answered,

"Your work! Oh, Mr. Hubbard, he thought the world of *you*!" and did not ask him how or why he had done it. After they had got Henry on the bed, Bartley was no longer of use there; but they let him remain in the corner into which he had shrunk, and from which he watched all that went on, with a dry mouth and faltering breath. It began to appear to him that he was very young to be involved in a misfortune like this; he did not understand why it should have happened to him; but he promised himself that if Henry lived he would try to be a better man in every way.

After he had lost all hope, the time seemed so long, the boy on the bed opened his eyes, once more, and looked round, while Bartley still sat with his face in his hands. "Where—where is Mr. Hubbard?" he faintly asked, with a bewildered look at his mother and the doctor.

Bartley heard the weak voice, and staggered forward, and fell on his knees beside the bed. "Here, here! Here I am, Henry! Oh, Henry, I didn't intend——" He stopped at the word, and hid his face in the coverlet.

The boy lay as if trying to make out what had happened, and the doctor explained that he had fainted. After a time, he put out his hand and laid it on Bartley's head. "Yes; but I don't understand what makes him cry."

They looked at Bartley, who had lifted his head, and he went over the whole affair, except so far as it related to Sally Morrison; he did not spare himself; he had often found that strenuous self-condemnation moved others to compassion; and besides, it was his nature to seek the relief of full confession. But Henry heard him through with a blank countenance. "Don't you remember?" Bartley implored at last.

"No, I don't remember. I only remember that there seemed to be something the matter with my head, this morning."

"That was the trouble with me, too," said Bartley. "I must have been crazy—I must have been insane—when I struck you. I can't account for it."

"I don't remember it," answered the boy.

"That's all right," said the doctor. "Don't try. I guess you better let him alone, now," he added to Bartley, with such a significant look that the young man retired from the bedside, and stood awkwardly apart. "He'll get along. You needn't be anxious about leaving him. He'll be better alone."

There was no mistaking this hint. "Well, well!" said Bartley, humbly, "I'll go. But I'd rather stay and watch with him—I sha'n't eat or sleep till he's on foot again. And I can't leave till you tell me that you forgive

me, Mrs. Bird. I never dreamed—I didn't intend——” He could not go on.

“I don't suppose you meant to hurt Henry,” said the mother. “You always pretended to be so fond of him, and he thought the world of you. But I don't see how you could do it. I presume it was all right.”

“No, it was all wrong—or so nearly all wrong that I must ask your forgiveness on that ground. I loved him—I thought the world of him, too. I'd ten thousand times rather have hurt myself,” pleaded Bartley. “Don't let me go till you say that you forgive me.”

“I'll see how Henry gets along,” said Mrs. Bird. “I don't know as I could rightly say I forgive you just yet.”

Doubtless she was dealing conscientiously with herself and with him. “I like to be sure of a thing when I say it,” she added.

The doctor followed him into the hall, and Bartley could not help turning to him for consolation. “I think Mrs. Bird is very unjust, Doctor. I've done everything I could, and said everything—to explain the matter; and I've blamed myself where I can't feel that I was to blame; and yet you see how she holds out against me.”

“I dare say,” answered the doctor, dryly, “she'll feel differently, as she says, if the boy gets well.”

Bartley dropped his hat to the floor. “Get well! Why—why you think he'll get well, *now*, don't you, Doctor?”

“Oh, yes; I was merely using her words. He'll get well.”

“And—and it won't affect his mind, will it? I thought it was very strange, his not remembering anything about it——”

“That's a very common phenomenon,” said the doctor. “The patient usually forgets everything that occurred for some little time before the accident, in cases of concussion of the brain.” Bartley shuddered at the phrase, but he could not ask anything further. “What I wanted to say to you,” continued the doctor, “was that this may be a long thing, and there may have to be an inquiry into it. You're lawyer enough to understand what that means. I should have to testify to what I know, and I only know what you told me.”

“Why, you don't doubt——”

“No, sir; I've no reason to suppose you haven't told me the truth, as far as it goes. If you have thought it advisable to keep anything back from me, you may wish to tell the whole story to an attorney.”

“I haven't kept anything back, Doctor Wills,” said Bartley. “I've told you everything—everything that concerned the quarrel. That drunken old scoundrel of a Morrison got us into it. He accused me of making up

to his daughter; and Henry was jealous—I never knew he cared anything for her. I hated to tell you this before his mother. But this is the whole truth, so help me God.”

“I supposed it was something of the kind,” replied the doctor. “I'm sorry for you. You can't keep it from having an ugly look if it gets out; and it may have to be made public. I advise you to go and see Squire Gaylord; he's always stood your friend.”

“I—I was just going there,” said Bartley; and this was true.

Through all, he had felt the need of some sort of retrieval; of reestablishing himself in his own esteem, by some signal stroke; and he could think of but one thing. It was not his fault if he believed that this must combine self-sacrifice with safety, and the greatest degree of humiliation with the largest sum of consolation. He was none the less resolved not to spare himself at all in offering to release Marcia from her engagement. The fact that he must now also see her father upon the legal aspect of his case, certainly complicated the affair, and detracted from its heroic quality. He could not tell which to see first, for he naturally wished his action to look as well as possible; and if he went first to Marcia, and she condemned him, he did not know in what figure he should approach her father. If, on the other hand, he went first to Squire Gaylord, the old lawyer might insist that the engagement was already at an end by Bartley's violent act, and might well refuse to let a man in his position even see his daughter. He lagged heavy-heartedly up the middle of the street, and left the question to solve itself at the last moment. But when he reached Squire Gaylord's gate, it seemed to him that it would be easier to face the father first; and this would be the right way, too.

He turned aside to the little office, and opened the door without knocking, and as he stood with the knob in his hand, trying to habituate his eyes, full of the snow-glare, to the dimmer light within, he heard a rapturous cry of “Why, Bartley!” and he felt Marcia's arms flung around his neck. His burdened heart yearned upon her with a tenderness he had not known before; he realized the preciousness of an embrace that might be the last; but he dared not put down his lips to hers. She pushed back her head in a little wonder, and saw the haggardness of his face, while he discovered her father looking at them. How strong and pure the fire in her must be when her father's presence could not abash her from this betrayal of her love! Bartley sickened, and he felt her arms slip from his neck. “Why—why—what is the matter?”

In spite of some vaguely magnanimous in-

tention to begin at the beginning, and tell the whole affair just as it happened, Bartley found himself wishing to put the best face on it at first, and trust to chances to make it all appear well. He did not speak at once, and Marcia pressed him into a chair, and then like an eager child, who will not let its friend escape till it has been told what it wishes to know, she set herself on his knee, and put her hand on his shoulder. He looked at her father, not at her, while he spoke hoarsely: "I have had trouble with Henry Bird, Squire Gaylord, and I've come to tell you about it."

The old Squire did not speak, but Marcia repeated in amazement, "With Henry Bird?"

"He struck me ——"

"Henry Bird *struck* you!" cried the girl. "I should like to know why Henry Bird struck *you*, when you've made so much of him, and he's always pretended to be so grateful!"

Bartley still looked at her father. "And I knocked him down."

"You did perfectly right, Bartley," exclaimed Marcia, "and I should have despised you if you had let any one run over you. Struck you! I declare ——"

He did not heed her, but continued to look at her father. "I didn't intend to hurt him—I hit him with my open hand—but he fell and struck his head on the floor. I'm afraid it hurt him pretty badly." He felt the pang that thrilled through the girl at his words, and her hand trembled on his shoulder; but she did not take it away.

The old man came forward from the pile of books which he and Marcia had been dusting, and sat down in a chair on the other side of the stove. He pushed back his hat from his forehead, and asked dryly, "What commenced it?"

Bartley hesitated. It was this part of the affair which he would rather have imparted to Marcia after seeing it with her father's eyes, or possibly, if her father viewed it favorably, have had him tell her. The old man noticed his reluctance. "Hadh't you better go into the house, Marsh?"

She merely gave him a look of utter astonishment for answer, and did not move. He laughed noiselessly, and said to Bartley: "Go on."

"It was that drunken old scoundrel of a Morrison, who began it!" cried Bartley, in angry desperation. Marcia dropped her hand from his shoulder, while her father worked his jaws upon the bit of stick he had picked up from the pile of wood, and put between his teeth. "You know that whenever he gets on a spree he comes to the office and wants Sally's wages raised."

Marcia sprang to her feet. "Oh, I knew it!

I knew it! I told you she would get you into trouble! I told you so!" She stood clinching her hands, and her father bent his keen scrutiny first upon her, and then upon the frowning face with which Bartley regarded her.

"Did he come to have her wages raised to-day?"

"No."

"What did he come for?" He involuntarily assumed the attitude of a lawyer cross-questioning a slippery witness.

"He came for— He came— He accused me of— He said I had— made love to his confounded girl."

Marcia gasped.

"What made him think you had?"

"It wasn't necessary for him to have any reason. He was drunk. I had been kind to the girl, and favored her all I could, because she seemed to be anxious to do her work well; and I praised her for trying."

"Um-umph," commented the Squire. "And that made Henry Bird jealous?"

"It seems that he was fond of her. I never dreamed of such a thing, and when I put old Morrison out of the office, and came back, he called me a liar, and struck me in the face." He did not lift his eyes to the level of Marcia's, who in her gray dress stood there like a gray shadow, and did not stir or speak. "And you never had made up to the girl at all?"

"No."

"Kissed her, I suppose, now and then?" suggested the Squire.

Bartley did not reply.

"Flattered her up, and told her how much you thought of her, occasionally?"

"I don't see what that has to do with it," said Bartley with a sulky defiance.

"No, I suppose it's what you'd do with most any pretty girl," returned the Squire. He was silent awhile. "And so you knocked Henry down. What happened then?"

"I tried to bring him to, and then I went for the doctor. He revived, and we got him home to his mother's. The doctor says he will get well; but he advised me to come and see you."

"Any witnesses of the assault?"

"No; we were alone in my own room."

"Told any one else about it?"

"I told the doctor and Mrs. Bird. Henry couldn't remember it at all."

"Couldn't remember about Morrison, or what made him mad at you?"

"Nothing."

"And that's all about it?"

"Yes."

The two men had talked across the stove at each other, practically ignoring the girl, who

stood apart from them, gray in the face as her dress, and suppressing a passion which had turned her as rigid as stone.

"Now, Marcia," said her father, kindly, "better go into the house. That's all there is of it."

"No, that isn't all," she answered. "Give me my ring, Bartley. Here's yours." She slipped it off her finger, and put it into his mechanically extended hand.

"Marcia!" he implored, confronting her.

"Give me my ring, please."

He obeyed, and put it into her hand. She slipped it back on the finger from which she had so fondly suffered him to take it yesterday, and replace it with his own.

"I'll go into the house, now, father. Good-bye, Bartley." Her eyes were perfectly clear and dry, and her voice controlled; and as he stood passive before her, she took him round the neck, and pressed against his face, once, and twice, and thrice, her own gray face, in which all love and unrelenting and despair were painted. Once and again she held him, and looked him in the eyes, as if to be sure it was he. Then, with a last pressure of her face to his, she released him, and passed out of the door.

"She's been talking about you, here, all the morning," said the Squire, with a sort of quiet absence, as if nothing in particular had happened, and he were commenting on a little fact that might possibly interest Bartley. He ruminated upon the fragment of wood in his mouth awhile before he added: "I guess she won't want to talk about you any more. I drew you out a little on that Sally Morrison business, because I wanted her to understand just what kind of fellow you were. You see it isn't the trouble you've got into with Henry Bird that's killed her; it's the cause of the trouble. I guess if it had been anything else she'd have stood by you. But you see that's the one thing she couldn't bear, and I'm glad it's happened now instead of afterward: I guess you're one of that kind, Mr. Hubbard."

"Squire Gaylord!" cried Bartley, "upon my sacred word of honor, there isn't any more of this thing than I've told you. And I think it's pretty hard to be thrown over for — for —"

"Fooling with a pretty girl, when you get a chance, and the girl seems to like it? Yes, it is rather hard. And I suppose you haven't even seen her since you were engaged to Marcia?"

"Of course not! That is —"

"It's a kind of retroactive legislation on Marcia's part," said the Squire, rubbing his chin, "and that's against one of the first

principles of law. But women don't seem to be able to grasp that idea. They're queer about some things. They appear to think they marry a man's whole life—his past as well as his future, and that makes 'em particular. And they distinguish between different kinds of men. You'll find 'em pinning their faith to a fellow who's been through pretty much everything, and swearing by him from the word go; and another chap who's never *done* anything very bad, they won't trust half a minute out of their sight. Well, I guess Marcia *is* of rather a jealous disposition," he concluded, as if Bartley had urged this point.

"She's very unjust to me," Bartley began.

"Ah, yes—she's *unjust*," said her father. "I don't deny that. But it wouldn't be any use talking to her. She'd probably turn round with some excuse about what she had suffered, and that would be the end of it. She would say that she couldn't go through it again. Well, it ought to be a comfort to you to think you don't care a great deal about it."

"But I *do* care!" exclaimed Bartley. "I care all the world for it. I —"

"Since when?" interrupted the Squire. "Do you mean to say that you didn't know till you asked her yesterday that Marcia was in love with you?"

Bartley was silent.

"I guess you knew it as much as a year ago, didn't you? Everybody else did. But you'd just as soon it had been Sally Morrison, or any other pretty girl. *You* didn't care! But Marcia did, you see. She wasn't one of the kind that let any good-looking fellow make love to them. It was because it was *you*; and you knew it. We're plain men, Mr. Hubbard; and I guess you'll get over this, in time. I shouldn't wonder if you began to mend, right away."

Bartley found himself helpless in the face of this passionless sarcasm. He could have met stormy indignation or any sort of invective in kind; but the contemptuous irony with which his pretensions were treated, the cold scrutiny with which his motives were searched, was something he could not meet. He tried to pull himself together for some sort of protest, but he ended by hanging his head in silence. He always believed that Squire Gaylord had liked him, and here he was treating him like his bitterest enemy, and seeming to enjoy his misery. He could not understand it; he thought it extremely unjust, and past all the measure of his offense. This was true, perhaps; but it is doubtful if Bartley would have accepted any suffering, no matter how nicely proportioned, in pun-

ishment of his wrong-doing. He sat hanging his head, and taking his pain in rebellious silence, with a gathering hate in his heart for the old man.

"M-well!" said the Squire, at last, rising from his chair, "I guess I must be going."

Bartley sprang to his feet aghast. "You're not going to leave me in the lurch, are you? You're not——"

"Oh, I shall take care of you, young man—don't be afraid. I've stood your friend too long, and your name's been mixed up too much with my girl's, for me to let you come to shame openly, if I can help it. I'm going to see Dr. Wills, about you, and I'm going to see Mrs. Bird, and try to patch it up somehow."

"And—and—where shall I go?" gasped Bartley.

"You might go to the devil, for all I cared for you," said the old man, with the contempt which he no longer cared to make ironical.

(To be continued.)

THE FARMER OF MARSHFIELD.

THAT large bucolic life,
How simply lived, and grandly—simply,
though

Report and rumor rife
And general gaze that could not gaze its
fill

Made it a spectacle and show,
Whereof men pleased themselves with fabling
still.

He could not stay or go,
Could not at will
Unbend in casual jest, in manly sport,
But some, for love or thrift, would spread a
wide report.

The sun cannot be hid
The heavens amid,
The sun is seen, because he shines,
And the sun shines, because he is the sun.
And, sun-like, Webster's lines
Out into all the earth afar were run.

Such was the man, and so
His private life was public; all he did,
Or said, or was, was known,
And nothing could be hid;
And nothing needed, for his ways were
good,

His most unguarded ways, and safely
shown.

His noble simple ways
Supplied the speech of men with daily food
For honest praise—
Not idle, since to praise the good and fair

"But I guess you better go back to your office, and go to work as if nothing had happened—till something does happen. I shall close the paper out as soon as I can. I was thinking of doing that just before you came in. I was thinking of taking you into the law business with me. Marcia and I were talking about it, here. But I guess you wouldn't like the idea, now."

He seemed to get a bitter satisfaction out of these mockeries, from which, indeed, he must have suffered quite as much as Bartley. But he ended, sadly and almost compassionately, with, "Come, come! You must start sometime." And Bartley dragged his leaden weight out of the door. The Squire closed it after him; but he did not accompany him down the street. It was plain he did not wish to be any longer alone with Bartley, and the young man suspected, with a sting of shame, that he scorned to be seen with him.

Is to grow like through habit, unaware.
Men liked to hear and tell
How farmer's garb became the great
man well:
And everywhere the farmer felt more
space,
An ampler air, a franker grace,
Ennoble his vocation, with the thought,
He is a farmer, Webster so has wrought.
Somewhat more noble they already who
Learn to think nobly of the work they do.
So a diffusive lesson of far reach
Thy Webster taught, not studious to teach
(As too he pleased, not studious to please),
When but he slipped the customary weight
Of public duty, or the lawyer's toil,
For intervals of ease
Sought in returns to that estate
From which he sprang, swart worker in the
soil.

His way in farming all men knew;
Way wide, forecasting, free,
A liberal tilth that made the tiller poor,
That huge Websterian plow what furrows
drew!
Through fallows fattened from the barren
sea.
Yoked to that plow and matched for
mighty size,
What oxen moved!—in progress equal,
sure,
Unconscious of resistance, as of force

Not finite, elemental, like his own,
 Taking its way with unimpeded course.
 He loved to look into their meek brown
 eyes,
 That with a light of love half human
 shone
 Calmly on him from out the ample
 front,
 While, with a kind of mutual, wise,
 Mute recognition of some kin,
 Superior to surprise,
 And schooled by immemorial wont,
 They seemed to say, We let him in,
 He is of us, he is, by natural dower,
 One in our brotherhood of great and peace-
 ful power.

So, when he came to die
 At Marshfield by the sea,
 And now the end is nigh,
 Up from the pleasant lea*
 Move his dumb friends in solemn, slow,
 Funereal procession, and before
 Their master's door
 In melancholy file compassionately go;
 He will be glad to see his trusty friends
 once more.
 Now let him look a look that shall suffice,
 Lo, let the dying man
 Take all the peace he can
 From those large tranquil brows and deep
 soft eyes.
 Rest it will be to him,
 Before his eyes grow dim,
 To bathe his aged eyes in one deep gaze
 Commingled with old days,
 On faces of such friends sincere,
 With fondness brought from boyhood, dear.

* Webster, in his last illness, had his oxen driven
 up for him to view them from his window.

Farewell, a long look and the last,
 And these have turned and passed.
 Henceforth he will no more,
 As was his wont before,
 Step forth from yonder door
 To taste the freshness of the early dawn,
 The whiteness of the sky,
 The whitening stars on high,
 The dews yet white that lie
 Far spread in pearl upon the glimmering
 lawn;
 Never at evening go,
 Sole pacing to and fro,
 With musing step and slow,
 Beneath the cope of heaven set thick with
 stars,
 Considering by whose hand
 Those works, in wisdom planned,
 Were fashioned, and still stand
 Serenely fast and fair above these earthly jars.
 Never again. Forth he will soon be
 brought
 By neighbors that have loved him, having
 known,
 Plain farmers, with the farmer's natural
 thought
 And feeling, sympathetic to his own.
 All in a temperate air, a golden light,
 Rich with October, sad with afternoon,
 Fitly let him be laid, with rustic rite,
 To rest amid the ripened harvest boon.
 He loved the ocean's mighty murmur deep,
 And this shall lull him through his dream-
 less sleep.
 But those plain men will speak above his
 head,
 "This is a lonesome world, and Webster
 dead!"*

* A farmer of the neighborhood leaned over the bier,
 just before the body was lowered into the grave, with
 this ejaculation.

A LISTENER BY THE SEA.

LAST night I lay beside the winter sea,
 And, waking late, I heard the sound without
 Of rain, and heard far off the wild sea shout
 Beyond the town—a lonesome melody.
 Heaving with ebb and flow, eternally
 Along the rocky coast it pours its rout
 Of waves, with constant roar, as of some stout,
 Hoar monster, fierce with grief or savage glee.
 Dark Afric hears, methought, that thunder-sound,
 And Indian rivers; lone Pacific isles,
 Trembling do hear it; from unnumbered miles
 Arising, as the brown earth wheels its round,
 It with vast whisper grieves the pale moon's height.
 With how great songs, O God, Thou fill'st the night.

THE CAVERNS OF LURAY.

ON THE WAY TO THE CAVERNS.

THAT the underlying limestones of Page County, Virginia, were penetrated by crevices, horizontal cracks, and some caverns of respectable size, has long been known. The general valley of the Shenandoah is here badly broken up. At Riverton two streams unite to form the main river. Between them lies the Massanutton mountain—an isolated range parallel with the neighboring chain, and dividing their water-sheds. Inclosed by it and the Blue Ridge, and drained by the South Fork of the Shenandoah, lies the Page Valley, with the small village of Luray, as county seat, in the center.

Page Valley is here several miles wide, and the surface is diversified by an endless series of knolls, ridges, rocky outcroppings, and deeply imbedded streams. "The rocks throughout the whole of this region have been much displaced, having been flexed into great folds, the direction of which coincides with that of the Appalachian mountain-chain. In fact, these folds are a remnant of the results of that series of movements in which the whole system primarily originated." Hidden

den in the woods near the top of one of these hills, about a mile east of Luray, an old cave has always been known to exist. Connected with it are traditions which reach back to the Ruffners, the earliest settlers of the valley. Peter Ruffner the First was a Hanoverian, who married the daughter of a wealthy Pennsylvania farmer, and moved down into this wilderness, where he possessed himself of a large tract of land and raised fifteen children. His eldest son, Peter the Second, also got him a wife and fifteen children, so that the colonization of the valley proceeded with great rapidity. One of this first generation of Ruffners went out hunting one day, and did not come back. At the end of nearly a week's search, his gun and powder-horn were found at the mouth of this cave, within which the famished and nearly dead man was at last discovered. Of course nothing less could be done than to call it Ruffner's Cave, which is printed on all the maps in attestation of the truth of this history.

Knowing something of this cave, in the summer of 1878 Mr. B. P. Stebbins conceived

PORCH OF RUST HOUSE.

the project of a more complete exploration of it, with a view of making it an object of interest to tourists, and he invited the coöperation of the brothers Andrew and William E. Campbell. These gentlemen declined to go into the old cave, but were ready to engage in a search for a new one, and it was finally agreed to form a "company" for that purpose. Together they went ranging over the hills on both sides of the valley, across the fields and in and out of the abundant and tangled woods, examining every depression, peering into all the dark corners, stooping under rocky ledges from which the rattlesnake had first to be expelled, enlarging holes from which scared foxes darted in dismay or in which they drew their skins into a minimum of bulk, hiding their bushy tails and skulking in the uttermost end of their half-natural burrow. They parted thickets only to find that they did not hide the coveted prize, which, unlike most prizes, would have an increased value in proportion to its hollowness! Nearly four weeks spent in fruitless search had its only effect in exciting the astonishment and ridicule of their neigh-

bors, when, returning one August day from a long tramp, they approached home over the hill where Ruffner's Cave was. In the cleared land on the northern slope, a couple of hundred yards or so from the mouth of the old cave, was a sink-hole choked with weeds, bushes and an accumulation of rails and loose stones which, for generations back, farmers had been accustomed to toss in there out of the way. It occurred to them that this suspicious hollow was worth investigation. Clearing away some of the rubbish, they fancied they felt currents of cool air sifting up through. Laboriously tumbling out the boulders, Mr. Andrew Campbell was finally able to descend by the aid of a rope into a black abyss, which was not bottomless, however, for he soon let go of the rope and left his companions on the surface to their conjectures. Becoming uneasy at his long absence, his brother also de-

COTTAGE AT ENTRANCE OF CAVE.

BRODDUS'S LAKE.

scended, and together the men walked in a lofty passage for several rods, where their progress was stopped by water. Returning, they told Mr. Stebbins what they had seen, and all agreed upon a policy of silence until the property could be bought. Then they went home and dreamed of "millions in it." Such was the discovery of the Luray Cave.

Dreams are but a "baseless fabric." The property was bought of a bankrupted owner, at sheriff's sale, but upon an intimation of its under-ground value, one of the relatives of the original owner sued for recovery upon an irregularity in the sale, and after two years of tedious litigation, in which the case was carried to the highest court, he won his suit. Previously, a company of Northern gentlemen, most of them also interested in the local railway, formed a joint-stock company to purchase the property, and it passed into their hands in the spring of 1881. But during the two years, the original cost had swelled, and the early visions had dwindled, until they met at \$40,000. This is the history of the "wonder," and now we are ready to enter it.

The ground rises only a trifle from the level of the valley to the hill, and on the

open slope stands a house with porticoes all around, conspicuous in fresh paint, and having a public air about it. There is the ordinary appearance of public waiting-rooms about this house, but, unlike most houses, the great interest of it lies in its cellar. Registering your name, your guide gives you a tin frame much like a scoop-shovel, held upright by a handle at the back, which holds in front three lighted candles. He opens an inner door, and you follow him down a staircase of masonry, and before you grasp the idea that your adventures have begun, you find yourself in the large antechamber of the caverns. This unpremeditated, unintentional entrance is as though you had been dropped in the midst of it, or had waked from a sleep there, and is most effectual in putting the stranger *en rapport* with the spirit of astonishment which he must feign, if (by reason of any sad defect in his constitution) it is lacking, in order to maintain his reputation in this locality as a respectable person. At the same time the truth is pressed upon your mind, that this cavern is not in the side of a mountain, as your preconception of it would suggest, but underneath one of the low hills which

diversify the surface of the valley, and which remain from the hollowing out of all the valleys, and the production of the mountains four or five miles distant on either side; and the cave "has no obvious relation with them, except that its origin was partly coincident with their origin, and with the excavation of the valley by erosion."

When the Campbells first entered this antechamber, which is about as large as an ordinary barn, they were able to follow a narrowing extension of it only a little way, when, as I have said, they were stopped by water. Some weeks later, in order to make a second exploration, they took a small boat with them, but found that the water had nearly dried away. We can now walk across on a causeway of clay for twenty-five or thirty yards, past the Vegetable Garden, the Bear Scratches, the Theater, the Gallery, over Muddy Lake on a planking bridge, which is itself spanned by a stone arch; through the Fish Market and across the Elfin Ramble—a plateau in which the roof is generally within reach of the hand—and so come to Pluto's Chasm, an underground ravine roofed with the strata which support precisely similar gulches and chasms open to daylight, and owing their configuration to the same slow and subtle agencies. Most persons, trying with their gaze to fathom a depth which their candles' beams fail to penetrate, but which, by and by, their feet lead them to, are tempted to exclaim, "What mighty convulsions rent these walls asunder!" forgetting the unparted stratum of native rock overhead. But *cataclysm*, as the all-potent word to explain every hard conundrum of geology, is obsolete. As in the fable of the hare and the tortoise, an agency infinitely slower, a very type of gentleness, has done the same work while the convulsion slept.

Great caves can only occur in a limestone region, and they result from the chemical fact that the carbonates of lime and magnesia are soluble in water containing carbonic acid. "This acid abounds in atmospheric air, and is one of the products of the decomposition of animal and vegetable waters, so that rain-water which has percolated through the soil has usually been enriched with it from both sources. With carbonic acid, then, as the active agent, and water as the carrier, we are able to account for the disappearance of strata however thick, and whether above or below ground. Above ground the result is a lowering of the general level, the deposition of a residual stratum of clay (a constituent, in a finely divided condition, of the Valley limestones), and the formation of valleys where special causes have favored the disin-

tegration of the stone. 'Hard' water flows away, and a clay soil is left behind. Below ground, on the other hand, the result is a cave—if there be a fissure in the strata through which the acidified water may make its descent. In the course of time this fissure is worn larger, and the entering water dissolves and bears away with it bit by bit the stratum through which it passes, flowing out at some lower level with its burden of lime and magnesia, but leaving the clay behind to plague the adventurous cave-hunter."

Given the initiatory crack—common enough in limestones—and it only requires time and abundance of water to hollow out Pluto's and all the other chasms, halls, galleries, and avenues which make up this or a more extensive series of caverns; and when once this work has well begun, other natural agencies contribute their aid to the enlargement of the area and the adornment of its interior.

From the chasm, where there is a Bridge of Sighs, a Balcony, a Specter, and various other names and habitations, we recross the Elfin Ramble, walk, wherever dry, on mud or tufaceous floor or ringing rock (when honey-combed, sounding hollow beneath the tread), and in muddy or difficult places upon bridges of pine planking, which rots away and must be replaced every nine months. We pass successively Titania's Veil, Diana's Bath—the lady was not fastidious!—and come to a very satisfactory Saracen Tent.

Then we ascend stair-ways past the Empress Column,—easily empress of all, I think,—and proceed under the Fallen Column to the spacious nave of the Cathedral. We pause to note its lofty groined roof and gothic pillars,—surely, in some like scene to this, the first architect of that style met his inspiration!—its large, Michael-Angelesque Angel's Wing, and its Organ. Then we sit down and turn to the prostrate stalactite. It is as big as a steam-boat boiler, and bears an enormous pagoda of stalagmitic rock which has grown there since it fell. It thus forms a good text for a conversation.

Here Dr. C. A. White, of the Smithsonian Institution, stands as authority. The rock out of which Luray Cavern has been excavated is a compact, bluish limestone, not very evenly bedded, and weathering ruggedly on account of its heterogeneous texture, a fact to which the almost endless variety and irregularity to which it chiefly owes its charm is largely due. The few fossils discovered indicate that this limestone stratum is of lower silurian, probably belonging to the Trenton period.

The position of the cave in the middle of an open valley, distant from the mountains,

BURNING MAGNESIUM TAPE BEFORE THE EMPRESS COLUMN.

and so much below their crests, shows that it was hollowed out toward the close of the epoch within which the formation of the valley took place. The character of the erosion leads to the conviction that the excavation was effected subsequently to the formation of the great folds referred to at the beginning of this article, which plainly took place after the close of the carboniferous period, because strata of that period and those of later date are involved.

It is thus evident that the geological date of the origin of Luray Cave, although it is carved out of silurian limestone, is considerably later than the close of the carboniferous period. None of the facts yet ascertained warrant a more definite conclusion concerning the limits of its antiquity than to say that the most recent epoch at which it might have been formed is the tertiary. It is highly

probable that the date of its origin is not more ancient than that of the Mammoth Cave, or the Wyandotte in southern Indiana.*

Now, these geological statements tell one the relative position which the cave occupies in cosmic history, but they help the mind little in comprehending its antiquity measured in years or even by centuries, and serve chiefly to make our vapping on the subject seem of extremely small account. Nor can we get at a much better estimate by studying the present processes of change, for evidently these have not gone on uniformly since the beginning,—both erosion and new growth varying from year to year at every point, and proceeding in no two parts of the cave at exactly the same rate. The indications are, that in past ages the work went on with great

* See SCRIBNER'S MONTHLY for April and October, 1880.

ON THE BANKS OF THE RHINE.

rapidity, but that latterly change has been very slow, and at present has almost ceased.

Leaving the Cathedral, a narrow, jagged passage, where one must continually guard both his shins and his crown from painful bumps, we get an outlook down into a sort of devil's pantheon, full of grotesque shapes and colossal caricatures of things animate and inanimate, casting odd and suggestive shadows in whose gloom fancy may work marvels of unworldly effect, and leads you by a stair-way to a well-curtained room called the Bridal Chamber. With an access of that idiocy with which the strongest people, perhaps, are tinctured when about to enter matrimony, one or two couples have come to this damp hole to be married; so the place is put down in descriptions as "consecrated"! The back door of the Bridal Chamber admits to Giant's Hall, just beyond which is the Ball-room—both large and lofty apartments, constituting a separate portion of the cave, parallel with the length of Pluto's Chasm. In the Ball-room we have worked back opposite the entrance, having followed a course roughly outlined by the letter U.

I have thus run hastily over the greater part of the ground open to the public, in order to give an idea of its extent and nomenclature. To describe each figure and room separately is impossible. The best I can do is to try

to give some general notion of the character of the ornamental formations of crystalline rock which render this cave without a peer in the world, perhaps, for the startling beauty and astonishing variety of its interior. Some caves—the Mammoth is an example—are completed by the simple digging out of their vaults; no subsequent growth of new rock supervenes to decorate their hard and changeless walls. There the sense of vast vacuity, of awful silence, of dreadful, lonely darkness, strikes the heart with awe, and impresses the mind by its utter intangibility. Here there is nothing of the sort. Objects are near at hand, suggest familiar forms, and, instead of vague terror, you feel a comfortable and lively entertainment.

Where conditions of dryness and ventilation are favorable and the percolation of water is just right, stalactites and stalagmites will form as they have done here, though rarely in equal profusion and attractiveness. Their formation is simple. Whenever through some of the minute crevices in the limestone roof or wall a drop of water trickles, it is sure to be saturated with carbonic acid, and to bear along with it a solution of lime and magnesia. When, emerging from its rocky channel, it meets with a current of air, it will evaporate and leave behind it minute crystals of carbonate of lime deposited in the form of a ring, because, as the drop evaporated, the solid matter became more concentrated around its edges than in the pendent center. "This ring now becomes the support of the drop, and the process continues until a tube of the diameter of the drop, and from one to thirty-six inches in length, is formed. At this stage of its growth it begins to fill up, and the water now trickling exteriorly deposits its solid matter and enlarges it." This process forms a hanging appendage of stone exactly as icicles grow—large at the top because the larger part of the lime is deposited before the drop reaches the tip, which nevertheless prolongs itself downward with never-ceasing endeavor to touch bottom.

But, in the majority of cases, more water flows down a stalactite than can be evaporated, and drops to the floor, depositing, parti-

cle by particle, its solid matter in the same spot, directly underneath the tip of the stalactite, until a column corresponding fairly to the size of the stalactite is built up; this is a stalagmite. In time, the upward reach of the one and the downward stretching of the other may join them into a single column, thick or slender, reaching from floor to ceiling. There are many such pillars, seeming to support the roof, in this cave—hundreds of them, from the size of a fishing-rod (and wonderfully resembling a bamboo stick, with every node perfect) to that great column in the center of Giant's Hall, which is fifteen or twenty feet in circumference and is ribbed like an ancient oak or redwood; pillars representing all sorts of architectural style in base and capital, for the sculpture-like growth and comingling of these stalactites and crystallizations lend themselves easily to every odd design and fantastic embellishment, which yet never seem inharmonious.

Though the simple stalactite will be circular and gradually decreasing in size, conically, from its attachment to its acuminate point, yet innumerable variations may occur, as the dripping or streaming water that feeds it is diverted from its direct and moderate flowing. Where it runs slowest, but copiously, or at least continuously, there most lime will be deposited, and the stony image will be built up to the prejudice of a less favored part. Thus it happens that stalactites often become expanded at their ends far beyond their size at the top, or take a slanting line; then the stalagmite underneath learns also to lean in the same direction, so that when they meet it will be at the intersection of two angular lines of growth. A notable example of this process is seen in the "Tara's Harp" and its snow-white feeder.

Chief of all the varieties, however, and the one that in lavish profusion is to be seen everywhere in these caverns, is that which, by growing on the edges only, produces not a round, icicle form, vertically pendent, but a wide and thin laminated or sheet form, which is best described by its semblance to heavy cloth hanging in pointed folds and wrinkles, as a table-cover arranges itself about a corner. This is most likely to happen where the water flows over the edge of a ledge or comes down through a crack, rather than by percolation through needle-point apertures, or where it oozes from the side-walls. Now the heterogeneous nature of this limestone, mixing masses of harder or more gritty substances with other fractions of a softer kind, caused it to be eroded unequally, and everywhere enormous angular masses, resting on a softer substratum, have been undermined

until they fell to the floor, stood out from the walls as protruding ledges, or were cut out from their connection with the wall-rock, and left standing as islands to be coated and reshaped and hidden away under the glittering panoply which the gnomes who did the work hastened to throw over every bit of common rock within their industrious reach. It is this channeling through soft rock and leaving hard limestone alone; this chipping away overhead and underneath a resisting stratum; this tumbling heedlessly down and sedulously piling up; this everlasting, tireless labor after grotesque change which is not yet, nor ever will be, content—these give to Luray its labyrinthine lack of shape, its chaotic multiplicity of things completed and things half-done and things not yet more than mere material, which mark it to the imagination as a workshop, or a last hasty refuge, or an unarranged store-house, of the art-workers of the under-world, who, surprised by the light of intruding day and the inquisitive, commonplace eyes of men, fled affrighted to some yet more profound habitation in the depths.

Fancy has taken the bit in her teeth, as she is most likely to do down here; but what I started out to show was, that where ledges and table-like surfaces were so abundant, there the drapery was sure to form. In the Market it crowds the terraced walls in short, thick, whitish fringes like so many fishes hung up by the gills—"rock-fish," the guide will tell you, as his little joke. The Saracen Tent is formed by these great, flat, sharply tipped and gently curving plates, rich brown in color, depending from a square canopy so that they reach the floor, save on one side, where you may enter as through conveniently parted canvas. The Bridal Chamber is curtained from curious gaze with their massive and carelessly graceful folds; the walls of

DOWN FROM THE CEILING.

A CORNER OF THE BALL-ROOM.

Pluto's Chasm are hung with them as in a mighty wardrobe; Diana's Bath is concealed under their protecting shelter; Titania's Veil is only a more delicate texture of the same; Cinderella Leaving the Ball becomes lost in their folds as she glides, lace-white, to her disrobing, and a Sleeping Beauty has wrapped these abundant blankets about her motionless form; while the Ball-room carries you back to the days of the Round Table, for the spacious walls are hung as with tapestries.

Do not disbelieve me when I speak of wealth of color. The range is small, to be sure, but the variation of tint and shade is infinite and never out of tune. A painter would, perhaps, express it intelligibly to his brethren by saying it was all a harmony in brown. The first crystals of these salts of lime are pure white and translucent. If you pick up a fallen fragment of a young stalactite, you

find it a white, delicate tube, glassy without, spongy within, alabaster-like, and almost transparent. Where water is continuously flowing, and crystallization at present is going on with some rapidity, as at the various "frozen fountains" and "cascades,"—which look precisely like the gleaming cataracts of sunlit ice which are to be seen on high mountains, or at Niagara in winter,—the surface is crystalline, perfectly white, like fresh marble, only more radiant and ethereal, and sparkling with a soft, snowy light. Such is the lofty and richly chased Empress Column, the Geyser, the odd little Comet, the Specter, that gleams fitfully from the Stygian gloom of a seemingly boundless abyss, a thousand alabaster pinnacles and pendants scattered here and there, and much silvery fretwork on wall and monument. But when the steady growth ceases, and fresh crystals no longer supersede with maiden purity the *débutantes* of yesterday, then

the carbonic moisture of the air eats away the glistening particles of lime, and leaves behind a discolored residuum of clay-dust and iron-oxides. If this has gone on very long, the object attached becomes almost completely decomposed; you may push your penknife to its hilt into the apparently adamantine substance of the Fallen Column. Thus it happens that, from the niveous purity or pearly surface of the new work, there runs a gentle gradation through every stage of yellowish and whitish brown to the dun of the long-abandoned and dirty stalagmite, the leaden gray of the native limestone, or the inky shadow that lurks behind. It is thus that the draped and folded tapestries in the Ball-room are variegated and resplendent in a thousand hues. Moreover, various tints are often combined in the same object, particularly in the way of stripes, more or less horizontal, due to the varying amount of iron, silica, or other foreign matter which the lime-water contained from time to time.

The best example of this, and, indeed, of the "drapery formation" generally, is to be found in the Wet Blanket,—a name given apparently to dampen your enthusiasm beforehand, so as to give the eye a fresh surprise. Suspended in a recess in the wall of a small sub-cavern is this curious stalactite, which perfectly simulates a blanket hung up after a wetting, every wrinkle natural to a dangling piece of heavy woolen cloth being represented, with the water yet draining out of it.

Down in Pluto's Chasm, also, is a notable group of stalactitic draperies. "They are sixteen alabaster scarfs," says a recent description, "of exquisite color and texture. Three are snow-white; thirteen like agate, are

THE DRAGON OF LURAY.

striated with rich bands of every imaginable shade of brown, and all are translucent. The shape of each is that of one wing of a narrow lambrequin, one edge being straight, the other meeting it by an undulating curve. The

UP FROM THE FLOOR.

stripes follow the curve in every detail. Down the edge of each piece of drapery trickles a tiny rill, glittering like silver in the lamp-light. This is the ever-plying shuttle that weaves the fairy fabric." A balcony has now been built right among them, overlooking the Chasm, and this point should by no means be missed. The burning of magnesium tape here brings out, with the suddenness and spectacular effect of the ballet-stage, a thousand grotesque shapes and fanciful outlines, leaving spaces of darkness between, where the eye nervously suspects that frightful creatures abide. "The devil!" exclaimed a startled guide, not long ago, as, halting for a moment, his lights were suddenly overturned by a gaunt form which shot by his feet; but it was only a hare. Wood-rats, mice, and bats are occasionally seen. There are no snakes, as one timid lady was afraid there might be, and the imagination is left to evolve the uncanny beasts out of the dens of darkness, which hold no life in reality beyond a few groping insects.

I have said that the edges of fallen rock-masses and ledges are clothed with the drapery-stalactites. This works curious results here and there in the cave, for two masses may be joined together, or, previously connected by an overlapping bridge-stone, may both be surrounded by stalactites which thus inclose an open center, and bear a forest of stalagmites on top. A large number of the pillars are probably hollow, and are formed by the crowding together of many drapery-stalactites, which finally have coalesced, leaving the pillar deeply fluted, or seamed up and down, with their disconnected edges. When you find one of these massive, ribbed, and rugged old pillars, lost above in a host of curved stalactites, their thin and wavy selvages guiding the eye to tips which seem to sway and quiver, it is hard to believe that this is not an aged willow turned to stone. Indeed, the whole scene, in many parts, is strongly suggestive of a forest with tangled undergrowths, thrifty saplings, fallen logs, and crowding ranks of sturdy trees, under whose bending limbs and drooping foliage one might wander for miles without catching the flicker of a leaf or hearing the stir of any breeze:

"The island valley * * *
Where falls not hail, or rain, or any snow,
Nor ever wind blows loudly."

In more than the general effect, indeed, the ornamental incrustations of this cave mimic the vegetable growths outside. Many of the stalactites are embroidered with small excrescences and complicated clusters of protruding and twisted points and flakes, much like

leaves, buds, and twigs. To these have been given the scientific name of *helictites*, and they are ascribed "to a slow crystallization taking place on a surface barely moist, from material conveyed to the point of growth by a capillary movement." The grottoes of Stebbins Avenue exhibit them to the best advantage.

Then there are the botryoids—round and oblong tubers covered with twigs and tubercles, such as that cauliflower-like group which gives the name to the Vegetable Garden; these grow where there is a continual spattering going on. A process of decomposition, dissolving out a part and leaving a spongy framework behind, furnishes to many other districts quantities of plant-semblances, that you may name and name in endless distinction. Then in the many little hollow basins, or "baths," and in the bottom of the gorges where still water lies, so crystal clear you cannot find its surface nor estimate its depth; where your blue magnesium-flame opens a wonderful new cave beneath your feet in the unrecognized reflection of the fretted roof, and where no ice is needed to cool, nor cordial competent to benefit, the taste of the beverage;—there the hard gray stone blossoms forth into multitudes of exquisite flowers of crystallization, with petals rosy, fawn-colored, and white, that apparently a breath would wilt. You have seen a group of sea-anemones in some tide-pool, with all their downy tentacles flung out? That is like these motionless corollas of calcite.

Another freak of crystallization is the making of "cave-pearls." They lie, three or four together, in little hollows in the floor, exactly like so many eggs in a sparrow's nest. Around a grain of sand or flint, as a nucleus, accumulates a concretion of lime. Every falling drop moves the grain and prevents its becoming attached or growing into any except a globular form; thus, under the proper circumstances, marbles or "pearls" are formed.

But I must cease this attempt at even a suggestion of the possible variety of size, and shape, and mimicry, and quaint device to be met with. That hard stone should lend itself to so many delicate, graceful, and airy shapes and attitudes, rivaling the flexible flower of the organic world, fills the mind with astonishment and bewilders the eye. And when you have struck the thin and pendent curtains, or the "pipes" of the Organ in the Cathedral,—for these are only a group of stalactites which have fallen and partly buried themselves upright in the mud,—and have found that each has a rich, deep, musical resonance of varying pitch, so that with a little study you could complete the octaves and thrum a melody whose tones would be more like the

THE WET BLANKET.

breathings of an organ than the metallic quality of piano or xylophone—then your admiration is complete; the denizens of the cavern not only pose but speak. And how many, many centuries has this museum, or gallery of the “playfulness of God,” which the old geologists used to talk of, patiently been awaiting its disclosure! It is not a place for thousands of lights and the chattering merriment of excursionists, with their flirtations and junketing, but for silent and full-hearted delight.

The impressions which it all makes upon such visitors as are affected at all, beyond oh's and ah's, if written down, would make very curious reading. Of the hundreds that walk singly through these catacombs, or troop after the brass band of an excursion, few have left any record by tongue or pen; but the two best remembered by the managers about sum up the whole range of mental experience here. Both, curiously enough, were uttered the same day. The first visitor, after a long tramp, turned to Mr. Corson, and speaking slowly and impressively, said: “I feel as though I must kneel down

and render homage to my Creator for this exhibition of infinite power.” As the blue magnesium-light lifted the curtain of thick darkness in the Ball-room, and brought out in an instant the far-reaching, coruscant, theatrical sculpture of the lofty dome, the silence was broken by the exclamation of the second spectator: “It knocks thunder out of the Black Crook!”

The cave has not yet years enough to have gathered about itself much human interest; but, before leaving, we must not forget to follow down a long stair-way into a deep and narrow gulch, where the dampness and gloom is little relieved by anything to please the eye. At the foot of the staircase, the guide drops his lantern close to a trench-like depression, through which a filmy brooklet trickles noiselessly. No need of interrogation—there is no mistaking that slender, slightly curved, brown object, lying there half out, half imbedded in the rock, with its rounded and bi-lobed head, nor its grooved and broken companions. They are not fallen, small stalactites; they are human bones. Fit

for the mausoleum of emperors, what a vast vault to become the sarcophagus of one poor frame! But the cave has guarded its trust well, for, while Cæsar's bones have "turned to clay," these are durable as iron.

It is remembered in the valley that, half a century ago, a dwarf lived here, and one day disappeared from view. Six or seven years afterward, his gun, and shreds of his overcoat, were discovered in the woods near the entrance to the old cave, whereupon it was concluded that he had entered and lost himself. However, the fact that additional parts of the skeleton are still buried underneath the tufaceous floor seems to disprove the theory that these are the poor dwarf's bones, since more than half a century, or a whole one, would be needed to deposit stone enough to entomb the bones, unless we discredit the evidence of the present slow growth of lime-rock in the cavern. Perhaps the owner of the femur, etc., was some Indian youth, who, three or four hundred years ago, by accident or design, entered these catacombs, and falling over the high precipice and unable to move, starved to death.*

Out into the warm, sweet air again, all the world looks fairer for one's temporary occultation. Surely the Troglodytes had a hard lot. Even the Naiads under the water; and the Nereids, though indissoluble from the growing trees, were better off!

* Mr. S. Z. Ammen, in his excellent little guide-

LOOKING TOWARD THE ENTRANCE.

book, calls these "the bones of a man—unhappy not to have possessed a copy of this book when he entered upon his explorations." My unhappiness, on the contrary, arose from the fact that I *did* possess it; for I found it had preëmpted all my adjectives, particularly that widely serviceable term, "weird."

THE FLOWER OF FLAME.

At Lyndhurst of the tall white towers
Was built a Palace of the Flowers,

That in the time of frost and snow
The children of the sun might blow.

And there, upon a winter's night,
A strange plant blossomed into light.

An elfin flower it was, in truth,—
No human eye had watched its growth.

When all the world was still as death,
It burst its bonds and broke its sheath,

And climbed upon the crystal tower,
Unfolding in a gorgeous flower

A running rose with burning briers,
And leaflets tipped with its own fires.

A living light shone from it, far
More bright than beam of moon or star.

On naked hill and barren dell
And leafless wood its glory fell,

And on the kingly Hudson's flood,
Red with a redness like to blood.

But soon this wonder, that had made
The stars grow pale, began to fade.

Its crimson petals fell as fast
As leaves before an autumn blast.

Thus, ere the dawning of the day,
It sprang to life and passed away,

And still we know not whence it came,
Or whither went the Flower of Flame.

ORIENTAL AND EARLY GREEK SCULPTURE.

THE fascination which Greek art has for the civilized world appears in the repeated revivals of its influence, molding the taste and artistic productions of modern times. From that early day when mediæval Italians first caught glimpses of the wonder-land of antique forms, it has ever been disclosing fresh beauties to charm mankind. Pisano and, later, Alberti, Ghiberti, and many others were deeply imbued with its spirit. Squarcione cruised among the Greek islands, and explored Greece itself for remains, and brought to his home in Padua drawings and ancient sculptures for the use of his scholars, among whom was the great Mantegna. No less did the forms of classic art hold sway over the genius of a Raphael, who studied fading frescoes in Roman baths. Michael Angelo in his boyhood copied a satyr, and sought comfort in sightless old age by running his fingers over the Belvedere Torso. At a later date, this enthusiasm received fresh impulse from the labors of Winckelmann and others, whose efforts were most signally favored by the discovery of Herculaneum and Pompeii. In our own times, the names of Olympia, Tanagra, Athens, and Pergamus are synonymous with the triumphs which the knights of modern research have won in disenchanting fair forms of the past from gloomy imprisonment.

No wonder that such a world of beauty should blind us to the less attractive but vigorous and intensely national art-growths of the Orient, and to the humble beginnings of sculpture in Greece itself. To enjoy this obscure twilight of art we must veil our eyes to its noonday glory. The Nile and the Tigris do not, indeed, wash the base of ruined Doric temples; from the parched plains of Mesopotamia and the sands of Egypt the excavator's spade does not unearth the perfect forms of an Apollo or a Zeus; and yet the venerable empires of the Orient have produced sculptures which are not merely a heterogeneous jumble of winged bulls, lion-headed monsters, stern colossi, and uncouth forms. Their monumental remains will be found, instead, to obey laws which group them harmoniously according to time, material, climate, religion, and race, for to such influences art, the mirror of human culture, must ever be susceptible.

First to command attention among these hoar and time-honored remains are the enduring monuments of the Nile valley, which itself gives the key to their interpretation.

Our nineteenth-century civilization, with its rapidly crumbling monuments, stands aghast at empires that were ancient even in the Homeric age, and whose sculptures could tell a story of thousands of years. The Sphinx at Gizeh reaches back into an age more distant even than that of the Great Pyramid, whose builder, Cheops, caused the restoration of statues akin in workmanship to those that have come down to us.

From this remote and mysterious past, the Œdipus of modern research has wrung many truths of deep import to the student of art. The papyrus roll revealing the medical lore of ancient Egypt, even to an infallible panacea for baldness, or giving directions for life in the future world; the inscription recounting victory or repeating the prayer of the pious, have yielded to the Egyptologist. Not the least interesting of the results is the light thrown on the spirit and motive of sculptures heretofore enigmatical.

As the traveler on the banks of the Nile gazes at the majestic ruins of Thebes, the prostrate temple columns, the propylæ rent asunder, the shattered colossi seem once more to stand up and speak of the glories of that age when Egypt was the conqueror of the world; when, beneath the magic wand of those arbiters of its destinies, the Thothmes and the Ramses, these wonders of architecture and sculpture sprang into existence. If we could, in imagination, build up these countless and vast structures, people them with their statues, line them throughout with reliefs, and then, with the painter's brush, charm back their former brilliancy of color; if we could see the obelisk shining with gold, the broad avenues of silent sphinxes through which passed the stately procession, the priests performing their gorgeous rites before the sacred images; and if we could picture the fertile Nile valley, with its overhanging canopy of blue and the unbroken sweep of distant mountains, we should then be able to gain an impression of the part that sculpture played there, its impressive forms harmonizing with the grand repose of the landscape and its colossal proportions witnessing to the ambition of mighty Pharaohs.

In all this, from the tiny scarabs and statuettes found with the mummy to the majestic figures at temple gates, there is a distinctly religious character. And yet, though texts, reliefs, and inscribed statues abound in the

FAÇADE OF GREAT ROCK-TEMPLE, ABOU-SYMBOL, NUBIA. (NEW EMPIRE.)

Pharaonic temples, their central religious thought is obscure. The numerous gods have but a shadowy individuality, and are strongly intermingled—their symbolical forms, medleys of human bodies and animal heads, only adding to the confusion. In the small temple at Karnak, five hundred and seventy-two black granite statues of the lion-headed goddess lined the courts in double rows, but whether purely decorative, or like the obelisk objects of sacred rites, is uncertain. Even royal statues were frequently worshiped, and, oddly enough, Ramses is seen, in one instance, worshiping himself in his own statue. Standing around the courts at regular intervals, like constituents of the architecture, are frequently mummied forms of the god Osiris, wearing the portrait-head of the Pharaoh. They never support the roof, however, but simply adhere to a pilaster which does this service. The colossal monarch, in even numbers, is likewise repeated, sitting on either side of the entrance, and frequently accompanied by diminutive members of the royal family, the heir-apparent peering out from betwixt the gigantic knees—"the law-giver between his feet." Such are the colossi of Thothmes III. before the pylons of Karnak; such the so-called speaking statue of Memnon, with its

twin brother, sixty feet high, portraits of Amenophis III. Often these figures were monoliths, dragged from the quarries by thousands of impressed serfs and captives. Again, the Pharaoh adorns the façade of rock-temples, as at Abou-Symbul, where, hewn from the mountain-side, appear figures of Ramses the Great, each sixty-six feet high, and having forefingers three feet in length. Two of these statues, which are all alike, sit on either side of the entrance, and a cornice of twenty-two sacred dog-headed apes, each six feet high, surmounts the temple-front. The sand is rapidly shrouding the grand and thoroughly Egyptian features of the monarch, who looks calmly down on the great river flowing at his feet. The mild dignity of these faces, expressed in such immense proportions, makes them unequaled for beauty among Egyptian colossi. The structure of the body, however, is rigid and conventional, typical of that vast number of statues which form the stern concomitant of the architecture in the Nile valley. Their royal character is especially marked by that colossal size never given to statues of the gods.

Representations of private persons likewise found their way into the temples, usually by favor of the monarch. The dis-

covery of such in the temple at Karnak enables us to understand the place which statues of this kind held in the building. Fourteen figures were there found in a row, on a long, breast-high pedestal. One kneels on one knee; one sits *à la Turc*, holding a papyrus roll; another with his knees drawn up to his chin—a common attitude among modern Egyptians while at rest. One of these was repeated three times, in different poses, and, if it was an exact portrait, the original must have been decidedly a *bon vivant*. Another, besides the usual dedicatory inscription to the gods, tells us that he was a distinguished man of letters, and had erected a statue to the king, taking care to inform us that it was of “hard stone.” Judging from the variety of pose and size, this assemblage represents a row of worshipers within the temple building quietly awaiting the blessing they desire.

But, besides its population of statues, figures in low relief covered the surface of the sacred structure. That marvelous “Hall of the Columns” at Karnak, with an area of one hundred and twenty square meters, having a roofing of stone resting on one hundred and thirty-four gigantic columns, is written all over with pictures in stone, furnishing an opportunity for the expression of varied and vivacious motion not met with in the statues. The pylons, those fortress-like structures which guarded the entrance to each court, were, likewise, covered with reliefs in which the colossal Pharaoh performs feats of valor worthy of a Samson, to the admiration of his pigmy followers. Where preserved, the top of the edifice is crowned by a compact row of apes, forming a cornice.

But our conception of the sculptural decoration of the Egyptian temple would be incomplete without calling to mind the dignified sphinxes reposing before the building, and varying in size with the pylon to which they lead. A regal avenue of such sphinxes stretches for over a mile across the plain from Karnak to Luxor. Within the courts other shorter avenues are frequently found, apparently inclosed by subsequent additions to the temple, which was the accretion of ages.

Turning from the Nile, how great the contrast in the sculptures of that neighboring empire on the plains of the Tigris. While the monuments of Egypt have a history embracing well nigh five thousand years, the bulk of Assyrian remains, excepting stray fragments, may be included within the space of three centuries (900 B. C. to about 600 B. C.). Egypt had conquered the world and her armies had invaded Mesopotamia long

before the excavated palaces of Nimroud, Nineveh, and Khorsabad were built. Yet the Greek Xenophon, passing over their wasted sites, makes no mention of these structures. Stern, shapeless mounds, rising like hills from the scorched plain, now mark the desolation of centuries, and the scene around is worthy of the ruins the traveler contemplates.

Several of these ancient seats of Assyrian empire have been excavated, but none more satisfactorily for the knowledge of Assyrian art than Sargon's palace and city at Khorsabad, within a mile of hilly summits and on a plain stretching away to the Tigris. Here human hands have piled up in an artificial hill one million three hundred and fifty thousand cubic meters of clay, kneaded like that so vividly described by the prophet Nahum. Spread out on its summit were found apartments of state, secluded quarters for the women, kitchens, stables, and store-houses becoming the dwelling of a powerful monarch, but all of clay, with ponderous walls varying from two to five meters in thickness. At the foot of this palace M. Place discovered Sargon's city, surrounded by walls, also of solid clay. These had towered up twenty-three meters, a height greater than that of houses facing most modern city avenues, and were wider than the avenues themselves (twenty-four meters). Piercing these walls were gateways, so spacious and complex as to call to mind the importance of the city gate in the life of Abraham, and in the story of Boaz and Ruth. But as clay walls crumble easily, and are besides uncomely, they were lined by

GATE-WAY IN SARGON'S CITY WALLS, KHORSABAD.
(ABOUT 701 B. C.)

LION FROM GATE-WAY AT NIMROUD. BRITISH MUSEUM. (ABOUT 885 B. C.)

more enduring and attractive material, which in three of these gates took the form of Sargon-headed bulls. These, like sentinels, faced the stranger approaching the city. Within the passage, winged genii adorned either side, apparently supporting the roofing, which was happily found intact, and throws a flood of light upon Assyrian sculpture in its relation to architecture. Here the arch seems to spring from the mitered heads of the bulls, and the vault to ride on their outstretched wings. Brilliantly enameled bricks, in which gold and blue predominate, face this arch and represent winged beings alternating with rosettes. The huge city-guardians, man, lion, bird, and bull combined, were found without a feather broken; color still shone freshly on their eyes and eyebrows, which were penciled with black, and gave a calm and impressive expression of life. The carefully scrolled mustache and ringlets, the painfully symmetrical feathers, the amusingly regular veins and muscles of these dandy bulls, witness to the ruling passion of the Assyrian sculptor to reduce everything to ornament, however incongruous. While many of the door-ways were lined simply with flat slabs, Khorsabad yielded twenty-six pairs of these monotonously prim portal-guardians. Such figures, in great variety, have likewise been found in other Assyrian ruins. At one gate-way in Nimroud they were pure lions. Again, the lion element was

combined with man and bird. Sometimes the strange monsters have arms and carry an animal, sometimes they regard each other from across the passage. In sculptures of an earlier date they walk on five legs, and later they have only four.

The walls of the rooms were also subject to decay, and needed protection. In the women's quarters and other less important parts, a coating of plain or painted stucco, still used in the Orient, sufficed, while the courts and parlors of state, which daily witnessed royal pomp and magnificence, required and received more durable decoration. Here alabaster slabs of uniform height, about three meters, formed below a shield of stone to the rude clay, while above, painted stucco and enameled brick lined the walls and vaulted ceiling. These slabs, so soft as to be easily whittled, offered tempting fields to the chisel of the sculptor, who traced upon them the facts of contemporary national history, in which the monarch always appears as the prominent actor.

In long and solemn procession, colossal gorgeously clothed figures of attendants and conquered peoples, bearing gifts, move around the sides of the spacious courts toward the king, distinguished by his pointed tiara, and his excess of jewels and embroidery. In the small chambers the scene is different. Here the actors, proportionately small, engage in fierce

PORTAL FIGURE FROM NIMROUD. BRITISH MUSEUM. (ABOUT 885 B. C.)

combat, the king joins battle with strange peoples—always, however, to be victorious. So anxious is the sculptor to impress us with the invincible prowess of the Assyrians, that he never allows us the fascination of uncertainty in watching a deadly conflict, or gives us a gleam of hope for the enemy. Spreading out before us their inhuman tortures, now he impales them before our eyes, now holds up their ghastly heads, or gives their bodies as carrion to the vultures. All this is done, however, with such guileless ignorance of perspective and such gross faults in drawing and com-

position that what was intended to be horrible becomes rather amusing. The same desire to make every detail clearly comprehensible controls the sculptor's chisel in royal hunting-scenes, where fierce and devastating beasts inevitably succumb to the "mighty hunter" in his rich robes and faultless toilet.

Although the Assyrian's gods were so numerous that he seems to have found his resources too limited to name them all, and took refuge in numbers, yet artistic representations of them are comparatively few. The main interest of Assyrian relief centers in the

doings of a powerful, brutal people, whose ponderous physiques are represented in the reliefs. And the size and weight of the iron instruments discovered at Khorsabad, which are too heavy for the modern natives to wield, bear witness to their great strength.

Of Assyrian statues but few have been found. The eight at Khorsabad seem to have taken the place of bulls in the women's apartments. But the artist shows a want of vigorous sense for this important branch of sculpture, the composition and workmanship of his statues being inferior to his combinations of high and low relief, as seen in the bulls.

But at least prolific industry and passion for symmetry cannot be denied to the Assyrian sculptor. Six thousand square meters of relief lined the state apartments of Sargon's palace alone, a part of which now adorns the galleries of the Louvre, and much of which has long since dissolved in the Tigris, where it sank in a storm, during removal. All this magnificence was the work of less than six years, for Sargon commenced building his city 711 B. C., and died 705 B. C. His son Sennacherib not occupying the palace, the neglected building must soon have crumbled.

Protected by the masses of falling clay, many of the sculptures have been well pre-

served, but as Assyrian alabaster rapidly deliquesces, they have otherwise dissolved: reliefs submerged but three days in the Tigris were found hopelessly obliterated.

The question may be asked: Why did the Assyrians, with an abundance of stone at hand for building, pile up these vast structures of clay? Following down the Tigris to the plains of Chaldea, we shall find an answer, for the Assyrian was an offshoot of the much older civilization developed on those flat plains of Babylon, where clay alone is found. There, to make habitations secure against frequent inundations, this material was piled up into mounds, and clay cities built upon them. Like true orientals, the Assyrians followed in the exact footsteps of their forefathers, and continued, although under altered circumstances, to build in clay—a custom still tenaciously preserved in that country.

How different these ephemeral remains from the granite and porphyry monuments of Egypt, results of long and arduous labor, and likely to be as enduring as time, even though not favored by a cloudless sky. The Egyptian, in inscriptions, delights to remind the gods of the "hard stones," the "eternal images" he has dedicated, to be imperishable witnesses to his piety—the emphasis he gives to

PORTAL FIGURE FROM NIMROUD. BRITISH MUSEUM. (ABOUT 885 B. C.)

AN ASSYRIAN GODDESS BEFORE THE SACRED TREE, NIMROUD. BRITISH MUSEUM. (ABOUT 885 B. C.)

temple and tomb making this spirit more striking still. With the Assyrian, the idea of living royalty was the absorbing theme. Remains in Assyria, conjectured to be temples, seem mere appendages of the palace. Of tombs there are no traces. Hence the presumption that, like the modern Persians, the Assyrians buried their dead in a far-off holy land. Such to them was their parent land, Chaldea, where immense fields of the dead, still unexplored, stretch far out into the desert.

In Egypt, from the very earliest time, the tomb was of the greatest significance for sculpture. Of temple ruins on the Nile, from that hoariest past between the First and Eleventh Dynasties, there is scarcely a trace. How vivid the witness borne to the sepulchral art on the plains of Memphis, the capital of oldest Egypt! Along the margin of the desert stretches the vast Necropolis, with a hidden population of statues, sentineled by those stupendous royal tombs, the Pyramids. Where else have such preparations been made for the final rest of the dead as in this great *campo santo* of the ancient empire?

Though mingled with much that was naïve and material, how vivid were the conceptions of that ancient people concerning the future world! They believed this life but an episode in an eternal existence. Death to them was the real life, only evil spirits being spoken of as dead. The coffin was called the "chest of

the living." But to the ancient Egyptian the immortal part, even after death, was in some mysterious way dependent for its contented existence upon the preservation of the body; hence the importance of embalming, the care taken to keep the body as life-like as possible and secure from harm during the long period of the soul's probation. The "eternal dwellings," hewn in the solid rock, high above the floods, were in strong contrast to the abodes of the living, built within reach

PORTRAIT STATUES OF RA-HOTEP AND NEFER-T. BOULAQ MUSEUM, CAIRO. (ANCIENT EMPIRE.) ABOUT 4450 B. C.

PROFILE OF RA-HOTEP.

of the swelling Nile, and of which scarcely a vestige remains.

The massive chamber of this tomb where lies the mummy is pictureless, and its entrance is closed by solid masonry. From it a shaft leads up, which was at many places thirty meters deep, and was filled with a dense mass of earth and stone, making more inviolate the mummy's rest. Over the concealed entrance of this shaft there rises that other essential part of the tomb, the sacred chapel (*mastaba*), of equally solid construction.

BOY KNEADING, BOULAQ MUSEUM, CAIRO. (ANCIENT EMPIRE.)

FACE OF NEFERTI.

In a dark recess (*sordâb*), aside from this chapel, are found many statues walled up. These are usually twenty or more in number, and represent the deceased with great diversity. To what purpose are they here? Singular beliefs, prevalent among the Egyptians and read from the hieroglyphics by Maspero, furnish us the key to this problem.

An immortal second-self, *ka*, somewhat resembling the "eidolon" of the Greeks and the shade of the Romans, was believed to spring into being with every mortal, grow with his growth, and accompany him after death. So close was the relationship of this strange double *ka* to man's proper being, that it was of the greatest importance to provide it with a material and imperishable body which it should occupy after death, sharing with the mummy the security of the "eternal

dwelling." It was believed that the shade *ka* could come out of this statue and perambulate among men in true ghostly fashion, returning to it at will. This stony body for the dead man's *ka* was naturally made in his exact likeness, and also bore an inscription stating his name and qualities. But a single statue might perish, and future happiness be thus forfeited. Hence that most unique feature of Egyptian statuary, the multiplication of the portraits of the deceased in his tomb.

To such naïve faiths and aspirations we owe the number and life-likeness of those most ancient statues which enrich the Boulaq Museum at Cairo, and are scattered through European collections. Of these the eminent Fergusson writes: "Nothing more wonderfully truthful and realistic has been done till the invention of photography, and even that can hardly represent a man with such unflat-

SHEIK-EL-BELLED. WOODEN STATUE, BOULAQ MUSEUM, CAIRO.
(ABOUT 3950 B. C.) *

tering truthfulness as these old portraits of the rich, sleek men of the Pyramid period." Their vigor and life-likeness is well illustrated in the figures at Boulaq, somewhat less than life-size, of Ra-hotep and his sister or wife, dating, according to Mariette, from the Third Dynasty. They were found, as in the engraving, seated side by side in a tomb at Meydoun, near Memphis. Ra-hotep is a "prince of the blood" and "general of infantry." Hands and feet, the stumbling-block of Egyptian sculptors, are sadly defective, but the closely shorn head and animated face, with its intent upward gaze, have a forcible naturalness, carried out also in the strong frame and distended muscles of the arm, raised as if gesturing. The profile of this ancient soldier, whose military glory dates from so

many thousands of years ago, awakens much respect for his character, and more for the artist who has caught and rendered it so well. The lady Nefer-t is simply called a "relative of the king." Although she sits silent, her arms folded across her chest, still, on gazing into her eyes of crystal and watching her speaking lips, we seem to know her very thoughts. Her buncy coiffure reminds one that it was usual in those ancient days to wear a wig instead of the modern turban as protection against the scorching sun. A closely fitting white garment suggests a form in keeping with Nefer-t's rich, voluptuous face. A necklace and band about her hair are all the ornaments she wears, the grace of her appearance being due to the charms the sculptor has evidently caught from life.

Such were the statues inclosed in the *sor-dâbs* of that remote empire, three or four thousand years before the explored Assyrian palaces were built, or the Homeric lays were sung. These works, unlike those of later ages in Egypt, are of great variety in posture, and are instinct with free life. Note the youth on his knees, kneading bread, perhaps for his master interred in the tomb. His limbs are well rounded, his pose natural,

BRITISH MUSEUM. (MIDDLE EMPIRE. ABOUT 2000 B. C.)

* Wooden statue of Sheik-el-belled, the only restoration in the Museum of Boulaq, published in the museum's catalogue with this apology: "No. 492. In order to enable the statue to stand upright, we have permitted ourselves to add feet, which we have left the color of the new wood."

WOODEN INNER DOORS OF TOMB OF HOSI. BOULAQ MUSEUM. (ANCIENT EMPIRE. BEFORE 3300 B. C.)

while his form and face are those of the ungainly dwellers on the Nile. A nude youth, carrying a bag on his shoulders, upsets the theory that Egyptians never represented the nude form.

How admirably those ancient sculptors performed the task—confessedly one of unusual difficulty—of portraying character in life-size forms, appears in a head of calcareous stone, now in the British Museum. A certain kindliness of expression, combined with the flaccidity of age in the skin, suggest the work of some Egyptian Holbein in this magnificent fragment. The large, wavy wig, the fresh naturalness in treatment, as well as the site of discovery, Memphis, mark this nobleman as a representative of the Pyramid period. This and other works prove that, in statues of that early time, the eyes were not elongated by strips extending to the ears, nor the eyebrows expressed by elevated bands. The rare rendering of the skin here is never met with in late Egyptian works, seldom even in Græco-Roman art, but constitutes one of the regal peculiarities of Greek art in its prime.

These life-like realistic statues, however, will enkindle little of that enthusiasm produced by works in which poetic grace and

masterly composition combine to charm the eye. But, to do justice to those old carvers, let us bear in mind the limits placed upon art by the spirit of the practical and prosaic people of the Nile, who required faithful portraits of themselves for their tombs. The physique and physiognomy of the race were, therefore, of untold influence upon the sculptor, and we are not surprised to find that his statues, when brought to light, are greeted as familiar forms by the Egyptian fellah of to-day. When the famous wooden statue of Boulaq was disinterred, so impressed were the villagers by its likeness to their actual chief that they at once called it "Sheik-el-belled" (village chief). So national, indeed, is this ancient art, and its forms so like the type of the modern Egyptian peasant, that the work of his forefathers finds more favor in his eyes than that of European artists. Granted, moreover, that the ancient sculptor had been capable of so doing, he would have had little encouragement to represent heroic action and create artistic works, knowing that they were to be forever buried in the tomb.

Leaving the statues in the dark *sordâb*, let us regard the tomb-chapel itself, varying in size and appointments with the age and

wealth of the dead, who, while living, devoted much of his time and substance to the preparation of his sepulcher. In this chapel, open to the passer-by, prayers were offered and banquets were held by friends in honor of the dead.

The Egyptian, like other men, dreaded the solitude of the grave, the more so that he attached such reality to it. Servants and family who had attended him in life he would need quite as much in the hereafter. But, as far back as we can trace him, the Egyptian was too advanced to secure society for his dead by the bloody immolations practiced by African tribes of to-day. Art had been called to his aid, depicting in brilliant relief on the chapel walls servants and trades-people in the routine and ardor of work. In the tomb of Ti, some are clearly portraits, as the cripple leading pick-eared hounds. In the midst of his family, engaged in pleasant games, or diverted by the graceful dance, the all-important dead person continually re-appears,

towering in colossal proportions above his pigmy attendants. Thus, sculptured company for the *ka* was provided by these groups on the walls of the tomb-chapel, and the comforting assurance no doubt attended the ancient Egyptian through life that, at death, his needs and social welfare would be properly cared for.

A lively communication between this busy spirit world and living men frequently furnishes amusing touches of nature. To the wooden statue of an Egyptian lady was found attached an importunate papyrus letter from her living husband, who evidently expected his better-half, though in the grave, to get the full force of his message. In this we are reminded of a curious custom existing in the church of the Jesuit College at Rome, where St. Aloysius Gonzaga is buried. On his festival it is usual for the college students to write letters to him, which are placed on his altar and, afterward burned unopened.

In the wall separating *sordâb* from chapel

SCULPTOR'S MODELS. BOULAQ MUSEUM. (SAÏTIC PERIOD, AFTER 665 B. C.)

BULL FOR SCULPTOR'S MODEL, BOULAQ MUSEUM. (SEE ILLUSTRATION ON PAGE 399.)

a crack hardly wide enough to admit a hand is sometimes found, serving as a channel of communication with the statues, and in the tomb of Ti, friends are represented at the opening, wafting incense to reach the stony nostrils within.

As John Chinaman, with due regard for his departed ancestors, provides for them in a very substantial manner by placing savory viands on the grave, so the Egyptian looked well to the creature comfort of his dead by the provision of actual food. Remains of quarters of beef have been found upon the mummy's sarcophagus. Such offerings were also carved on the tombstone (*stele*) within the chapel;

RAM FOR SCULPTOR'S MODEL. (SEE ILLUSTRATION ON PAGE 399.)

piled up on a table before the dead were represented all the good things of which he should partake. To these was added a written prayer that the god would insure to the *ka* of the departed the reception of these offerings. So important were provisions deemed that the great ones of Egypt set apart lands and goods, the revenues of which should supply banquets to be held, at stated intervals, in their tomb-chapels for ages to come, and stipulated with priests, by

contracts still extant, for an abundance and variety.

Among these tombstone reliefs, perhaps the most striking, as works of art, are those of Hosi, now in Boulaq. Unlike the usual stone lining of the chapels, they are of wood, and were found in the niches of a brick tomb—facts which indicate their very great age, although Hosi's form surpasses those of later reliefs. Seated or standing, he is taller and more slender than the usual representation of the people of the ancient empire. His finely formed head, aquiline nose, strongly marked jaw-bone, and arching instep have nothing in common with their round noses, smiling lips, stocky forms, and flat feet. The detailed anatomy about Hosi's collar-bones and chest is well-nigh unique in Egyptian relief, and shows a truly artistic hand. And yet these excellences are united with strange defects. The head in profile rests on shoulders in full-front view, while loins and legs are twisted back into profile. These faults, so prevalent in all Egyptian relief, may perhaps be explained when it is remembered that the human figure formed a part of the writing, as seen among the hieroglyphics on Hosi's tombstone. The human form thus made to stand for individual ideas, and having been fixed during the infancy of art in faulty outlines, could not, we imagine, be changed without causing confusion in the meaning. It would, therefore, naturally become in the course of time inviolate. Repeated attempts to introduce a truer profile are seen in reliefs of different ages, but the innovations

of random artists were not accepted, and it may be said that, in relief at least, "writing killed art."

But, leaving the companionship of the august Egyptians for the society of the brute creation, we shall find that the ancient artist well appreciated the beauty of a flock of geese, the imprudent kick of a tethered calf, and the dignity of the king of beasts, in all of which he was fully equaled by his brother craftsman in Assyria.

The conscientiousness of the Egyptian in his reproduction of animal forms finds a lively witness in models discovered on most sites. In those from Tanis, now in Boulaq,

while the Assyrian lion, with gaping jaws and threatening teeth, expresses fierce rage and tremendous force—as the sculptor doubtless saw him, goaded by the torments of the cruel hunter. The lion has well been called the hero in Assyrian art. All the details of the hunt were faithfully delineated; but especially on Assur-bani-abla's (Sardanapalus) palace walls, at Nineveh, we follow the scene, from letting the beasts out of their cages into vast parks, to where we see them hunted by the monarch, single-handed or from his chariot, and we watch their dying agonies, or see their powerful dead forms borne away. On one of these slabs, in the British Museum, the

WOUNDED LIONESS, FROM ASSUR-BANI-ABLA'S PALACE, KOYUNLIK. BRITISH MUSEUM. (ABOUT 625 B. C.)

and doubtless intended for study, perhaps by the pupils in some ancient academy of design, the ram's head and neck, and the lion's bold but stealthy step, are worthy of study to-day.

Animals, in Egyptian architecture, never bear anything, but recline, like the sphinxes, or squat, like the sacred apes. In Assyria, on the other hand, the winged bull and yawning lion carry an arch, although represented as vigorously walking out from under it. Even the sacred sphinx, when transplanted to the Tigris, is burdened with a pillar. In Egyptian statuary the lion, like the famous beasts of the British Museum, is conventional—rendered by bold, strong surfaces, which emphasize the grand repose of this king of beasts,

king pours out a libation over his prey. The grandeur of the lion's heads, here arranged in perspective at the feet of the monarch, may challenge the world in vividness of artistic power. Nothing could be more astonishing than the contrast between these majestic brute forms and the figure of the king, in which the sculptor's power is exhausted in the elaboration of superfluous ornament and embroidery.

The representation, in Assyria, of the more terrible wild beasts, as the snorting war-horse, fierce dog, wild ass, bull, and lion, is in keeping with the character of a people whose art never seems to rise above the expression of brute force. A group from Nineveh, in the British Museum, taken from Sar-

HUNTING SCENE, FROM ASSUR-BANI-ABLA'S PALACE, KOYUNJIK. BRITISH MUSEUM. (ABOUT 625 B. C.)

danapalus's hunting series, shows with what power the sculptor gave the canine form. The keeper can hardly hold these fierce brutes, whose well-shaped heads and strong forms are strained in the effort to make a vehement plunge. That dogs of such huge dimensions actually wandered about Assyrian palaces appears from the impress of a paw, as large as a man's hand, found in the clay at Khorsabad.

In the Assyrian reliefs in the New York Historical Society rooms, it will be seen that the form of the monarch and his attendants have not a startling discrepancy in size as in Egyptian relief, where the huge chief, Gulliver-like, overshadows his Lilliputian followers, and renders artistic harmony in composition impossible. There is, also, in these Assyrian alabaster slabs, a truer profile of the chest, shoulders, and eye—the deeply cut inner corner of the latter, with the more natural outline of the upper lid, forming a pleasing

contrast to the flat, almond-shaped eye of Egyptian relief.

In addition, Assyrian sculptures show continual progress, and had not the empire vanished with the fall of Nineveh (about 600 B. C.), we might expect to find works of still greater freedom. Not so in Egypt. After those realistic portraits, so full of promise of the ancient empire, a sudden night falls upon the sculptor's activity with the close of the Sixth Dynasty. On awaking again, his art forms are rigid, and gradually petrify into fixed types, to which not even the brilliant epoch of the Eighteenth and Nineteenth Dynasties, or the reviving energies of the Twenty-sixth, could give the freedom and truthfulness of the older time.

In the oldest existing Egyptian and Assyrian sculptures there is scarcely a sign of inexperienced beginnings, when the *a, b, c* of technique was being learned. To men who

could create the majestic Sphinx, or the speaking faces of Ra-hotep and Nefer-t; to the sculptor who, several thousand years before Christ, could skillfully carve the feminine forms of the nude Babylonian goddess, found in Koayunjik, the practice of art was no *terra incognita*. Oriental sculptors appear, from the first, as easily subjecting soft alabaster and limestone, obdurate basalt or porphyry, to the rules of their art.

In Greece, it is far otherwise. There the course of sculpture may be traced back to feeble struggling with the material. For ages before the sculptor's art asserted itself, it seems to have slumbered, long after Greek song had sounded truly Hellenic lays.

Certain forms of artistic activity manifested themselves on Greek soil even in those remote days. Glimpses of primitively wrought gold, crudely decorated vases, fragments of ivory and gems graven with uncouth designs, a few sculptured relics in coarse stone, rudest miniature forms of man and beast in terra cotta and bronze, from tombs or from the ashes of sacred altars, reveal to us the early artist's capabilities. Sometimes, he decorates his work with lozenges, squares, detached meander introducing equally square human and animal forms, domestic beasts and birds and those he hunted, all rendered as if in imitation of woven tissues (see Curium vase, Metropolitan Museum, New York). He does not attempt to model the horse, but covers his flat side with imperti-

nent zig-zags; the bird's body he turns into a triangle spread over with a net-work of lines. The origin of these geometric decorations, whether developed by each barbarous tribe independently, as among savages of to-day, or imported from abroad, is as yet unknown. Patterns resembling straggling sea-weed, sprawling polyps, and cuttle-fish which might have originated among people acquainted with the sea, are found on other crude pottery, discovered at Mycenæ, in the Troad, and on some of the islands. These are well illustrated by the vases from Ialysus, Rhodes, presented to the British Museum by Professor Ruskin.

Still another class of designs is found on Greek soil, consisting of fierce lions and bulls, fabulous monsters such as griffins, sphinxes, human-headed birds, mermen and satyr forms, besides palm-leaves, lotus-buds, and rosettes. All these find their prototypes on Eastern cylinders and bowls, and on reliefs which clearly betray an oriental origin. How fascinating it would be to trace in detail the genealogy of those crude monsters on Greek soil back to their ancestors in the far East! Thus, on very ancient Babylonian cylinders in the British Museum, the sage of the Chaldean epic Hea-bani, who aids Izdhubar in his search for Noah, appears in satyr form; thus the spirit Oannes, who came up out of the Persian Gulf to teach the primitive Chaldeans, is portrayed on early Assyrian reliefs in semi-fish, semi-human form, which re-ap-

ASSUR-BANI-ABLA POURING OUT A LIBATION ON SLAIN LIONS. KOYUNJIK. BRITISH MUSEUM. (ABOUT 625 B. C.)

pears, little altered, on early Greek gems and sculptures. On an Assyrian slab at Dartmouth College, the elegant robes of Assurnazir-pal, who lived 885 B. C.,—hard on to the Homeric age,—are rich in devices seen in modified form on early Greek vases. So, also, the Phœnician silver bowls represented in the Metropolitan Museum are interesting, as suggesting the ornamental motives of classic art.

But how came these oriental designs on Greek soil? Recent excavations aid in answering this query, indicating the course of their wanderings and stages of development between the remote East and Greece. One of these stages was Asia Minor. The nameless ruined cities of Cappadocia and Phrygia have the same extensive palace architecture and the same ornamental style in sculpture found in Assyria. The crude rock-hewn figures in procession at Boghaz-Keui in Cappadocia, the single warriors found near Smyrna, clad in turned-up shoes such as are still worn by the Turks, and the fierce lions and bulls represented in other places and pictured in Perrot's "*Expédition Archéologique de Galatie*," are a reflex of Assyrian sculpture. But, while borrowing much from Mesopotamia, there are independent traits in this ancient Asia Minor art. It seeks expression, not in perishable clay and alabaster, but in the rock which there abounds. The working in this hard material must have developed the spirit of patient application inherited by the Greeks. The extensive sculptures there carved in the native rock of the mountain-side doubtless encouraged that feeling for solidity and fondness for the monumental in art which is lacking in the flimsy work of Assyria but which re-appears in that of Greece.

Some attribute this ancient Asia Minor art to the Hittites, a nation of great conquests, whose capital, Carchemish, was the center of a trade the stations of which may, perhaps, be traced along the great modern routes of caravan travel—on the north, through Sardis to the Mediterranean coasts; and on the south, to the opulent cities of ancient Mesopotamia. However this may be, Asia Minor was certainly early overspread by Asiatic influence, and was brought into lively intercourse with the neighboring islands and Greece itself through migration, war, and trade. This is poetically hinted at in Greek song and myth, and proved by the family resemblance between the early remains of these different places.

But oriental influences streamed in through other channels. Phœnician traders, plowing the blue Mediterranean, brought treasures from the south eagerly desired by the natives

of the islands and shores of Greece; establishing colonies for the furtherance of trade, they introduced their myths, idols, and art-forms, which they had appropriated freely from Assyria and Egypt. Their designs must have seemed surpassingly beautiful to the primitive artist of ancient Greece, as they did to Homer, and we find that they were adopted in very early vases and gems.

But a weightier acquisition for the future of Greek sculpture seems to have been made in learning the manipulation of metal. The Asiatic artist, with a fondness for gorgeous display peculiar to the oriental of to-day, hid cheaper material with costly incrustation. In Solomon's temple the Phœnician Hiram, after carving upon the wooden doors cherubim and palm-trees, "covered them with gold." An Assyrian throne, discovered at Nimroud, dating from about 885 B. C., actually shows this incrusting. Bronze plates recently discovered at Olympia were evidently intended for external application, and early Greek stone reliefs show by their style and choice of subjects the influence of this *technique*.

Great significance attaches to oriental incrustation, from the fact that the Greeks should clothe their loftiest ideal conceptions in this garb. Phidias's Olympic Zeus and Athene's Parthenon were of wood, covered with gold and ivory. The old Asiatic idols which were denounced by the prophet Isaiah lent their *technique* to a more gifted race, to be transfigured in their masterpieces.

This early semi-oriental, semi-Greek art was, according to tradition, mainly industrial, busying itself with decorating armor, caldrons, tripods, vases, and gems, for use, sacred or profane. Remains confirm these shadowy records, and show us, in addition, crude idols—symbols, rather than representations, of the gods. In the oldest strata of ashes about the Olympian altars were found tiny, uncouth figures, representing the worshiper himself, frequently as charioteer or rider, and also exceedingly crude horses and oxen. Thus in Olympia, at least, the early suppliant did not offer an image of a god, or of the animal sacred to deity, but his own image and those of the animals necessary to his daily comfort. He thus followed out a custom traceable to the East, and which long flourished prosaically in Cyprus in statues proven by M. Renan to represent private devotees. There are many of these in the Metropolitan Museum of New York.

We have seen that the early people of Greece borrowed largely from the East, but oriental designs, in being thus transplanted, lost much of their original symbolic meaning.

Around these imported forms the inventive fancy of the Greeks wove the web of myth, and, stimulated by inborn genius, recast them into higher, nobler shapes. The sphinx of Egyptian relief representing a Pharaoh trampling an enemy to death under his lion's paws came to the Greeks a mystery, and was woven into tragic Theban myth, as the possessor of a dark enigma who brought destruction upon those who failed to solve its riddle. This male monster of foreign origin was made to assume bewitching female form and character—a transformation common to most oriental monsters when they pass under the wand of Greek fancy. The prosaic designs of the Phœnicians become idealized, almost independent, creations. The griffin's closed beak was fiercely opened, his bald head crowned with large ears, and his tame wings, before an exact copy of Nature, now curl boldly upward, as seen in Greek objects from Olympia.

When and how vase-painter, jeweler, and bronze artificer commenced in their humble way these transformations, we know not. Poetry has blinded history, gathering up in one man, Dædalus, great advances. The name of this mythical artist, in person serving the Homeric gods, furnishes weighty and indisputable evidence for the existence of Hellenic creative genius, but no clew as to the time when such power first dawned. Long and arduous must have been the process, however, before it came to full expression, and the Greek artisan appears still holding to his oriental models as late as 600 B. C., long after the plain white light of Eastern myth had been broken into rainbow hues by Greek fancy, and poets had enchanted into perfect human forms the monotonous, monstrous gods of their neighbors.

We know not how the primitive symbol, wooden log, or shapeless stone passed up to the god in human form, but, looking back to those olden days, we see the worshiper washing his crude wooden idol, painting, clothing, frizzing it, adorning it with wreaths, diadems, and necklaces. These hoary customs were kept up till late times, most frequently in the worship of goddesses, who were supposed, no doubt, to be by nature subject to woman's frailty, fondness for fine raiment.

At first the worship of the gods, we are told, centered simply about an open-air altar and its sacrifices. From this humble altar how sublime the course of Greek genius up to the stern beauty of the temple, as a sheltering roof for the sacred image and made worthy of the god!

But this height was only attained when a strongly Greek civilization had been devel-

oped, and could clasp hands with material prosperity. Such a union there was in the seventh century, B. C. A thrifty commerce opened up new resources, colonies scattered from Greece to far-off shores, growth in state and the development of Hellenic ideas showed themselves, while the ruins of large temples, built about 600 B. C., testify to that grand morning of national artistic life. Clay had, by this time, gained greater significance in art, metal was also more skillfully used, and marble was coming to enjoy its place as a medium of artistic expression. With all these changes appeared that vigorous activity in monumental sculpture which, in a hundred and fifty years, was to carry the statue of the god up to its Phidian glory, and give a higher significance to the industrial art of old, bidding it contribute elaborate throne and costly utensil to the direct service of deity. The Samians, Rhœcus and Theodorus, the Cretans, Dipoinis and Scyllis, with many others, stepped upon the stage. Their statues have perished, but ruins from that early time show that, in Asia Minor, temple architecture had well-nigh transformed the motives borrowed from the East, although sculpture still maintained a slightly oriental coloring. In remote Sicily, however, temple sculpture seems to show scarcely a trace of oriental influence, a powerful native genius apparently asserting itself in its own crude way.

These varied relics open up a vast field for study. Precious fragments are scattered through our museums, or still haunt their old retreats. Every new piece discovered, although uncouth, is greeted with the heartiest welcome, as it may aid to unlock the tantalizing secrets about the origin and growth of Greek sculpture.

And yet, although so varied and to us so confusing, we may be sure that these fragments all found their appropriate niche in the art-world of the ancient Greeks. Reliefs decorated the temple structure and funeral monument; they lent a charm to altar, tripod, and throne; on votive tablet they pictured prayer and thanksgiving to the deity; like vignettes they headed decrees of state, perpetuated in marble and set up in public. Statues, however, it is more difficult to place. Some were the great temple deities, like the ancient Hera, found at Olympia; others, more numerous, were votive figures of the gods, guests of the temple deity in his sacred house, expressions of public or private devotion. Other statues represented the athlete, or the worshiper who consecrated his own image to the deity—the latter found rarely, however, among pure Greeks. The deceased was also, even in those old days, sometimes honored with a statue

TOMBSTONE OF DISK-THROWER, ATHENS. (PROBABLY BETWEEN 550 B. C. AND 500 B. C.)

on his tomb, as is proven by remains found at Athens.

The artistic character of all these works varies with age and place, while in all a stiffness is observable, amounting in the older even to clumsiness; yet the student will mark growth in different specimens from the same place—a continual feeling after something better, indicated in the striving to render more truthfully the difficult parts. He will notice a searching for the ideal and beautiful, never wholly found, and deep interest will be enlisted for these ancient sculptors, although admiration be denied their work.

But growth was not equally vigorous and healthy in all parts of the Greek world. Like the orange-tree, art bore ripe and sour fruit at the same time. The purer the Hellenic element and the more gifted the local family, the more vigorously did sculpture develop. Thus in old-fashioned, strongly Phœnician Cyprus it never comes to rich maturity; in Hellenic Rhodes it enjoys a summer life, while in Greece itself, Athens in Attica, and Argos, Sicyon, and Ægina in the Peloponnesus, far out-rival their sister cities.

Even in these purely Greek art-centers there is diversity. The schools of the Peloponnesus are stern, seeking law of form, while a keen sense of vitality and delight in easy flow of lines marks the Attic school. Yet both idealize on a groundwork of sound naturalism. The human form, conceived as nature's noblest work, is far different from the decorative conceptions of the Assyrian and

Phœnician on the one hand, and, on the other, shows a spirit entirely foreign to the photographic realism of early Egypt, as well as to the impassive or lifeless works of later Egyptian art. That monstrous symbolism of the East which put the head of beast on human shoulders to express deity, where it has been adopted in Greece, dies out. Against the black, horse-headed Demeter of Phigaleia the artist of Ægina rebels, and when called upon to replace it, has a convenient dream bidding him change the image. Animals sacred to the gods now simply accompany them, sometimes on the hand, as the deer held by Kanachus's Apollo, sometimes decorating the apparel, as the owls and pegas on Athene's helmet, and the snakes on her ægis.

While the ancient sculptor's imagination was thus gradually unfolding, and his hand was gaining in skill to wring submission from his material, he was, no doubt, greatly influenced by the sight of the people about him, decked out in oriental taste, as well as by the rude puppet images of his gods, hung with precise drapery and overladen with jewels. The Samians early wore an excess of jewelry, following the oriental taste of their neighbors the Lydians, while in Sparta, Lycurgus made it law that men should wear long hair. In later times, Doric warriors paid great attention to dressing their flowing locks, while the old mode of dressing hair in Attica struck later generations as stiff, so that under the lead of Alcibiades it was discarded, a more

graceful fashion taking its place. When, then, we see just such primness in the old sculptures, we must think that the customs of the people were mirrored by the artist. As in time the people developed a better taste and truer sense of grace and beauty, renouncing their overlaid magnificence, and wore their hair and garments in a manner better suited to reflect the beauty of the Greek form, then the work of art felt the change. The simplicity of natural grace overcame the fussy attire and whimsical *friseur* of archaic works. Thus the intricate and artificial costume of ladies on the early reliefs disappears before the chaste simplicity of the Attic maidens of the Parthenon frieze.

Of still greater importance to the sculptor must have been the impulse he received from sacred competitive games, held, not only in Olympia, but in every Greek town. Here his eye was made familiar with the most perfect forms, engaged in all the graceful activity of athletic sports, and motives were naturally suggested for his chisel. At Olympia, 537 B. C., these games began to be a source of perennial occupation to the sculptor. The victor was allowed to place his statue in the sacred grove near the temple of the gods, but only to him who had been thrice victorious was granted the distinction of a portrait-statue. How numerous and important these figures of victors were is shown by the long chapters devoted to them by that ancient tourist, Pausanias, who is usually tantalizingly brief in his account of the sights he saw. Among the earliest that he noticed was a wooden figure of a boxer, one

Arrachion, standing in the market-place of Phigaleia, with feet close together and arms hanging at the sides in the stiff pose of existing archaic statues.

On a very old bronze relief, recently discovered at Olympia, two boxers in combat wear long hair hanging down the shoulders, like the statue above referred to. The victors were frequently, after death, adored as minor gods who bestowed physical strength. As their statues were thought to work miracles and cure diseases, they were repeated in many parts of Greece, thus opening up new horizons for the sculptor's activity.

Glancing around among the monuments, let us pause before the tombstone of an athlete (page 406), in Athens, which hints to us the humble beginnings of Attic art. It has, also, a special interest as confirming the historical incident recorded by Thucydides that, when the Athenians built the wall about their threatened city, as a defense against the Persian invaders, so great was their haste that even ancient tombstones from the neighborhood were torn down, and used like common stone. In the ruins of that wall, erected under Themistocles's supervision, this quaint relief was recently discovered. Having done its noble part against the barbarian invaders, it is now rescued from oblivion, and receives due honor by a place in the gallery. Its limits call to mind Solon's wise sumptuary law, which restricted the dimensions of tombstones to so unpretentious a size that ten men should execute a single one in three days. This slab shows us a beardless youth holding

TOMBSTONE FROM PHARSALOS, THESSALY. LOUVRE. (PROBABLY BETWEEN 500 B. C. AND 460 B. C.)

with his hand a disk behind his head. Besides adapting itself to the prescribed limits of the law, this relief shows obedience to that artistic feeling which characterized the Greek sculptor alone, for, not content with the arid background of oriental relief, he sought to occupy it in a graceful way by skillful and meaning composition. This is now done by the disk to indicate the athlete. His long, stiff hair, gathered in a coil which was, perhaps, in reality of gold, illustrates how desirable was the change to short hair afterward introduced in Athens. Although our youth's well-shaped jaw-bone, strong chin, short upper lip, and lively expression are in his favor, yet there is but little promise for the future of Attic sculpture in the excessively plain face, with its portrait-like bulbous nose, swelling, superficially placid eye in full front view,—although the face is in profile,—and high cheek-bones, together with the clumsy, ill-drawn hand. The forehead and chin are here in one unbroken line, from which the nose abruptly protrudes. There is no sign of the true Greek profile, in which mouth and chin retreat decidedly behind the exquisite line of brow and nose. The smirking lips of this youthful athlete are also foreign to the sweet dignity of later Attic faces, and seem due to a desire on the part of the sculptor to give a life-like expression, as suggested by faces around him—similar, it may be, to those of modern Greek peasants, in whom the protruding chin and the prominent nose make the place occupied by the mouth look hollow, and thus give the impression of a perpetual smile. Of this type the earlier sculptor's work is seemingly an exaggeration, but it is developed by the later into those ideal forms in which Greek art excelled.

Exaggeration is, in fact, one of the marked characteristics of early archaic art; runners fairly tear themselves, so intense is their motion, and in quiet figures the main features receive disproportionate size. At first we laugh at these peculiarities, but to the student they will suggest great strivings after truth.

A tombstone relief from Pharsalos, in Thessaly, and now in the Louvre, presents a pleasant contrast to this primitive Attic head. Two young women here offer each other flowers. The holding of flowers, apparently with a religious significance, frequently recurs in very ancient art, but seldom in advanced Greek sculpture. How daintily these two figures hold the buds in their hands—the latter so gracefully grouped as themselves to suggest a bunch of flowers! How absorbing the feeling and interest evident in these bended heads! One of the flowers which they regard so tenderly is raised high above the others, suggest-

BRONZE STATUETTE, VERONA. BRITISH MUSEUM.

ing worship, and hence the graceful name given to the relief, of "L'Exaltation de la Fleur." So easy here is the flow of lines and fullness of design, well-nigh covering the background, that one is tempted at first glance, despite the injured noses, to assign to these forms the freedom of art in its prime. A second look, however, at the fixed smile, the eyes in full front view although the face is in profile; at the Schematic treatment of the hair-bands, and the absence of the left breast, although the right is strongly marked, together with the neglect of the form, which cannot be divined through the drapery below the elbow—shows how successfully the sculptor has blinded our eyes by the ease he has lent his work. The pleasing grace of line and the agreeable gradation of light and shade are far different from the sharply defined and sterner plastic reliefs of the Peloponnesus. The effect, akin to that produced by the painter, is well adapted for

purposes of decorative relief. We see, also, here a striving for that ideal grace of which there is no trace in the homely, every-day forms of ancient Egypt, nor in the powerful brute force of Assyrian reliefs, with their surfeit of ornament. Indeed, so great is this contrast that we cannot seek a comparison; but, stepping with the Greek up to the higher level he has attained, we are content to admire the work from a purely Greek point of view.

Existing statuary bears, likewise, precious witness to the ancient Greek sculptor's successful efforts, in a series of statues, commencing with such as the one from Athens, now in the British Museum, and culminating in those represented by the so-called Apollo-Gouffier and the *Æginetan* marbles.

The Apollo-Gouffier, that erect crude stone figure in the British Museum, is said to have come from the tomb-street of Athens, and doubtless once decorated a grave. It is one of those works of art in which, even through the exaggeration of the sculptor, his vigorous endeavors are clearly shown.

As an illustration of that wonderful advance made by archaic Greek art, may be cited a neighboring statue in the British Museum, originally from Constantinople, where it was obtained by the French ambassador, Choiseul Gouffier. The many repetitions of this quiet, erect figure suggest some celebrated Greek original, since it was common in antiquity, as it now is, to repeat favorite statues. But whom may this youth represent, standing so erect, with powerful form, prominent chest, muscular arms, beautifully regular but stern profile, and leathern thong hanging at his side? Is it Apollo, or a human being—perhaps an athlete? Apollo, the god of male beauty, the Greeks were wont to conceive as a youth whose form was rich and full, graced by curling locks and not hidden by drapery. He was accompanied by the swift deer, held the lyre or bow as attributes, but in no case does a strap appear, as in this statue. The athlete, on the other hand, was characterized by a form of great physical strength and firm muscular build, accompanied by objects used in the games. The discus-thrower carried a disk; the boxer, a leathern thong to be twisted about his waist. Now, as this statue of the British Museum strongly emphasizes physical force, rendered in a style which comes close upon that of the Phidian age, it has been supposed by Dr. Waldstein that it cannot be Apollo, who by that time must have found sculptors able to hint, at least, at his flowing form and peculiar physical perfections. He explains the long hair as a custom of the early Greeks generally, which, as other monuments prove, prevailed likewise

among athletes. It here appears braided and bound tightly around the head, not for an ornament, but in order to render easier the boxer's action in the struggle. The strap hanging on the support of the statue once seems to have dropped from the hand, which is now gone. Marks on the right leg indicate that this figure may once have held a lowered palm-branch, as a sign of victory. Dr. Waldstein traces this statue back to a probable original by Pythagoras—that master reputed to have been as homely as his great predecessor and namesake, the philosopher. In his statues of athletes he made happy innovations, once even gaining the prize over his versatile contemporary, Myron. Whether or not these suggestive theories be accepted by archæologists, they will doubtless aid in throwing light on many works of the old time. In this statue, the head-dress, flat abdomen, and pose of feet are archaic, but the general modeling and treatment approached the great works that follow. By those seeking a parallel, the name Mantegna has naturally been spoken in its presence, so suggestive is it of the severely chaste beauty of old Italian art. In early archaic sculptures no tracery of veins or subtle texture of skin are indicated. Here, however, the veins of the upper arm, the parts habitually most exercised, are swollen, while the marble skin seems to move and flow like that delicate texture in life, varying with the parts underlying. The muscles themselves are not elevations put together, but melt into one another, rising and falling by gentle transitions. While in older statues the weight of the body is borne by both legs alike, whether one foot is advanced or both stand together, here one leg is "unfreighted," bending easily at the knee, and the suggestion of imminent motion thus given affords the eye a delightful sense of freedom and true organic life. If we could see the statue complete, with arms and palm-branch, we should further realize the sculptor's subtle wisdom in making the body below the waist dip toward the right, while above it inclines to the left, enhancing the rhythmical impression of life and the unity of parts. As it is, we almost forget that we are studying archaic Greek art. This statue represents well the gradual shuffling off of older forms and putting on of greater naturalness, and gives us a glimpse of the significance of preceding works as a preparation for the dignity and freedom of the Phidian age.

The far-famed marbles from *Ægina*, now in Munich, present archaic forms in most varied action. The statue of a dying warrior shows how admirably the old sculptor could represent a man of years sinking in the last

struggle. The glands in the corners of the eyes, and the teeth seen through the half-opened lips, lend the face, also, the look of being well-nigh fixed in death, as the "darkness," described in Homeric lay, "gathers over the eyes." In this statue a subtle rendering of the skin, combined with the well-proportioned rhythmical structure of the whole, is all the more striking, since some of the old severity still clings to it, especially as seen in the beard.

The interest attaching to these archaic nude statues is shared, likewise, by old draped sculpture. In the earlier draped figures, like the seated Miletus statues in the British Museum, elaborately cut garments do not suggest the form beneath, and the folds are not cut out with the chisel, but have been, doubtless, largely expressed by color. Again, the opposite tendency shows itself, the form appearing almost nude under the intricately fashioned and faultlessly regular garments.

A bronze statuette, about seven inches high, which wandered from Verona to the British Museum, presents a fine combination of archaic traits. This ancient lady, with a face of rare sweetness, out of whose eyes gems still flash a tender light, has an elaborate old-fashioned toilet. The dainty figure, of whose grace and exquisite charm, like that of the first buds of spring, it is difficult to gain an adequate impression except in presence of the bronze, still stands on her tiny pedestal, and was, doubtless, one of those votive gifts so frequently consecrated to deity by pious worshipers of antiquity. The hand with her symbol—perhaps a flower which would give us the key to her name—is, alas, gone. The gesture of the other hand is worth notice. Aphrodite, unlike the stern maiden Athene, appears continually on vase paintings, playing with her garment. On the handle of a mirror from Athens, now in the British Museum, she raises her robe, as does this statuette, but many other archaic figures have this gesture in common with Aphrodite. It may, in time, have enjoyed a special religious significance, and as such have been adopted by the Romans to characterize their goddess Spes. Its frequent recurrence in old works seems, however, to suggest a common gesture among women in lifting their trailing garments, applied by the early artist indiscriminately to many goddesses whose thought he could not better translate than by copying

his country-women. Whatever may be its significance, the gesture has been so used as to throw a great charm about this figure. In the exquisite face, in the form so gracefully reflected, not buried, by the quaint, regular drapery, bordered by inlaid silver and enamel, the artist has produced a work which, although of inferior size, is great in art. How delicate his taste in representing the eyes by brilliants! Our prepossession is not in favor of the inlaid eyes, said to have been so commonly used in ancient Greek masterpieces. We suspect that they must have given a painfully life-like expression, and so we prefer the dark, cavernous sockets which we are accustomed to see, despoiled of their gems. But how tender and gentle the expression of life lent to this face by the sparkle of the diamond! Instead of imitating the natural eye in its details, our artist has simply lodged a point of light in the dark silver eyeball.

The coy, tender expression of this face, the exquisite workmanship, combined with stiffness of style, call to mind epithets applied by the ancients to Kalamis, that Athenian master who received a commission from the poet Pindar, and whose works were eagerly sought for by Romans centuries later. Although it is impossible to trace this gem back to his workshop, it may hint to us how Kalamis could express, even in archaic forms, feminine grace, so as to enkindle the admiration of coming generations, accustomed to the masterpieces of a riper art.

Great names meet us as Greek sculpture stands on the threshold of the Phidian age, such as Kalamis, Myron, and Pythagoras, the Peruginos and Mantegnas of ancient Greece, their efforts crowning those of a host who had preceded them. In these old masters we see how sound and natural the genius of the Greeks, their poetic, artistic feeling standing out in strong contrast to the unimaginative chronicle spirit of Assyria and Egypt. Scorning mere mystic symbols, they idealized the form of man to become a worthy dwelling-place of the immortals.

But while the shapes of the gods were thus being perfected by an Ageladas, a Kanachos, and a Kalamis, and those of sturdy or agile athletes by a Pythagoras and a Myron, the highest ideals of the Greek mind were yet to be attained.

THE INCREASE OF DIVORCE.

WHEN the Vatican Council dissolved, with a large minority of its members still refusing their assent to the dogma of papal infallibility, the writer of this article held a conversation with a near relative of one of the dissenting prelates, in which the question of the future action of these prelates was raised.

"They will all submit," was the prophecy.

"But how can that be?" was the next query. "They have proved incontestably, from Scripture and from history, that the pope is not infallible. By their arguments they must have convinced themselves. How can they now confess that he is infallible?"

"The logic that convinces them," was the answer, "is the logic of despair. They have been trained from childhood to believe that ecumenical councils are infallible. That, surely, is fundamental in the Catholic faith. An ecumenical council has now pronounced the pope infallible. To dispute this is to reject the fundamental article of Catholic faith and to become Protestants. They cannot be Protestants. It is difficult for you to understand this, but the best of them believe, *ex animo*, that the Roman Catholic Church, with all its faults, is still the true and only church of Christ; and they look with a sincere and a grave apprehension upon what seem to them to be the disorganizing and destructive influences of Protestantism. They believe, for one thing, that the morality and security of our communities depend upon the maintenance of the family relation in all its sacredness; and they believe that the Roman Catholic Church is interposing the only effective barrier at the present time to the destruction of the family in Christian lands. The Protestant sects, with their easy notions about divorce, are assisting rather than restraining the forces that are at work undermining the Christian family. This is one of the signs by which they are convinced that Protestantism is radically wrong, and one of the reasons that will surely

lead them to adhere to the Roman Catholic Church, and to submit to the Vatican decrees."

This representation of the Roman Catholic Church as the special custodian of the purity and permanence of the family had, when it was first spoken, something of the effect of a moral paradox. The claim does, indeed, appear to be somewhat exaggerated when we reflect upon the state of social morality in Roman Catholic countries as compared with those in which Protestantism prevails. In one respect, however, the Roman Catholic Church has proved itself the conservator of the family. By a consistent and stringent discipline it has always maintained the sacredness of the marriage bond. Its doctrine is that marriage is a sacrament, and it holds that the union thus consecrated can be dissolved only by death. Whether this rigid law promotes domestic or social virtue may be a question, but there can be no doubt that the Roman Catholic Church has steadily enforced its law, and that in this respect the contrast is strong between its action and that of the Protestant communions.

Whatever may be said of the present state of social morality in Protestant countries, it cannot be denied that in some of them, and especially in our own country, the permanence of the family is seriously threatened. The forces by which this mischief is wrought had been at work for several years, and had already become strongly entrenched in our laws and in the habits of the people, before any strong resistance was attempted. The General Convention of the Protestant Episcopal Church, in 1868, sounded one of the first notes of alarm, and a canon adopted by that body furnished a stringent rule to all the ministers under its authority with respect to the solemnization of marriages—a rule which it would be well if divines of other churches should feel themselves bound in conscience to obey. "No minister of this church," says the law, "shall solemnize

matrimony in any case where there is a divorced wife or husband of either party still living; but this canon shall not be held to apply to the innocent party in a divorce for the cause of adultery, nor to parties once divorced seeking to be united again." About the same time other religious bodies gave some attention to the subject, but the most powerful presentation that has yet been made to the American public was in Dr. Woolsey's temperate and scholarly treatise, published in 1869.* Since that time occasional articles have been published in newspapers and magazines, and, within the past five years, in several of the New England States systematic and earnest movements have been set on foot with the purpose of producing such changes in public sentiment, and in the legislation of the several States, as shall check this growing evil. These movements have recently culminated in the formation at Boston of a New England Divorce Reform Association, with directors in the several New England States.

On the day of the organization of this society, the Rev. Samuel W. Dike, of Royalton, Vermont, a Congregational clergyman who has given much study to this subject, read a lecture in Boston, containing the most careful and complete statement that has yet been made of the statistics of divorce in this country. With respect to New England, Mr. Dike's figures are quite full; in other parts of the country the value of statistics is not so highly appreciated, and information upon this subject is not easily obtained. Nevertheless, facts enough are within our reach to furnish food for sober thought.

The number of divorces did not begin to increase with any great rapidity until about the middle of the present century, and then only in Connecticut. Up to that time the only causes of divorce generally allowed were adultery and desertion. In 1843 the Connecticut law-makers added "habitual intemperance" and "intolerable cruelty." Six years later, three more doors were opened to the petitioners for divorce: "sentence of imprisonment for life; bestiality, or any other infamous crime involving a violation of conjugal duty, and punishable by imprisonment in the State-prison; and any such misconduct of the other party as permanently destroys the happiness of the petitioner and defeats the purposes of the marriage relation."† This last "cause" would seem to be sufficiently broad and indeterminate to meet the wants of all persons con-

templating divorce. If the law containing this provision had been entitled "An Act for the Promotion of Divorce in the State of Connecticut," the description would have been exact. Under the encouragement of such legislation, divorces multiplied with great rapidity. In 1849, there were ninety-four divorces in Connecticut; in 1850, one hundred and twenty-nine; in 1854, two hundred and sixteen; in 1859, two hundred and ninety-nine; in 1864, four hundred and twenty-six.

For the fifteen years following 1864, says Mr. Dike, "they averaged four hundred and forty-six annually, varying less from year to year than the reported births or marriages or deaths." Thus Connecticut maintains its reputation as the land of steady habits. No habit is steadier in that commonwealth than the habit of putting asunder what God has joined together. For the last fifteen years there has been not quite one divorce for every ten marriages. From 1849 to 1864 the population of Connecticut increased about fifty per cent., and the number of divorces about five hundred per cent. In the first decade of this century, President Dwight thought that things had come to a horrible pass because there was one divorce in every hundred marriages; what would that stalwart moralist have said to one in ten?

In Vermont, the ratio of divorces to marriages has increased from one in twenty-three in 1860, to one in fourteen in 1878. Owing to some changes in legislation, and to a considerable awakening of public sentiment, the number of divorces in 1879 was materially reduced.

New Hampshire is not fully reported, but the figures show the same tendencies at work. In the entire State there were one hundred and fifty-nine divorces in 1870; two hundred and forty in 1875, and two hundred and forty-one in 1878. This shows an increase in the number of divorces of fifty per cent. during eight years, while the population during the same period must have increased slightly, if at all.

In Maine, the statistics are still more imperfect. The number of divorces granted in that State, in 1880, was five hundred and ten. We do not know the number of marriages, but the ratio of divorces to the population is greater than in Connecticut. From five counties in Maine Mr. Dike has reports for 1878, and also for 1880, and in these counties the number of divorces in the former year was one hundred and sixty-six, and in the latter two hundred and twenty-three—an increase in two years of nearly thirty-five per cent.

Concerning Rhode Island, the only informa-

* Essay on Divorce and Divorce Legislation, with Special Reference to the United States. By Theodore D. Woolsey, D. D., LL. D. New York: Charles Scribner & Company.

† Essay on Divorce, p. 219.

tion within our reach is that the present ratio of divorces to marriages is about one to thirteen or fourteen. Mr. Dike gives us the former figure, and Mr. Carroll D. Wright, of the Massachusetts Bureau of Statistics, the latter.

The article on "Divorce" in Mr. Wright's Report for 1880 gives us full statistics for Massachusetts. Twenty years ago there was one divorce in this State for every fifty-one marriages; at present the rate is one to twenty-one. The population of the State has increased during this period about fifty per cent., the number of divorces nearly one hundred and fifty per cent. Twenty years ago there was about one marriage in Massachusetts annually for every one hundred and twelve persons; now there is about one to every one hundred and thirty-five. The ratio of marriages to the population is much smaller now than it was in 1860. On the other hand, the ratio of divorces to the population twenty years ago was about one in five thousand, while it is now one in three thousand. Comparing the several New England States, Mr. Dike tells us that, reckoning on the basis of the present census, there is one divorce to every thirteen hundred and fifty-seven inhabitants in Maine; one to every fourteen hundred and forty-three in New Hampshire; one to every sixteen hundred and eighty-seven in Vermont; one to every twenty-nine hundred and seventy-three in Massachusetts; one to every fifteen hundred and fifty-three in Connecticut, and one to every fourteen hundred and eleven in Rhode Island. While, therefore, the ratio of divorces to marriages is largest in Connecticut, the ratio of divorces to the population is larger in three of the other New England States, Maine being the "banner" State in this competition.

It has been the common belief that certain Western States, notably Indiana and Illinois, were sinners above all the others in this matter; but, so far as the facts have been collected, this does not appear to be true. Chicago has had the reputation of dealing in divorces more extensively than any other city in the Union; but the ratio of divorces to marriages in Chicago appears to be only one in twelve—less than either New Haven or Bangor.

The most startling figures are reported from the Western Reserve of Ohio—a region inhabited by a population almost wholly sprung from New England stock. In these counties, Mr. Dike tells us, "the ratio of divorces to marriages was 1 to 11.8 for the two years 1878 and 1879, while for the rest of the State it is 1 to 19.9. Nor is the worst of the Reserve in the cities. The ratio in Ash-

tabula County, among a farming people originally from New England, is 1 to 8.5. And in Lake County the proportion of divorce suits begun to marriages is 1 to 6.2, and of divorce granted, 1 to 7.4. Unless there be like counties in Maine, this is the worst county in divorces in the United States—except Tolland County, Connecticut, as that was for a few years."

This picture is dark enough, but another shade must be added. In at least four of the New England States, more than one-fourth of the marriages reported are those of Roman Catholics. Among these there are no divorces to speak of. The number granted should be compared, therefore, only with the number of *Protestant* marriages, and this would make the ratio much higher,—one to fifteen in Massachusetts; one to thirteen in Vermont; one to nine in Rhode Island, and one to less than eight in Connecticut.

How much can we learn from these figures respecting the moral condition of the communities represented? Are offenses against purity most numerous where the ratio of divorces to marriages is largest? That there is likely to be some relation between these two classes of facts no one will dispute, yet this relation is far less close than might at first be imagined. The divorce rate is twice as large in Connecticut as in Massachusetts; yet it is not credible that there is twice as much social immorality in the former State as in the latter. Divorces have never been allowed at all in South Carolina; but there is, at any rate, room for question whether the morals of South Carolina are purer in this respect than the morals of Maine. In France, also, the laws make no provision for divorce, though legal separations are allowed; but there is at present only about one legal separation for every one hundred and fifty marriages: is it to be presumed that the people of France live purer lives than the people of the Western Reserve in Ohio, where there is one divorce for every twelve marriages?

It is difficult to compare one community with another, because the statistics are scarce, and the methods of punishing and of recording crime vary so greatly. We may compare different periods of time in the same community with much more satisfactory results. What, then, do we find to be the fact with respect to the increase of social immorality in those communities where the number of divorces has been so rapidly increasing? Of the New England States, Massachusetts alone, by her admirable Bureau of Statistics, puts within our reach the answer to this question. During the past twenty years, the population of Massachusetts has increased

about fifty per cent., and the number of divorces annually granted has increased one hundred and forty-six per cent. What has been the increase during this period in offenses against purity? Combining four of the principal crimes of this character, we find the number of convictions in Massachusetts for 1860 to be two hundred and ninety-seven, and for 1879 only three hundred and twenty-nine—an increase of not quite eleven per cent. Taking the years 1860 and 1861 together, and comparing them with the years 1878 and 1879, the convictions in the latter period are only twenty-two per cent. more than in the former period. For the five years 1875-79, the convictions for these crimes are fifty-one per cent. greater than for the five years 1860-64. This indicates no relative increase in offenses of this character. Taking the shorter terms, the per cent. of increase falls considerably below the rate of increase in the population; but taking the period of five years which covers the war, and comparing it with the five years ending in 1879, the increase in this kind of crime has just kept pace with the increase of population.

Mr. Dike's conclusions differ greatly from these, but he confines his comparison to two crimes against purity. The broader comparison must yield a fairer result. It is not true, then, so far as we can gather from the statistics of crime in Massachusetts, that the multiplication of divorces is accompanied by a corresponding increase in crimes against chastity.

Mr. Dike supplements the figures of the Massachusetts Bureau of Statistics with a digest of letters received by him from intelligent men in all parts of New England, giving the impressions of the writers respecting social vice in their several neighborhoods. The sum of these judgments is that, in three-fourths of the localities thus reporting, impurity is on the increase. But Mr. Dike is quite right in saying that the opinions of men on a question of this sort are to be taken with much allowance. There has been no generation of good men since the flood whose verdict respecting the morality of their own time would not have been substantially the same as is that of Mr. Dike's correspondents. The men of fifty years ago would have said without hesitation that the standards and practices of their own time were lower than those of the generation preceding, and so on back to Noah. This is not conjecture; it can be verified by quotations from the moralists of every age. We need not enter into the explanation of this persistent pessimism; we only note the phenomenon in order that we may rightly estimate the opinions of our

contemporaries. Doubtless reactions do occur in the moral progress of Christendom; but if there is a "power not ourselves that makes for righteousness," and if the world is, on the whole, growing better instead of worse from age to age, then most of these desponding censors of their own times must have been mistaken, and perhaps those of our time are mistaken, too. Crime is dramatic, virtue is commonplace. The newspapers record the misdoings of the day; the well-doing that forms the staple of its real history they do not notice. There are many reasons why good men fail to discern the moral progress of their own times.

We will trust, therefore, that the figures we have been studying do not indicate an increase of immorality corresponding to the increase in the number of divorces. The trouble is institutional rather than ethical. It is not the vice and corruption of society that are assailing the family so much as it is certain disorganizing ideas and theories now filling the air.

That profound observation concerning the movement of progressive societies in modern times, which Mr. Dike quotes from Sir Henry Sumner Maine, explains to a considerable degree the facts we have been considering. This movement, as he declares, has hitherto been "a movement from status to contract." "Contract," according to his definition, "is the tie between man and man which replaces those forms of reciprocity and rights which have their origin in the family." The word family is used here in the patriarchal rather than in the modern sense of the word, but the statement is true in both senses. And it is one of the most comprehensive generalizations of the same distinguished writer that "the individual is steadily substituted for the family as the unit of which civil laws take account."*

This vast change in the relations of men to civil law is in many respects beneficent. It is the fruit of a purified ethical judgment. The doctrine of individual responsibility and individual rights has supplanted the old doctrine of imputed and hereditary guilt and merit, greatly to the advantage of theology and morals. But the ideal relations of men, with which ethics and religion chiefly deal, cannot always be incorporated into social institutions. The infant is responsible to God for his conduct; but it would not be well to make him, in our theories or in our laws, independent of parental control. The movement "from status to contract" has not yet wholly emancipated the infant. Until he is twenty-one years of age the law regards him as incapable of mak-

* "Ancient Law," p. 163.

ing contracts. In civil law he is not a unit, but a cipher. The family is not yet, therefore, legally or theoretically decomposed into its individual elements. Nevertheless, the movement in this direction has gone very far. The doctrine of individual rights and responsibilities has been pushed to absurd and dangerous extremes. Parental authority holds the children much less firmly now than once it did; filial reverence and obedience are fast becoming historic virtues. In the exaltation of the individual, modern society has greatly weakened the family bond. The feelings of mutual obligation and fidelity have been suppressed in the assertion of personal liberty. Men's rights, and women's rights, and children's rights have been theorized about and insisted on, with little thought of the reciprocal duties of husbands and wives, and parents and children.

This process of individuation is no doubt a reaction from the old system under which the family was everything and the individual nothing—under which neither wives nor children had any legal rights that husbands or fathers were bound to respect. The pendulum has swung now to the other extreme. The individualism of the present is not much better than the tyranny of the past. Social theories or sentiments that tend to disintegrate the family contain the germs of moral pestilence. That such theories and sentiments are abroad, no reader of the newspapers needs to be told. The agitation in behalf of woman suffrage, and even the less radical movements for the elevation of women, make continual use of arguments which have this tendency. Doubtless it was necessary to arouse the self-respect of women, and to strengthen their individuality; but if "God never made an independent man," then it is presumable that he never made an independent woman; and theories that weaken those affections by which the solitary are gathered into families need to be sharply challenged. A reform which should succeed in developing the "selfhood" of our women up to a point at which they should avoid the obligations of wifehood and maternity would not in the long run prove salutary. "Individuality" is one of those good things of which it is quite possible to have too much.

It may be said that nature will prove too strong for these extreme theories—that the great fact of sex will assert itself, as it always has done. This is true; but the great fact of sex has found many ways of asserting itself, some of which have not been conducive to the well-being of the race. It is by no means impossible that the natural affections should be stunted or distorted in their growth by bad training. And it is a question to be duly con-

sidered whether the theorizing upon the relations of men and women which has been current of late years has not tended in this direction, and whether the great increase in the number of divorces is not, in a considerable degree, the result of this theorizing. Many of the persons who have been most active in the advocacy of woman's rights have been the champions of easy divorce. Their philosophy of individualism regards marriage purely as a contract, and holds that it ought to be possible to dissolve it without difficulty. John Stuart Mill quotes a remark of Humboldt to the effect that "marriage, having the peculiarity that its objects are frustrated unless the feelings of both parties are in harmony with it, should require nothing more than the declared will of either party to dissolve it." Mr. Mill dissents from this sweeping conclusion; he holds that in the case of marriage the obligations of each party to the other and of both to the offspring of the marriage forbid that the relation should be so summarily terminated. These obligations, he says, "are a necessary element in the question; and even if, as Von Humboldt maintains, they ought to make no difference in the legal freedom of the parties to release themselves from the engagement (and I also hold that they ought not to make much difference), they necessarily make a great difference in the moral freedom."* Mr. Mill thinks that the sacred and supreme obligations of parentage ought not to make *much* difference in the legal freedom of the married to release themselves from the bonds of marriage, where "the feelings of both parties" are not "in harmony." If these obligations should not offer any serious impediment to the legal dissolution of the marriage relation, nothing else could. The conclusion is, that married people should be left by the laws *pretty nearly* free to dissolve this contract of marriage at the pleasure of either.

Some of the advocates of woman suffrage are much more positive than Mr. Mill in the expression of such opinions, and some are much more cautious; but it cannot be denied that the tendency of this agitation has been to promote the theory that marriage is nothing but a contract, and to increase the facilities for its dissolution.

As the result of the same general movement, many changes have been made in the laws of most of our States, the effect of which has been to render the husband and the wife independent of each other in the ownership of property. In some of the States marriage is no longer anything more than a sentimental partnership; in their material interests the

* "On Liberty," p. 201.

pair are not one, but twain. Either may carry on business, contract debts, bequeath property, sue and be sued without the consent of the other. This legislation has been intended, of course, to protect the property rights of women; but it may well be questioned whether the effect of it has not been injurious. The old laws which practically deprived the woman of all property rights were, indeed, unjust; but if, instead of dividing so sharply the wife's proprietorship from that of the husband, the reformed legislation, regarding the twain as one, had sought rather to identify their interests, to make the property common, and to provide for a joint ownership, the bonds that unite the family would not have been so seriously weakened. It may be difficult to frame laws which shall secure this joint ownership, but this is the direction in which all legislation should tend. When our law-makers provide so abundantly for entire separateness of material interest between the married pair, they become the instigators of divorce.

I have referred to the changes in divorce legislation in the State of Connecticut since the middle of the present century. The changes in most of the other States have been equally radical and sweeping. Originally, in most of the States no causes of divorce were recognized except adultery and desertion. One cause after another has been added, until now the ways that lead out of wedlock are numerous and broad, and many there be that find them. In Massachusetts, which affords by no means an extreme example of the progress of this sort of legislation, the causes have been increased to nine: Adultery; impotency; sentence to imprisonment at hard labor for five years or more; desertion for three consecutive years; separation without consent, and union for three years with religious sect or society holding the relation of husband and wife unlawful; extreme cruelty; gross and confirmed habits of intoxication; cruel and abusive treatment; neglect to provide. In some of the States the doors are much wider. I have already quoted the provision known as the "omnibus clause" in Connecticut, by which divorce was made procurable for general misconduct. This clause has been repealed, but in other States provisions equally liberal are found. In Maine, a statute of 1857 allows any justice of the Supreme Court, at any term, in the county of the residence of either party to the application, to grant a full divorce "whenever, in the exercise of a sound discretion, he deems it reasonable and proper, conducive to domestic harmony, and consistent with the peace

and morality of society."* North Carolina, also, not only grants divorces for certain specified causes, but permits the courts at their discretion to dissolve the relation, "if any other just cause of divorce exists." Similar clauses are found in the statutes of Iowa, and of Rhode Island.† South Carolina, in which divorces are not allowed for any cause whatever, and New York, in which adultery is the only cause allowed, are exceptions to the general course of legislation on this subject. I have seen the suggestion that the large number of divorces in Connecticut must be explained partly by its proximity to New York, the supposition being that many citizens of the latter State become residents of the former for the purpose of availing themselves of its larger facilities for divorce. This is not improbable, and the remark may be extended to Massachusetts and Vermont.

Undoubtedly, the immediate reason of many of these changes in the divorce laws may be found in the empiricism of legislators. The great majority of the men who make our laws are without experience and ignorant of history; and they often venture upon measures of legislation for which there is the slenderest basis. Some well-meaning man is familiar with a case in his own neighborhood in which a woman has suffered many things at the hands of a drunken or cruel or improvident husband; it seems to him a grievous thing that a good woman should be tied to a worthless man; the result is a bill in the next legislature providing that divorces may be granted in cases like the one known to the legislator. A statutory induction as sweeping as this, from one or two facts, is not a rare thing in modern legislation. General laws are made for special cases; and if the cases for which they were made were the only ones affected by them the mischief would be small; the difficulty is that they open the doors to countless flagrant abuses. It is an evil thing that a good woman should be unhappily wedded to a coarse and selfish man—albeit some of the finest characters are developed in common life under such conditions; but if the law which releases this one woman from an unhappy marriage afford to a hundred others, whose sufferings are much less severe than hers, the weapon with which they may destroy the homes that might, with a little

* Woolsey's "Essay on Divorce," p. 204.

† In Indiana no discretionary clause exists, and divorce is now granted for the following causes: adultery, impotency existing at the time of marriage, cruel and inhuman treatment, habitual drunkenness, abandonment for two years, failure of husband to provide for family for two years, and conviction after marriage of infamous crime.

patience and good-will, have been preserved and hallowed, then the law causes far more misery than it cures. It is evident that our law-makers have not carefully studied the broader effects of the measures of relief that they have so freely offered.

Under the best laws, cases of hardship will occur. Natural laws produce much suffering. Gravitation kills men before our eyes continually. It does not, therefore, occur to us that the law of gravitation ought to be repealed, or that its stringency should be relaxed. If the laws of nature were made less inflexible, probably the suffering arising under them would be increased. There can be no doubt that the well-meant changes by which the grip of the old marriage laws has been gradually loosened have produced, on the whole, more domestic unhappiness than they have prevented.

Doubtless, we must regard these changes in the law as causes, to some extent, of the great increase of divorce in recent years. President Woolsey says that, in Connecticut, "after each of these advances in legislation, there was an increase of divorces." Mr. Carroll D. Wright, in his report on the subject to the Massachusetts legislature, shows how each modification of the law has resulted in the granting of a larger number of divorces during the succeeding year. Yet divorces have increased very rapidly when there have been no changes in legislation. In New Hampshire, the laws are substantially the same now as they were twenty-five years ago, but the divorces have increased as rapidly as in other parts of New England. Neither can this increase in New Hampshire be accounted for, in part, as in the cases of Connecticut, Massachusetts, and Vermont, by an overflow from New York. The New Hampshire divorces must be mainly indigenous. It is true that the laws of New Hampshire twenty-five years ago were about as liberal as the laws of the other States are now; nevertheless, divorces were not, it is probable, much more numerous then in New Hampshire than they were in the other States. This shows that the increase in divorces is not due chiefly to legislation.

The statistics of divorce in other lands exhibit the same fact. In most of the European countries, the ratio of divorces to marriages is much smaller than in this country; the difference is so vast that it ought to startle those complacent Americans who are prone to think that all the virtues belong to themselves, and all the vices to the "effete monarchies" of the old world; nevertheless, in the European countries where no changes in legislation have occurred, the divorce rate is

increasing rapidly. In England, the divorce laws have not been essentially altered since 1857. In 1860, the petitions for divorce and legal separation (both forms being recognized by English law) were one to every six hundred and twenty-eight marriages; in 1870, one to every five hundred and seventeen marriages; in 1875, one to every four hundred and forty-six marriages; in 1878, one to every three hundred marriages. These figures, let it be noted, give the number of *petitions* for divorce and separation; the number of divorces and separations actually granted would be considerably less. One to three hundred is still much less alarming than one to eight or ten; but the increase in England during these eighteen years is still very significant—if anybody can tell what it signifies!

In Belgium, in 1840, the ratio of divorces to marriages was one to five hundred and seventy-six; in 1874, it was one to two hundred.

In France, as has been said, divorces are not allowed, but legal separations are provided for. During the ten years from 1840 to 1850, there was one separation for every three hundred and seventy-one marriages; from 1850 to 1860, one to two hundred and thirty-nine; from 1860 to 1870, one to one hundred and fifty-two. During these thirty years, there has been, so far as I can learn, no change in the French laws on this subject.

These facts show that the increase of divorces is not simply due to changes in the laws. The breaks in the dike are not the cause of the high water, though they may have helped to spread its devastations. It is evident, also, that the causes which have produced the results that we deplore are operating elsewhere, though they have worked themselves out more fully in our country than in the Old World.

Such, then, are the facts relating to this subject: a recent and rapid and alarming increase in the ratio of divorces to marriages; this increase accompanied in most of the States by changes in the laws which render the husband and the wife virtually independent of each other in property matters, and which greatly multiply the facilities for divorce; yet these statutory changes are themselves demonstrably effects more than causes—results of the working of a subtle individuating force that threatens to decompose society into its ultimate atoms.

There are those, no doubt, who see in this process of individuation, in this movement "from status to contract," by which the family is dissolved, only the normal evolution of the highest social order. They foresee and are ready to welcome a still further relaxation of divorce laws. They think, with Mr. Mill,

that the state ought not to put any very strong barriers in the way of the separation of those who do not live happily in wedlock. Perhaps they think, also, that the state ought not to trouble itself greatly about marriage, and that the relations of the sexes ought to be left wholly to individual choice. Such a doctrine has sometimes been preached, but we have not hitherto been inclined to regard the people preaching it as the prophets of a high morality. Must we now confess that they are the heralds of a new dispensation?

In spite of all the formidable facts and figures here presented, we may venture to dispute their claim. There are social tendencies to be followed, and social tendencies to be resisted. Under the present economic system we find wealth rapidly accumulating in the hands of a few men, and great multitudes sinking into pauperism. That tendency does not seem to us wholesome; we point to it as evidence that there is something wrong in our economic system. Similarly, when we see divorces steadily increasing, we need not assume that the movement is in the direction of the ultimate social order; it may be a temporary reaction toward social anarchy and corruption. That this is the logic of the movement is strongly believed by many who have given to the subject some study, and who have resolved to do what they can to resist the forces that now assail the permanence of the family.

How much can be done in this direction, and how it can be done most wisely, are questions of expediency that demand careful study. It is plain, for one thing, that this evil was not produced by legislation, and that legislation cannot cure it. The attempt to reform all these abuses by stringent and sweeping laws would be worse than useless.

"A Christian," says President Woolsey, "would be glad to have * * * divorce or separation granted only on account of adultery and malicious desertion, or for the first reason alone. In the present state of Christian countries, however, this extent of reformation is altogether unlikely to be attained * * * Law-makers will say that they are not bound by the morality of the New Testament in their legislation touching rights and the common welfare; that you may as well separate two parties who hate and injure one another, rather than vainly strive to reach the inaccessible ideal by your laws, which the next legislature can alter; and that strictness in prohibiting divorce will not prevent social evil, but will only force it to pour its fiery floods by a new crater upon society. We are disposed to take the ground, therefore, on which alone the defects of the Mosaic legislation

can be justified,—that the hardness of men's hearts prevents a better system,—and to inquire, not what is the best possible law, but what are some of the features of a law that is at once desirable and feasible? It is a painful conviction that forces us into this position—a conviction, impressed by the history of divorce and divorce laws even in Christian civilization, that the strict rules of the New Testament cannot be introduced into our law, or if introduced, cannot long be enforced." * This is the result to which Christian statesmanship brings one of the wisest men of this generation. The practical suggestions which follow are in part borrowed from the same authority, though in the form in which they here appear he is not responsible for any of them.

Although, therefore, these evils connected with divorce cannot be wholly corrected by law, something may be done to improve the laws and thus to lessen the evils.

1. The distinction formerly recognized in most of the States, and now abolished in most of them, between absolute divorce and legal separation, should be restored. For the crime of adultery, for desertion (after a long term of years), and perhaps in the case of the imprisonment for life of one of the parties, absolute divorce might be granted; in some of the other cases for which divorces are now granted,—such as drunkenness, cruelty, and neglect,—separation from bed and board might be allowed, giving to neither party the right of marrying again, and leaving the way open for the reunion of the separated parties.

2. Where adultery is a crime, the granting of a divorce for adultery should be followed at once by the arrest and imprisonment of the criminal. "Provision should be made," says Dr. Woolsey, "that the penalty should follow the sentence of divorce without any other trial." This is the simplest common sense. Our laws are brought into contempt when the courts permit men whom they have judicially pronounced to be criminals to escape the consequences of their crimes.

3. If absolute divorce be allowed for other causes than adultery, the law should prescribe a limit of at least three years within which the guilty party should be forbidden to marry.

4. No indeterminate causes of divorce, such as those included in the famous "omnibus clause" of Connecticut, and in the statutes of other States, should be recognized. To recognize incompatibility of temper, general misconduct, and other vague and impalpable grounds of action, is mischievous in the extreme. It is through such clauses that the worst abuses of divorce creep in.

5. The state's-attorney ought to appear in every uncontested divorce suit, to protect the interest not only of the absent party, but of the public. The public has an interest in every such case. It is not simply a question between the two parties, any more than theft, or the uttering of counterfeit money, or traffic in diseased meat, is merely a question between the two parties to the transaction. The state is as much interested to maintain the sacredness and permanency of the family as it is to maintain an honest currency. And the people ought not to sit by and let the institution of the family be undermined by scores of fraudulent and collusive divorces.

A few such changes in the laws would interpose a wholesome check to the present tendencies. Reforms like these would make it plainer than it now is that our States do not wish to encourage divorce; that they mean rather to do what they can to preserve the integrity of the family.

Something may also be done by law to prevent hasty and ill-assorted marriages. Easy divorce gives rise to rash marriages—since it can be so easily done for, no matter what it is begun for; rash marriages, on the other hand, furnish the soil from which many divorces spring. Stricter divorce laws would tend to keep people from rushing into wedlock; but something can be done directly by law to secure this result.

1. It is a question whether the old rule, requiring the publication of the intentions of matrimony a week or two before the marriage, ought not to be restored. The publication, if made, should now be made, of course, in the newspapers, and not in the churches.

2. Whether this is done or not, the law should require the parties contemplating matrimony to procure a license at least two weeks before the solemnization of marriage; and to place the license thus procured in the hands of the clergyman or magistrate before whom the marriage is to be solemnized, also at least two weeks before the celebration of the rite. An opportunity would thus be given the clergyman or magistrate to investigate cases with which he might not be familiar, and to assure himself that he was proceeding in accordance with the requirements of divine and human law.

3. The license should state on its face whether either of the parties has been previously divorced, and if so, where, when, and for what cause.

Such provisions should not seem irksome to well-meaning persons; and they would not only serve to prevent foolish people from rushing into a relation for which they are wholly unfitted, but would also assist clergy-

men in the intelligent performance of a difficult and delicate duty.

Another question naturally presents itself to the minds of those who study the various and dissimilar statutes by which the subject of divorce is regulated in the different States of the Union. The laws of no two States are alike, and strange complications often arise from this cause. Cases are not unknown in which women are provided by law with more than one husband each, and men are legally authorized to live in wedlock with the wives of their neighbors. Such confusion of laws is both disgusting and demoralizing: cannot some remedy be found?

The suggestion of a national divorce law, to be binding upon all the States, has often been made. Whether such a law could be enacted under the existing Constitution is a question into which this discussion will not enter. If the Constitution would not now authorize the enactment of such a law, the question of amending it, so that it would, is worth debating. It is not clear that the reasons for a uniform rule of naturalization, and uniform laws on the subject of bankruptcies, throughout the United States, for which the Constitution expressly provides, are any stronger than the reasons for a uniform rule of divorce. It is conceded by many that the widely different systems of taxation now existing in contiguous States give rise to many anomalies and hardships; and that it may be necessary before long for the nation to establish a uniform system of taxation in all the States. Are not the interests arising out of the family relation equally worthy to be guarded by uniform laws? The looseness and confusion of State legislation on this subject renders it difficult for the general government to deal with the Mormon problem. Even if there were no legal obstacle in the way, the moral power of the executive would be impaired by all these statutory anomalies. The Mormons might easily point out that polygamous relations are maintained under State laws.

There would seem to be no difficulty in the way of an inter-State commission,—to consist of two or three capable men appointed by the legislature of each State,—which should meet and consider the whole matter. Perhaps such a commission could agree upon certain uniform rules, to be recommended to the legislatures of the several States; and perhaps these recommendations would be adopted by some, if not by all, of the States. The end to be gained is surely worth much painstaking; and if it could be reached in this way, the scruples of strenuous upholders of State-rights would not be excited.

It is not, however, let us reiterate, chiefly

by means of law that the growing evil which we have now been considering will be eradicated. The changes in legislation by which divorce has been facilitated have arisen from the prevalence of false social theories. No legislative reforms will be salutary that do not register the rise of purer sentiments and a sounder philosophy. The weapons that will prevail in this warfare are not carnal, and the victory will not be won in a single engagement. A long campaign is before us. There is need of vigorous and searching discussion of the questions involved. The relations of the individual to the social order and the social organisms will bear patient investigation. We have heard much of late about the sacredness of personality. Perhaps it will turn out, by and by, that there is something besides personality that is sacred. It may appear, after fuller study, that no man or woman is an integer; that the individual completes his own life only when he stands in the right relation to the family, which is the organic unit of society; that the affections which constitute the family bond need, therefore, to be cultivated quite as much as the sentiment of "in-

dividuality"; that the mutual respect, and deference, and helpfulness required by the family relation are traits no less manly and no less womanly than "independence"; that the theorizing and the training which put so much stress on rights, and so little upon affections and duties, are pernicious in the extreme.

There is need, also, that the Protestant churches should arouse themselves to more consistent and vigorous action upon the matter of divorce. The clear provisions of the Christian law respecting the causes of divorce ought to be emphasized in the teaching and enforced in the discipline of the churches. Whatever sanctions religion can bring should be brought to the defense of the family. And ministers of the gospel may well be cautious about transgressing the express command of their Master in the marriage of persons formerly divorced for other causes than those named in the New Testament. Such explicit testimony and energetic action may avert the evils now assailing the peace and security of our homes, and should convince our Roman Catholic brethren that Protestantism is not the foe of the Christian family.

SCHUMANN'S SONATA IN A MINOR.

[MIT LEIDENSCHAFTLICHEM AUSDRUCK.]

THE brilliant room, the flowers, the perfumed calm,

The slender crystal vase where all aflame
The scarlet poppies stand erect and tall;

Color that burns as if no frost could tame:
The shaded lamp-light glowing over all;
The summer night a dream of warmth and balm.

Out breaks at once the golden melody
"With passionate expression"—ah, from whence

Comes the enchantment of this mystic spell,
This charm that takes us captive soul and sense,

The sacred power of music—who shall tell,
Who find the secret of its mastery?

Lo, in the keen vibration of the air,
Pierced by the sweetness of the violin,
Shaken by thrilling chords and searching notes

That flood the ivory keys, the flowers begin
To tremble,—'tis as if some spirit floats,
And breathes upon their beauty unaware.

Stately and still and proud the poppies stand,
In silken splendor of superb attire;

Stricken with arrows of melodious sound
Their loosened petals fall like flakes of fire;
With waves of music overwhelmed and drowned,

Solemnly drop their flames on either hand.

So the rare moment dies, and what is left?

Only a memory sweet to shut between
Some poem's silent leaves, to find again,
Perhaps, when winter blasts are howling keen,

And summer's loveliness is spoiled and slain,
And all the world of light and bloom bereft.

But winter cannot rob the music so!

Nor time nor fate its subtle power destroy
To bring again the summer's dear caress,
To fill the heart with youth's unreasoning joy—

Sound, color, perfume, love, to warm and bless,
And airs of balm from Paradise that blow.

WHO WERE THE CHARTISTS?

Who were the Chartists?—a question to be first answered by saying what Chartism was. A word of fear in England, from 1837, for ten to fifteen years onward, of its sound scarcely an echo now remains. In the Epilogue to Green's "Short History of the English People," these few words—"The discontent of the poorer classes gave rise, in 1839, to riotous demands for the People's Charter"—with briefest possible statement of the provisions of the Charter, are all the information given of an agitation that stirred the whole island. Elsewhere it is spoken of with the same superciliousness. Historians in general are not generous to the defeated, nor care to waste their ink on chronicles of the "lower orders." Two earnest writers, however, have treated the subject as more important: Carlyle in his "Chartism," Kingsley in his "Alton Locke." Nobly intentioned books these two, with serious endeavor toward truth; but in vain would one look even there to learn either what Chartism meant or what manner of man this Chartist was. Carlyle's writing is blurred by the confusion in the writer's mind between rights and might: it is the work of a Jeremiah, who ends with Lamentations. What is to be learned from it is the reason for that prevalent discontent of the poorer classes in which Chartism had its birth. That is sufficiently exposed by both Carlyle and Kingsley; but both were by their peculiar views unfitted for correct judgment of the movement or the men. Having determined in their own minds that the one thing needful for the masses is good guidance by a wiser few, no matter how appointed (of course presumed divinely), satisfied that there lies the whole problem of government (Carlyle's aristocracy of beneficent whip-bearers wanting only, according to Kingsley, the further benefit of clergy), they not unnaturally concluded that all sound thinkers must be of the same opinion; and were so disenabled from understanding men who, certain that they had been misgoverned by the aristocracy, and betrayed or neglected by the church (described by even pious William Cowper as in those Georgian days "a priesthood such as Baal's was of old"), had come to the opposite conclusion—that it was time for the many to dethrone the few and take care of themselves. Chartism, indeed, was the plain operation of democracy pure and simple; not republican,

for it asked only popular rule, without thought of organization of society. It was just a people's protest against absolutism, monarchical or oligarchical—against privilege and class-legislation: a simple claim for some voice in the appointment of governors or public servants. It said this: "Before all else, acknowledge men as men! If you cannot do away with the inequalities of long-continued circumstance, do not aggravate them by making them the very basis of your law, first rendering us unfit by your partial regulations, and then keeping us down as a fair consequence of your own unjust prohibiting!"

This principle of Chartism—the looking to the suffrage as the inalienable right of manhood—had so permeated the minds of Englishmen, owing in a great measure to the wide circulation of Paine's "Rights of Man" (published in 1791-2), that in 1819 a petition for universal suffrage, presented to the House of Commons by Major Cartwright, obtained a million of signatures. The great Whig party had already taken up the same cry. So early as 1780, the Duke of Richmond introduced a bill into the House of Lords, to give the right of voting to "every man not contaminated by crime nor incapacitated for want of reason." Three years later, in his celebrated "Letter to Colonel Sherman," he wrote:

"The subject of Parliamentary reform is that which, of all others, most deserves the attention of the public, as I conceive it would include every other advantage which a nation can wish; and I have no hesitation in saying that, from every consideration which I have been able to give this great question, that for many years has occupied my mind, and from every day's experience to the present hour, I am more and more convinced that the restoring the right of voting to every man universally who is not incapacitated by nature for want of reason, or by law for the commission of crime, is the only reform that can be effectual and permanent."

At the same date a committee, of which Charles James Fox was chairman, appointed by the electors of Westminster, recommended annual Parliaments, universal suffrage, equal voting districts, no property qualification, voting by ballot, and payment of members. The "Society of Friends of the People," established in 1792 by Charles Grey (afterward the Earl Grey of the Reform Bill), James Mackintosh, and others, noblemen and members of the House of Commons, followed the old lead; and the continued agitation resulted,

in 1832, in the passing of what is called the Reform Bill—a reform by which the middle classes were admitted to a share in the government, wherewith the Whig patriots, having come into office, were satisfied. The working classes were not.

Chartism, so long unnamed, but so nursed, was, nevertheless, born of popular discontent—that “sick discontent,” as Carlyle observes, in which England, almost since the glorious Dutch Revolution, say for a century or more, lay “writhing powerless on its fever bed, dark, nigh desperate”—the one sole recipe for its woes, on the advent of a reformed government, a new poor-law and refusal of outdoor relief. In which connection, under date of 1832, I read of fifteen hundred paupers in one East London poor-house (that of Spitalfields, the silk weavers’ district, many of them descendants of Huguenots expelled from France) dying off “like rotten sheep” from mere foulness of the atmosphere. No wild rumor this, but certified by medical authority. In 1833 Leicester frame-work knitters received, for seventeen hours’ work a day, a wage of five shillings a week—one dollar a week—on which to support a family. Six years later, wheat being at eighty-three shillings a quarter, the wages of agricultural laborers were considered fair when averaging seven shillings a week. But the poor are so improvident. And in 1840 (here quoting again from Carlyle) we have “half a million of hand-loom weavers working fifteen hours a day, in perpetual inability to procure thereby enough of the coarsest food.” And beyond all nakedness, hunger, or distress, “the feeling of injustice that,” as the seer remarks, “is insupportable to all men.” Ground enough, one would think, for discontent, for smoldering wrath, for impotent writhings, for even vindictive outrage, if nothing better can be done. “Sullen, revengeful humor of revolt against the upper classes, decreasing respect for what their temporal superiors command, decreasing faith in what their spiritual superiors teach, is more and more the universal spirit of the lower classes.” So Carlyle saw in 1840. Some other less heeded men saw it earlier. Notable among these was Henry Hetherington, who, inasmuch as one man can be credited with the beginning of a popular movement, may be called the founder of Chartism. He, with William Lovett, James Watson, and a few others, all working-men, misliking secret societies or open violence, and wise enough, too, to perceive the powerlessness of conspiring against the reigning oppression, sought, rather, to call forth legally and peaceably such an expression of public opinion as should be sufficient of itself to ob-

tain redress. From a paper prepared by Hetherington in 1831 arose the “National Union of the Working Classes,” for “protection of working-men in the free disposal of their labor” (anticipating free trade); to obtain “an effectual reform in Parliament” (Whig intentions already seen through); and “the enactment of a wise and comprehensive code” (to do away with much grievous uncertainty of the law, especially with regard to offenses of the poorer classes). The principles of the union, drawn up by Lovett and Watson, as they were the principles which actuated the framers of the People’s Charter, may be worth giving in full:

“NATIONAL UNION OF THE WORKING CLASSES.

“We, the working classes of London, declare:

“1. All property (honestly acquired) to be sacred and inviolable.

“2. That all men are born equally free, and have certain natural and inalienable rights.

“3. That governments ought to be founded on those rights; and all laws instituted for the common benefit in the protection and security of all the people, and not for the particular emolument or advantage of any single man, family, or set of men.

“4. That all hereditary distinctions of birth are unnatural, and opposed to the equal rights of man; and therefore ought to be abolished.

“5. That every man of the age of twenty-one years, of sound mind and not tainted by crime, has a right, either by himself or his representatives, to a free voice in determining the nature of the laws, the necessity for public contributions, the appropriation of them, their amount, mode of assessment, and duration.

“6. That in order to secure the unbiassed choice of proper persons for representatives, the mode of voting should be by ballot; that intellectual fitness and moral worth, and not property, should be the qualification for representatives; and that the duration of Parliament should be but for one year.

“7. We declare these principles to be essential to our protection as working-men, and the only sure guarantees for the securing to us the proceeds of our labor; and that we will never be satisfied with the enactment of any law or laws which does not recognize the rights enumerated in this declaration.”

In 1837, the London Working-men’s Association held a conference with the few liberal members of the House of Commons, the result of which was the appointment of a committee of twelve persons to draw up a bill to be proposed to Parliament. The committee consisted of Daniel O’Connell, M. P., John Arthur Roebuck, M. P., John Temple Leader, M. P., Charles Hindley, M. P., Colonel T. Perronet Thompson, M. P., William Sharman Crawford, M. P.; and, as deputies of the Working-men’s Association, Henry Hetherington, John Cleave, James Watson, Richard Moore, William Lovett, and Henry Vincent. The work of writing fell to Lovett, who was aided on legal points by Roebuck, who wrote the preamble. Carefully considered afterward,

clause by clause, in the London Association, and approved by associations throughout the country, the perfected draft came at last before the public as the People's Charter—the outline of an act to provide for the just representation of the people of Great Britain and Ireland in the Commons' House of Parliament, embracing the principles of universal suffrage, no property qualification (for members), annual Parliaments, equal representation, payment of members, and vote by ballot. The principles of this outlined act were, it will be seen, precisely those which, in 1780, Charles James Fox had recommended to the electors of Westminster, which the leaders of the great Whig party, not then in office, had deemed the only reform that could be effectual or permanent. Now, fifty years later, this reform, asked for by the people themselves and its practicability made manifest, was officially declared to be revolutionary; and the very name of the People's Charter helped the opponents to a nickname. Chartist (one believing in old Whig principles, and discontended because these principles were abandoned by the party in power) became a word of reproach. Liberal politicians of the Brougham and Burdett, and even of the Russell temper, would have none of it.

Such was the origin, such were the principles, of Chartism. And what sort of men were the Chartists? "Insatiable wild beasts," said, almost unanimously, the contemporary liberal and illiberal press. "Discontented rioters of the poorer classes," writes the more authoritative historian. Yet the rioting was not extensive. Some there was: unimportant writhings, chiefly of starving and ignorant agricultural laborers, stirred out of their accustomed apathy by the falling of a few hasty and unconsidered words on the heaped-up dry fuel of their misery; now and then a "riot" of less ignorant and more excitable mechanics—for the most part provoked by police brutality, or the secret works of Government spies (as Cobbett, then in Parliament, conclusively proved); this was all set down to Chartists, however innocent the rioters of any thought of political action or concern with Chartism. An abortive attempt to liberate a prisoner, in which the only blood shed was that of the would-be liberators, was the one important item of wild-beastliness. And "insatiable" was an unhappy term for men toward whose satisfaction nothing except the most liberal abuse was offered. But Chartism (its objects were so just) meant rebuke to those in authority, and insofar was essentially repugnant to the taste of the higher classes; wherefore, to borrow late slang, it was "bad form" to associate or sympathize with those low fellows, the Chartists. "What had mere

working-men to do with the nation's government? Let them leave that to their betters!" It was a time of reaction. The current generation had not outgrown the scare of the French Revolution. The "Young England" of a dreamily benevolent conservatism (Carlyle interpreted by Benjamin Disraeli—Genesis xliii. 34) and the Christian socialism of Professor Maurice were not yet glimmering in the dawn. Respectable writers, like the class for which they wrote, kept aloof from "the great unwashed"—public baths being not yet numerous in England, and private not too frequent. Leigh Hunt alone was generous enough to praise the public addresses of the Working-men's Association; and Carlyle and Kingsley (Shelley's "Masque of Anarchy" belongs to earlier days) stand as exceptions to the rule of neglect—they too, as I have said, debarred from acquaintance with the men. I, being with these Chartists through nearly the whole of the contest, in close companionship with some of the leaders, had opportunity of knowing what they were. Is it too soon to say?

Among them were some of the noblest, the most disinterested, the bravest, ay, and the most intelligent men in England. I am not prouder of Mazzini's friendship, of the friendship of some others whom England consents to honor, than I am of the friendship of these men "of the poorer classes"—only working-men, my Chartist comrades. Let me recall one: Cornelius George Harding, Chartist and gentleman:

"As true old Chaucer sang to us, so many years ago,
He is the gentlest man who dares the gentlest deeds to do:
However rude his birth or state, however low his place,
He is the gentleman whose life right gentle thought doth grace."

This one was lowly placed, and of the poorest: a self-taught, loving, fragile lad, a toiler from his childhood, and from boyhood (his father dead) the sole support of his mother. Conscientious, diligent, studious, esteemed by his employers, loved by his companions; public-spirited, unobtrusive, zealous, brave, devoted; gentle as a woman, pure as a girl, irreproachable as a saint; never sparing himself when work was to be done as a republican missionary, or help was needed for a friend; dying at the age of twenty-seven, of consumption, overwork, and that fever of the enthusiast, the sword outwearing the too slender sheath:—I have known no more beautifully natured man than this poor Chartist.

William Lovett was of the same gentle nature. Only a poor cabinet-maker—poor his

life through, for he gave his days to the people's service and took no reward. A true patriot: history records none truer. Not self-seeking, nor ambitious, save of the fame of good deeds. Not a strong man, but essentially good, of kindest nature, clean, just, intelligent, peace-loving, although "seditious"; and, if not strong, unflinching. What epitaph or praise needs be beyond his title—the framer of the People's Charter? A charter greater than the "Great Charter," which did not recognize the workman as a man. Another of history's riotous wild beasts! This one would not have trodden upon a worm. Cornish by birth, born in 1800, at Newlyn, a little fishing-town near Penzance, his father the captain of a small trading-vessel, drowned at sea before the boy saw light, he was carefully brought up by his mother, a woman of much character, intelligence, and piety, getting such schooling as was to be had by the poorer classes in those days. All that was supposed sufficient to train up a child in quiet and respectful ways was his: his mother's example and precept, Dr. Watts's divine songs, the strict Methodist connection; but other influences could not be shut out from even the child's simplicity. It was war-time. "Deeply engraven on the memory of my boyhood," he writes in his autobiography ("Life and Struggles of William Lovett, in his pursuit of bread, knowledge, and freedom"), were "the apprehensions and alarms amongst the inhabitants of our town regarding the 'press-gang.' The cry that 'the press-gang was coming,' was sufficient to cause all the young and eligible men of the town to flock up to the hills and away to the country as fast as possible, and to hide themselves in all manner of places till the danger was supposed to be over. It was not always, however, that the road to the country was open to them, for the authorities sometimes arranged that a troop of light-horse should be at hand to cut off their retreat when the press-gang landed. Then might the soldiers be seen with drawn swords, riding down the poor fishermen, often through fields of standing corn where they had sought to hide themselves, while the press-gang were engaged in diligently searching every house in order to secure their victims. In this way, as well as out of their boats at sea, were great numbers taken away and many of them never heard of by their relations." Such scenes probably lit the first sparks of his natural indignation against wrong. When old enough, he was apprenticed to a rope-maker; afterward, rope-making being slack, the war being over, he tried fishing, but could not do away with seasickness; then, being of age, and not without considerable mechanical

ingenuity, he went to London to seek employment as a self-taught carpenter. For a time he suffered the usual course of privation, but persevered; and, at first refused admission into the Cabinet-makers' Society because he had not served an apprenticeship, he at last was chosen president of the society. Anxious always to improve, strict in conduct, temperate in his habits, he spared money for books, cheating his stomach with scant dinners, joined the Mechanics' Institute, then new, attended lectures, etc. He tells an amusing story—characteristic, too—of once returning from a lecture with Sir Richard Phillips, the book-seller and author, who had some theory of gravitation in opposition to the Newtonian. Glad, I suppose, to get an intelligent listener, the scientific book-seller led him round and round St. Paul's church-yard in the moonlight, to broach his peculiar views, explaining them occasionally by diagrams chalked on the shop-shutters, as need occurred. In 1826 he married, making his own house-furniture—which furniture was seized five years later because he refused either to serve in the militia or to pay the fine for a substitute,—his plea "no vote, no musket." His daring conduct was not without effect. Public excitement led to discussion in Parliament, to exposure of the system in practice; and no drawing for the militia has taken place from that time.

By this he had become acquainted with the various endeavors then making for the amelioration of the condition of working-men, had joined the "First London Coöperative Trading Association" (one of several associations for the same purpose—the first established at Brighton in 1828), and was becoming proficient in politics. So early as 1829, he drew up a petition for opening the British Museum on Sundays. He was active also in the agitation for a free and unstamped press, begun by Hetherington in 1830. Of his action, with Hetherington and Watson, in the formation of the Union of the Working Classes, and the formation of the People's Charter, I have already spoken. The addresses of the London Working-men's Association were, I believe, his writing. I note one in especial, an address to the working-men of Belgium on occasion of the imprisonment of one Jacob Katz for calling a meeting of his fellow-workmen in Brussels, to discuss their grievances—the first public essay to break down the king-fostered antipathy between the peoples. When a convention of delegates from all parts of the country met in London, in 1839, to prepare and to procure signatures to a national petition for the Charter, Lovett was chosen secretary. The frightened Government began to make arrests, to give oppor-

WILLIAM LOVETT.

tunity for them also by needless provocation of the people. An outrageous attack by the police, in July, 1839, on a peaceable meeting in the Bull-ring, Birmingham, being condemned by this Convention, Lovett, as their secretary, was arrested, and, with another member of the Convention, John Collins, who had taken the condemnatory resolutions to the printer, was convicted of a "seditious libel," for which they suffered twelve months' imprisonment in Warwick Gaol. Unconverted, he came out of prison. After the failure of Chartism, the rest of his life was given mainly to educational movements; and two educational works by him, "Elementary Anatomy and Physiology," and "Social and Political Morality," have been highly spoken of. There was no lack of the old-time earnest philanthropic spirit when I last saw the old man, in London, in the beginning of 1873. No rioter he, but simply a good citizen, fully impressed with his duty as a man, benevolent and earnest.

With Hetherington I was closely associated: editing for him in, I think, 1841-2, the "Odd-Fellow" (so called because it was, to some extent, the organ of the societies of that name), a weekly unstamped broad sheet, for which I also wrote the political leaders. I had acted with him in Chartist matters for some years before. Of him, I may repeat some few of words written to be spoken over his grave, as I was too far away to attend the burial:

"None more single-minded, few so brave, so generous as he. The most chivalrous of our party. He could neglect his own interests (by no means a virtue, but there is never lack of rebukers for all failings of that kind), but he never did and never could neglect his duty to the cause he had embraced, to the principles he had avowed. There was no notoriety-hunting in him—as, indeed, so mean a passion has no place in any true man. And he was of the truest. He would toil in any unnoticeable good work toward human freedom, in any forlorn hope, or even, when he saw that justice was with them, for men who were not of his party, as cheerfully and vigorously as most other men will labor for money, or fame, or respectability. He was a real man—one of that select and glorious company of those who are completely in earnest. His principles were not kept in the pocket of a Sunday coat (I don't know that he always had a Sunday change of any sort); but were to him the daily light which led his steps. If strife and wrath lay in his path, it was seldom from any fault of his; for though hasty, as a man of impulsive nature and chafed by some heavy afflictions, he was not intolerant, nor quarrelsome, nor vindictive. Men who did not know him have called him violent. He was, as said before, hasty and impetuous, but utterly without malice; and he would not have harmed his worst enemy, though, in truth, he heartily detested tyranny and tyrants. * * * One of the truest and bravest of the warm-hearted."

Born in London, in 1792, he was brought up as a printer; afterward in business as a book-seller and news-agent. One of the founders, with Doctor Birkbeck, of the first Mechanics' Institute, he was active in every movement for the instruction and moral elevation, as well as the political and social enfranchisement, of the working classes.

HENRY HETHERINGTON.

For four years, 1831-4, he led the fight for a free press,—fined, imprisoned, hunted as an outlaw, but at last defeating the Government, obtaining from a special jury the verdict that his "Poor Man's Guardian," for which he and others had suffered, was a strictly legal publication. How severe the fight, may be known from the mere fact that over five hundred persons, during those four years, were imprisoned for selling the strictly legal but too radical publications. These prisoners and their families had all to be supported by those who sympathized with the movement, mostly working-men, some few nobly exceptional men of station and influence giving generous help. Chief of these last was Julian Hibbert, the chairman and treasurer of the "Victim Fund," a man who, dying sadly, asked that no record might remain of him. "I ask only silence." Too late now to dispute his wish. All that can be said of him is that, a man of "family," some means, high culture, and most generous nature, he was the chief prop of Hetherington's great endeavor. Not unlike Shelley his portrait shows him; what I have heard of his character continues the resemblance.

Obnoxious to the Government on account of his determined resistance to the hinderances of a free press, Hetherington was a marked man also as a prominent Chartist. In the Convention he sat as delegate for London and for Stockport. A fervid speaker, ready and clear, humorous or sarcastic as occasion required, often eloquent, he was very popular; yet he was sufficiently master of himself to escape prosecution in the day of arrests for "sedition." He had, perhaps, had his share of punishment for the unstamped. Not quite, it was thought by the Government, which in 1841 obtained a conviction against him for publishing (rather for selling in the ordinary way of business, he not being the publisher) certain "Letters to the Clergy." He defended himself, and so eloquently as to call forth a warm eulogy from Chief Justice Denman; and, technically guilty, escaped with four months' imprisonment in a debtor's prison, the lightest punishment on record for so heinous an offense. The champion of a free and untaxed press is a proper title for Henry Hetherington. He died of cholera, in 1849. Outside of comradeship, some evidence of his worth may be found in the following resolution:

"We, the Directors of the Poor of the Parish of St. Pancras, at present assembled, sincerely deplore the loss of our much respected friend Mr. Henry Hetherington; and cannot allow the earliest opportunity to pass without offering this poor tribute to his worth, talent, energy, urbanity, and zeal. In him the poor, and more especially the infant, have lost a powerful advocate, the Directors a valuable coadjutor, the rate-

payers an economical distributor of their funds, and mankind a sincere philanthropist."—*Passed unanimously at a meeting of the Board of Directors, August 24, 1849.*

Close to Hetherington, their public life coincident, their friendship "beyond the love of women," was James Watson; he, too, a working-man, some seven years younger than his friend, born at Malton in Yorkshire, in 1799, his father a day-laborer of "the poorer class," who died when James was about a year old. Like Lovett, he owed everything in early life to his mother. At twelve years of age apprenticed to a clergyman (no unusual thing in those days) to learn field labor, house-service, etc.; after that employed as warehouseman at Leeds; then book-seller's shopman in London; store-keeper for a co-operative association; compositor and publisher; he worked his steady way to independence, helped by a wife worthy of him; and was able in his declining years, in spite of prison hinderances and long devotion of his energies to the public service, to enjoy some years of well-earned ease before his death, in 1874. Of him, my very dear friend,—I knew him intimately for nearly forty years,—how shall I speak impartially? I can but describe him as I knew him. A man of the old Puritan type, such a man (though neither poet nor statesman) as Milton or Vane would have held dear. A man most single-hearted, profoundly religious (certainly of no denomination), simple, clear-thoughted, earnest, trusty, and inflexible. Not to be daunted (he endured three long imprisonments for selling publications—now freely sold—disapproved of by the then Government), not to be enticed by pleasure. A plain, self-taught, good man, with all the virtues of his class—the honest working class of which England is justly proud, and besides that the indomitable spirit of a Wickliffe, and such gentleness withal as that of him whom Shelley characterized as "gentlest of the wise"—Leigh Hunt. Happily married, though with no family, yet fond of children, and loved by every child that came near him; a man of kindest affections, but severe in his self-devotion to the good of his fellows and of humanity, his exertions as a publisher and active politician, public speaker and teacher, given freely, and his example consecrated to the bettering of mankind, of his own class to begin with. A close thinker, very thoughtful, yet practical, prudent and sure in action, wise in council, of unblamable life, austere in himself, and if severely just yet never cruel in his judgments, severe only because, though he might pity the evil-doer, he could have no sympathy with evil. Habitually grave, for life was serious, and suffering

JAMES WATSON.*

rife around him, yet sedate and cheerful. A man of the Cromwell period, a gentler Ironside. A man whom all who had to do with esteemed and trusted, whom all who knew loved. Perfectly healthy souled, whole! I call him a working-man, for I have always looked upon him as such, though in most of his life a tradesman, a book-seller. But his business was for daily bread, not profit—his only means of livelihood at last, and at first chosen with a view to supply his fellow workmen with political and social information else beyond their reach. If the sale of a book supplied his current wants, the modest fare and surroundings of a decent mechanic, he was content. If profit came, it went to bring out some new work which might be of advantage to his class. His first capital came

from Julian Hibbert, who had nursed him through a severe sickness, who saw what the man was, and who in his will left him four hundred and fifty guineas, in token of his esteem and friendship. His first publications were set up by himself, and with his own hands printed on a press—the gift, with the types, of Julian Hibbert. He published nothing merely for profit. His shop was his church. It was only by dint of constant economy and self-denial that he saved enough to provide a small annuity for his old age, with after provision for his wife. In his later years of comparative retirement, still interested, if not so active as before, in political matters, his lodging (two rooms only) was in the neighborhood of the Crystal Palace, in order that he might almost daily study the works of art and manufacture there exhibited, and enjoy the music. Looking back upon his life, knowing of it from its beginning to its close, I find it flawless. I cannot detect a single stain upon the record of threescore and fifteen years.

Not unworthy to be also his friend was Richard Moore, by profession a carver, not without talent to have commanded wealth, had he cared for wealth as he cared for the public service. His name is not prominent in histories, yet to him, with Hetherington and Watson, more than to any other men, we are indebted for a free press in England. What labor was involved in that, even after Hetherington's defeat of the Government and the consequent reduction of the tax on newspapers from fourpence to one penny each, may be learned from my stating that the committee appointed by the "People's Charter Union" as the "Newspaper (penny) Stamp Abolition Committee" (afterward committee of the "Association for Repeal of all the Taxes on Knowledge," of which Moore was unpaid permanent chairman, and C. Dobson Collet, another Chartist, unpaid secretary, from its formation, in 1849, to the abolition of the duty on paper, in 1861) had to meet

* I am glad to be able to give portraits of Hetherington and Watson (though Hetherington's is from a poor drawing, not doing him justice) as they were in the most active period of their lives. The other portraits are all from photographs taken at an advanced age, but may show how time can render even "rioters" venerable-looking and humanize the traits of the most unsatisfactory of "wild beasts." Cooper writes to the friend who obtained for me his portrait: "I am in my seventy-seventh year. I enclose you a photograph taken only a month ago, so Linton will have the latest likeness." Frost's photograph was taken on his return to England, after the remission of his convict sentence.

At Ayr, in Scotland, public subscription has placed a statue to the memory of one of these "convicts," Doctor John Taylor (born at Newark-castle, Ayrshire, 1805, died in 1842), delegate from Paisley to the Chartist Convention of 1839. I did not know him personally, but the inscription underneath the statue, from those who did know him, may be sufficient attestation of his worth. The legend runs thus: "In commemoration of his virtues as a man and his services as a reformer. Professionally, he was alike the poor man's generous friend and physician; politically, he was the eloquent and unflinching advocate of the people's cause, freely sacrificing health, means, social status, and even personal liberty, to the advancement of measures then considered extreme, but now acknowledged to be essential to the well-being of the state."

Watson, also, over the grave at Norwood, has his memorial stone—a plain granite obelisk, with the following words: "James Watson, 1874; erected by a few friends, as a token of regard for his integrity of character, and his brave efforts to secure the right of free speech and a free and unstamped press."

Convicted of patriotism!

RICHARD MOORE.

four hundred and seventy-three times. To give other phases of his career would be but to repeat the course of his comrades. In all that Hetherington, Lovett, and Watson did, Moore stood beside them. For forty years an active politician, without office or reward. No man had an ill word of him. Another Chartist whose life was without stain, to be duly honored in coming republican days, when men shall proudly record the earlier struggles of the people. He died in 1878, aged sixty-eight. From one of several obituary notices, all of the same character, I borrow the following :

"There was something singularly earnest, gentle, and chivalrous in his character. Few men have enjoyed the confidence and friendship of leading politicians more than he. Cobden, Milner Gibson, Mazzini, and all the prominent English radicals and liberal exiles, he could reckon among his friends. I do not suppose that, for the better part of half a century, during which he has served the public, he ever received the value of a day's wages. The purity of his life was only equalled by his disinterestedness."

From my own personal knowledge I know this to be the truth.

With the other two framers of the People's Charter, Vincent and Cleave, I had but slight acquaintance. Vincent,—originally, I believe, a compositor, an enthusiastic and eloquent speaker,—on the failure of Chartism, took to general lecturing; he was popular and successful, and was heard also in this country. Cleave, a book-seller (he had been

at sea in his youth), was active in the battle of the unstamped as well as for the Charter. Rude and bluff in manner, he had, says Lovett, who knew him better than I did, "a warm and generous heart; always ready to aid the good cause, and to lend a helping hand to the extent of his means. He labored hard and made great sacrifices."

Not unremembered be John Frost, the Newport linen-draper. He had been mayor of Newport, too, so hardly of seditious tendencies. A man of mature age, over fifty, when he led that mad attempt to take Vincent out of prison. A respectable, worthy, well-esteemed, quiet man, with nothing to gain but everything to lose by his insurgency, like William Smith O'Brien, impelled solely by a chivalrous sense of public duty. I care not if it be called Quixotic. I would, indeed, there were not so few of men so earnest. His followers—say rather those who chose him for their leader—were hot-headed Welsh miners, excited by braggart talk of probable outbreaks elsewhere. This "rebellion" put down by a few soldiers, Frost and two companions, Williams and Jones, were tried for high treason, convicted, of course, and, left for execution, would certainly have been hanged but for the urgency of petitions in their favor and the ill omen of the appearance of an executioner at the young Queen's wedding; so the sentence was commuted to transportation for life—to any man of wholesome, decent habits, a punish-

JOHN FROST.

ment severer than death. Horrible beyond telling was the condition of our penal settlements in those days. After some years the convict's sufferings were lightened, and, but a few years ago, the remainder of his sentence remitted, Frost returned from Australia to die in England in 1877—a hale, hearty-looking old man of ninety-three, unchanged in his opinions.

More heat was in impulsive Thomas Cooper, the poor shoe-maker, who beguiled captivity by writing the "Purgatory of Suicides; a Prison Rhyme," in ten books, which, with part of an historical romance, a series of simple tales, and a small Hebrew guide, were the fruits of two years and eleven weeks' confinement in Stafford Gaol. The author speaks of himself as one "who bent over the last and wielded the awl till three-and-twenty,—struggling amidst weak health and deprivation to acquire a knowledge of languages,—and whose experience in after life was at first limited to the humble sphere of a school-master, and never enlarged beyond that of a laborious worker on a newspaper." His imprisonment was for "seditious conspiracy"—a speech made by him to some colliers on strike having been followed, without his purpose or his knowledge, by riot. He stood two trials—the first for taking part in the riot, when he proved an *alibi*; the second for conspiring to produce the riot, for which, after a ten days' trial, he pleading for himself, he was convicted. To return to his poem. Noteworthy on account of the circumstances under which it was produced, it also deserves credit for itself: a poem well conceived, wrought out with no ordinary amount of power, and not wanting in poetic imagination. A few lines may suffice to show its form,—lines of which Ebenezer Elliott, the "Corn-law Rhymers," would not have been ashamed. The opening of the third book:

"Hail, glorious Sun!
Great exorcist, that bringest up the train
Of childhood's joyance and youth's dazzling dreams
From the heart's sepulchre, until again
I live in ecstasy 'mid woods and streams
And golden flowers that laugh while kiss'd by thy
bright beams.

"Ay! once more, mirror'd in the silver Trent,
Thy noontide majesty I think I view,
With boyish wonder; or, till drowsed and spent
With eagerness, peer up the vaulted blue
With shaded eyes, watching the lark pursue
Her dizzy flight; then on a fragrant bed
Of meadow sweets, still sprent with morning dew,
Dream how the heavenly chambers overhead
With steps of grace and joy the holy angels tread."

Hasty as Cooper was, a man of warm feelings and some sensitiveness of temper, he was as kind-hearted as hasty, a "wild beast" whose

THOMAS COOPER.

soul was full of good-will toward men, guileless as a child, and with all a poet's love of the simple loveliness of nature. He was a man, too, of good sense and thought; his "Letters to Young Men," written in such English as Cobbett wrote, are of the same solid stuff. He was also an eloquent speaker. I believe he is now a preacher of some dissenting persuasion. I do not recollect if he was a Chartist before he was graduated at Stafford; but I know he was heartily and actively with us after he came thence. I was well acquainted with and much esteemed him.

Some words I must spare for Thomas Powell, whom I knew when he was a shopman with his friend Hetherington. He, a fiery little Welshman, had more of the rebel in him, albeit a sensible man, clever and wary—a man who might have led an insurrection. He had twelve months in prison, not for inciting, but for seditious staying of action—so proving that he had influence beyond that of the mere inciter. What quality he had, how trusted and trustworthy he was, one little anecdote will show. When Hetherington was indicted for selling Haslam's "Letters to the Clergy," he made up his mind to suffer imprisonment rather than pay a fine. He had been mulcted enough in former days, and this time "they should take it out of his bones." A friend (Chartist also, Hugh Williams, a Caermarthen lawyer, Cobden's brother-in-law) lent him a sum sufficient to purchase his whole property, books, presses, household stuff, etc. This

handed to Powell, the property valued by a broker to make the sale legal, Powell bought all, paying the ready money for it. Hetherington returned his friend's loan, and coming out of prison (he was not fined) received back his own from Powell. There were no vouchers or receipts passed to vitiate the transaction. So these Chartists trusted one another. A restless, not an irritable man, on the failure of Chartism, Powell took a party of emigrants to South America. That enterprise also failed. He died soon after, in Trinidad.

The men I have spoken of are hardly to be dismissed as rioters, nor will mere personal discontent appear to be the motor of their lives. I have said the rioting with which Chartists are credited by history was not extensive, however the number of Government prosecutions may appear to contradict me. I note that all of these, my friends and fellow-workers, except young Harding and Moore, were what a liberal Home Secretary would classify as convicts: convicted of offenses against existing powers, punished with imprisonment, not for crime, but, as good old Lamennais has it in his "Words of a Believer," for having wished to serve their fellows. The Chartist convict list (how much of it of the same character?) was indeed a lengthy one, deductions made for matters which had no concern with Chartism. One Vernon, of whom I recall nothing but his sentence, had eighteen months of jail. James Bronterre O'Brien, an Irishman, one of the most able among us, some while editor of Hetherington's "Poor Man's Guardian," had eighteen months. Sharpe, Williams, and Holberry died in prison. Cuffey, Ellis, Lacy, Dowling, Fay, and Mullins were transported. I know not if any of them ever returned. Ernest Jones, a later Chartist,—a man of what is called good family, a barrister, and with some poetical talent,—had two years, with exceptionally harsh treatment. Feargus O'Connor (an honest but less capable O'Connell), whose demagogic egotism did more than anything else to discredit, mislead, and ruin the cause, proved his sincerity by twelve months in York Castle. And my friend George Julian Harney (resident in the United States for the last seventeen years, the only survivor of the fifty-three members of the Chartist Convention of 1839), three times imprisoned for selling unstamped newspapers, had his share of numerous occasional arrests. Fifty-seven men were at one time on trial together, the majority defending

themselves, Harney leading, and O'Connor closing the defense. Arrests, convictions, punishments were plentiful enough. Proving what? For sample of what might constitute offense: four laboring men in Lancashire, in 1831, sentenced to twelve months' imprisonment for *unlawfully assembling on a Sunday*.

But I am not writing a history of Chartism. I am speaking here of Chartists. Convicts as they were (so were Eliot, Vane, Sidney, and one Russell), may we not also call them martyrs, sufferers for a righteous cause? Few words may sum up the history: Mistakes, discouragement, dissensions, confusion, desertions, apathy, and despair. Is it not the story of almost all popular, of all first, attempts? Matters not to blame the blundering bluster of O'Connor, to condemn the impolicy of accepting recruits from among the trading politicians who join but to betray. Two things insured our failure: we were not equal to our task, and also we were before our time. Note yet a third: there was no organization toward action. Our work was a protest; we had no plan beyond that. Others will learn wisdom from our failings; and the time will grow.

I have picked my men for praise—the best I knew, the leaders of the earlier movement, most of them members of the London associations. Other good men I could name, if not many of that stamp or height of worthiness, both in London and in the provinces. I have not taken these as exceptions. All the rest were not "wild beasts." One million two hundred and eighty-three thousand persons signed the first Chartist petition, presented to the House of Commons on the 14th of June, 1839. Surely good and bad were in that number. But though there were no record of personal worth, this would be no less true: That since the days when the chief of English gentlemen endeavored to found a religious commonwealth, failing not from lack of earnestness, bravery, or wisest counsel, but because they, too, were before their time, and because they would build upon an impossible foundation,—the letter of an obsolete law,—no nobler or more righteous thought has stirred the soul of Britain than stirred it in this misunderstood attempt of working-men to raise the character of British life by lifting law and life to the ground of natural right,—the only basis of a nation. Pale as that star of Chartism showed in the horizon, lingeringly as the clouds yet obscuring it may pass away, I yet dare to think that it heralded the morning of the Republic.

FROM MENTOR TO ELBERON.*

THE presidential episode in the life of James A. Garfield was one "crowded with perils, but crowned with triumphs." Its tragical ending has made a story of unmatched pathos, which has become a household word. His memory has taken a lasting and sacred place in human hearts, wherever they can be touched by the recital of great sufferings heroically borne. Of the story of his later life, much has been written and told by friends and admirers,—much that is true, and more that is fanciful. It has been my singular fortune and happiness to have enjoyed the confidence and friendship of him whom everybody is mourning; a friendship of a life-time, which has known "no shadow of turning." In the light of that friendship, I make record here of some recollections of General Garfield, with no purpose of adding to his fame, for that is secure; but by way of illustration of those great qualities of head and heart which have served to endear him to his countrymen.

The meeting of the Chicago Convention found General Garfield a member of the House of Representatives, and the acknowledged leader of his party in that body; a Senator-elect, chosen under the most happy auspices, and a delegate-at-large to the Convention from his native State. Indications were not wanting that his name might be brought before the Convention as a candidate; and there were not a few friends who looked with great confidence to his nomination. He did not share this confidence; and, in the light of past events, we may now emphasize the sincerity and earnestness of his wish first to round out his legislative career in the Senate. Whenever I referred to the probability or possibility of his nomination, while he looked forward with an honest ambition to the highest honor to be conferred by his fellow-citizens, he would say: "Not yet; I must make my record in the Senate." I shall not soon forget my last interview with him in his library, before his departure for Chicago. While he was fully alive to the important results of the great convention, and his first thoughts were in the direction of the welfare of his party and the country, with the spirit of the gladiator he longed for the conflict of debate. Rising from his chair, he said, slowly and musingly: "Well, I go to

Chicago!" Then, drawing himself up, he added,—“And if any one attempts to bulldoze that convention, I purpose measuring lances with him!”

The following incident further uncovers his own views and feelings regarding his candidacy. On the return from Chicago, some one on the train observed that "Garfield would now be common property, and the target for all kinds of abuse." Overhearing the remark, he turned to an intimate friend, saying:

"Do you hear how I am to be handled? I am afraid that will wear on me harder than the work of the campaign. You know how nearly the outrageous slanders and lies so cruelly hurled at me a few years ago wearied me with political life before the country got to understand that I was entirely clean-handed. If my position then invoked such abuse, what must I expect with a heated presidential campaign before me? I earnestly wish they had taken my advice and let me wait for the future. But this world does not seem to be the place to carry out one's wishes."

After some further conversation on the subject, which was followed by a period of thought and silence, he looked up and said:

"You have a great deal of practical sense. What is the remedy?"

"Don't listen to it," was the reply.

"That is," rejoined he, "don't *hear* it. That can be done in one way. Why can't I set up Garfield the Candidate, to receive all this fire, which, after all, will be aimed at the candidate, and keep myself near enough to advise him what to do and say. Then can I give him the benefit of my best judgment. What do you think of the idea?"

"It looks well," was the reply, "and *you* can carry it into execution, if it is possible to be done by any man."

"Very well," he responded, "I'll try it."

I recount this detailed conversation for its importance as furnishing the key to his bearing throughout his brief presidential career. Garfield the man was always greater than Garfield the candidate or the President. One of his campaign biographers, who knew him well, remarked, sententiously, that his nomination was simply an incident in his life.

* This paper by Colonel Rockwell was written to form part of the new edition of Major J. M. Bundy's "Life of Garfield" (published by A. S. Barnes & Co.), in which it will shortly appear.

JAMES A. GARFIELD. (FROM AN ARTOTYPE BY EDWARD BIERSTADT. N. Y.)*

To his intimate friends, who understood the beauty, serenity, and philosophical calmness of his inner life, his various public honors were insignificant when compared with the real merit of his individuality. This abstraction of self stood him in good stead. It explains a thousand touches of character. His long residence in Washington had made him familiarly known to thousands, and when, the enthusiasms and congratulations incident to the nomination having somewhat subsided, he returned to the capital, he had for all a cordial greeting, and a hearty grasp of the hand. The same unaffected, boyish manner marked the poise

of the man, unshaken by elevation. During this visit, I read to him a letter to me from an old college friend of ours, in which there were affectionate remembrances, coupled with exultation over his achievements, and the pathetic suggestion of the writer, that Garfield "was now likely to swing out of his horizon." Throwing his arm about me, the General exclaimed, feelingly: "Give my love to the dear old fellow, and say I have no horizon for him." When told that another friend regarded him as one gone far away, he said, in his whole-hearted, sunny way: "Wait till we meet, and see." He specially enjoyed the greeting and banquet given him by his old

* This portrait is here printed as giving a somewhat different phase of the late President's character from that presented in Mr. Cole's engraving in the December number.

Cumberland army friends. At his meeting with two or three of them later, for a little needed recreation, they will always remember the hearty zest and joyousness with which he said, "Boys, isn't this royal?"

Returning to Mentor, he began the work of the campaign, the unwritten history of which will show a thoroughness, a mastery of detail, a wise management, and, above all, a supremacy of direction and command, that are known to few. With his bearing during this trying period the country is fully acquainted, and the wisdom and moderation which he exhibited were daily apparent in his acts and words. It was clearly evident that the "candidate" was in the hands of a cool, well-balanced manager. In no way were these qualities more conspicuously shown than in the often repeated ordeal of off-hand speeches. An eminent public man, in a recent letter to me, referring to the extraordinary success of these impromptu speeches, when the speaker's mind was filled with the anxieties and weariments of the canvass, states that, in a conversation of Democratic leaders, just before the election, one of the most distinguished of their number said to them:

"When Garfield began making speeches every day to the committees of all kinds calling upon him, I felt sure he would blunder into saying something that would be a dead-weight for him and an advantage for us. But, watching every word he has said, I am astonished that he has not made a single mistake in all of these talks out of which any capital could be made against him."

Connected with one of these little speeches is an incident which I recall as throwing a side light on one phase of his character—a philosophical independence—which often absolved him from strict partisan allegiance. One day, the colored Jubilee Singers made him a visit. They were received with that hearty and unaffected cordiality which was given to all who came. At his request, they sang some of their weird and characteristic songs, concluding with a pathetic benediction, which touched the hearts of the listeners. For a moment there was a silence, which was broken at last by his thanks, in the name of his family and himself. Then, in the midst of eloquent words of cheer and encouragement, he reminded them that they "were fighting for light and the freedom it brings, and," said he, "in that contest I would rather be with you and defeated, than against you and victorious";—then, after a brief pause, with a sudden energy—"and let the politicians make the most of it!"

Through all these occasional utterances the man may be continually seen, to the

exclusion of the candidate. Considerations of personal success were set aside in the presence of the "eternal verities." If a thing was right, it was "everlastingly" right. It is safe to say that few men in his position would have had the moral courage of his words to a delegation of colored men that called upon him. "I will not," said he, "affect to be your friend any more than thousands of others; I do not pretend even to be particularly your friend; but your friend only with all other just men." Replying to a remark of mine to the effect that his words were novel and unusual, but in the direction of justice and truth, whatever they might be politically, he said: "I am glad you like the speech; I thought it was time to do some plain talking." The same courageous expression of his convictions of what was right, rather than expedient, cropped out at Chatauqua, when he said: "I would rather be defeated than make capital out of my religion."

During the campaign, with its cares and anxieties, its labors and fatigues, its slanders and assaults, there was for him one perpetual fountain of sunshine and comfort in the love and endearments of home and friends. The domestic life of General Garfield has been laid bare to the world, only to be admired for its beauty and simplicity, and for the wealth of affection lavished by him upon his family. They were his veritable household gods. Every member had his or her special place in his heart. His imagination, with a quaint invention, gave them many grotesque names. One boy was "The Dutch Brig," another, with Garfield's old and ever-present love of the sea, was his "Little Yacht." From the ashes of the "Squirrel" sprang the nondescript phoenix "Scutifer." A chance word, a trait of character, a pun, any unusual incident, would furnish the pretext for a new prenomem. "Chickamauga," "Burton," "Little Whack," "Burling," and many another pet name resounded through the house from his cheery lips. Even the telegraph-operator was the "Hurler of Lightning," familiarly abbreviated in conversation to "Hurler"; and the big Newfoundland dog, in memory of the numerous bills killed in 1879 by the executive disapproval, was called by the suggestive name of "Veto." The home life seemed to be a mighty fortress and defense against everything connected with the campaign, which was continually relegated to the little office, a building appropriately detached from the house. At all other times and places, one was reminded only of a quiet, simple, happy country home. At the table, the master of the house was the ruling spirit. Fun, fact, fancy,

reminiscence, quotation, anecdote, flowed from his lips in variety and profusion.

It was during this period that an incident occurred which I recall with no ordinary interest, prelude, as it did, the great tragedy so soon to be enacted. A prominent gentleman of Cleveland had been so greatly impressed with the circumstantial details of an organized plan for the assassination of General Garfield, that he had driven out to Mentor, by night, to acquaint him with the facts. As the result of the interview, it was arranged that the man who had made known the existence of the alleged plot should visit the general the next day, that he might examine and cross-question him. Pending his arrival, General Swaim and myself were made acquainted with the case, and were advised to watch the manner and bearing of the man, with a view to the detection of indications of insanity. In the course of the conversation, the probability of the story and the necessity of action were discussed. Finally, after musing awhile, Garfield said, somewhat sadly and impressively: "Well, if assassination is to play its part in the campaign, and I must be the sacrifice, perhaps it is best. I think I am ready." The examination of the following day disclosed enough of mental wryness in the informer to satisfy us that the plot was a hallucination, and the subject was dropped.

As the time for the election approached, it became more and more apparent to his friends that the mere question of his personal success or failure was insignificant to him, as a factor in the contest. He wished for success infinitely more for the sake of the gratification it would give to his friends than for any power, emolument, or honor that should come to him. Bidding a near friend good-bye, only a few days before the election, he said, with a touch of almost boyish humor:

"You will not think any the less of me if I am not elected, will you?"

To inquiries as to the probable result, he would say:

"I never allow myself to be too much elated or cast down, no matter what happens."

Soon after the election, General Garfield announced his purpose to be "a first-class listener," and patiently and philosophically received the advice and suggestions of his party friends concerning the shaping of his cabinet and policy; reserving his own counsel. Even yet, in the midst of the cares, anxieties, and responsibilities that pressed upon him, the first thought was always of those who were nearest and dearest. Drawing his daughter to him one evening, in his hearty, impulsive way, he exclaimed:

"You are worth to me a dozen presidencies."

The immediate educational future of his elder sons enlisted his careful and earnest attention. He fully realized the difficulties, the temptations, and the unusual surroundings that might interfere with their good. With a view to their careful and thorough preparation for admission to college, it was arranged that they should precede his coming to Washington, and prosecute their studies under a private tutor, at my house. I cannot better indicate his solicitude and interest in the best welfare of his boys, than by his remark to me, prior to their coming:

"Whatever fate may await me," said he, "I am resolved, if possible, to save my children from being injured by my presidency. '*Hoc opus, hic labor est.*' Every attempt, therefore, to flatter them, or to make more of them than they deserve, I shall do all I can to prevent, and to arm them against."

During the winter, the quiet little town of Mentor became the object of national interest. Each day brought its deputations and committees, its speeches and congratulations; and the home life, with its beauties and comforts, was broken up. There was a longing for the old ways; a feeling that something very dear and necessary to the happiness of daily life was slipping away. With some members of the family, vague apprehensions of impending trouble became, to a remarkable degree, almost convictions. One near to General Garfield wrote thus, in January: "I am not sorry that the cold winter is passing so rapidly; although the events of the next two months rise up before us, until I am overwhelmed in advance. I scarcely dare to think; I only feel the desire to hurry through it all. But, perhaps, our trials will then only have begun."

I visited General Garfield late in February. Everything that was best was unchanged. He was still the reticent, self-contained, self-counseling listener; in all else frank, open, boyish. Yet, behind all, was something indefinable that suggested a change in his mental habits. In the course of conversation, I spoke of the supreme solitude in which every human soul, despite the most affectionate social ties, must necessarily dwell, coupling my remark with an allusion to an unusual loneliness which his new position would bring. The thought seemed to strike him with special force, and he referred to this cause many regrets that new and unexpected relations would inevitably arise with scores of old friends,—relations that the highest considerations of public duty would dictate, compelling the ruthless setting aside of old and tender ties, in the interest of public necessities. Dwelling upon this point with special force of word and manner,

his nature seemed at last to concentrate itself into an intensity of feeling, as he said, with the deepest fervor: "I fear it remains for me to make my pathway over the wrecks of human hearts!"

Through all the enthusiasms and ceremonial of the inauguration there was still the same calm intellectual poise, the same perfect self-control and mastery. I think all who enjoyed his personal acquaintance or friendship will agree with me that it was the man rather than the President whom they met, greeted, and congratulated. In the midst of the excitements and distractions of those days, when there was an occasional moment of quiet, and he could open his heart without restraint, the touches of regret over the fate that had hurried his career and broken in upon that symmetry which he had planned, would assert themselves. With two or three friends, I accompanied him to Mr. Chittenden's reception, on the evening after his arrival. The conversation naturally drifted to the personal relations of General Garfield to the presidency; its bearing upon his future, and the bright promises for the public good that would come from his administration. The glories of the present were brilliant and attractive enough: but to him the future brought a sobering, saddening prospect. "Four years hence," said he, "I shall leave the presidency, still a young man, with no future before me; to become a political reminiscence—a squeezed lemon, to be thrown away."

This feeling was expressed on the following evening at the reunion of his college classmates, where he said, with intense feeling and emphasis: "This honor comes to me unsought. I have never had the presidential fever, not even for a day; nor have I it to-night. I have no feeling of elation in view of the position I am called upon to fill. I would thank God were I to-day a free lance in the House or the Senate."

Perhaps no better illustration of General Garfield's mighty endurance and capacity for work can be given than that contained in the history of the 3d and 4th of March. The 3d was passed in a continuous round of receptions of friends, and the important conferences relating to his cabinet; the close of the day bringing unwonted weariness, only to be followed by a banquet at the White House, and the reunion of his classmates. Returning late to his hotel, some time after midnight, he re-drafted nearly three-fourths of his inaugural address; his faithful and devoted secretary, Mr. Brown, assisting him in his toil. The rough sheets of this important paper, now in my possession, bear testimony to his indomi-

table perseverance and will, and his fastidious and scholarly tastes. These manuscripts are voluminous, and exhibit in a remarkable way his habits of thought and work, his fund of knowledge, and his versatility and reach in the handling of the great problems of statesmanship. There are no less than a half-dozen separate and distinct drafts of the address in whole or in part, each profusely adorned with notes, interlineations, and marginalia. The mass of rejected material is valuable and suggestive, and, if appropriately arranged, would make a paper of no small worth and proportion. When, at the reading of one of these tentative drafts to me in February last, I had expressed to him my desire to possess it, he exclaimed, in his characteristic and original way: "What! you would not wish the staggers of my mind, would you?"

Of the great strain and demand made upon his physical and intellectual forces on the 4th of March, it is not necessary that I should record details. No incident among the many of that eventful day gave him greater gratification than the visit of the alumni of Williams College, headed by his old instructor, ex-President Hopkins. The words of congratulation of the "dear old doctor" were so solemn and impressive that they seemed to be the messengers of a benediction. With his head bowed, and his heart full of love and reverence, the new President spoke of the greetings that had been given him "by that venerable and venerated man who was, in college days, and will always be, *our* President." Continuing, he said: "I hope he will pardon me for a more personal reference. For a quarter of a century Dr. Hopkins has seemed to me a man apart from other men; standing on a mountain peak, embodying in himself much of the majesty of earth, and reflecting in his life something of the sunlight and glory of heaven. His presence here is a benediction."

Probably no administration ever opened its existence under brighter auspices than that of President Garfield, but it was not long before his great vitality showed visible signs of yielding to the dragging wear of the never-ending demands and importunities for place. Each day brought its exhausting physical fatigue and intellectual weariness—the result of a continual din of selfish talk. Fairly staggering into the library at the close of a specially exhausting day, he said to me: "I cannot endure this much longer; no man, who has passed his prime, can succeed me here, to wrestle with the people as I have done, without its killing him." Yet through it all he was cheerful. As throughout his life, so, even now, his great heart held

its accustomed sway: the playful, almost boyish, humor illuminating all. Leaving behind him the stress of work and the cares of his office, he would often say: "Now the fun is over, let us go to business!"—referring to some proposed recreation. These annoyances were all the more harassing on account of the domestic trials and afflictions which followed, beginning with the illness of his mother. Upon her recovery, with the affectionate solicitude that marked his care for her, he made the necessary arrangements for the change of air and scene which her precarious health demanded. He accompanied her to the train, with the friend who was to be her escort. Her last remark to him, as he was about bidding her farewell, acquires, in the light of his fate, a new and startling significance, as another of those inexplicable premonitions of evil to which I have before referred. With great earnestness, she said:

"James, I wish you to take good care of yourself, for I am afraid somebody will shoot you!"

"Why, mother," he asked, in astonishment, "who would wish to shoot me?"

When asked recently, by a friend, why she had addressed this caution to her son, she said, "I do not understand: I only know I felt that I must." This incident possesses an added interest when it is remembered that several months before the meeting of the Chicago Convention, without previous allusion to the subject, she suddenly and bluntly said to her son: "James, you will be nominated at Chicago next June!"

The President was scarcely free from the anxiety of his mother's illness before she whose light and comfort had done more to make his life happy than all his achievements and triumphs, was prostrated by a dangerous illness. Dividing his time between the cares of his office and her chamber, he gave her that devotion which was to be so soon, so amply, and so heroically repaid. He was specially touched by the delicate and sympathetic expressions which came to him through the press, in reference to his affliction. On one occasion, reading a sympathetic paragraph in one of the local papers, he requested me to inquire the name of the writer, that I might impart to him his thanks and appreciation.

With Mrs. Garfield's convalescence began the President's anxiety for her departure to Elberon—the spot that was to be the scene of a few brief days of rest, and, finally, where his great soul was to be unimprisoned. Under the bracing and invigorating salt air, Mrs. Garfield was rapidly regaining her health and strength; while the President, freed from the tread-mill life of the White House, enjoyed,

in fullest measure, the quiet of the charming cottage life by the sea. He was looking forward with great interest to the reunion of his college classmates, at the twenty-fifth anniversary of their graduation, and to his New England trip, and his leisure moments were spent in giving his personal attention to the details of the journey. But now came a new token of disaster: one evening the telegraph-operator placed in my hand a dispatch to the President, announcing the sudden death of one relative, and the fatal injury of another by a railway accident. From my room, where he was engaged in an important conversation with two or three gentlemen, I called him into the hall, and handed him the dispatch. He read it, crushed it in his hand, saying: "Keep this from Crete," and, going back, resumed his conversation. Afterward, he told me that it was with great effort that he retained his composure until the interview was concluded.

Leaving Mrs. Garfield at Elberon, the President returned to Washington in the latter part of June, rested and refreshed by his little vacation. The closing days of the month he devoted to that careful arrangement and disposition of affairs that was habitual with him, looking after minute details with the thoughtfulness that was characteristic of his treatment of public duties. I passed a portion of the evening of July 1st with him, receiving his final instructions regarding his journey, and bade him good-night.

With the startling events of the fateful second of July, and the incidents of the memorable eighty days, the reader is almost as familiar as if he had stood in the place of those whose privilege it was to minister to him. To some of us, who had intimately known President Garfield, his gallant and plucky bearing in the face of the "one chance" which he outwardly accepted—though, as I now believe, he inwardly rejected it from the first—was not unexpected. It was, after all, but the continuance of that marvelous poise and self-control which were the "granite foundation" of his greatness. These, from the instant of returning consciousness, which was lost for a moment after the "fatal blow" (as he himself called it that morning), instantly marshaled themselves into place, and never deserted him to the last.

Throughout his long illness, I was most forcibly impressed with the manner in which those traits of his character which were most winning in health became intensified. His perfect courtesy, his consideration and thoughtfulness, his keen appreciation and thankfulness, his unmeasured affection, were continually exhibiting themselves in a thousand ways. His

medical attendants will not forget, after the long and painful dressings, his frequent and hearty: "Thank you, gentlemen." He whose duty it was, through so many anxious days, to take the pulse, temperature, and respiration, will remember pleasantly the President's oft-repeated question to his attendants, as the hours dragged wearily on: "Isn't it time for 'Old Temperature' to put in an appearance?" Nor will another regret that the monotony of a long agony should give him the appellation of "the beneficent bore!" His thankfulness and appreciation of the care and devotion given him by his physicians and attendants were measureless. Placing his hand on the head of one of them, a day or two before his death, he said, with much emotion: "You have been always faithful and forbearing." It has been remarked that the President scarcely referred to his assassin. He seems to have foreshadowed his feelings in one of his little speeches during the campaign, in which he said: "If a man murders you without provocation, your soul bears no burden of the wrong; but all the angels of the universe will weep for the misguided man who committed the murder." For his enemies, or those who may have chosen thus to regard themselves, he had no enmity,—naught but magnanimity.

Probably there were never eighty days of illness so full of incident, and yet there is much that cannot be told and can only be felt. To one, it seems now that for that life every hour was a struggle so intense that all else has been swallowed up in it. "There was never a moment that the dear General was left alone, and yet, when one thinks of the loneliness in which his great spirit lived, the heart is almost ready to break." When Mrs. Garfield thinks of the seriousness with which he would send her away from him, when he would say: "Yes, go and ride; I want you to;" "You must go to bed now; I can't let you sit up any longer;" or "Go down to the table; you must preside there;" she wonders that she dared to leave him, even for a moment; yet his gentle firmness compelled obedience, and went far to encourage the hope in which she lived. Even that first night, when he said to her; "Go, now, and rest; I shall want you near me when the crisis comes," she did not, or *would* not, think that he referred to his death; although she afterward knew he did. The tenderness with which he withheld from her what she now believes he felt would be his fate, deluges her heart with tears.

The long, hot, weary days of July and August dragged on. The President was still master of himself, and by his magnificent

bearing was teaching the country and the world the noblest of human lessons: how to live grandly in the daily clutch of death. Whatever flaws fallible human nature may have charged against him in the days of sturdy health, let it never be forgotten that during these eighty days, when he was subjected to the supremest tests, he was uniformly great.

From one apprehension I am thankful that I was freed, with the beginning of his silence. To his son, as will be remembered, a few days after his hurt, he had said, with a touch of the never-failing humor: "It is only the hull that is staved in: the upper works are unharmed." As the days wore on, and, with a sad reluctance, we noted the failing strength, the emaciation, the weakening voice, and the gradual physical decline, I could not bear to think of witnessing a possible decay of those rare intellectual forces. And here let it be recorded that to the last day his eye was undimmed, and the splendid vigor of brain was unimpaired.

Some weeks after his hurt, there came to the President by the delicate remembrance of his old friend Mr. Evarts, then in Paris, a superb copy of his favorite Latin poet, Horace. It was, I think, a royal subscription edition; luxurious in its heavy laid paper, its illustrations and text (alike engraved), and its sumptuous binding. The old scholarly love flashed from his eyes as they wandered over the familiar pages, catching glimpses of oft-repeated verses. Perhaps they rested on the "Integer vitæ," or the "Cras ingens." Turning to the fly-leaf, he asked me to translate the two following lines:

*"Doctrina, sed, vim promovet insitam,
Rectique cultus pectora roborant."*

Book IV., Ode IV.

which his friend had appropriately appended to his name; and the old habits of thoroughness came back, as he playfully chided me for my infelicitous rendering of one of the words.

One day there came from some friend a large and very faithful portrait of his venerable mother. Quietly, and while he was sleeping, it was placed on an easel at the foot of his bed, where it should greet him on waking. Opening his eyes not long after, he gazed upon the familiar features intently for some moments. Then, raising his fingers to his lips, he waved his hand toward the picture with the filial salutation: "Dear soul!"

I have been asked by several correspondents how far he was made acquainted with the feeling of his countrymen toward himself during his illness. I think the impression is quite general that he knew but little of

it. This is a mistake. Many letters from strangers, acquaintances, and friends were read to him at intervals during his illness. These, with the not infrequent reading of short items from the newspapers, gave him an intelligent idea of the general feeling. For all this his heart was unutterably thankful, and, wherever it was possible, he would send some expression of his gratitude.

The time came at last when even the hope under which the President, his attendants, and the country had lived was fading away with his stay at the capital. The details of the remarkable journey to Elberon and of the last fortnight are too well known for me to recount them here. With the reaction from the fatigue of a journey which was made almost literally through the valley of the shadow of death, returned the hope in which we all lived.

As September wore away, the days brought new premonitions of the end. It came appropriately on "Chickamauga day," when, eighteen years before, he had faced death on the battle-field. How fitting was his last utterance: "Oh, Swaim!" to that devoted friend, who had stood shoulder to shoulder to him in many a desperate situation, and with whom he had shared the same blanket and

"Drunk from the same canteen!"

For many years it has been my habit to send to him, of whom I have written, words of congratulation with each accession of unsought honors. They were prophetic and descriptive of the illustrious journey he was making. Its earthly part is ended; but I send him once again the old salutation: "*Sic itur ad astra!*"

THE HORSEMAN.

Who is it rides with whip and spur—
Or madman, or king's messenger?

The night is near, the lights begin
To glimmer from the road-side inn,

And o'er the moor-land, waste and wide,
The mists behind the horseman ride.

"Ho, there within—a stirrup-cup!
No time have I to sleep or sup.

"An honest cup!—and mingle well
The juices that have still the spell

"To banish doubt and care, and slay
The ghosts that prowl the king's highway."

"And whither dost thou ride, my friend?"
"My friend, to find the road-way's end."

His eyeballs shone: he caught and quaffed,
With scornful lips, the burning draught.

"Yea, friend, I ride to prove my life;
If there be guerdon worth the strife—

"If after loss, and after gain,
And after bliss, and after pain,

"There be no deeper draught than this—
No sharper pain—no sweeter bliss—

"Nor anything which yet I crave
This side, or yet beyond the grave—

"All this, all this I ride to know;
So pledge me, Gray-beard, ere I go."

"But gold thou hast: and youth is thine,
And on thy breast the blazoned sign

"Of honor—yea, and Love hath bound,
With rose and leaf, thy temples round.

"With youth, and name, and wealth in store,
And woman's love, what wilt thou more?"

"What more?" "what more?" thou gray-
beard wight?
That something yet—that one delight—

"To know! to know!—although it be
To know but endless misery!

"The something that doth beckon still,
Beyond the plain, beyond the hill,

"Beyond the moon, beyond the sun,
Where yonder shining coursers run.

"Farewell! Where'er the pathway trend,
I ride, I ride, to find the end!"

REMINISCENCES OF THIERS.

IT was in 1867 that I first saw Thiers. Having passed many years in private life, in 1863 he had entered the Corps Législatif, under the Second Empire, as a deputy from the second *circonscription* of Paris, thus commencing a new political career at the age of sixty-three. In my younger days I had read with enthusiasm his "History of the French Revolution," a work which for half a century has held the intelligent world under the empire of its charm and fascination. I had also read with almost equal interest his "History of the Consulate and the Empire," which Lamartine once pronounced "*the book of the century.*" Being in Paris in the month of July, 1867, I hailed the good fortune which enabled me to obtain admission to the Corps Législatif, and to listen to Thiers on the day he concluded his great speech on the "Mexican Question," which was one of the most terrible arraignments ever launched against any government.

Previous to the *coup d'état* of the 2d of December, 1851, Thiers had been a member of the Legislative Assembly under the Republic of 1848, from the department of the Seine Interieur. It was at this time that he was thrown into the prison of Mazas, together with many of the most eminent men in France. Afterward temporarily banished, he was permitted to reënter France in August, 1852.

When I took up my official residence in Paris, in the spring of 1869, Thiers was still a member of the Corps Législatif. He was the center of a small group of deputies who composed the opposition in the Chamber, and known as the "Left." In a body of nearly three hundred members, this opposition could not claim more than about thirty. But in this small minority there were numbered many men of such ability, power, and eloquence as to make them a real force. After Thiers there was Jules Favre, who held the first place as an orator, and next to him I should place Jules Grévy, a lawyer of distinction, a man of large attainments and an original republican, and now President of the French Republic. Gambetta was a comparatively new member, sitting on the extreme left, and just beginning to make his reputation. Ernest Picard was an able man, witty and skillful in debate; Jules Simon, also an original republican, a man of real ability, and much devoted to letters and the cause of education. Emmanuel Arago and Eugène Pelletan, advanced republicans, were among the deputies from

Paris. And in this group of the opposition there were two members of the Provisional Government of 1848—Garnier-Pagès and Adolphe Crémieux. Pagès was a man of striking personal appearance and courtly manners, and bore the strongest resemblance to Henry Clay of any man I have ever seen. Crémieux was the old Hebrew advocate who had but recently been elected a member, and was beginning to take that position in the Chamber to which his large experience in affairs, his great ability and earnest patriotism entitled him. They have both died within a comparatively recent period. One of the most prominent, able, and courageous men of this group was Jules Ferry, now so well known as the recent head of the French ministry. Among the other members of this opposition was Jules Le Cesne, deputy from Hâvre, who had passed much of his life in New Orleans, where he had accumulated a fortune.

Never in his long and illustrious career did Thiers occupy a higher plane than in the Corps Législatif, in July, 1870, when the question of war or peace hung trembling in the balance. It is impossible to go into the history of those frightful days, when a midsummer madness seems to have seized the French Government, and when all Paris was under the influence of an excitement and fury almost without a parallel.

It was in the sitting of the Corps Législatif of the 15th of July, 1870, that the question of the declaration of war came up for consideration. Thiers, almost single-handed and alone, undertook to stem the torrent which he saw was about to sweep over his country and engulf its glory and prosperity. In the midst of a hostile and howling majority he appealed for a little delay, that the members might have more information and a fuller knowledge of the subject. I now quote from the official record of the proceedings:

"M. THIERS: History, France, and the world are now regarding us. The resolution which you propose to take may result in the death of thousands of men. Upon your action, perhaps, may depend the destinies of our country, and it is necessary to me, before this formidable decision may be made, that I should have a moment for reflection. Leave me, then, to say one thing. You cry out against me, but I am as decided to hear your murmurs as it is necessary to brave them. [*Très bien*!—à Gauche.] * * * I have the sentiments which I represent here, not by the passions of the country, but by its well-considered interests. I have the certainty, the inmost consciousness, of fulfilling a difficult duty in resisting passions—patriotic, if you wish to call them such, but imprudent. [*Allons donc*!—à Droite; à Gauche—*Oui, oui; très bien.*] You may be

convinced that when one has lived forty years in the midst of agitations and political vicissitudes, and that he has fulfilled his duty, and that he has the certainty of having fulfilled it, that nothing can shake him, not even outrages. When a subject so grave, gentlemen, any member—he might be the only member, he might be the last in your esteem—if he have a doubt, he ought to have the privilege to express it. Yes, there are more than I. I am not the only one. [Interruptions.]

"M. DUGUÉ DE LA FAUCONNERIE: You are fourteen.

"M. DE CHOISEUL: If the elections had been free we would be more numerous. [Exclamations.]

"M. LE MARQUIS DE PIRÉ: Recall to yourself then, M. Thiers, the noble energy with which you denounced the legislative defections of 1815, and do not imitate them. * * *

"M. THIERS: Very well, gentlemen; do you wish that they should say—do you wish that all Europe should say—that the vital point had been accorded, and that on a mere question of form you would shed torrents of blood? [*Réclamations bruyantes à la Droite et au Centre.*] I demand, then, in face of the country, that they shall give us information of the dispatches upon which they have taken the resolution which has been announced, for it is not necessary to deceive ourselves—it is a declaration of war. [*Certainement—mouvements prolongés.*]

To this statement of Thiers, M. Granier de Cassagnac, one of the most violent of the Imperialist members of the Chamber, frankly answered, "I believe it." M. Thiers said that he well knew what men were capable of, under the influence of their emotions; that the candidature of the Prince of Hohenzollern had been retired, and that, in the opinion of all Europe, France had received satisfaction on the essential point. The Right and Center received this declaration with loud protests. "You have," said Thiers, "expressed your opinion; now permit me to express my own, in a few words." Meeting with interruptions, he said it would be comprehended that he was in that moment fulfilling the most painful duty of his life, and added these great words: "Yes, as to myself, I am tranquil for my memory. I am sure of that which is reserved to me; I am sure of that, for my action of this moment; but for you, I am certain that there will be days when you will regret your precipitation." These remarks were greeted with insulting expressions by the majority of the Chamber—*"Allons donc! allons donc!"*

I now quote further from the official report:

"M. LE MARQUIS DE PIRÉ: You are the trumpet anti-patriotic of disaster—go to Coblenz.

"M. THIERS: Offend me, insult me—I am ready to submit to all to avert the shedding of the blood of my fellow-citizens which you are ready to shed so imprudently. I suffer, believe it, to have to speak thus.

"M. LE MARQUIS DE PIRÉ: It is we who suffer in listening to you.

"M. THIERS: When I see that, yielding to your passions, you do not wish to take an instant of reflection,—that you do not wish to demand a knowledge of

the dispatches upon which your judgment should be supported,—I say, gentlemen, permit me the expression that you do not fulfill, in all their extent, the duties that are imposed upon you.

"M. JEROME DAVID: Guard your lessons—we reject them.

"M. THIERS: Say what you wish, but it is very imprudent for you to let the country suspect that it is a party resolution which you take to-day. [*Vives et nombreuses exclamations.*]

"M. DUGUÉ DE LA FAUCONNERIE: It is you who are but a party; we are the nation; we are two hundred and seventy.

"M. THIERS: I am willing to vote to the Government all the means necessary when the war shall have been definitively declared, but I desire to know the dispatches on which that declaration of war is based. I await that which is to be done, but I decline, as to myself, the declaration of war so little justified."

The little group of the Left in the Chamber associated itself by its applause to these brave words of Thiers, so profound, so patriotic, and so far-sighted. The next day, the Senate adopted a resolution analogous to that of the Chamber of Deputies. Events now marched apace. A few days after, on the 28th of July, 1870, the Emperor, doubtful and hesitating, left the palace of St. Cloud, never to return to it more, to join the army. The disaster at Wissembourg, on the 4th of August, was followed on the 6th by the double defeat at Reischaffen and Forbach. No one in Paris at that time can ever forget the scenes of excitement, turbulence, and madness that followed the news of these frightful disasters to the French arms. The crisis had already arrived, and made the stoutest hearts tremble. In that extremity there appeared no resource left but to call the Corps Législatif together, and to invest it with sovereign power.

It was on the 9th day of August that the Corps Législatif met in extraordinary session. Excitement, indignation, grief pervaded all Paris, and all looked forward with the most intense interest and anxiety as to what action would be taken by that body in this hour of peril. That sitting has hardly a parallel in the parliamentary annals of France, except in the very worst days of the National Convention. In my long service in the House of Representatives I had witnessed many scenes of violence and excitement, particularly just before the Rebellion, and, on one occasion (in the affair of Grow and Keitt), a hand-to-hand fight in the area in front of the Speaker's chair, but never had I witnessed anything equal to the intense and long-continued violence of this sitting. And it was on this occasion that I was particularly struck with the attitude and deportment of Thiers. Goaded to madness by the threat of M. Granier de Cassagnac that, if he had the power, he would send them all before a military commission.

before night, in an instant nearly every member of the Left rushed into the hemicycle in front of the Tribune, gesticulating wildly and filling the hall with their vociferations. Garnier-Pagès, nearly seventy years old, and ex-member of the Provisional Government of 1848, in advance of all his colleagues, made directly for the Duc de Grammont, who was sitting on the ministerial bench, and shook his fist in his face. During all this mad tumult, when every member was wild and livid with rage, Thiers sat quietly in his seat, unmoved, and apparently undisturbed by the tempest which was raging around him—the coolest of all his colleagues, because the greatest.

It is impossible, in the limits of this paper, to make more than a passing allusion to the stupendous events that followed this celebrated sitting of the 9th of August. The weight of public opinion rested so heavily upon the majority of the Chamber that the Ollivier ministry fell miserably under its own weight and the reprobation of the country. Never was that force of public opinion—which Webster once described as being more powerful than the lightning, or the whirlwind, or the earthquake—so strikingly felt as in its effects on the Corps Législatif on this occasion. This ministry of Ollivier, which had inaugurated the war and plunged France into unheard-of disasters and perils, went down without an instant's warning and without a single voice being raised in its behalf. What is known as the "Palikao ministry" succeeded to that of Ollivier. The majority of the Chamber refused to associate itself with the measures proposed by Thiers and his colleagues of the Left intended to meet the crisis. On the 24th of August, Thiers arraigned the majority for opposing propositions the necessity of which no one could deny, and in sincere and patriotic words expressed the sentiments of the opposition to the effect that they should not mingle political questions with the question of the defense of the country.

All the world now knows the desperate efforts made by Thiers in the last days of the Corps Législatif to retain France on the brink of the abyss. They know all the courage, patience, and devotedness he displayed in the too famous sitting of the 15th of July, 1870, in endeavoring to arrest in its headlong career the majority, struck with madness. There is not, in the history of political assemblies, a more touching spectacle than this venerable man giving the most salutary counsels, the most patriotic warnings in the midst of interruptions and murmurs, and contending against the clamors

of those who accused him of betraying the country when he wished to save it.*

Long, dreary, and anxious days ran on. Immense masses of people thronged the *boulevards*, surrounded the news-stands, reading the journals, discussing the situation, and awaiting telegraphic dispatches which never arrived. The sessions of the Corps Législatif were short and feverish, and the ministers did not appear any more on their benches.

It was on the 4th of September, 1870, that the last hour of the Empire came finally to strike. This day is one of the most important in that French history which for nearly a century has been more interesting and exciting than any romance which ever captivated the imagination. It was on this beautiful and radiant Sabbath, when all Paris had poured itself into the streets, as on a day of *fête*, that the Empire ceased to live. I saw all that it was possible for any one man to see, and my description of the scenes, embodied in an official dispatch to my Government, has been published, with others, by the order of Congress. The establishment of the Provisional Government of National Defense was the immediate outcome of this revolution. Thiers, while declining to become a member of this Government, lost no time in associating himself with its appalling labors and responsibilities. His conspicuous position, the courageous and brilliant rôle he had played in the Corps Législatif since he had reëntered public life, and his courageous attitude at the moment of the declaration of war, made him the first man in the state.† It was to him that the Government naturally turned in this hour of its extremity, as the only man who could plead the cause of France before the cabinets of Europe. Commissioned as an Ambassador to the European governments, Thiers, in spite of his age, disdained to spare himself the fatigues, the dangers, and disgusts of an ungrateful enterprise. He visited London, St. Petersburg, Vienna, and Rome. Received everywhere with the utmost consideration and sympathy, he was yet unable to accomplish much for his afflicted country. It is a long and sad history—his return to France, passing through the German lines under a flag of truce; his visit to Paris; his going back to Versailles; the insurrection of the 31st of October, 1870, and the consequent breaking off of all negotiations with the Count de Bismarck.

An armistice having been concluded between France and Germany in order to enable France to elect a new Assembly, to decide on

* M. Henri Martin.

† M. Jules Favre.

the question of war or peace, the election took place on the 8th day of February, 1871. The immense popularity of Thiers at this time is shown by the fact that no less than twenty-six departments elected him to the Assembly. He chose to serve for the Department of the Seine (Paris). Thiers now entered upon a new career, which the misfortunes of his country had imposed upon him, and in which he was enabled to render such services as will make his name in all coming time one of the chiefest glories of France. He was made chief of the executive power by the new National Assembly which had met at Bordeaux, and it was through his immense influence and prestige that the treaty of peace was made and signed with Germany, and ratified by the Assembly by a vote of more than five to one. After remaining a few days at Bordeaux, the Assembly transferred its sittings to Versailles. Though the Assembly was to sit in that old city of Louis IV., Thiers took up his official residence in the splendid *hôtel* of the Ministry of Foreign Affairs in Paris.

The insurrection of the Commune of Paris broke out on the 18th day of March, 1871. I was obliged to go to the Ministry of Foreign Affairs, at nine o'clock in the morning of that day, to communicate to M. Jules Favre an important dispatch I had received from the Count de Bismarck. What struck me as somewhat curious was that the court of the Foreign Office was filled with horses with military accouterments, and being held by orderlies. On inquiring of the messenger, I was told that M. Favre was in the second story, and if I wanted to see him personally, I would have to go up, which I did, and delivered my communication. One of the grand *salons* was filled with officers of high rank, and an excited discussion was going on. In an adjoining room I found Thiers walking up and down, entirely alone, and apparently very much absorbed. Not being advised of the gravity of the situation, I very soon started for a little trip to the country in company with some American friends. Returning late in the evening, it was only the next morning (Sunday) that I learned fully what had taken place. I immediately started for the Foreign Office to procure more authentic information, but on arriving there I found no one except the old messenger of the minister.

He told me that on the preceding day, and while Thiers, his cabinet, and many military men were in deliberation at the ministry, they were constantly receiving the most alarming reports from the insurrectionary parts of the city, but that no determination had been made to leave Paris until about

four o'clock in the afternoon, when a battalion of the insurrectionary National Guard marched along the Quai D'Orsay, keeping step to the cry, "*À bas Thiers ! À bas Thiers !*" (Down with Thiers!) This demonstration at once determined the whole Government to take its immediate departure for Versailles. This was the commencement of the bloody and terrible reign of the Commune of Paris. On his arrival at Versailles, Thiers took up his official residence at the Prefecture (residence of the Prefect) of the Seine et Oise, tendered him by the authorities of that department. It is no part of my purpose to dwell upon the action of the National Assembly at Versailles during the reign of the Commune, nor to recount the terrible events at Paris during that frightful epoch. Never was a greater responsibility placed upon any man than upon Thiers at this time. He had to sign a peace imposing the most onerous conditions upon the country. Order had to be reëstablished in the interior, the army had to be reconstituted, the finances reëstablished, and the opposing interests of the country conciliated.

The Empire had fallen on the 4th of September, 1870, and the Provisional Government of National Defense had taken its place. I was never accredited to this Government, neither were any of the representatives of foreign powers, but all were accepted and acted as such representatives the same as if they had been regularly accredited. After the establishment of a regular Government at Bordeaux, and Thiers had been made chief of the executive power, my Government sent me letters accrediting me as minister of the United States near the French Republic. I received them during the very height of the Commune, and my presentation of them was of the most simple and informal character, and probably no minister of a first-class power ever presented his letters of credence to another first-class power with less ceremony than there was on this occasion. It not being deemed necessary, under the circumstances, that I should pursue the forms of the Foreign Office, I informally notified Thiers that I had received my letters of credence, and was ready to present them at any time he should be pleased to designate; and he named half-past two o'clock on the afternoon of May 9th, 1871. At that hour, accompanied by a friend, I proceeded to his official residence, and was immediately received by him, without any ceremony, in his *cabinet de travail*, where he sat at a small table, busily engaged in writing.

The letters of credence were drawn up with that admirable tact which distinguished Mr.

Secretary Fish when dealing with political questions. I did not think it necessary to make a formal speech, and only remarked that I could add nothing to what had been so well said by the President in the letters of credence, further than to express my own wishes for his health and personal welfare, and that prosperity and happiness might come to the people of France. He signified his gratification at the cordial terms in which the President had expressed himself, and desired that I would communicate to him that he most sincerely reciprocated the sentiments of the United States which the President had declared for France. Thus commenced my official relations with this distinguished man, and which grew into personal relations of the most cordial character, and existing until the day of his death.

It was in the summer of 1871 that the late Governor Seward was in Paris on his return voyage around the world. Though he was physically feeble, never was his mind clearer or his conversation more delightful. He was particularly interested in the political situation in France and in the success of the Republic. I visited the National Assembly at Versailles with him, and afterward he attended one of the official receptions of President Thiers, where he was received with the highest marks of respect and consideration. As a special compliment he was invited to dine *en famille* the next day at the Palace of the Prefecture. In a subsequent conversation with Thiers, he inquired particularly after Mr. Seward and spoke of his gratification in having met that distinguished man, whom he considered, to use his own language, "as one of the greatest statesmen of the two worlds."

The first thing to be accomplished by Thiers was the suppression of the insurrection of Paris, which was only accomplished after a siege of more than two months by the whole military power of France. As the advancing army approached nearer and nearer to Paris, the hatred of the Commune authorities to Thiers became more and more intense. It passed a decree that his house in the Place St. Georges should be demolished, which was remorselessly executed. Passing there every few days, I saw the work of demolition progress until literally not one stone was left upon another. Thiers had lived in this house for nearly half a century, and there he had composed the great works which are a part of the literary glory of France, and there he had prepared the speeches he had delivered at the Tribune. There he had received the most celebrated historical persons and savans of the age, and there he had gathered books, manuscripts, and the rarest

works of art that were to be found in all Europe. All these priceless contents were carried away and scattered.

The labors of Thiers at this time were simply prodigious. The condition of France was terrible. The Germans held military occupation of a large number of departments; its armies in part prisoners; its treasury empty and its credit impaired; the whole interior administration disorganized; violence and disorder in the large cities; political parties violent, and the Assembly secretly hostile and reactionary; the indemnity to be raised for Germany. Though seventy-five years old, Thiers entered on his duties with juvenile ardor, and exhibited an activity alike without limit and without example. There was little that escaped him in the administration of the Government. With but a few hours of sleep, five o'clock in the morning always found him at work in his cabinet, in conjunction with his secretary, his life-long friend and associate, Barthélemy St. Hilaire, one of the most distinguished men of France, member of the French Academy and recently Minister of Foreign Affairs under President Grévy. I recollect an account given in the papers of Thiers having once playfully reproached his old friend for not having arrived at his cabinet until after five o'clock in the morning. Often would some minister be surprised to receive a note, asking him to call, in relation to some matter in his department, at six o'clock in the morning. While giving all his attention to matters of interior administration and to public affairs generally, Thiers was attending the sessions of the National Assembly and participating in the discussion of the most important questions. As M. Jules Simon well says, he was absorbed in labors enough to fill three existences. He managed to do everything, thanks to his strength of will and the extreme lucidity of his mind. He gave himself up entirely to the matter in hand and the person present. He never had that busy and preoccupied air which some persons have with one-twentieth of the work. He was, in some respects, like Lincoln. He was cheerful in the midst of the greatest crisis. He would catch a jesting phrase on the wing, and was not afraid of a doubtful joke. His natural cheerfulness was a great aid to him in his crushing work. While his ministers were weighed down with labors and responsibilities, he was always cheerful and at his ease. He has furnished an example for all rulers. He gave all he had of heart, mind, and strength to his country. He did not fritter away his time on trifling and immaterial questions, nor permit it to be taken up in dispensing public patronage. He rarely gave

himself any vacation. When the Chambers had taken a vacancy and the ministers were having their holidays, Thiers was once asked about a holiday for himself. "Ah!" said he, "my holiday is eighteen hours' work a day."

To Thiers will belong the imperishable glory of having paid off the ransom of a thousand millions of dollars to Germany, and of freeing French territory from the occupation of German troops. On the accomplishment of these objects, all France was filled with joy, and the National Assembly declared that he had merited well of his country. But who can measure the uncertainty of political events? It was soon after this that the same Assembly pushed him from power, and attempted to snatch from him the laurels which belonged to him. In this connection, it was my fortune to be present in this Assembly, and to witness one of the most remarkable scenes that ever took place in a deliberative body. It was at a very full sitting, on the 17th of June, 1877. The parties in the Chamber were very equally divided, and occupied different sides of the hall. It was by accident that Thiers, still holding the position of deputy, was present and sitting in his usual seat, near the main aisle, on the left of the Chamber. This was during the administration of President MacMahon, when the "Ministry of Combat" was in full swing. M. de Fourtou, Minister of the Interior, a man excessively odious to the Republicans, was making a speech on the political questions of the day. In the course of his remarks he said: "The men who are at the head of the Government to-day are the outcome of the elections of 1871, and made part of this National Assembly, which, it can be said, was the pacificator of the country and the liberator of the territory."

This impudent claim, so derogatory to the Left of the Chamber and to Thiers, was like a spark of fire falling on a powder magazine. As soon as the words fell from the lips of M. de Fourtou, several members, pointing to Thiers, cried out: "*Voilà le libérateur du territoire!*" (There is the liberator of the territory.) Every man of the Left and the Center-left sprang to his feet, and as by a common impulse turned toward Thiers, and saluted him with cheers and acclamations such as have rarely fallen on the ears of any man. Again and again were the cheers and clapping of hands renewed. Many members approached Thiers, who remained unmoved in his seat, and embraced him; all were under the empire of the most profound emotion, and many shed tears. The news of this wonderful ovation spread immediately over all France and created

a great sensation, and the persons who had the good fortune to witness it were envied, as having been present on an occasion which will hardly ever find a parallel. A celebrated French artist has put the scene on canvas, after the manner of the painting by Healy, of Webster replying to Hayne, which adorns the historic walls of Faneuil Hall, in Boston.

The work of intrigue and conspiracy in the Assembly to overthrow the President of the Republic did not cease at the moment when he had accomplished one of the greatest works ever achieved by any ruler. All the reactionary elements of the National Assembly, the Bonapartists, the Legitimists, and the Orleanists, though hating each other scarcely less than they hated Thiers and the Republic, united together, as one man, to overthrow both. The Republican Government overthrown, they were to take their chances as to what government should be established in its stead. The discussion in the Assembly on the "*interpellations*," the votes on which were to decide the fate of Thiers and his ministers, was fixed for May 23d, 1873. The excitement all over the country was at fever heat, but it culminated the next day, when it was known that Thiers would mount the Tribune in his own vindication and defense. Never as on this day had there been so many members of the Assembly present at its sittings. Out of a body of seven hundred and thirty-two members there were only about twenty absent. Never before had I seen the galleries so crowded. Not only every seat, but every inch of standing room was taken. I heard all the discussion of both days. On the 24th, I was enabled to procure a seat in the diplomatic tribune for ex-Governor Hoffman, of New York, who was thus enabled to witness the proceedings of that historic day. The Chamber met at nine o'clock in the morning, and Thiers promptly mounted the Tribune at that hour, and made one of the most remarkable and effective speeches of his life. Never had he been better inspired, and never had he shown greater talent or more ample resources. He spoke for two hours, and without a single note before him, and with a wonderful vigor and earnestness. He was frequently and loudly applauded by the Left and the Center-left. Feeling that he had nothing to hope for from the opposition, he addressed to it many keen reproaches, which always brought loud cheers from his friends. The Duc de Broglie, whom he had sent to England as Ambassador, had now turned bitterly against him, and had become the organ of the opposition in pressing the *interpellation* before the Chamber. Thiers closed with a bitter thrust at the Duc,

who had accused him of being a "*protégé* of the radicals." I shall never forget the scene. Looking directly at M. de Broglie, who sat almost directly before him, he exclaimed :

"Are not you the *protégé* of a party whom the great Duc de Broglie, your father, would have repulsed with horror—the *protégé* of the Empire!"

That was the conclusion of his speech, and he terminated, as it might be said, that supreme parliamentary struggle in the same way as Napoleon told Marshal Soult that he must terminate the campaign of Austerlitz—*par un coup de tonnerre* (a clap of thunder). A scene followed the closing words of the President of the Republic. The whole Left and Center-left rose, giving him repeated and prolonged acclamations. Then came the vital vote on passing to the order of the day pure and simple, which is equivalent, in our parliamentary practice, to laying the whole subject on the table. It was a long time before it was announced, and the result was awaited with breathless anxiety. The majority against passing to the order of the day was only fourteen, out of a vote of seven hundred and ten. Then came another vote connected with the *interpellation*, involving the censure of the Government. This proposition was voted by a majority of sixteen, and that gave the *coup de grâce* to Thiers and his ministers. The Assembly then adjourned till eight o'clock in the evening, in order that Thiers might be conferred with. In the intense excitement and confusion which prevailed at the moment, the stentorian voice of Emmanuel Arago was heard, proclaiming "that the coalesced monarchists had taken it upon their consciences to show before Europe and before history the most monstrous ingratitude." The Assembly reconvened a quarter before nine o'clock, when M. Dufaure presented the resignation of Thiers. A vote was immediately taken upon accepting it, and that was carried by thirty-one majority. Mr. Buffet had just before been elected president of the Chamber in place of Jules Grévy, who had resigned but a few days previous on account of an indignity offered to him by the reactionary members of the Assembly. He now took it upon himself, in the name of the Assembly, to express regrets for the resignation of Thiers. As soon as the friends of the latter understood what the president of the Assembly was driving at, the most extraordinary uproar ensued. At his every attempt to speak they literally howled him down by the cries, "No funeral oration from you!" "No more hypocrisy!" etc., etc. Many times did the president attempt to be

heard, and every time was his voice drowned by cries of rage and indignation. At this moment, two-thirds of each side of the Chamber were on their feet, vociferating at the top of their voices, and shaking their fists at each other, until finally both sides were exhausted. After this scene was over, the proposition was carried to proceed immediately to the election of a President, and Marshal MacMahon was elected by the votes of the coalition, the Left abstaining from voting. A committee was at once appointed to notify him of his election, and it soon returned to report his acceptance. The Assembly adjourned at midnight. All this time, the excitement in Paris was intense. When the deputies arrived from Versailles at the Gare St. Lazare, at one o'clock on Sunday morning, they found ten thousand people surrounding it and in the neighboring streets, all crying, "Down with the Assembly!" "Down with the Right!" "*Vive la République!*" "*Vive Thiers!*" The ejection of Thiers from the presidency produced a deep feeling throughout France and Europe. From this time, the hold he had upon the French people became stronger and stronger, and the time was soon to come when the men who had thrust him from power were to find that the stone which the builders had rejected was to become the head of the corner. History has never recorded an instance of baser ingratitude toward a public servant than that of the National Assembly toward Thiers. But the instructions they had taught returned to plague them. Nine days after he had retired from the presidency, he entered the National Assembly as a simple deputy from Paris, and chose his seat on the benches of the Center-left. On his entering the Chamber, three hundred members of the minority rose to receive him, and gave him round after round of applause, gathered around him, and extended to him every mark of affection and friendship. The coalitionists could not conceal their uneasiness at this demonstration, and they trembled when they considered their treatment of him, the place which he held in the affections of the French people, his patriotism, his wonderful ability, his restless activity, his tact, and his eloquence. They now began to realize that, though they had hurled him from power, he still ruled in the hearts of the people of France. Though striking him down, his enemies did not dare to touch the Government of the Republic which he had set up, and he lived to witness the extraordinary spectacle of an Assembly which had cast him out, as Mr. John Lemoinne expressed it, "profoundly royal and clerical, finishing, without knowing it and without wishing it,

by establishing with its own hands a republic."

To such an extent had Thiers contributed to this result, that he may justly be looked upon as the founder of the Republic of France. Though a deputy, he now rarely went to the Chamber, and could not be considered much more than a private citizen. But without power and without patronage he practically dominated France. Such was the condition of things that Thiers became a greater power in France when living as a private citizen in his Hôtel Bagration, in the Rue du Faubourg St. Honoré, than MacMahon in his official residence at the Palace of the Prefecture at Versailles, or at the Elysée at Paris.

After Thiers left the presidency he had one great object in view, and he enforced his opinions and advice everywhere—in the salons of his residence, in the *couloirs* of the National Assembly, in his travels, and in his speeches. He never ceased to repeat that the only government possible in France was that of the republic. His counsels were always those of wisdom and moderation, and his watchwords were "*confiance et sagesse*."

Thiers had come to be regarded with admiration and esteem by Frenchmen, wherever they were to be found in every part of the civilized world. From our country he received many tokens of affectionate regard, and he always expressed to me his profound gratitude. The most significant presentation to him from the United States was that of a medal and certain historic relics from the French citizens and residents of Philadelphia. Requested by Mr. H. A. Sintard to make the presentation in their name, I performed that pleasant duty on the 19th of January, 1874. The occasion was a very interesting one. In accordance with a previous appointment, I proceeded to the residence of the illustrious statesman at nine o'clock in the evening, accompanied by my secretaries, Colonel Hoffman and Mr. Vignaud, and several American gentlemen. In making the presentation, I addressed M. Thiers as follows:

"MONSIEUR THIERS: I am called upon to-day to fulfill a mission to you which is very agreeable to me.

"The French residents of the city of Philadelphia, desiring to show the great respect with which you have inspired them, and make known their appreciation of the services which you have rendered to the French Republic, have had a medal struck in your honor, and have added several valuable historical relics connected with the first colonization of the State of Pennsylvania and of the Revolution of 1776.

"These gentlemen have sent me these objects, and have done me the honor to choose me as their intermediary in presenting them to you.

"I have now the pleasure to offer to you this medal,

which is inclosed in a box of which the materials are of historic origin. Those which form the body were made from the wood of the room in which was accomplished one of the greatest acts of history—the emancipation of a people—the signing of the Declaration of Independence of the United States.

"The escutcheon which supports the lid is made of a piece of oak and a piece of elm. The oak comes from the beam on which was suspended the bell which, on the Fourth of July, 1776, gave to the American colonies the signal of freedom, which the powerful arm of France was soon to consolidate. The elm is a fragment of the celebrated tree under which William Penn, in 1682, concluded with the Indians a treaty which has never been broken.

"Many of your fellow-citizens have established themselves in that beautiful and admirable city of Philadelphia, and you will be happy to learn, and I am pleased to bear witness, that they uphold nobly the dignity of the French name, and that they are honored and respected citizens of their adopted country.

"I know that I am the interpreter of their sentiments, and those of the American people, in wishing that your happiness may always be associated with that of the French people, and that your illustrious career may be extended through long years."

M. Thiers made the following response:

"MY DEAR MR. WASHBURNE: I thank you for having the goodness to serve as intermediary to the French established in Philadelphia, and for having consented to bring me, in person, the high testimony of their esteem. Nothing could have honored me more than to see my conduct approved by former citizens of France, settled in your noble country, and strangers to all our divisions, and to see that approbation confirmed by Americans, who are such good judges of patriotism.

"Intrusted with the direction of the destinies of my country in one of the most painful moments of its history, I have consecrated to it my entire devotion for nearly three years, and perhaps I have succeeded in reducing the sum of the evils which weighed upon her. I allow myself to think so, when I receive testimonials coming from so far away, and which no political passion could have dictated.

"France and America have had for each other the sentiments of sisters. I should be happy if the continuation in France of the republican form of government, which I regard as the only possible one among us to-day, shall contribute to increase the mutual sympathies of the two nations, and if, marching united in the same paths, they strive, on both sides of the Atlantic, to diffuse throughout the world, with the light of civilization, the love of liberty, of order, of justice, and of peace.

"Accept, my dear Mr. Washburne, my cordial grasp of the hand, and consider it as given to the French and Americans living together on the beautiful soil of the New World."

After his new *hôtel* in the Place St. Georges had been rebuilt, in place of the one destroyed by the Commune, he took up his residence therein. In this retreat, where France and Europe had their eyes constantly upon him, every one came with respect, to be enlightened by his large views and to solicit counsel of his great experience. In his elegant *salons* were congregated, almost every evening, some of the most distinguished men of France, both

in the political and literary world. The souvenirs of those days, so dear to the friends in the hearts of whom yet vibrate that conversation, always so entertaining and instructive, so amiable in its familiarity, and so elevated when it touched the domain of art or of history, or the interests or the hopes of the country. One could but admire the reunion of faculties the most diversified, or, it might be said, the most opposite. To that spirit which appertains only to the young, he joined an incomparable personal experience enlarged by an habitual intercourse with all that had been grand in history.* Almost the only relaxation he had was in the evening. While President, and afterward, almost up to the day of his death, while in Paris, it was his habit to give a dinner party almost every evening, to which a greater or smaller number of persons was invited. After the dinner was over, his *salons* were open to receive informally such persons as had, from their political and social character, a right to call. It was my pleasure to dine with him often, and still more frequently to attend his evening receptions, where all the current topics of the day were discussed. On these occasions he was always the central figure, usually standing in the middle of the room, surrounded by his guests, who listened with the utmost attention to everything that fell from his lips. He was the master of every subject—government, politics, law, philosophy, history, and all the sciences.

After a life of the most incredible activity, it might well be supposed that, at nearly eighty years of age, M. Thiers might wish to "crown a life of labor with an age of ease." But not so. He was scarcely ever more active or more busily engaged than after he had laid down the burden of the Government. All his faculties were in their primitive vigor and his health excellent. He devoted much attention to the political questions of the day, and gave advice to his friends who flocked around him to listen to his words of wisdom. It was his greatest delight to find time to recur to the studies and occupations of his earlier years. His fondness for art never left him. He had filled his *salons* with a choice collection of works of art, of bronzes, marbles, plaques of China and Japan, and the rarest engravings. He often passed long hours at the Museum of Natural History, at the Observatory, and the Normal School. He studied with M. Le Verrier the movements of the stars, and made experiments in chemistry with M. Pasteur; and often, like a zealous pupil, placed his hand on the alembic and on

the retort.* In the midst of all his occupations and all the responsibilities resting upon him, he had, since 1862, been engaged on a work in which is treated the history of humanity in its relations to the world. It was his intention to complete this work, in which culminated all his scientific studies, all his experience of life, and where, in this greatest of all subjects, that mind, in which everything was clear and strong, would make itself manifest.†

The year 1877 was a most eventful one in French politics. The Republican Assembly elected in February, 1876, having defied the "Ministry of Combat," was dissolved by Marshal MacMahon on the 16th day of May, 1877. The election for deputies to the new Assembly was fixed for the 14th of October following. France was now plunged into an electoral contest which excited an intensity of feeling of which the people of this country have but a faint conception. Familiar with the elections that have taken place in the United States for more than forty years, I have never known anything that would begin to compare with it—except, perhaps, the celebrated contest between Lincoln and Douglas, in Illinois, in the senatorial campaign of 1858.

Nothing was better understood than that, should a Republican Chamber be returned, Thiers would be elected President of the Republic whenever a vacancy should occur. Occupying that position, he was naturally the leader in the pending campaign, which was to determine the political destinies of France. His wise and sagacious counsels were sought for by the Republicans in all parts of France, and to an extent which overtaxed his physical powers. In the month of August he left Paris and went to Dieppe, for a change and for needed repose. In order to be nearer the political center, he left Dieppe toward the last of August and went to St. Germain-en-Laye, a suburban village of Paris, celebrated as the birthplace of the Grand Monarch, Louis XIV., and took up his lodgings in the modest but celebrated hotel known as the Pavilion Henry IV. It was here that he wrote, with his own hand, his great manifesto to his constituents—and, indeed, to all France—made public soon after his death, and which is his testament before posterity. While at his midday breakfast on the 3d of September, Thiers was smitten with a stroke of apoplexy. I cannot well forget the time or the circumstances. A short time before this date an American gentleman,‡ a

* M. Henri Martin.

great admirer of Thiers, had sent to me a beautiful and most elaborate carriage blanket, to be presented to the ex-President of the Republic. I addressed a note to Thiers, advising him of the mission with which I had been charged, and asking him to fix a time when it would be agreeable for him to receive me at St. Germain. On the 2d of September Madame Thiers wrote me a note, stating that her husband would be at home, and would be glad to see me, at two o'clock P. M., on the 4th. But it was not for me to fulfill my mission. He had died at half-past six o'clock the previous evening.

The news of his death on the evening of the 3d was not generally known in Paris till the morning of the 4th, and it fell like a thunder-bolt over the city. The great leader of liberal and republican France had fallen, as it were, on the field of battle, and consternation and despair pervaded the Republican party. While his death was mourned as that of a great man, who had rendered inestimable services to his country, his taking off in the very crisis of the electoral contest was regarded as a great political calamity. There was deep and sincere mourning for him in every city, village, and hamlet in France. But, on the other hand, in the reactionary and anti-republican circles, and in a portion of the Paris press, there was open rejoicing in being delivered from the man who had done the most to found the Republic. Even while his body lay in state in the Place St. Georges, and thousands and tens of thousands were taking their last look at the remains of the dead ex-President, the reactionary press was teeming with the most brutal assaults on his memory. But without knowing it, the enemies of Thiers at this time were simply "piling up wrath against the day of wrath." Never in the history of nations has there been such a revenge taken as on the men who, in the height of their power and arrogance, drove Thiers from the presidency, and after his death insulted his memory. The Republicans of France have only had to wait the returns of successive elections to see most of these men relegated to private life.

The death of Thiers, occurring as it did, affected not only the Republicans, but it caused a marked uneasiness in Government and official circles. It was feared that the funeral obsequies of the distinguished statesman would be made the object of a great national manifestation, implying a severe condemnation of the policy of combat and reaction. The Government undertook, therefore, to regulate all the funeral ceremonies, and designate the men to deliver the dis-

courses that were to be pronounced. To that end, Marshal MacMahon issued a decree that the obsequies would take place at the expense of the state. But Madame Thiers declared that she would accept the concourse of the Government only on the express condition that she should be left free to regulate all the details of the funeral ceremonies. The Government declining this, she further declared that all the obsequies should be at her own expense. She then made application to have the religious ceremonies at the Church of the Madeleine; but the Archbishop Guilbert refused to do for the first President of the Republic what he had done a short time before for Madame Déjazet, the actress. All these things had excited among the French people devoted to Thiers the most intense indignation, and many thought it would be impossible to prevent an outbreak of violence, to be repressed by the strong arm of military force. Though fearfully exasperated, never before in all their history had the people of Paris shown such self-control. As by instinct they seem to have comprehended how disastrously any violence would affect the stupendous political struggle in which they were engaged, and how it would be used to the prejudice of the Republic.

The funeral of Thiers took place on the 8th day of September, 1877, and it was the most imposing funeral demonstration ever witnessed in the history of the world. Eight hundred thousand people assisted at that unequalled ceremony, and not the slightest incident occurred to trouble the calm of that last and affectionate homage to a great man. Nearly all the representatives of the foreign powers were present, and most of the large cities and towns sent delegations to place wreaths upon the grave of the illustrious dead. As the tribute of our own country to the memory of the great statesman and patriot, I helped to lay flowers on his bier, and followed his colossal hearse to the tomb.

The impression created all over France by the death of Thiers, and by the circumstances attending his funeral, was deep and profound. From that day, there was no longer any doubt that the cause of the Republic, to which it may be said he had given his life, would triumph. The election, taking place six weeks after his death, resulted in giving the Republicans a majority of one hundred and twenty-five in the National Assembly. The French people had vindicated M. Thiers. His epitaph, engraved upon his tomb, will be forever cherished in the hearts of his countrymen: .

"Il a aimé sa patrie: il a cherché la vérité."

LEGAL ASPECTS OF THE MORMON PROBLEM.

IN considering what is called the "Mormon Problem," it is of the first importance to bear in mind the fact that its magnitude is greatly exaggerated in the minds of most persons by the tradition of the enormous trouble and turmoil it caused in the last generation. Appearing as a new religious sect in the thinly settled West, before the railroad period, when religious prejudices and animosities were much keener than they are now, and the subjects of national interest much fewer, the Mormons attracted far more attention than any similar phenomenon, were such a thing possible, would be likely to excite now in any part of the country. The pioneer West of that day was an eminently religious community, and its feeling toward sectarians who founded their religion upon an easily detected imposture was inspired by an honest religious zeal. When the Mormons made polygamy part of their religion, they, of course, greatly intensified this animosity, but they did not do this till after they had been for years a persecuted sect. Hunted as they were from State to State, and forced, willingly or unwillingly, into a chronic armed resistance to all lawful authority; recruiting their ranks from foreign countries, and consequently rapidly becoming a totally un-American body, they were for a generation a species of social monstrosity. The Mormon "wars" and Mormon migrations of those days were really small affairs, judged by the number of people who actually took part in them, but in the quiet annals of a country devoted to peaceful material pursuits they made a tremendous noise, the echoes of which have even yet not died away. As the country has grown in population, and railroads have been pushed through Utah, the relative proportions of Mormondom and the United States have so changed that what then seemed threatening to become a national difficulty has really dwindled down to a local nuisance, which everybody admits must, in the course of time, disappear altogether, from the operation of natural causes. There is still a Mormon "problem" at Washington, which every few years causes excitement and produces legislation. But this is somewhat different, even in kind, from that which led to the early wars and persecutions. It is really the problem of governing from a distance, under our peculiar system of law, a Territory whose population is divided between two hostile social systems. The ques-

tions and difficulties presented by it are mainly legal and constitutional.

The Mormons at present form the majority of the population of the Territory of Utah, and with regard to most of their internal concerns, find no difficulty in carrying on the ordinary affairs of life and government without serious trouble. The non-Mormon population is, however, hostile to them, as they are to it, on account, chiefly, of their practice of polygamy. It is now generally admitted that, were polygamy out of the way, the difference of religion would not constitute any insuperable obstacle to establishing harmonious relations between the Saints and the Gentiles. In the various attempts which have been made through legislation to put an end to this system of marriage, the Mormon troubles may be said to have entered upon their last stage—a stage in which confessedly the only weapons which can be resorted to against them are those furnished by judge, jury, and sheriff.

The statutes of the United States contain several provisions designed to put an end to the peculiar practices of the Mormons, and to break up their system of communal life. Of these we may dismiss at once, as of no importance, the act intended to limit their right to accumulate church property. Section 1890 of the Revised Statutes provides that "no corporation or association for religious or charitable purposes shall acquire or hold real estate in any Territory during the existence of the Territorial Government, of a greater value than fifty thousand dollars; and all real estate acquired or held by such corporation or association contrary hereto shall be forfeited and escheat to the United States; but existing vested rights in real estate shall not be impaired by the provisions of this section." This provision became law nearly twenty years ago, and formed part of the Bill for the suppression of Polygamy, to which we shall have further occasion to refer. Similar acts are to be found on the statute books of every State in the Union, and are, in principle, open to no objection whatever. The provision, however, with regard to vested rights, which it was probably necessary to incorporate in the act, in order that it might not be in conflict with the elementary principles of constitutional law and common justice, had the effect of making it entirely nugatory. The possessions of the Mormon Church were chiefly acquired before

its passage, and its enactment did not take them away. The experience of history shows that the properties of religious corporations cannot be broken up under law by any means short of confiscation, and confiscation under this act was expressly prohibited.

Other provisions of the same bill were, however, of more importance. Section 5352 of the Revised Statutes provides that "every person having a husband or wife living, who marries another, whether married or single, in a Territory or other place over which the United States have exclusive jurisdiction, is guilty of bigamy, and shall be punished by a fine of not more than five hundred dollars and by imprisonment for a term of not more than five years."

This, together with the provision above quoted with reference to religious corporations, became law on the 1st of July, 1862. It was passed almost without debate in the Senate, and under the operation of the previous question in the House. It has since been passed upon by the Supreme Court of the United States in the case of *Reynolds v. United States*.^{*} Reynolds had been indicted under the act of 1862, in the District Court for the Third Judicial District of Utah, for bigamy, and pleaded not guilty. He was found guilty, and sentenced to hard labor for two years and to pay a fine of five hundred dollars. On the appeal to the Supreme Court, among the principal objections raised by the accused to the judgment was the religious conviction of the accused as to the validity of his second marriage. The court devoted a good deal of attention to the consideration of this objection. The evidence showed that the Mormon Church made it the duty of the male members of the Church, circumstances permitting, to practice polygamy; that this duty was enjoined by books believed by the Mormons to be of divine origin, among others the Holy Bible, and that the members of the Church believed the practice to be directly enjoined upon them by God in a revelation to the founder and prophet of the Church; that a failure to practice polygamy, where it was possible, would be punished by damnation in a future life. It was also proved that the accused had received permission from the recognized authorities in the Church to enter into a polygamous marriage, and that the marriage which was made the foundation of the indictment was duly performed according to the doctrines and rites of the Church. Upon this evidence his counsel urged that the judgment was in conflict with the constitutional guarantee of the free exercise of

religion. The Supreme Court, however, decided that the act of Congress was not in conflict with the constitutional guarantee. The following extracts show the ground of the decision:

"The only question which remains is, whether those who make polygamy a part of their religion are excepted from the operation of the statute. If they are, then those who do not make polygamy a part of their religious belief may be found guilty and punished, while those who do, must be acquitted and go free. This would be introducing a new element into criminal law. Laws are made for the government of actions, and while they cannot interfere with mere religious belief and opinions, they may with practices. Suppose one believed that human sacrifices were a necessary part of religious worship, would it be seriously contended that the civil government under which he lived could not interfere to prevent a sacrifice? Or if a wife religiously believed it was her duty to burn herself upon the funeral pile of her dead husband, would it be beyond the power of civil government to prevent her carrying her belief into practice?"

"* * * A criminal intent is generally an element of crime, but every man is presumed to intend the necessary and legitimate consequences of what he knowingly does. Here the accused knew he had been once married, and that his first wife was living. He also knew that his second marriage was forbidden by law. When, therefore, he married the second time, he is presumed to have intended to break the law. And the breaking of the law is a crime. Every act necessary to constitute the crime was knowingly done, and the crime was therefore knowingly committed. Ignorance of a fact may sometimes be taken as evidence of a want of criminal intent, but not ignorance of the law. The only defense of the accused in this case is his belief that the law ought not to have been enacted. It matters not that his belief was a part of his professed religion; it was still belief and belief only."

This case was decided in 1878, sixteen years after the law against polygamy had been passed by Congress, and amply sustained, as will be seen, the constitutionality of that act. But notwithstanding this, it is admitted that the law is a dead letter. In 1874, in the House of Representatives, in the course of a speech on the Poland Bill, which we shall presently have occasion to consider, Mr. Potter, of New York, referred incidentally to the statute as "a law against polygamy which we never have enforced." The Reynolds case has not made this statement any the less true to-day than it was at the time of this speech.

The law has not been and never will be enforced, for reasons which grow out of the condition of society in Utah, and which are beyond the reach of ordinary legal machinery. To any one interested in the study of the limits of criminal legislation, the failure of the statute is a patent illustration of the absolute necessity of considering in the passage of such measures not merely the crime to be punished, but the means which the feeling of the community supplies for the purpose of setting in motion the judicial machinery for its punish-

^{*} 98 U. S. R. (8 Otto) 145.

ment. The reason why bigamy is easily punished in monogamic communities, such as the States of our Union, is that the evidence necessary to convict the guilty party is generally ready to be furnished by a person who suffers from the crime; the sentiment of the community is opposed to polygamous unions, and the second marriage being universally looked upon as a mere nullity, the lawful wife as well as the children of the lawful marriage have a strong motive to supply evidence for the purpose of breaking up any such unlawful connection. The case in a community like Utah is the reverse of this. No member of the polygamous family has any adequate motive to come forward and furnish the evidence which would be absolutely necessary to secure a conviction. It is not merely that they all regard polygamy as the normal marriage state, but, as appears from the Reynolds case, they regard it as a religious duty, and a violation of this duty as entailing religious penalties much more serious than any possible inconvenience or discomforts which might arise from a continuance of their existing family system.

Judge Poland, of Vermont, who was the author of the bill known as the "Poland Bill," for the reorganization of the judicial system in Utah, saw clearly enough that much more drastic legislation than this was necessary if polygamy was to be extirpated by law, and, in 1870, he accordingly introduced a bill, which, had it passed, would certainly have had some very important effect upon the solution of the Mormon problem. It provided, among other things, that in all prosecutions for polygamy the wife should be a witness against the husband; that cohabitation should be *prima facie* evidence to establish marriage in any prosecution under the law; that no statute of limitation should apply to the offense; that no alien who practiced polygamy should be naturalized; that no polygamist should hold any office, or be permitted to vote; that no polygamist should receive any benefit under the homestead and preemption laws; that in any prosecution for polygamy, where the defendant absented himself from the Territory, his property might be confiscated, and finally, that the President of the United States should enforce the provisions of the bill by the use of the army. This bill, which reads as if it had been prompted by the legislative spirit of three centuries ago, if enforced, probably would have resulted in the extirpation of polygamy, but it would have been at the point of the bayonet, and would have left Utah a howling wilderness.

The Poland Bill which passed June 23d, 1874, and which must not be confounded with

the original bill introduced by Mr. Poland, just referred to, was designed, as explained by him, to provide some kind of legal machinery by which the law of 1862 against polygamy could be enforced. According to the notions prevalent in Congress at the time, the difficulty in the way of enforcing that law being the sentiment of the community on the subject of marriage, the true way to get over this was to provide means for the selection of juries whose sentiments on the subject of marriage should be directly opposed to that of the accused; in other words, to pack the juries with anti-Mormons. As Mr. Poland said, in explanation of the provisions of the bill, "every United States officer in that Territory understood well when he undertook, under this law of Congress, to try anybody for polygamy, he had to stand up before twelve unblushing, undeniable polygamists." The Poland Bill was designed to put an end to this shocking state of affairs by a complete revolution in the judicial system of Utah. The importance of this measure may be inferred from the fact that it was a departure from the traditional system of government in the Territories. While the Constitution gives Congress absolute power of legislation over them, the practice of that body down to the time of the passage of the statute against polygamy had always been to leave the regulation of the domestic concerns of the community entirely to the local government, in analogy with the relations established by the Constitution between Congress and the various States.

The imposition upon a distant community of an entire system of law enacted in Washington, in obedience to the wishes and prejudices of another substantially foreign community, has never been tried, and probably never will be; but the statute against bigamy, as well as that with regard to religious corporations, and, finally, the Poland Bill, were all steps in this direction. This bill was aimed at the local probate courts of Utah. These tribunals, under the laws of the Territory, possessed a very wide jurisdiction, while the judges were said to be generally, if not universally, Mormon priests. By the provisions of the act, their general jurisdiction was taken away from them and committed to the district courts, from which appeals lie to the Supreme Court of the Territory, and thence to the Supreme Court of the United States. The most important provisions of the act, however, relate to the drawing of juries, which had previously been in the hands of these same probate judges. It modified this by dividing the duty between the clerk of the district court in each judicial district, and the probate judge.

These two officials were directed by it to prepare a jury list, from which grand and petit jurors should be drawn alternately, selecting the names of male citizens of the United States who had resided in the district for the period of six months next preceding, and who could read and write the English language. From the list of such citizens, which was to contain two hundred names, the United States marshal, or his deputy, was directed to draw by lot the necessary number of names for a grand or petit jury, or both. The *venire* was to be issued by the clerk of the district court to the marshal or his deputy, and the jurors summoned under it were to constitute the regular grand and petit jurors for the term, for all cases. The bill, as originally introduced in the House, contained a provision that "in the trial of any prosecution for adultery, bigamy, or polygamy, it shall be a good cause for principal challenge to any juror that he practices polygamy, or that he believes in the rightfulness of the same." This provision was strenuously objected to, on the ground that, as three-fourths of the men who reside in the Territory now do believe in polygamy and practice it, the result would be that they would all be absolutely excluded from the juries in such cases, and the jury, in all prosecutions for bigamy or polygamy, would therefore necessarily be made up of persons who were non-Mormons. The provision was subsequently struck out of the bill, and the law was passed without it. But, of course, the very object of the provision was to pack juries, and the objection mentioned brings us face to face with this fundamental difficulty in dealing with polygamy by legal methods—that no Utah jury, unless it were packed, would ever convict a Mormon of the crime. A majority of every jury in Utah, if drawn without applying the test of religious conviction as to polygamy, will consist of persons who believe as Reynolds believed, and as Reynolds's wives believed, that polygamy is a religious duty, and ought not to be punished by law, and would therefore have conscientious scruples against indicting persons for violation of the law. But any one familiar with the elementary principles of criminal law will see at a glance that no legislation is necessary for such a case as this. It is a universal principle of law that a person who, upon his conscience, could not find an indictment, cannot serve as a juror to try an indictment. The same ground which would exclude him from the grand jury would also exclude him from the petit jury. As to the grand jury, this precise point came up in the Reynolds case, and was decided without the slightest difficulty by the

Supreme Court of the Territory.* One of the parties appearing as grand juror in that case stated, in answer to a question by the prosecution, that he had conscientious scruples against indicting persons for violation of the statute of 1862, and on that ground he was challenged for cause. The Supreme Court of the Territory, with regard to this says:

"A person who, upon his conscience, could not find indictments under a law, would not make a good juror to enforce that law. And if all members, or a majority of a grand jury, had like scruples, that ancient and venerable body would not only become useless, but also an absolute hindrance to the enforcement of the law. A party having these conscientious scruples would, if sworn upon the grand jury, have to commit moral perjury. He, upon oath, admits that his conscience forbids his aiding in the enforcement of a specific law, yet, as grand juror, he swears to go counter thereto, and enforce the law. Such a party would be wholly incompetent to sit upon a petit jury. And the same ground which would exclude him from the grand jury would also exclude him from the petit jury."

A jury of polygamists to try an indictment for polygamy would indeed be a singular spectacle. To secure a conviction, the jury must be anti-Mormons. To secure a conviction in accordance with our modern ideas of justice, the jury must be fairly drawn and not packed. Technically, believers in polygamy would all have to be excluded from the jury, for the simple reason that a juror believing in the duty of polygamy would be committing perjury in sitting to try a person for it as a crime; but a jury obtained by the process of excluding polygamists would be necessarily a packed jury, and therefore a trial by it would be unfair. No plainer demonstration could be made of the impossibility of effecting by any change in the jury laws the enforcement of the statute against bigamy.

The failure of the attempt to break up the Mormon system by Congressional legislation does not, by any means, show that the Mormon system will ultimately prevail in Utah. The operation of natural causes is certain, in the long run, to sap the foundations of polygamy. The railroads have already brought the Territory into communication with the rest of the country, and the development of the mines must ultimately bring in a large Gentile population—almost altogether male. A strong tendency in the direction of marriages between Gentile men and the daughters of Mormon parents must spring up. Indeed, this is said to show itself already. There is no surplus of women in the West from which to recruit polygamous households; the births of the two sexes are always very nearly equal, and

* U. S. v. Reynolds, 1 Utah, 226, 231.

the Mormon population is no longer being rapidly increased from abroad, as it was in the times of the early persecution of the Church. It is now stationary, or nearly so, and being rapidly hemmed in by a community having a social system which all experience shows is the only one permanently adapted to modern industrial life. As the Territory fills up, and the Mormons are brought more and more into relations with the rest of the world, one of the strongest internal causes of disintegration will unquestionably be the sense of shame operating upon the younger female generation. In the natural course of things, some of the daughters of Mormon householders must marry Gentiles, and others, who do not marry outside the church, will be made keenly aware that they are surrounded by a community which regards their position as a

degraded one. As long as they could keep themselves separated from the rest of the world, this Gentile feeling was of very little consequence to them. It did not affect them in their daily life; it was something remote from them, which they did not even need to disregard. This cannot continue forever, and indeed a change must begin, if it has not begun already, as soon as the surrounding monogamic Gentile system of marriage has a fair opportunity to enter into competition with its rival. Under these circumstances, there is nothing to be done with the Mormons but to let them alone. Persecution has been tried, and has only served to strengthen and increase them. Law has been tried, and has proved of no use, because it has not been enforced. From the circumstances of the case, it cannot be.

OLD MADAME.

"MISS BARBARA! Barbara, honey! Where's this you're hiding at?" cried old Phillis, tying her bandana head-gear in a more flamboyant knot over her gray hair and brown face. "Where's this you're hiding at? The Old Madame's after you."

And in answer to the summons, a girl clad in homespun, but with every line of her lithe figure the lines, one might fancy, of a wood-and-water nymph's, came slowly up from the shore and the fishing-smacks, with a young fisherman beside her.

Down on the margin, the men were hauling a seine and singing as they hauled; a droger was dropping its dark sails; bare-footed urchins were wading in the breaking roller where the boat that the men were launching dipped up and down; women walked with baskets poised lightly on their heads, calling gayly to one another; sands were sparkling, sails were glancing, winds were blowing, waves were curling, voices were ringing and laughing,—it was all the scene of a happy, sunshiny, summer morning in the little fishing-hamlet of an island off the coast.

The girl and her companion wound up the tony path, passing Phillis, and paused before a low stone house that seemed only a big powder itself, in whose narrow, open hallway, stretching from door to door, leaned a stately old woman on her staff,—a background of the sea rising behind her.

"Did you wish for Barbara, Old Madame?" asked the fisherman, as superb a piece of rude youth and strength as any young Viking.

She fixed him with her glance an instant.

"And you are his grandson?" said the old woman. "You are called by his name—the fourth of the name—Ben Benvoisie? I am not dreaming? You are sure of it?"

"As sure as that you are called Old Madame," he replied, with a grave pride of self-respect, and an air of something solemn in his joy, as if he had but just turned from looking on death to embrace life.

"As sure as that I am called Old Madame," she repeated. "Barbara, come here. As sure as that I am called Old Madame."

BUT she had not always been Old Madame. A woman not far from ninety now, tall and unbent, with her great black eyes glowing like stars in sunken wells from her face, scarred with the script of sorrow—a proud beggar, preserving in her little coffer only the money that one day should bury her with her haughty kindred—once she was the beautiful Elizabeth Champernoune, the child of noble ancestry, the heiress of unbounded wealth, the last of a great house of honor.

From birth till age, nothing that surrounded her but had its relation to the family grandeur. Her estate—her grandfather's, nay, her great-grandfather's—lay on a goodly island at the mouth of a broad river; an island whose paltry fishing-village of to-day was, before her time, a community where also a handful of other dignitaries dwelt only in less splendor. There were one or two of the ancient fishermen and pilots yet living when she died, who, babbling of their memories, could recall out of their child-

hood the stately form of her father, the Judge Champernoune, as he walked abroad in his black robes, who came from over seas to marry her mother, the heiress of the hero for whom the King of France had sent—when, in the French and Indian wars, the echoes of his daring deeds rang across the water—to make him Baron Chaslesmarie, with famous grants and largesse.

And in state befitting one whom the King of France had with his own hand exalted, had the prodigal Baron Chaslesmarie spent his days—never, however, discontinuing the vast fisheries of his father, in which he had himself made fortunes before the King had found him out. And although the title died with him, and the pension died before him, for the King of France had, with treacherous complaisance, ceded the island to the enemy one day when war was over, yet store of land and money were left for the sole child, who became the wife of Judge Champernoune and the mother of Elizabeth.

What a sweet old spot it was in which Elizabeth's girlhood of ideal happiness went by! The house,—a many-gabled dwelling, here of wood and there of brick, with a noble hall where the original cornices and casements had been replaced by others of carved mahogany, the panels of the doors rich with their thick gilding, and the cellars three-deep for the cordials and dainties with which the old Baron Chaslesmarie had stored them,—was a part of it, once brought from foreign shores as the great Government-house. Set in its brilliant gardens, it was a pleasant sight to see—here a broad upper gallery giving airy shelter, there a flight of stairs running from some flower-bed to some casement, with roses and honey-suckles clambering about the balustrade, avenues of ash and sycamore leading away from it, an outer velvet turf surrounding it and ending in a boundary of mossy granite boulders. The old baron slept in his proud tomb across the bay—by the fort he had defended, the chapel he had built, in the grave-yard of his people, proud as he; and Ben Benvoisie, the lad whom gossips said he had snatched from the shores of some Channel Island in one of the wild voyages of his youth, slept at his feet,—but another Ben Benvoisie lived after him. In a dimple between these boulders of the gardens' boundary, Judge Champernoune and his wife and his other child were laid away; there was always something sadly romantic to Elizabeth in the thought of her father walking over the island from time to time, and selecting this spot for his eternal rest, where the rocky walls inclosed him, the snows of winter and the bramble-roses of

summer covered him, and the waves, not far remote, sang his long lullaby.

By the time that Elizabeth inherited the place, the importance of the island town had gone up the river to a spot on the mainland, and one by one the great families had followed, the old judge buying the land of them as they went, and their houses, dismembered, with fire and with decay, of a wing here and a gable there, and keeping but little trace of them. The judge had no thought of leaving; and the people would have felt as if the hand of Providence had been withdrawn had he done so. Nor had Elizabeth any thought of it, when she came to reign in her father's stead and infuse new life into the business of her ancestors, that had continued, as it were, by its own momentum, since, although Judge Champernoune had not thought it beneath his judicial dignity to carry it on as he found it, yet, owing to his other duties, he had not given it that personal attention it had in the vigor and impetus of the Chaslesmaries. She had not a memory that did not belong to the place; certain sunbeams that she recalled slanting down the warehouses rich with the odors of spices and sugar, through which she had wandered as a child, were living things to her; a foggy morning, when an unseen fruiter in the seamist made all the air of the island port delicious as some tropical grove, with its cargo of lemons, seemed like a journey to the ends of the earth. And the place itself was her demesne, she its acknowledged *châtelaine*; there was not a woman in the town who had not served in her mother's kitchen or hall; it was in her fishing-smacks the men went out to sea, in her brigs they ran down to the West Indian waters and over to the Mediterranean ports—perhaps, alas, the African; it was her warehouses they filled with goods from far countries, which her agents scattered over the land—for a commerce that, beginning with the supplying of the fishing-fleets, had swelled into a great foreign trade. And their homes were all that she could make them in their degree; their children she herself attended in sudden illness, having been reared, as her mother was before her, in the homely surgery and herb-craft proper to those that had others in their charge; and many a stormy night, in later years, did the good Dame Elizabeth leave her own children in their downy nests, and hasten to ease some child going out of the world on the horrible hoarse breath of croup, or to bring other children into the world in scorn of doctors three miles off.

She was twenty-five when the step-son of her father's sister, her cousin by marriage but not

by blood, appeared to fulfill the agreement of their parents, to take effect when he should finish his travels—which, indeed, he had been in no haste to end. She had not been without suitors, of high and low degree. Had not the heir of the Canadian governor spoken of a treaty for the hand of this fair princess? Was it not Ben Benvoisie, the bold young master of a fishing-smack, with whom she had played when a child, who once would have carried her off to sea like any Norse pirate, and who had dared to leave his kiss red on her lips? Had Elizabeth been guilty of thinking that, had she been a river-pilot's daughter, such kisses would not come amiss?

Yet long ago had she understood that she was pledged to her cousin Louis, and she waited for his coming. His eyes were as blue as hers were brown, his hair as black as hers was red, his features as Greek as hers were Norman, his stature as commanding as her own.

"Oh, he was a beauty, my cousin Louis was!" she used to say.

She never called him her lover, nor her husband—he was always her cousin Louis.

"So you have come, sir," she said, when he stepped ashore, and crossed the street and met her at the gate, and would have kissed her brow. "More slowly, sir," she said, drawing back. "You have come to win, not to wear. Elizabeth Charlesmarie Champenoune is not a ribbon or a rose, to be tossed aside and picked up at will."

"By the Lord!" cried Cousin Louis. "If I had dreamed she were the rose she is, the salt seas would not have been running all these years between me and her sweetness—and her thorns."

"This is no court, and these no court-ladies, Cousin Louis," she replied. "We are plain people, used only to plain speeches."

"Plain, indeed," said Cousin Louis. "Only Helen of Troy was plainer!"

"Nor do flattering words," she said, "well befit those whose slow coming flatters ill."

But the smile with which she uttered her somewhat bitter speech was of enchanting good-humor, and Cousin Louis thought his lines had fallen in pleasant places.

He was not so sure of it when a month had passed, and the same smile sweetened an icy manner still, and he had not yet been able, in the rush of guests that surrounded her, to have a word alone with Elizabeth. He saw that jackanapes of a young West Indian planter bring the color to her cheek with his whispered word. He saw her stroll down between the sycamores, unattended by any save Captain Wentworth. But let him strive to gain her ear and one of the young officers

from Fort Charlesmarie was sure to intercept him,—strive to speak with her, and Dorothy and Jean and Margaret and Belle seemed to spring from the ground to her side. From smiling he changed to sullen, and from sullen to savage—to abuse his folly, to abuse her coquetry, to wonder if he cared enough for the winning of her to endure these indignities, and all at once to discover that this month had taught him there was but one woman in the world for him, and all the rest were shadows. One woman in the world,—and without her, life was so incomplete, himself so halved, that death would be the better portion.

How then? What to do? Patience gave up the siege. He was thinking of desperate measures on the day when, moping around the shores alone in a boat, he espied them riding from the Beacon Hill down upon the broad ferry-boat that crossed the shallow inlet. How his heart knocked his sides as he saw that pale, dark West Indian, with his purple velvet corduroys, and his nankeen jacket and jockey-cap, riding down beside her,—as he saw Wentworth spring from the stirrup to offer a palm for her foot when they reached the door! But Cousin Louis had not waited for that; he had put some strength to his strokes and was at the door before him, was at her side before him, compelling his withdrawal, offering no palm to tread on, but reaching up and grasping her waist with his two hands.

"By heaven!" he murmured then, as Wentworth was beyond hearing, his eyes blazing on hers. "What man do you think will endure this? What man will suffer this suspense in which you keep me?"

"It is you, Cousin Louis, who are keeping me in suspense," she answered, as she hung above him there.

And was there anything in her arch tone that gave him hope? He released her then, but when an hour later he met her again, "Very well," he said, in the suppressed key of his passion. "I will keep you in the suspense you spoke of no more. You will marry me this day, or not at all. By my soul, I will wait no longer for my answer!"

"You have never asked me, sir, before," she said. "How could you have an answer? I hardly know if you have asked me now."

But, that sunset, with Belle and Margaret and Jean and Dorothy, she strolled down to the little church, that by some hidden password was half-filled with the fishing-people and her servants. And when she came back, she was leaning on Cousin Louis's arm very differently from her usual habit, and the girls were going on before.

"If I had known this Cossack fashion was the way to win," Cousin Louis was saying—when a scream from Margaret and Belle and Dorothy and Jean rang back to them, and, hurrying forward, they found the girls with their outcry between two drawn swords, for Wentworth and the West Indian had come down into the moonlit glade to finish a sudden quarrel that had arisen over their wine, as to the preferences of the fair *châtelaine*.

"Put up your swords, gentlemen," said Cousin Louis, with his proud, happy smile, "unless you wish to measure them with mine. It would be folly to fight about nothing. And there is no such person as Elizabeth Champernoune."

The men turned white in the moonlight to see the lovely creature standing there, and before they had time for anger or amazement, Elizabeth said after him:

"There is no such person as Elizabeth Champernoune. She married, an hour ago, her cousin Louis."

Ah me, that all these passions now should be but idle air! Perhaps the hearts of the gallants swelled and sank and swelled again, as they looked at her, beautiful, rosy and glowing, in the broad white beam that bathed her. They put up their swords, and went to the house and drank her health and were rowed away.

Elizabeth and Cousin Louis settled down to their long life of promised happiness, in the hospitality of an open hearth around which friends and children clustered, blest, it seemed, by fortune and by fate. Gay parties came and went from the town above, from larger and more distant towns, from the village and port across the bay. Life was all one long, sweet holiday. What pride and joy was theirs when the son Chaslesmarie was born; what tender bliss Elizabeth's when the velvet face of the little Louise first lay beneath her own and she sank away with her into a land of downy dreams, conscious only of the wings of love hovering over her! How, at once, as child after child came, they seemed to turn into water-nixies, taking to the sea as naturally as the gulls flying around the cliffs! How each loiterer in the village would make the children his own, teaching them every prank of the waves, taking them in boats far beyond the outer light, bringing them through the breakers after dark, wrapped in great pilot-coats and drenched with foam! She never knew what was fear for her five boys, the foster-brothers of all the other children in the village; only the little maiden Louise, pale as the rose that grew beneath the oriel, she kept under her eye as she might, bringing her up in fine household arts and delicate accomplishments, ignorant

of the shadow of Ben Benvoisie stalking so close behind as to darken all her work.

Her husband had taken the great business that Elizabeth's people had so long carried on through their glories and titles, their soldiery and war, their other pursuits if they had them; his warehouses lined the shores, the offing was full of his ships, he owned almost the last rod of land on the island and much along the main. He did not pretend to maintain the state of the old baron; but to be a guest at Chaslesmarie was to live a charmed life awhile. He was a man of singular uprightness; as he grew older apt to bursts of anger, yet to Elizabeth and to his household he was gentleness itself; some men trembled at the sound of his voice, but children never did. If he was not so beloved as his wife by the fishing-people, it was because he was not recognized master as of right, and because he exacted his due, although tossing it in the lap of the next needy one. But he was a person with whom no other took a liberty. "A king among men, was my cousin Louis," Old Madame used to say, and sigh and sigh and sigh again as she said it.

But the hospitality of the island was not all that of pleasure and sumptuous ease. It was a place easily reached by sail from one or more of the great towns, by boat from the town above; and in the stirring and muttering of political discontent, the gentlemen who appeared and disappeared at all hours of the day, and as often by night, folded in cloaks wet with the salt sea spray, wore spurs at their heels and swords at their sides to some purpose. And when at last war came—Horror of horrors, what was this! Cousin Louis and his island had renounced allegiance to the crown, and had taken the side of the colonial rebels and the Continental Congress.

"We!" cried Elizabeth, who knew little of such things, and had a vague idea that they owed fealty still to that throne at whose foot her grandfather had knelt. "We, whom the King of France ennobled and enriched!"

"And for that price were we sold ere we were born, and do we stay slaves handed about from one ruler to another?" her husband answered her. "We have ennobled and enriched ourselves. We have twice and thrice repaid the kings of France in tribute money. Soon shall the kings of France go the way of all the world—may the kings of Britain follow them! Henceforth, the people put on the crown. I believe in the rights of man. I live under no tyranny—but yours," he said gayly.

"A Chaslesmarie! A Champernoune!" Elizabeth was saying to herself, heedless of his smile.

"We are an insignificant islet," her husband

urged. "The kings of France have betrayed us. The kings of Britain have oppressed us. We renounce the one. We defy the other!" And he ran the flag under which the rebels fought, up the staff at Charlesmarie, and it was to be seen at the peak of all his brigantines and sloops that, leaving their legitimate affairs, armed themselves and scoured the seas, and brought their prizes into port. But freely as this wealth came in, as freely it went out; for Cousin Louis did nothing by the halves. And heart and soul being in the matter, it is safe to say that not one guinea of the gold his sailors brought him in, during that long struggle, remained to him at its close.

It was during this struggle that, when one day the sloop *Adder's-tongue* sailed, the elder son of Ben Benvoisie—who had long since married a fisherman's daughter—was found on board, a stowaway. Great was Ben Benvoisie's wrath when he missed his son; but there was nothing to be done. He rejected Cousin Louis's regrets with scorn. But when the sloop brought in her prizes, and the first man ashore told him his son had died of some ailment before he sighted an enemy, then his rage rose in a flame, he towered like an angry god, and standing on the head of the wharf, in the presence of all the people, he cursed Cousin Louis, root and branch, at home and abroad,—a black cloud full of bursting lightnings rising behind him as he spoke, as if he had a confederate in evil powers,—cursed him in wild and stinging words that made the blood run cold, that cut Cousin Louis to the heart, that, when they were repeated to her, made even Elizabeth turn faint and sick. "There is a strange second-sight with those Benvoisies," she said. "God grant his curses come to naught." But she hardly ever saw him at a distance without an instant's prayer, and she knew that the fishing-people always after that sight of him, standing there at the head of the wharf, with his blazing eyes and streaming hair, and the rain and the lightning and the thunder volleying around him, held some superstitions of their own regarding the evil eye of the Benvoisies, and kept some silent watch to see what would come of it all.

But the war at last was ended, the world was trying to regain its equilibrium, and continental money was at hand on every side, and little other. Cousin Louis, who had faith in the new republic, believed with an equally hot head in its good faith, and sent word far and near that he would redeem the current paper, dollar for dollar in gold. And he did so. There were barrels of it in his warehouse garrets, and his grandchildren had it to play with. "It is Ben Benvoisie's word," said Elizabeth, when they saw the mistake. But

Cousin Louis laughed and kissed her, and said it had sunk a good deal of treasure, to be sure, but asked if Ben Benvoisie's word was to outweigh his fisheries and fleets and warehouses and hay-lands—his splendid boys, his girl Louise! And he caught the shrinking, slender creature to his heart as he spoke—this lovely young Louise, as fair and fragile as a lily on its stem, whom he loved as he loved his life, his flower-girl, as he called her, just blossoming into girlhood, with the pale rose-tint on her cheek, and her eyes like the azure larkspur. How was he, absorbed in his counting-room, forgetful at his dinner-table, taking his pleasures with guests, with gayeties, to know that his slip of a girl, not yet sixteen, met a handsome hazel-eyed lad at the foot of the long garden every night,—Ben Benvoisie the third,—and had promised to go with him, his wife, in boy's clothes, whenever the fruiter was ready for sea again! But old Ben Benvoisie knew it; and he could not forbear his savage jeer, and the end was that Cousin Louis, at the foot of the long garden one night, put a bullet through young Ben Benvoisie's arm, and carried off his fainting girl to her room that she showed no wish to leave again. "She will die," said Cousin Louis, one day toward the year's close, "if we do not give way."

"She had better," said Elizabeth, who knew what the misery of her child's marriage with old Ben Benvoisie's son must needs be when the first glamour of young passion should be over.

And she did. And Cousin Louis's heart went down into the grave with her.

"It is not only old Ben Benvoisie's word," said Elizabeth. "It is his hand."

Her secret tears were bitter for the child, but not so bitter as they would have been had she first passed into old Ben Benvoisie's power, and been made the instrument for humbling the pride and breaking the heart daily of her brothers Charlesmarie and Champenoune, and of the hated owner of the *Adder's-tongue*, had she lived to smart and suffer under the difference between the rude race, reared in a fishing-hut, and that reared in the mansion of her ancestors. Perhaps Old Madame never saw the thing fairly; it always seemed to her that Louise died of some disease incident to childhood. "I have my boys left," said Elizabeth. "And no one can disturb my little grave."

It was two graves the second year after. For Charlesmarie, her first-born and her darling, whose baby kisses had been sweeter than her lover's, the life in whose little limbs and whose delicious flesh had been dearer than her own, his bright head now brighter for the

fresh laurels of Harvard,—Charlesmarie, riding down from the Beacon Hill, where he had gone to see the fishing-fleet make sail, was thrown from his horse, and did not live long enough to tell who was the man starting from the covert of bayberry-bushes. But Elizabeth carried a stout heart and a high head. She could not, if she would, have bent as Cousin Louis did, nor did the proud serenity leave her eye, although his darkened with a sadness never lightened. None knew her pangs, nor saw the tears that stained her pillow in the night; she would, if she could, have hid her suffering from herself. She began to feel a terrible assurance that she was fighting fate, but she would make a hard fight of it. Conscious of her integrity of purpose, of the justice of her claims, of her right to the children she had borne, there was something in her of the spirit of the ancients who dared, if not to defy the gods, yet to accept the combat offered by them. Champernoune was the heir instead, that was all. Then there were the twin boys, Max and Rex, two lawless young souls; and the youngest of all, St. Jean, whose head always wore a halo in Elizabeth's eyes. With these, why should she grieve? Now she was also the mother of angels!

Again, after a while, the frequent festivities filled the house, and the great gold and silver plate glittered in the dark dining-room and filled it, at every touch, with melodious and tremulous vibrations. Now the Legislature of the State, one and all, attended a grand banqueting there, now the Governor and his Council; now navy-yard and fort and town, and far-off towns, came to the balls that did not end even with the bright outdoor breakfast, but ran into the next night's dancing, and a whole week's gayety; now it was boating and bathing in the creeks; now it was sailing out beyond the last lights with music and flowers and cheer; and all the time it was splendor and sumptuousness and life at the breaking crest. And Elizabeth led the dance, the stateliest of the stately, the most beautiful still of the beautiful. And if sometimes she saw old Ben Benvoisie's eyes, as he leaned over the gate and looked at her a moment within the gardens and among her roses, it was not to shudder at them. What possessed Elizabeth in those days? She only felt that the currents of her blood must sweep along in this mad way, or the heart would stop.

Then came Champernoune's wedding,—he and that friend whom the chief magistrate of the land delighted to honor, marrying sisters in one night. How lovely, how gracious, how young the bride! Was it at Gonaives that year that she died dancing? Was it at

Gonaives that the yellow-fever buried Champernoune in the common trench?

Elizabeth was coming up the landing from the boat, her little negro dwarf carrying her baskets, when the news reached her quick senses, as the one that spoke it meant it should; she staggered and fell. The doctors came to bind up the broken bones, and only when they said, "At last it is quite right; but, dear lady, your dancing days are over," did any see her tears. She had buried her only girl, her first-born boy, her married heir, without great signs of sorrow. She had plunged into a burning house in the village once, gathering her gauzy skirts about her, to bring out the little Louise whom an unfaithful nurse had taken there and forsaken in her fright; she had waded, torch in hand, into the wildly rolling surf of a starless night to clutch the bow of Charlesmarie's boat that was sweeping helplessly to the breaker with the unskilled child at the helm; she had shut herself up with Champernoune, when Ben Benvoisie brought back the small-pox to the village, and had suffered no one to minister to him but herself; and when the dog all thought mad tore Cousin Louis's arm, she herself had sucked the poison from the wound.

Yet with that sentence, that absurd little sentence, that her dancing days were over, it seemed all at once to Elizabeth that everything else was over, too. With Champernoune now everything else had gone—state and splendor, peace and pleasure, hospitality and home and hearth, and all the rest. All things had been possible to her, the mastery of her inner joy itself in one form or another, while she held her forces under her. But now she herself was stricken, and who was to fight for them? Who, when the stars in their courses fought against Sisera!

But as wild as the grief of Cousin Louis was, hers was as still, though there were ashes on her heart. She went about with a cane when she got up, unable to step a minuet or bend a knee in prayer. "But see," cried old Ben Benvoisie to himself, "her head is just as high!"

Not so with Cousin Louis. He sat in his counting-room, his face bent on his hands half the time. Cargoes came in unheeded, reports were made him unregarded, ships lay at the wharf unloaded, the state of the market did not concern him—nothing seemed of any matter but those three graves. Then he roused himself to a spasmodic activity, gave orders here and orders there, but his mind was elsewhere. With the striking of the year's balance he had made bad bargains, taken bad debts, sent out bad men with his fleets, brought in his fares and his fruits and foreign

goods at a bad season, lost the labor of years. A fire had reduced a great property elsewhere to ashes, a storm had scattered and destroyed his southern ships. "Something must be done," said Cousin Louis. And he looked back from his counting-room, on the fair mansion from whose windows he had so long heard song and laughter floating, with its gardens round about it, where the sweetbriar and the tall white rose climbed and looked back at the red rose blushing at their feet, where the honeysuckles shed their fragrance, where the great butterflies waved their wings over all the sweet old-fashioned flowers that had been brought from the gardens of France and summer after summer had bloomed and spiced the air, where the golden robins flashed from bough to bough of the lane of plum-trees, and the sunshine lay vivid on the encircling velvet verdure. "Her home, and the home of her people for a century behind her—the people whose blood in her veins went to make her what she is—noblest woman, sweetest wife, that ever made a man's delight. The purest, proudest, loftiest soul that looks heaven in the face. O God, bless her, my dear wife—dearer than when I wooed you or when I wedded you, by all the long increase of years! Something must be done," said Cousin Louis, "or that will go with the rest."

Perhaps Cousin Louis began to forefeel the future then. Certainly, as a little time passed on, an unused timidity overwhelmed him. Against Elizabeth's advice he began to call in various moneys from here and there where they were gathering more to themselves. "There is to be another war with the British," he said "We must look to our fortunes." But he would not have any interference with their way of life, the way Elizabeth had always lived. There must still be the dinner to the judges, the supper to the clergy, the frequent teas to the ladies of the fort, the midsummer throng of young people, the house full for the Christmas holidays; Max and Rex were to be thought of, St. Jean was not to grow up remembering a house of mourning. Why had no one told them that, in all the festive season before Champernonne's death, the younger boys not being held then to strict account, old Ben Benvoisie, sitting with them on the sea-beaten rocks, had fired their fancy with stories of the wild sea-life that had blanched his hair and furrowed his face before the time? One day St. Jean came in to break the news: Max and Rex had run away to sea. "I should have liked to go," said St. Jean, "but I could not leave my mother so."

go master of the best ship I have!" And in due time he sent him supercargo to the East, that he might learn all that a lad who had tumbled about among ropes and blocks and waves and rocks, ever since his birth, did not already know. But he forbade his wife to repeat to him the names of Rex and Max; nor would they ever again have been mentioned in his presence but for the report of a ship that had spoken the craft they took, and learned that it had been overhauled, and Max, of whom nothing more was ever heard, pressed into the British service, and Rex, ordered aloft on a stormy night, had fallen from the yard into the sea, and his grave was rolled between two waves.

As Elizabeth came home from the little church—the first time she went out after this—thinking, as she went, of the twilight when she found Champernonne, who had stolen from the lightsome scenes that greeted him and his young bride, to stand a little while beside the grave where his brother Chaslesmarie slept—she met old Ben Benvoisie.

"Well," he said, "you know how good it is yourself."

"Is not the curse fulfilled, Ben Benvoisie?" she demanded. "Are you going to spare me none?"

"None," said Ben Benvoisie.

The servants were running toward her when she reached the house. The master had a stroke. A stroke indeed. He sat in his chair a year, head and face white, speaking of nothing but his children's graves, they thought. "Too cold—too damp. Why did I bury there?" he murmured. "I will go have them up," he said. "Oh, why did I bury so deep—cold—cold—Elizabeth!" But when Elizabeth answered him, the thing he would say had gone, and when he died at last, for all his struggle for speech, it was still unspoken.

Ah, what a year was that when the long strain was over, and she had placed him where she was to lie herself, at her father's feet! Things went on as they would that year. Wrapped in an ashen apathy, Elizabeth hardly knew she breathed, and living less at that time in this world than the other, the things of this world had small concern for her. Born, too, and reared in wealth, she could as easily have understood that there was any other atmosphere about her as any other condition; and the rogues, then, had it all their own way. Suits for western lands that were the territorial possessions of princes were compromised for sums she never saw; blocks of city houses were sold for taxes; heaven knows what else was done, what

"By the gods!" said his father. "You shall

rights were signed away on papers brought for her name as administratrix. And when St. Jean came home from sea, where were the various moneys that his father had been calling in for so long a time? There was not a penny of them to be accounted for.

St. Jean was a man before his time. He looked about him. The great business had gone to the dogs, and some of the clerks and factors had gone with it; at least, they too had disappeared. Other men, in other places, had taken advantage of the lapse, established other houses, opened other fisheries, stolen their markets. There was not enough of either fleet left in condition to weather a gale. "It has all been at the top of the wave," said St. Jean, "and now we are in the trough of the sea." But he had his ship, the *Great-heart*, and with that he set about redeeming his fortunes. And his first step was to bring home to his mother a daughter-in-law as proud as she—Hope, the orphan of a West Indian prelate, with no fortune but her face, and with manners that Elizabeth thought unbecoming so penniless a woman.

When St. Jean went away to sea again, he established his wife—Little Madame, the people had styled her—in a home of her own; for large as the Mansion was, it was not large enough to hold those two women: a home in a long low stone house that belonged to the estate and had once been two or three houses together,—at which one looked twice, you might say, to see if it were dwelling or bowlder,—and which he renovated and then filled with some of the spare pictures and furnishings of the Mansion-house. And there Hope lived, cheered Elizabeth what she could, and cared for the children that came to her—and how many came! And Elizabeth, who could never feel that Hope had quite the right to a place as her rival in St. Jean's affections, took these little children to her heart, if she could not yet altogether take their mother; and they filled for her many a weary hour of St. Jean's absences on his long voyages,—St. Jean who, in some miraculous way, now represented to her father and husband and son.

Elizabeth had time enough for the little people; for friends did not disturb her much after the first visits of condolence. Trouble had come to many of them, as well. Dorothy and Margaret and Belle and Jean, and their compeers, were scattered and dead and absorbed and forgetful, and she summoned none of them about her any more with music and feasting. Of all her wealth now nothing remained but a part of the land on the island and the adjoining main, with its slight and fickle revenue. Of all her concourse of servants there were only Phillis and Scip, who

would have thought themselves transferred to some other world had they left Old Madame.

But the Mansion of Charlesmarie was a place of pleasure to the children still, at any rate, and the little swarm spent many an hour in the old box-bordered garden, where the stately lady walked on Phillis's arm, and in the great hall where she told them the history of each of the personages of the tall portraits, from that of the fierce old Charlesmarie of all down to the angel-faced child St. Jean; told them, not as firing pride with memories of ancient pride, but as storied incidents of family life; and as she told them she seemed to live over her share in them, and place and race and memories seemed only a part of herself.

"Madame," said St. Jean once, when at home,—no child of hers had often called her mother,—"I think if we sold the place and moved away we would do well. The soil is used up, the race is run out—if we transplanted and made new stock? Here is no chance to educate the children or to rebuild our fortunes now. Somewhere else, it may be, I could put myself in better business connection —"

The gaze of his mother's burning black eyes bade him to silence. She felt as if in that moment he had forsworn his ancestors.

"Leave this place of whose dust we are made!" she cried. "Or is it made of the dust of the Charlesmaries? And how short-sighted—here, where, at least, we reign! Never shall we leave it! See, St. Jean, it is all yours,"—and from command her voice took on entreaty, and how could St. Jean resist the pleading mother! He went away to sea again, and left all as before.

But the earth had moved to Elizabeth with just one thrill and tremor. The idea, the possibility, of leaving the place into which every fiber of her being was wrought had shaken her. It was a sort of conscious death into whose blackness she looked for one moment—so one might feel about to lose identity. She walked through the rooms with their quaint and rich old furnishing, somber and heavy, their gilded panels, their carved wainscot, the old French portraits of her people that looked down on her and seemed to claim her; she paused in the oriel of the yellow drawing-room, where it always seemed like a sunshiny afternoon in an October beech-wood—paused, and looked across the bay.

There gleamed the battlements of the fort that her grandfather, the baron, had built; there was the church below, there was the tomb, among the graves of those whose powers had come to their flower in him; the

grassy knoll, beyond, gleamed in the gold of the slant sun and reminded her of the days when, a child, she used to watch the last glint on the low swells of the graves, across the blue waters of the bay whose rocky islets rose red with the rust of the tides. Far out, the seas were breaking in a white line over the low red ledge, and, farther still, the lighthouse on the dim old Wrecker's Reef was kindling its spark to answer the light on the head of Charlesmarie that her grandfather had first hung in the air. Close at hand, a boat made in, piled high at either end with the brown sea-weed, the fishing-sails were flitting here and there, as there had never been a day when they were not, and the whole, bathed with the deepening sunset glow, glittered in peace and beauty. There had not been ten days in all her life when she had not looked upon the scene. No, no, no! As well give up life itself, for this was all there was of life to her. There was the shore where, when a child, she found the bed of garnets that the next tide washed away; here could she just remember having seen the glorious old Baron Charlesmarie, with his men-at-arms about him; here had her dear father proudly walked, with his air of inflexible justice, and the wind had seized his black robes and swept them about her, running at his side; here had her mother died; here had she first seen the superb patrician beauty of her husband's face when he came from France, with his head full of Jean Jacques and the rights of man; here was the little chapel where they married, the linden avenue up which they strolled, with the branches shaking out fragrance and star-beams together above them—the first hour, the first delightful hour, they ever were alone together, she and her Cousin Louis. Oh, here had been her life with him—a husband tenderer than a lover, a man whose loftiness lifted his race and taught her how upright other men might be, a soul so pure that the light of God seemed to shine through it upon her! Here had been her joys, here had been her sorrows; here had she put her love away and heard the molds ring down on that dear head; here had the world darkened to her, here should it darken to her forever when all the shadows of the grave lengthened around her. Father and mother, husband and child, race and land, they were all in this spot. These people, all of whom she knew by name, were they not like her own; could the warmth of the blood bring much nearer to her these faces that had surrounded her since time begun—these men and women whose lives she had ordered, whose children had been fostered with her children, who half-worshiped her in her girlhood, who half-worshiped her still as

Old Madame? Could she leave them? Not though St. Jean's *Great-heart* went down,—St. Jean's ship for which Hope on her house-top sat so long watching. "I refuse to think of it," she said. "It is infinitely tiresome." And then the children trooped in and stopped further soliloquy, and she let them dress themselves out in her stiff old brocades that had been sent for just after she married and had never needed to be renewed,—the cloth-of-silver and peach-bloom, the flowered Venetian, the gold-shot white paduasoy; she liked to see the pretty Barbara and Helena and Bess prancing about the shining floors, holding up the long draperies, and she would have decked them out in her old silver-set jewels, too, had they not been parted with long since when Cousin Louis was calling in their moneys. It all renewed her youth so sweetly, if so sadly, and the mimic play in some obscure way making her feel they only played at life, relieved her of a sense of responsibility regarding their real life. When they tired of their finery, she led them down, as usual, before the portrait of this one and of that, and told over the old stories they liked to hear.

"Madame," said little Barbara, lifting her stiff peach-blossom draperies, "why is it always 'then,'—why is it never 'now'?"

But the old dame's heart did not once cry Ichabod. To her the glory never had departed. It was as imperishable as sky and air.

It was the threatened war-time again at last; and Hope, with her sweet soft eyes watching from the house-top, saw her husband's ship come in, and with it its consort—just a day too late. The embargo had been declared, and, unknowingly, he hailed from a forbidden port. Other sailors touched other ports and took out false papers for protection. St. Jean scorned the act. He relied on public justice: he relied on a reed. His cargoes were confiscated, and his ships were left at the wharf to rot before he could get hearing. In those two vessels was the result of his years of storm and calm, nights when the ship was heavy by the head with ice, days when her seamy sides were scorched and blistered by the sun, the best part of his life. And gone because he preferred poverty to perjury.

"Better so," said Old Madame. "I am prouder of my penniless son than of any merchant prince with a false oath on his soul." And her own contentment seemed to her all that could be asked. She never thought of regretting the matter; but she despised the general Government more than ever, and would have shown blue-lights to the enemy, had he been near and wanted a channel, were it not that he was Cousin Louis's enemy as well.

Alas! a bitterer enemy was near. One tempestuous winter's night the minute-guns were heard off Wrecker's Reef,—and who but St. Jean must lead the rescue? Hope, cloaked and on her house-top, with the glass saw it all; saw St. Jean climb the reef as the moon ran out on the end of a flying scud of cloud to glance on the foam-edged roll of the black wild seas; saw the others following along the sides of the ice-sheathed rock to carry succor to the freezing castaways, and saw, too, a plunging portion of the wreck strike one form, and hurl it headlong. It was her husband. And although he was brought back alive, yet the blow upon his breast, and the night's exposure in the icy waters, in his disheartened state, did deathly work upon St. Jean, and he was laid low and helpless long before his release.

Then Elizabeth sold the hay-fields along the main-land to pay the doctor's bills and the druggist's, to try softer air for the prostrated man, to bring him home again. She had loved to see the sun ripening the long stretch of their rich grasses with reds and purples, with russets and fresh-bursting green again, as far as eye could see. But she forgot she had ever owned them, or owning them had lost them. They were there still when she gazed that way. Then the Thierry place followed, and the little *Hasard* houses,—they had not yet learned how to be poor.

"There is the quarry," said St. Jean, his heart sore as his hand was feeble. "We cannot work it now."

"The grocer took it long ago," said Elizabeth.

"And the *Podarzhon* orchard?"

"Oh, the *Podarzhon* orchard! Yes, your great-grand sire used to call it his pot of money. Well, the trees were old and ran to wood,—your father renewed so many! But the apples had lost their flavor,—what apples they used to be! Oh, yes, we ate up the *Podarzhon* orchard some time since. And the lamb-pasture brought the children their great-coats and shoes last year. And the barley-field— How lucky that we happened to have them, my dear!"

"And I dying," groaned St. Jean. "What, what is to become of them!"

"To become of them!" said the unfaltering spirit. "Is there question what will become of any of the blood of *Chaslesmarie*?"

A night came, at length, when Hope fainted in her arms—Elizabeth's last child was dead. "A white name and a white soul," said Elizabeth. "I thank God I knew him!" And the *Geoffrey* field went to bury him. "I shall be with him soon," she said, smiling, not weeping. "Heaven can hardly be more

holy than he made earth seem, he was so like a saint!" After that, she felt as if he had no more than gone on one of his long *voyages*. She sold the few acres of the *Millet* farm in a month or two; they had nothing else to live on now but such small sales; and from a portion of the proceeds she put aside, in a little hair-covered coffer, her grave-clothes, with the money, in crisp bank-notes, that should one day suffice to lay her away decently between her graves. And then she and Hope sat down and spent their days telling over the virtues of their dead.

It was a summer day, when the late wild-roses were just drooping on their stems and the wanton blackberry vines were everywhere putting out their arms, and all things hung a little heavily in the still air before the thunder-storm, that Elizabeth climbed alone, with her staff, to the dimple among the rocks where her dear ones lay. She paused at the top to look around her. Here swept the encircling river, with the red rocks rising from its azure; beyond it the main-land lifted softly swelling fields that had once belonged to her ancestors of glorious memory; far away to the south and east, over its ledges and reefs mounting purple to the bending sky, stretched the sea, its foaming fields also once theirs and yielding them its revenues. Now, —nothing but these graves, she said; the graves of renown, of honor, of lofty purity. "No, no," said Elizabeth aloud. "Renown, honor, purity are not buried here. St. Jean's children cannot be robbed of that inheritance. Fire that still burns must burst through the ashes. It is fallen indeed; but with these children it shall begin its upward way again!"

"Its upward way again," said a deep voice. And, half-starting, she turned to see old Ben *Benvoisie* sitting on one of the graves below her.

"So you are satisfied at last, Ben *Benvoisie*," said Elizabeth, after a moment's gazing.

"Satisfied with what?"

"Satisfied that not one child is left to my arms, and that, when the mortgage on the *Mansion* falls due, not one acre of my birth-right is left to my name."

"Do you think I did it, then, Old Madame?" asked the man, pulling his cloak about him. "Am I one of the forces of nature? You flatter me! Am I the pride, the waste, the love of pleasure, the heedlessness of the morrow, the self-confidence of your race, that forgot there was a world outside the sound of the name of *Chaslesmarie*? Did I take one life away from you?" he cried, as he tottered to his stick. "Nay, once I would have given you my own! Did I take a penny of your wealth? I am as poor to-day as I was

seventy years ago when I laid my life at your feet, and you laughed and scorned and spurned it, and thought so lightly of it you forgot it!"

Elizabeth was silent a little. Her hood fell back, and there streamed out a long lock of her silver hair in which still burned a gleam of gold; her black eyes, softer than once they were, met quietly the gaze that was reading the writing of the lines cut in her face, like the lines whipped into stone by the sharp sands of the desert.

"It was not these leveling days," she said. "I was the child of nobles ——"

"And I was a worm at your feet. A worm with a sting, you found. But it was not you I cursed," he cried, in a hoarse passion,—"not you, Elizabeth Champernonne! It was the master ——"

"Louis and I were one," she answered him. "We are one still. A part of him is here above the sod; a part of me is there below it. We shall rest beside each other soon, as we did every night of forty years. Soon you, too, Ben Benvoisie, will go to your long sleep, and neither your banning nor your blessing will help or hurt the generation that is to come."

"Will it not?" he said. And he laughed a low laugh half under his breath. "Yet the generations repeat themselves. Look there!" And he wheeled about suddenly and pointed with his stick, as if it had been an old wizard's wand. "Look yonder at the beach," he said. "On the flat boulder by which we found the bed of garnets when you and I were too young—eighty years ago, is it?—to know that you were the child of nobles, and I a worm!"

And there, on the low, flat rock, distinct against the turbid darkness of the sky, sat the pretty Barbara, a brown-eyed lass of sixteen, and the arm about her shoulder was the arm of young Ben Benvoisie, the old man's grandson, and his face, a handsome tawny face with the blue fire of its eyes, was bent toward hers—and hers was lifted.

"Leave them to their dream a little while, Old Madame, before you wake them," said the old man, in a strangely altered voice.

"I shall not wake them," said Elizabeth.

And they were silent a moment again, looking down at the figures on the rocks. And the two faces that had bent together there, had clung together in their first long sweet kiss of love, parted, with the redness of innocent blushes on them, and were raised toward the distant sea, now dimly streaked with foam and wind.

"I have seen ninety years," said old Ben Benvoisie. "And you, Old Madame?"

"I have lived eighty-five," she answered, absently.

"Long years, long years," he said. "But, at last," he said, "at last, Dame Elizabeth, my flesh and blood and yours are one!"

Elizabeth turned to move away, but his voice again arrested her. "Look ye!" he said. "When those two are one, once and forever, when Chaslesmarie is sunk in Benvoisie, when you are conquered at last, I shall tell them where Master Louis buried his moneys, Old Madame!"

She had been going on without a word; but she stopped and looked back over her shoulder. "Only they are conquered, Ben Benvoisie, who contend," she said. "And I have never contended. Perhaps I had rather see her dead. I do not know. But Barbara has her own life to live in these changed times. She is too young, I am too old, to make her live mine. And were I conquered," she cried in a great voice, "it is not by you, but by age and the slow years and death! I defy you, as I have defied Fate! For, take the bread from my mouth, the mantle from my back, yet while I live the current in my veins remains," cried the old Titaness, "and while I live that current will always run with the courage and the honor of the Chaslesmaries and Champernounes!"

"Not so," said the other. "Conquered you are. Conquered because your race ceases. Because Chaslesmarie is swallowed up in Benvoisie as death is swallowed up in victory!"

But she had gone on into the gathering darkness of the storm, from which the young people fled up the shore, and heard no more. And the storm burst about the island, and the old Chaslesmarie Mansion answered it in roof and rafter, trembling as if to the buffets of striving elemental foes. And all at once the flames wrapped it; and gilded wainscot, Dutch carving, ancestral portraits, were only a pile of hissing cinders when the morning sun glittered on rain-drops, rocks, and river. And Elizabeth, with her little hair-coffer of cere-clothes and money, had gone to Hope's cottage, and old Ben Benvoisie was found stretched upon the grave where she had seen him sitting. And they never knew where Cousin Louis had buried his money.

"Miss Barbara! Barbara, honey!" called old Phillis, again, a little before noon. "Where's this you's hiding at? Old Madame wants ye. Don't ye hear me tell?"

And pretty Barbara came hesitatingly up the rocks that made each dwelling in the place look as if it were a part of the island itself, tearful and rosy and sparkling. And by her side, grave as became him that day, and erect and proud as his grand-parent, was old Ben Benvoisie's grandson.

"Barbara," said the Old Madame presently, breaking through the reverie caused by their first few words, "did my eyes deceive me yesterday? Have you cut adrift? Have you made up your mind that you can do without fine dresses and silver dishes and ——"

"Why, I always have," said Barbara, looking up simply.

"That is true," said Elizabeth. "And so they do not count for much. And you think you know what love is—you baby? You really think you love this sailor-lad? Tell me, how much do you love him, child?"

"As much, Madame dear," said Barbara, shyly, dimpling, glancing half askance, "perhaps as much, grandmamma, as you loved Cousin Louis."

"Say you so? Then it were enough to carry its light through life and throw it far across the dark shadows of death, my child! And you," she said, turning suddenly and severely to young Ben. "Is it for life, or for a holiday, a pleasuring, a pastime?"

He looked at her as if, in spite of the claims of parentage and her all but century of reign, he examined her right to ask. "Since Barbara promised me," said he at last, "I have felt, Old Madame, like one inside a church."

"Something in him," said Elizabeth. "Not altogether the sweetness of the senses, but the sacredness of the sacrament."

And although they were not married for twice a twelvemonth, Elizabeth considered that she had married them that morning. And the reddest bonnet-rouge among the fishermen had a thrill as if all thrones were leveled when, at old Ben Benvoisie's funeral,—

in the simple procession where none rode,—after young Ben and Barbara, they saw Hope and Old Madame walk, as became the next of kin.

And so one year and another crept into the past. And at length Old Madame fell ill.

"I am going now, Hope," she said. "I should like to see Barbara's baby before I go. But remember that there is money for my burial in the little coffer. And there is still the Dernier's wood-land to sell ——"

"Do not think of such things now," said Hope. "God will take care of us in some way. He always has. We are as much a part of the universe as the rest of it."

"We are put in this world to think of such things," said Elizabeth. "We are put in this world to live in it, not to live in another. Now I am going to another. We shall see what that will be. From this I have had all it had to give. I came into it with the reverence and revenue of princes. I go out of it a beggar," she cried, in a tone that tore Hope's heart. "I came into it in purple—I go out of it in rags ——"

Rags. Before they laid her away with those who had made part of her career of splendor and of sorrow, they opened the little hair-coffer,—moths had eaten the grave-clothes and a mouse had made its nest in the bank-notes. And to-day nothing is left of Charlesmarie or Champernoune—not even a name and hardly a memory; and the blood ennobled by the King of France is the common blood of the fishers of the island given once with all its serfs and vassals—the island-fishers who sell you a string of herring for a shilling.

TOPICS OF THE TIME.

New Patches on an Old Garment.

It seems to be agreed that something must be done about the civil service. Here and there a happy optimist still asseverates that our service is the best in the world, and here and there an inveterate machinist stands amidst the fragments of his shattered machine wondering at the foolishness of the "doctrinaires" who think that parties could be better managed without patronage; but sober citizens generally admit that Mr. Miller, one of the new Senators from New York, was not far out of the way when he declared, in a recent speech before the New York Republican convention, that "by the logic of events, this question has passed out of the category of discussion. It is no longer a question," he continued, "whether we shall have a reformed service, but how it shall best be done."

This is the problem to which our statesmen are now turning their attention. And it must be said that

the clumsy way in which some of them deal with it indicates dense ignorance of the whole subject. This is not to be wondered at. So busy have these gentlemen been in carrying elections and in distributing patronage that they have found scant time to attend to the routine duties of their offices; the task of informing themselves about the history and the science of civil administration has been quite out of the question. If they had only had time to acquaint themselves with the results of experience in dealing with such problems, they would address themselves to the problem before them much less uncertainly than they are now doing. There is really a large and instructive literature dealing with the subject. The reports that have been made to Congress within the last fourteen years are valuable; it would be interesting, but not, we fear, re-assuring, to learn how many of the present members of Congress have read them. Other nations have also given careful heed to this matter. Questions

of administration have become vital questions to our European neighbors; with their vast debts and their costly armaments, it has been necessary for them to reduce the expense and increase the efficiency of their civil service; the best wits of their wisest men have been enlisted in this study; the experiments that they have tried and the results that they have reached would certainly have some value for our statesmen.

We are inclined to credit President Arthur with a sincere wish to improve the civil service. He feels, by this time, the burdensomeness of the present system, and he sees that something must be done to relieve the President of an intolerable load. He has made, as yet, no official suggestions of reform, but one proposition intended to be practical has been reported as coming from him. This proposition is that the civil offices be divided equally among the Congressional districts, and that each member of Congress be required to make the appointments assigned to his district, and be held responsible for them.

The project is vague. Would the Democratic as well as the Republican districts share in this division? Would the Democrats in the House of Representatives, as well as the Republicans, be called on to make appointments? Probably that is not intended. President Arthur has not yet been suspected of any design to make the service unpartisan. The offices would be divided among the Republican districts. Whenever any district ceased to be Republican, it would cease to receive dividends of patronage, and, very likely, the places filled from that district would be vacated to make room for the quota of some other district won by the Republicans from the Democrats. The vicissitudes of office-holding under such a system would not be lessened, and it needs no very lively imagination to picture the scandals it would breed. Besides, one wants to know what would become of the Senators under this arrangement. Are they to be wholly relieved of the duty of dispensing patronage?

This method of disposing of the offices is not a new invention. It was formerly in actual operation in England; the appointments under the Government were divided among the members of Parliament belonging to the administration party, and there was a secretary of patronage, whose business it was to see that each honorable gentleman got for his friends the number of places to which he was entitled, and no more. If the results of that experiment had been known, it is not likely that this proposition would have been made. The capital defect in the plan is, however, that it confuses the legislative and executive departments, and confers power where there is no responsibility. The allowing of members of the legislature to appoint all the subordinate officers in the executive departments is a political solecism. The fact that this is, substantially, the present system is not, really, an argument in its favor. It is declared that the members of Congress would be held responsible for the appointments they made. How, we beg to know, could such a responsibility be enforced?

Another scheme of reform is attributed to ex-Secretary Windom. It contemplates the division of the offices among the States in the ratio of their population, and the appointment of a committee in each State, who shall conduct examinations for admission to

the civil service, and send to Washington lists of successful competitors, from which the quota of the State shall be filled. This plan also needs expounding. Is this State committee to be composed wholly of Republicans? Is the examination to be competitive, and if so, are Democrats to be permitted to compete? To whom and on what conditions will the lists be open? If the object of this proposition be to secure a non-partisan civil service, to which ascertained merit and not political favor shall be the condition of admission, the object is a good one; whether the method suggested is practicable or not cannot well be told till we know more about it. On the whole, it is doubtful whether the old garment could be well mended with these new patches.

Two bills are now before Congress which deal with the whole subject comprehensively. The one is known as the Pendleton Bill, and it provides for the appointment of a civil service commission, whose duty it shall be to devise rules by which, "so far as practicable, all citizens duly qualified shall be allowed equal opportunities, on grounds of personal fitness, for securing appointments, employment, and promotion in the subordinate civil service of the United States." The bill further provides that the capacity of applicants for office shall be tested by open competitive examination; that the offices shall be graded, and that original entrance to the service shall be at the lowest grade; that there shall be a period of probation before the appointment shall be confirmed, and that promotions from one grade to another shall be won by competition. In short, the bill proposes simply to organize and apply to all the large offices in the country the methods of appointment which have been tested in the New York Custom-house and in the New York and Boston post-offices for several years, and the value of which in improving the service has been abundantly demonstrated.

The other bill mentioned is known as the Willis Bill. Its object is "to prevent extortion from persons in the public service, and bribery and coercion by such persons." It makes the levying of assessments for political purposes on Government clerks a misdemeanor, and provides heavy penalties for all persons, official or unofficial, who shall be caught in any such attempt. If all reports are true, the evils which this bill is designed to remedy are not all extirpated, even from the New York Post-office.

These two bills ought to be well studied and thoroughly debated. If they are not practicable, let us know why. It is to be hoped that the ambition to invent new methods of reform will not lead our lawmakers to remain in ignorance of methods which experience has justified.

Garfield on Civil Service Reform.

In the death of President Garfield, the cause of civil service reform lost one of its earliest friends and advocates. He was a supporter of the Jenckes Bill, in 1866—the first measure presented in Congress for the introduction of a system of competitive examinations for applicants for the lower grades of official positions. If we are not mistaken, he was the first member of Congress to establish such examinations to guide him in the appointment of West Point cadets

and midshipmen at the Naval Academy. These appointments had always been regarded as the political or personal patronage of a representative in Congress; as vacancies occurred to be filled from his district, General Garfield gave them to lads (selected from the best pupils in the high schools) who passed the most satisfactory examination before a committee of teachers and physicians. Early in his Congressional service, he introduced the custom, when there was a contest for a vacant postmastership, of asking the people who got their mail at the office in question to hold an election. He would then recommend the man having the most votes, on the ground that the neighbors of the candidates were the best judges of their qualifications. He never regarded the offices in his district as in any sense his property, and was always averse to deciding between the claims of aspirants.

As a Congressman, General Garfield occupied an exceptionally independent position. He never sought the office to which he was eight times elected. His first and all subsequent nominations grew out of the free and emphatic preference of an overwhelming majority of his party, and the preponderance of his party in his district was so great that his election was always the certain sequence of his nomination. He therefore had no political debts to pay, and was under no obligations to the politicians of his district which he had to discharge by putting them in office. Thus he never got entangled in the vicious system of patronage which has enervated and corrupted so many of the ablest men in public life. As soon as the great questions left to Congress and the people as the legacy of the Civil War began to be put in the way of settlement, his candid, investigating, and independent mind could not fail to be impressed with the need of improving the civil service. One of his earliest utterances in Congress upon this subject will be found in a speech delivered in the House in 1870, in which, referring to the evil of the existing system of Congressional dictation in the making of appointments, he said:

"We press appointments upon the departments; we crowd the doors; we fill the corridors; senators and representatives throng the offices and the bureaus until the public business is obstructed, the patience of the officers worn out, and sometimes, for fear of losing their places through our influence, they at last give way and appoint men, not because they are fit for the position, but because we ask it."

Two years later, in April, 1872, he spoke with great earnestness and force against the pernicious patronage system. We have space for only two brief quotations from his remarks, but they will suffice to show how strongly he was impressed with the magnitude of the evil, and how he saw at that early day that the only way of escape from it was in the direction of a permanent service, with appointments for fitness, promotion for merit, and removal only for cause.

"This state of things has grown up gradually and by almost imperceptible degrees, until the old adjustment of the different departments of the Government is wholly changed. I affirm that this present custom is an apostasy from the original policy of the Government,—an apostasy alarming in its character,—and that the chief reason why a reform in the civil service is required is that the three powers, or particularly the

two powers of the Government, the legislative and the executive, may be restored to their independence, may be left unawed and uninfluenced by the pressure of personal dictation and control. * * *

"There is no great and eminently successful department of this Government which has not been made so by being taken out of the ordinary channels of political management. Is there a man here who would be willing to turn the Coast-Survey service over to the fate of our ordinary civil service? In that bureau we have a system of promotion by merit, which has given us those distinguished and noble men who in that service have crowned the nation with honor. So with the Light-house Board, and so with all the branches of our service which have really been an honor to human nature and a glory to the nation itself. It is because we want to lift other departments to a similarly high plane that we ask the power of Congress to some measure of civil service reform."

In his speeches upon the stump, between 1870 and 1880, General Garfield frequently urged the need of reform measures to elevate the civil service. Many extracts might be made from reports of these speeches in the public prints. A single one, however, will answer our purpose, which is to show how deep was his interest in the reform movement, and how entirely he was in accord with its main lines of thought and action. At Athens, Ohio, August 26th, 1879, in a political address, he said:

"Let it once be fully understood that continuance in office depends solely upon the faithful and efficient discharge of its duties, and that no man is to be removed merely to make place for another, and the reform will be half accomplished. Again, the appointing power must be liberated from Congressional control; this must be done both for the sake of the service and for the protection of the legislators. The Constitution shields members of Congress from arrest during their attendance upon the sessions of Congress, and while going to and from the same. This is done, not for their sake, but because the country has need of their unobstructed service."

In a thoughtful article entitled "A Century of Congress," which he contributed to the "Atlantic Monthly" in the summer of 1877, General Garfield condemned the evils of the patronage system in language of unmistakable directness. After referring to President Jackson's course, in turning out all the office-holders who had not aided his election, he said:

"From that time forward the civil offices of the Government became the prizes for which political parties strive, and twenty-five years ago the corrupting doctrine that 'to the victors belong the spoils' was shamelessly announced as an article of political faith and practice. It is hardly possible to state with adequate force the noxious influence of this doctrine. It was bad enough when the Federal offices numbered no more than eight or ten thousand; but now, when the growth of the country, and the great increase in the number of public offices occasioned by the late war, have swelled the civil list to more than eighty thousand, and to the ordinary motives of political strife this vast patronage is offered as a reward to the victorious party, the magnitude of the evil can hardly be measured. * * * From the President downward through all the grades of official authority, civil office becomes a vast corrupting power, to be used in running the machine of party politics."

In the same article, after showing how the power of appointment has been virtually usurped by the senators and representatives, and the just powers of the executive crippled, and pointing out the injurious influence upon the members of the legislative branch of the Government themselves of being made seekers for office for their constituents, General Garfield said:

"To sum up in a word: the present system invades the independence of the Executive and makes him less responsible for the character of his appointments; it impairs the efficiency of the legislator by diverting him from his proper sphere of duty, and involves him in the intrigues of aspirants for office; it degrades the civil service itself, by destroying the personal independence of those who are appointed; it repels from the service those high and manly qualities which are so necessary to a pure administration; and finally, it debauches the public mind by holding up public offices as the reward of mere party zeal."

So far, the record of General Garfield on this subject is clear and bright. No member of Congress had studied the matter so thoroughly, or had expressed himself about it so courageously. His later well-remembered utterances, in his letter accepting the nomination to the presidency and in his inaugural address, were, however, regarded as hesitating and uncertain. Doubtless the practical difficulties in the way of carrying this reform through Congress looked large to him; he knew the temper of the legislators in both houses, and he had not, we must remember, that aroused public sentiment behind him which has been evoked by his death. If his movements were somewhat cautious, we need not wonder.

His proposition to fix the tenure of the minor offices was, it must be owned, not much better than a make-shift. The suggestion that in making appointments, "the Executive should seek and receive the information and assistance of those whose knowledge of the communities in which the duties are to be performed best qualifies them to aid in making the wisest choice," was hailed by the official dispensers of patronage as a concession to their claims, but it is not certain that they would have gained much by it. A very large number of the minor offices, including three-fourths of all the post-offices, may have to be filled, even under a reformed civil service, by some such method. The suggestion, it will be observed, does not apply to the Government offices at Washington. One remark, found both in the letter and in the inaugural, should be well remembered,—that the aid of legislation is required to render any reform of the service effective or permanent.

The settled beliefs of General Garfield appear in the passages quoted above; and although his later outgivings may have been somewhat dubious, it is reasonable to suppose that when he had found his feet, and had begun to wield a little more deliberately the great powers intrusted to him, he would have used his resources of leadership in making effective the principles to which he had so fully committed himself. Those who had good opportunities to know, assert that this measure was regarded by him as tentative. This is confirmed by the nature of the situation. Garfield was in no sense of the term a representative politician. As he himself said, he was interested in conflicts of minds, and not in conflicts of men. This indisposition

to the work of the trading politician, and the fact already mentioned that he had no political debts to pay, kept him, as a Congressman, singularly in ignorance of the partisan forces with which, after his election to the presidency, he had to contend. There is reason to think that he underestimated the opposition "limited tenure" would be likely to meet from the politicians, and that toward the last he saw how inadequate would be a measure which, while it might somewhat reduce the bulk of the partisan pressure for office, would not to any great extent remove its causes, and would chiefly alter the times at which such pressure would occur.

One service that he did render to this reform must not be overlooked. He slew that dragon named the Courtesy of the Senate. He had denounced it, years before, in his place in the House; upon the threshold of his administration he destroyed it. It was the deadliest foe of reform, and he attacked it in its lair. The weapons with which he struck were not the weapons of civil service reform; but they did the business. President Garfield regained, for the Executive, powers which had long been usurped by the Senate. It is to be hoped that none of his successors will surrender what he won at the cost of his life; and if the prerogatives of the Executive are vigorously maintained, the way will be clear, for civil service reform.

Communism in the Book Trade.

WE Americans have always been prone to take comfort from the imperviousness of our society to socialistic, communistic, or agrarian ideas. Where property is so widely distributed, where the common people are land-owners, and often, in a small way, money-lenders—communistic theories make no deep impression. The New York beer-garden socialists may smoke their pipes and spend their breaths in saloon oratory, but Americans see, in all their yeasty talk, only a diverting farce. The agitation of such questions is foreign to our atmosphere. In this country it is a growth as strange as a well-developed *Victoria regia* would be. A communist in America is something to be put under glass, protected from chilling winds, and kept for observation and wonder. This is why the reporter, who sniffs the strange and abnormal as quickly as a hound does a fox, runs after every dying wave of European agitation that breaks into froth upon our shores. The local socialist leaders, with the help of the newspapers, make a sensation, without making an impression—such a sensation as that made by the two-headed girl and the Chinese giant.

But there is a many-sidedness, a plausibility, an insidiousness about anti-property notions, and we cannot be too sure that they will not make headway in some form among us. Such theories are harmless enough so long as they are heard only in the oratory of the beer-garden, but when in a modified way they make their appearance, as they have done of late years, in the thought and practice of a most respectable and important branch of trade, it is time for us to feel less secure in regard to the economic foundations of American civilization. Book-sellers and publishers constitute a guild that has always been remarkable for the intelligence of its members. If not a learned profession, book-publishing is at least a business in which

general knowledge is important. Perhaps we might call publishing a learned trade. It would be difficult for a man to hold relations with books so intimate as are those of a publisher without becoming a man of information. When, therefore, clear-headed publishers, in a matter pertaining to their own business, adopt a theory and use arguments whose only logical result is communism, there is occasion for inquiry into the soundness of our theories of property.

The tendency we are marking is but another illustration of the warping influence on the understanding of an injustice long practiced. Just as the confiscation of Irish estates, the plundering of monasteries, and the capture by privateering expeditions of richly laden Spanish caracks, tended to obscure the sense of property-right in the English of Elizabeth's time, so has the long-continued injustice of our copyright law warped the public conscience itself, until the simple principle of ownership of that which a man has produced—the groundwork of all property-holding and commercial civilization—can no longer be applied to the highest products of diligence and intelligence. We have been told that copyright is not a natural right; but that it is good public policy to remunerate an author, and that the most practicable way of paying him seems to be to give him a monopoly of the sale of his book for a limited term of years in his own country. Of course under this formula the author has no rights. We only pay him because we think it wise to encourage him. The foreign author is another affair; we may make all we can out of his works, since no public policy obliges us to "encourage" English writers by paying them for their labor. We have thus rigged a very nice and plausible bit of unadulterated communism, under which we can do as we please with the painfully wrought product of a scholar's life, and snap our fingers in the face and eyes of the ten commandments.

The phrase is ingeniously worded—the words "public policy" and "monopoly" are handled with skill—and, like other communistic utterances, the formula has, at first sight, a seeming fairness. But a homely old English proverb reminds us that goose and gander may be eaten with the same sauce. A principle which has so many possible applications as this should not be confined to men of letters. It is so big with blessings to mankind that it would be a sin to give authors a copyright "monopoly" of its inestimable benefits. It ought to work both ways, in school phrase. A. has written a book, after years of thought. It is the ripe fruit of his life. He has spent money in collecting a library preparatory to its production. He has traveled far and observed much. The book represents his time, his money, his intelligence. B., who is a publisher, says: "I do not grant you any ownership in this book. But it is probably good public policy to remunerate authors, and I propose to allow you a monopoly of the sales for a limited term of years and over a limited area of territory. In all other countries and beyond a certain period, the book-trade and the public will enrich themselves at your expense and drink to your health out of the profits derived from your toil." B., the publisher, at length builds a house, into which he puts, in differing proportions, just what A. put into his book, namely, time, money, and thought. It is now the turn of A. to speak philosophically: "I also

recognize the fact that it is good public policy to remunerate the man who uses his time, his money, and his intelligence. There seems no better way to recompense one who has built a house than by giving him a partial monopoly of it for a limited time. I propose that the parlor, the kitchen, and two sleeping chambers be granted to you for twenty-eight years. The remainder of the house belongs to whoever can first succeed in occupying it, and after your monopoly expires, you having been sufficiently remunerated, the house will belong to the public."

But we are told that copyright is not a natural right. If by that is meant that in a "state of nature" there was no such thing as copyright, one may grant it. There could be no need for copyright until the modern facility for multiplying copies made it possible for unscrupulous people to make unjust profits out of another man's toil. In a "state of nature," or barbarism, there are no well-defined rights of property. The Indian hunter must divide his newly killed deer, according to well-known rules, among those who arrive after it is killed; to each his portion, in the order of his coming. Barbarism is communism. Every lazy man in a village of wigwags can claim food from the store of any provident tribesman. Thus barbarism perpetuates itself by refusing to industry its natural recompense.

As civilization advances, the house comes to belong to the builder, the fish to him who caught and dried them, the corn to the household that planted betimes, and at length the intellectual offspring of intellect is also secured to the producer. The logic of civilization is inevitable—either the rule of property in what a man makes is universal, or it should be wholly abolished. Some of our intelligent and upright publishers made haste to recognize this fact, frankly and fully, before the vulgar and sweeping piracy of the lowest rank of book-venders partially shifted the interest of the reputable houses to the right side of the scale. If a book does not belong to him who wrote it, then a horse does not belong to him who bred him, or a ship to him who built it. The question is not between the author and publisher, but between civilization and barbarism, sound economy and communism. Either copyright is the author's honest and equitable right, or the beer-garden philosophers are the angels that proclaim the millennium of general division and redistribution.

The treaty now being agitated is the half loaf better than none, but until American publishers and English publishers—who have been as unwilling to see the whole truth as those upon this side—recognize the fact that a man's right to the work of his brain is something deeper than a question of trade and expediency, there will be no just and final settlement.

A Forgotten Obligation to the Ministry.

A LARGE obligation sometimes puts out of sight a smaller one. There is an incidental service rendered to society in this country by the Christian ministry, which is more likely to be forgotten than the obligation due to them for their own immediate work.

Emerson has somewhere said that quiet and studious lives are the chief corrective of a money-making

age. Now, the life of a minister can hardly be called a quiet one, and it is not always possible to the busy pastor to lead a studious life, in the general sense of that term. And yet, the kind of life usually led by ministers is, beyond question, the most efficient antidote to a money-making spirit that our society knows. The minister is often the one man in his circle who stands for something higher than mere getting. We know well enough that there are divers kinds of men in the ministry. There are those who go about seeking fat pastures for the shepherd, and those who speculate in something besides metaphysics, and there are clerical sponges. It is impossible that any profession should fail to get its share of men who fall below the standard of their calling. But, speaking generally, the Christian ministry sets up a light-house in each community, by giving to it a man whose life indicates that there are other ends of living than the gross one of getting and keeping. "Let us not for the sake of living lose what men should live for," was written in Latin on the banners of one of the regiments that fought under Cromwell. And this is what the life of a minister says to those about him: "Let us not, in our haste to accumulate, forget those things which make accumulations valuable."

For, while the ministry stands for religion and morals, it stands also for culture and knowledge. The man of business has no time, or thinks he has none (which comes to the same thing), to know what is going on in the world of thought. But his minister knows, and conversation with the minister reminds him that there is, even here below, a world above that world of things in which he is so busy. Historical and scientific knowledge, and the humanizing influence of literature, sift through the pulpit to the people. If the ministers in America had never mentioned Darwin's theory of the evolution of the human race, large bodies of people would have known no more about the storm of debate that raged in the upper air than they know of a cyclone going on in the sun. The pulpit is not an arena for free discussion, it is true,—the debate is generally one-sided,—but it is a never-closed channel for the diffusion of knowledge, and a continual reminder that above the sphere of things in human life, is a sphere of thought.

In the country village, the minister is not so exclusively an authority as he was in the old days, when he was usually the only liberally educated man in the town. But he is a source of intellectual enlightenment; his conversation or that which is dropped incidentally in his sermon, stirs the mind of some lad with curiosity. Books are mentioned of which the boy has never heard, and dim vistas of knowledge open up before his eyes. The hills that stand about the town seem too strait for him, the humdrum of life too narrow. He, too, will study, and will know of these things whereof the parson speaks. And so another is presently added to the ranks of educated men, by the contagion of culture. This is the history of the intellectual awakening of many of our great men. The minister touched them with admiration for his superior information, and they straightway got a Latin grammar and began to push at that narrow door of knowledge.

It is the fashion to accuse the ministry of a certain reluctance to receive new ideas—a reluctance that inheres, perhaps, in all professions with long-standing tra-

ditions. But after all reduction, who shall tell the debt we owe it for its educating influence? It is not a small matter that every Sunday thousands of discourses by educated men are given in all parts of the country. A profession that counts many of the finest minds, and has the attention of so large a proportion of the people, cannot help stimulating exceedingly the intellectual life of the nation. If we leave out of sight its religious work, and even its moral teaching, the debt we owe the ministry for its influence on the general education of the people is incalculable.

When Frederick Oberlin, in his half-barbarous parish in the Vosges, planted schools, taught the people to build bridges, and substituted good French for their miserable *patois*, he did a work that has rarely been accomplished in the life of an individual man. But it was typical of what, in a large and diffused manner, and partly by indirect methods, the clerical profession is doing for our social life. The minister is often the center of interest in education in a community, and he sometimes brings with him a higher standard and better methods than have before prevailed. The constant interchange of educated ministers from one part of the country to another, is one of the influences that has kept our language from splitting into widely divergent dialects. For, in how many towns is the minister's speech the standard.

To confess this obligation to the clerical profession, is to remind us of the additional responsibility which the possession of a minister's influence involves. The secular education of the minister, so influential on those about him, ought to be broadened, his historical knowledge should be full, his scientific information fresh, the culture of his literary taste considerable. A wider education for the ministry means a larger general culture for the people. It is even possible that the nasal quality of voice by which so many of our people bewray themselves, might be quite done away with in time, if we could have two generations of ministers trained to speak the mother-tongue with full and sonorous utterance. Not that ministers are worse offenders in this regard than the rest of us, but as a class they have more influence. Again, if ministers generally understood the principles which underlie approved educational methods, there would be a more rapid improvement in schools, for their public spirit and enlightened interest in education are beyond question. But in urging these additional responsibilities upon the clergy, we are only recognizing the force of the old French maxim, *noblesse oblige*. If nobility imposes extraordinary obligations, so does influence.

The Good-natured Man.

GOOD-NATURE, like the tongue in the anecdote of *Æsop*, is the best thing in the world, but also the worst thing in the world. In its own sphere it is as divine as the sunshine. If it does not drive the world forward, it saves much of the force that would otherwise be required. It is the great lubricant of human affairs. Oiling the machinery is as indispensable a work as lighting a fire under the boiler, and your true master of men, while he applies driving force, does not spare the good-nature that makes smooth work by decreasing the resistance. The genuine school-master, for example, knows that the best products of

intellectual culture grow in the sunlight, and that the storms which clear the air should be exceptional. We talk much, nowadays, of the cheering effect of decoration on the home, and of the blessing of open fires; but a little old-fashioned good-nature in parents and children is brighter than an artistic dado, and goes to the heart more immediately than a sentimental wood-fire, on brazen andirons of the style of Queen Anne or Ghengis Khan. Decorating a house that is never irradiated with hearty good-nature is like frescoing a cellar wall.

But a Hebrew philosopher long since discovered that "to everything there is a season, and a time to every purpose under the heaven," and the greater part of all the evils in the world grow either from the root of untimeliness or that of out-of-place-ness. Inappropriateness curdles everything—even good-nature is an unmitigated evil when it gets out of place or season.

In one of our large cities, in the worst days of ring speculation, a citizen declared his intention to vote for the candidate for mayor nominated by the party opposed to his own. Both candidates, he said, were honest, but the one his own party had nominated was too good-natured. The other man was equally honest and far less obliging—a man for the times, who would not spare anybody's feelings. We have had many public officers whose honesty has been rendered unserviceable by their good-natured disinclination to put even a rogue to inconvenience.

There is a good-nature that is the genuine result of goodness of heart, and there is a good-nature born of laziness of spirit. Some men are unwilling to incommode others because they love their own ease. Good-nature that comes of spiritual discipline or an unselfish heart is stamped with the divine image; but the good-nature that seeks only to avoid trouble is a spurious coin. It is easier for a well-dressed lady to bestow a piece of money on a pitiable-looking wretch of a woman than it would be for her to stop and observe that the borrowed baby of the beggar is drugged, and further, to reflect that in supporting such mendicants the giver is only cherishing the human vermin that make the world loathsome.

This indolent good-nature is the bane of our political and commercial life. Men are selected for places of trust because they are "good fellows." Now, as a general rule, the good fellow is the worst fellow in the world to put in a place of trust. The good fellow means well, but nothing is so impotent as the good fellow's good intentions. Before the war, it used to be said that Northern politicians wanted backbone. But, indeed, the training of the office-seeker, like that of the acrobat, is directed to the producing of suppleness and elasticity in the spine. The good fellow is chosen on account of flexibility. He cannot well say no. It is not the art of good-fellowship to say no. He is honest enough in a lazy way—the good fellow does not steal. But he cannot say no when the rogue approaches him, and so, though he does not grow rich at public expense, the money leaks away all the same.

Impotent good-nature is not so villainous as direct theft, but the effect on the treasure-chest is much the same. Good-nature shuts its eyes and folds its hands while theft takes the safe-key from his pocket. Your good fellow can never quite believe that a rogue will steal.

It is not so wonderful, after all, that popular elections put this sort of good-natured men into responsible places. The marvel is that men of business training do the same thing in commercial affairs. They generally select the good fellow for a bank-cashier, for example. He is a good man to meet the public, he will bring business to the bank. But they do not reflect on the amount of distress it will give their good-natured cashier to say no, when some tottering business house or some speculating adventurer seeks an "accommodation." To accommodate is what the good-natured man likes to do—it is cruel to ask him to refuse the people who beat like waves against the walls of a moneyed institution. Sooner or later the obliging cashier grows tired of the everlasting no, and the unstable borrowers "effect an entrance," as the reporters say of burglars. When the bank fails, everybody is astonished—the cashier was always "the best fellow in the world." They do not reflect that his good-fellowship was actually his disqualification.

Directors in financial corporations, such as banks, savings-banks, life-insurance companies, seem to be generally remarkable for sunny good-nature. They are selected to watch the active officers, and their supposed watchfulness lends credit to the corporation. But millions of dollars are stolen every year without the knowledge of these prominent directors, who probably think it their main duty as gentlemen not to give offense to the executive officers of their institutions by overmuch watchfulness. It is notorious that the bank and insurance examiners of the State often find loans of the most improper kind on the books of life-insurance companies and savings-banks. The directors would not stoop to examine too closely into the administration of the institution to the support of whose credit they have freely lent their names. They are good-natured accessories to crimes which leave many a family penniless.

When a great journalist, now dead, was asked the secret of success in his profession, he said: "Industry and ugliness." There are other professions besides that of the journalist in which ugliness is a valuable quality. Public teachers generally need a fair allowance of it. We once heard an old Kentuckian describe a fashionable preacher: "He's a beautiful speaker, but a horse-thief could sit under his preaching without being disturbed."

Inestimable as is good-nature, it is a dangerous quality in men who are the appointed guardians of other men's morals or money. Unruffled good temper is not the best recommendation one can give in all cases—it is not the highest virtue of a watch-dog, for example.

COMMUNICATIONS.

Letter from John Greenleaf Whittier.

AMESBURY, 24th 10th mo. 1881.

MY DEAR FRIEND: The literary circles of your city have sustained a great loss in the death of Dr. Holland. The sudden and unexpected event was a painful surprise to friends in this section. We had hoped that many more years of literary labor and achievement were before him. But his work has been well done; his life has been well rounded. Poet, novelist, historian, and last, not least, the most successful of editors, he has left an honorable name among American authors. From his earliest publications, the New England historic romance of "The Bay Path" and the fine poem "Bitter-Sweet," he has had the ear of the public as a beloved and popular author. The common heart of the people always kept time to his music. And his wide influence was on the right side. Practical wisdom, broad Christian charity, earnest patriotism, and crystal purity marked his writings. If his sudden departure left him no opportunity, he had at least no occasion to blot out a line. Peace, then, to the tired worker! "O man beloved, go thou in thy way, for thou shalt rest, and stand in thy lot at the end of the days!"

I am very truly thy friend,

JOHN G. WHITTIER.

Parton's "Voltaire."

TO THE EDITOR OF THE CENTURY.

SIR: You accuse me, in your notice of my "Life of Voltaire," of attempting to deceive the public with regard to the meaning of Voltaire's phrase, "*L'Infâme*." You say he meant "the founder of Christianity."

I do you more justice than you do me. I assume and believe that you are honestly mistaken. To set you right, I inclose a short passage from the most careful and elaborate of Voltaire's religious works, "*Dieu et Les Hommes*," in which he expressly exculpates Jesus from the crimes committed in his name, and declares that Christ was no Christian. If this does not suffice, I could send for a dozen others of similar purport, or you can easily find such for yourself by reference to the index of his works, vol. 96, p. 419, under the head of "Jesus."

Respectfully yours,

JAMES PARTON.

NEWBURYPORT, Oct. 24th, 1881.

"*L'INFÂME*"—WHAT WAS IT?

"I dare assert, with the best-informed and wisest men, that Jesus never thought of founding that sect (Christianity). Christianity, such as it was as early as the time of Constantine, was more remote from Jesus than from Zoroaster or from Brahma. Jesus has become the pretext of our fantastic doctrines, of our persecutions, of our religious crimes; but he was not the author of them. Many have regarded Jesus as a Jewish physician whom foreign charlatans adopted as the chief of their pharmacy. Those charlatans wished

to make men believe that they obtained their poisons from him. I flatter myself with having demonstrated that Jesus was not a Christian, and that, on the contrary, he would have condemned with horror our Christianity, such as Rome has made it; a Christianity absurd and barbarous, which debases the soul and starves the body, lest both should be burned together during eternity; a Christianity which, in order to enrich monks and people no better than monks, has reduced whole communities to beggary, and thus to the necessity of crime; a Christianity which exposes Kings to the first devotee-assassin who wishes to immolate them to Holy Church; a Christianity which has despoiled Europe, in order to heap up in the house of the Madonna of Loreto, who came from Jerusalem through the air to the March of Ancona, more treasure than would be required to nourish the poor of twenty kingdoms; a Christianity which could console the earth, and which has covered it with blood, with carnage, and with innumerable evils of every kind."

From Voltaire's "*Dieu et Les Hommes*," chapter xxxiii., last paragraph. *Œuvres de Voltaire*, vol. 45, page 398. 97-volume ed. Paris, 1834.

The critique to which Mr. Parton excepts contains no accusation of attempting to deceive the public. It expresses the belief "that it is not mere carelessness" which leads the biographer to take a certain view of the meaning of Voltaire's famous phrase. It credits him with intention in presenting that view, not hinting the least doubt as to his sincerity in adopting it. It uses no phrase from which the inference can be drawn that the biographer is trying to impose on the public something in which he does not believe himself. But it does distinctly maintain that his interpretation, without any reference to its honesty, is not the correct one.

Mr. Parton begs the question by his very statement of it, "*L'Infâme*, what was it?" Whether Voltaire's war cry, "*Ecrases l'Infâme*," referred to a person or to a system has been discussed ever since he uttered it, and probably will be a topic of contest during all the writing of books of which there is no end about him. We do not perceive that Mr. Parton's latest citations help to any decision of the dispute.

To go to the root of the matter, what was it that Voltaire denied? It was the fundamental dogma of Christianity, the divinity of Jesus. He struck at its heart, as directly as at its abuses. There were in Voltaire's mind two figures bearing that one name. One was the idea of the historical Jesus, the Judean type of mere human perfectibility, to which, in the cited passages and in numerous others, he gives his praise—and his patronage. The other was the idea of a divine Person, worshiped by the civilized world in Voltaire's day as the founder of the religious system that bears his name. Of course, Voltaire denied that such a Person ever existed, averring that he was a priestly invention. Suppose he was right? Then he assailed a phantom. Suppose he was wrong? Then he attacked a reality. At any rate, it was as a person that he chose him for his enemy. He reviled the alleged circumstances of his birth—he derided his

miraculous powers—he branded him as an impostor in the life and actions attributed to him. What else than a personal scorn inspired his other famous saying to the effect that with a dozen philosophers he could pull down the system that the Galilean with a dozen fishermen had built up? This was in quite another temper than that of hatred for superstition, and such a temper found natural expression in the phrase “Crush the wretch,” launched at a person whom he denounced as imaginary, but whom he knew that the civilized world of his day, Protestant and Romanist, accepted and venerated as real. If there was no founder of Christianity, then the phrase was meant for its abuses—if there was any such founder, then it was meant for him.

Such a two-edged weapon was quite suited to Voltaire's grasp. Those who have a fancy for twisting ropes of sand may attempt to reconcile his inconsistencies. We yield all the admiration Mr. Parton can ask to his grand war upon the crimes and miseries cloaked by superstition—but we are not dazzled by it into blindness to the passionate scurrilities of his onslaught on those who would not accept his conception of pure Deism as their religion.

THE WRITER OF THE REVIEW.

The Spot where Pocahontas Rescued Captain Smith.

BALTIMORE, 19th October, 1881.

TO THE EDITOR OF THE CENTURY.

SIR: Having read Mr. Page's paper on Yorktown and Rosewell, I beg leave to say that, in my opinion, “Shelly” is not the place (as stated by him) where Pocahontas rescued John Smith.

While on a visit at Rosewell, I found among the old books in the library a copy of Smith's “Generall Historie,” published in London, in 1627. Smith says: “Fourteene myles northward from the river Powhatan [now James] is the river Pamaunkee [now York]. * * * At the ordinary flow of the salt water it divideth itselfe into two gallant branches. * * * Where this river is divided, the country is called Pamaunkee [now West Point]. * * * *About 25 myles lower on the north side of this river is Werowocomoco, where their great King inhabited when I was delivered him prisoner.*” In another place he says that Werowocomoco was “some fourteene myles from Iamestowne.” Stith, the first native Virginian historian, locates Werowocomoco “on the north side of York River nearly opposite the mouth of Queen's Creek, and about 25 myles below the fork of the river.” Thomas Jefferson, in his “Notes,” praises Smith for his accuracy, and says that Werowocomoco was situate “about Rosewell.”

Rosewell farm extends along the York River nearly opposite Queen's Creek, which is on the south side of that river, and on this farm Werowocomoco was, without doubt, situate. The spot said to be the site of the Indian village corresponds exactly to Smith's and Stith's location. It was about twelve miles from Jamestown

to the point on the south bank of the York, where Smith says he crossed the river to Werowocomoco in a “salvage canow”; and as the river is here about two and a half miles wide, it makes the site “some fourteene myles from Iamestowne.” “Shelly” is at the mouth of Carter's Creek on its east bank, opposite King's Creek, and is some two miles farther down the York than the spot indicated by Smith. In short, if “Shelly” had been the place, Smith and Stith would have naturally located it at the mouth of a creek. There being, however, no creek on the north side near the site, they have properly fixed the location by the number of miles from the fork of the river, and nearly opposite the creek on the south side of the river.

The site of the village where Smith was saved by the king's daughter is a plain running about half a mile along the bank of the river, elevated above the beach about five or six feet, and extending on an unbroken level a mile or so inland. Any bare-legged urchin, burnished by the sun, will point out the spot to the inquiring antiquary. Enormous beds of oyster-shells are found here some feet below the rich loamy soil; and this, and the quantity of Indian earthenware, stone hatchets, and arrow-heads occasionally picked up, indicate a dwelling-place of the natives, and fix the locality. The plain has lain fallow for many years, and is now covered with pines, cedars, oaks, sweet-smelling myrtle, and prickly cactus.

LEWIS MAYER.

The Prince Imperial.

TO THE EDITOR OF THE CENTURY.

SIR: On page 147, in an article entitled “Hints to Horseback Riders,” the author, “Midy Morgan,” says: “Standing on the near side of his horse, he will take a lock of the mane in his left hand, wind it around his two middle fingers, then, holding the reins quite loosely in the same hand, place his right hand on the cantle of the saddle, his left foot in the stirrup, and rise easily and quickly to his seat. Want of practice in this mode of mounting cost the life of his Royal Highness, the late Prince Imperial.”

It seems a pity to blame the Prince Imperial for lack of knowledge in mounting, when he was one of the finest riders in the army, and certainly his teacher, M. de Bussigny, would have taught him all the methods of mounting; and if his life had depended on his riding or mounting he would not have lost it at the time he did. The true cause of his failure to mount was the extreme restiveness of the horse he then had. It always required one or two men to hold this horse while the Prince mounted, and at the time of the attack he was, presumably, more restive and unmanageable than usual, owing to his fright.

My information on the subject comes from my brother, who was in the British Army in South Africa, and in the camp when the body of the Prince was brought in. He knew the brave Prince well, and admired him much.

F. B. J.

LITERATURE.

American History.*

If the rising generation shall be wanting in familiarity with the history of their own country, it will not be for lack of teachers. The more steps up the mountain of knowledge the easier, of course, the ascent—if it be taken for granted that all steps lead to the top. It is their very number, however, that makes discrimination the more necessary, lest some of them should lead into devious ways, to escape from which only adds to the labor of upward progress.

A book so full of anecdote as the "Young Folk's History," so full of the romantic incidents of war, so spirited in its descriptions of battles, and so clear, without tediousness, in its narrative of military movements, cannot fail to be attractive to young readers. These qualities will commend it to even older persons than those for whom it was specially written; and these will, perhaps, be more patient than young persons themselves with the frequent slip into that style which is thought to be peculiarly adapted to the youthful mind. Most boys and girls, we are inclined to think, who are old enough to read and understand a narrative of the causes and consequences of historical events, rather resent being written at as if they were not yet beyond words in two syllables.

The author of this volume, however, says in his preface, that "he who would write a truthful history of those times [the years of the Rebellion] must necessarily divest himself of partisanship and lift himself above the plane of local prejudice." It is a most proper and excellent sentiment, but it is quite likely that it will be a good many years yet before any historian of that period will find readers in so catholic a state of mind that they will believe him to have lifted himself upon any such higher plane. He is pretty certain to be weighed and measured by their standard, and not his own; if he has a bias they will be quick to detect it; and they will be disposed to believe he has one if he does not agree with them. Most persons of mature minds in this country have very positive opinions of events which occurred since their children, who are not yet grown up, were born, and it is a difficult matter to persuade them that such opinions can bear a reconsideration. Everybody, North and South, was very much in earnest from fifteen to twenty years ago, and everybody, on both sides, was sure he was right. A statement of the attitude of both sides in any given case—say, for example, the question of the treatment of Northern and Southern prisoners of war—does not seem to either side to be a candid statement, without the evidence which each relies upon to sustain its position. Mere assertion and mere denial are not argument, and where argument and proof are needed to comprehend

an event or a series of events, a statement that is only assertion or denial is a mere pretense of impartiality. History surely has a higher purpose than to record that he says he did, and he says he didn't.

Neither the Northern unionist nor the Southern disunionist of the war period will accept Mr. Champlin's assumption of impartiality. Only those will applaud him who the South believed beguiled her, twenty years ago, into armed resistance by the implied promise of help, and who the North believed were traitors at heart to a Union they wanted the courage to take up arms against. This treatment of the subject is simply to re-open the old wounds, to revive the old controversies which the time has not yet come to discuss dispassionately. A history cannot be satisfactory to those who were in dead earnest that, under a pretense of impartiality, condemns one party for beginning the war, and the other for the way in which it was carried on. Partisanship and prejudice are very much to be deprecated, but they are never so mischievous as when they creep about under the guise of frankness.

Nobody, probably, will dispute the assertion that a primer is nothing if not accurate. Indeed, it is rather worse than nothing if not accurate, for, professing only to be a bare statement of facts, it is misleading if the facts are misstated. In the one before us, we observe, without any very critical examination, a good many errors. They are sometimes absolute mistakes; sometimes carelessness of statement; sometimes a want of accuracy which will leave upon the youthful mind an erroneous impression which may not be easily eradicated. They are not, indeed, difficult to correct, but there is, therefore, the less excuse for their being committed. As no authority of authorship, however, is given, it was, perhaps, expected that the book would be subjected to the more critical examination of school-committees, and taken, if at all, on their own responsibility. Its general plan is a good one, and with so much in it that is excellent, it is a pity that it should be marred by errors that could have been easily avoided. But their number is, for a primer, serious. The name it bears is that of so experienced a publisher that we are quite sure he will be surprised to hear that it is open to the criticism of having been too carelessly or too hastily written.

Books for Children.

In the elder days, books for young folks and children were almost unknown. The few books really fit for the reading of the young, forty years ago, were not written for them, but were works of real genius, like "The Arabian Nights' Entertainments," "Robinson Crusoe," and "Gulliver's Travels." The managers of Sunday-schools were among the first to demand reading adapted to the understanding of readers of tender years. This produced a literature of a novel and peculiar class. For the most part, Sunday-school libraries were made up of the biographies of preternaturally good children. These, with a few modernized versions of Scripture stories, artfully disguised

* Young Folk's History of the War for the Union. By John D. Champlin, Jr. Copiously illustrated. New York: Henry Holt & Co.

Armstrong's Primer of United States History; for School and Family use. With maps. New York: A. C. Armstrong & Son.

with familiar dialogue, long constituted the intellectual pabulum of the infant American. In due time came Jacob Abbott, with his admirable Rollo and Lucy series of juvenile books, and these were in turn followed by the well-known brief biographical sketches of eminent historical personages, prepared for young people by the same author. Still, though knowledge came, wisdom in children's books lingered. It were invidious now to mention any of the names of the men and women who followed in the track marked out by Mr. Abbott. But it is sufficient to say that they were neither few, nor laggard in the race for distinction as successful writers for children. All at once, as it seemed, everybody began to write books for children. The boys received the first attention. Then, women, jealous for the amusement of the girls, provided suitable stories for the coming mothers of the republic. The new era had fairly begun.

Leaving out of account the pernicious literature which thoughtless men have invented for young people, it must be said that too many books are written for the young. There is a plethora of reading matter which cannot fail, by and by, to pall on the tastes of the very class that it was intended to amuse, divert, and instruct. A bright girl or boy, turned loose in a book-store, would be dazed by the embarrassment of riches spread over the ample counters. He would be in a fair way to starve in the midst of profusion. It would be impossible to fix the attention on any one feature of the display. As a rule, parents do not allow their children to make their own choices of books in this reckless manner. But the illustration which we have used is a fair one for the present purpose. In one way and another, children get at the vastness of the volume of reading matter provided for them. The spectacle of a child of tender years devouring one book while holding fast by feet, knees, and hands to two or three others yet to be opened, is not by any means phenomenal.

But, since books are written for the young folks, and as they will have the books, we have only now to choose wisely and well for them. Art exhausts its resources on bindings and engravings. The cunning publisher knows very well that the eye of the child is educated before the intellect begins to make known its wants. Each season brings new combinations of color, new devices to arrest the alert attention, and new works of the imagination to engross the awakened mind. This year the holiday books are more beautiful than ever, although we were ready to say last year that nothing could surpass the wonderful things then brought forth for the delight of the children. Frank R. Stockton, that prince of story-tellers, has produced new editions of his "Roundabout Rambles"¹ and "Tales Out of School,"² both of which conform to the prevailing fashion for gay covers and illuminated title-pages. Rossiter Johnson's capital story for boys, "Phaeton Rogers,"³ originally published in "St. Nicholas," makes its appearance in all the bravery of permanent book form, and a permanent boy classic it

long will be. Mr. Edward Everett Hale continues his tales told by those who acted in their own veracious histories. His latest venture is "Stories of Adventure Told by Adventurers,"⁴ in which he introduces Marco Polo, Sir John Mandeville, and a goodly company of voyagers and travelers. Boston and its ancient worthies and traditions is fitly celebrated in "Boston Town,"⁵ a well-made book by Horace Scudder, who marshals a troop of boys and girls and leads them all over old Boston, guided by a knowing old grandfather, and illustrates their journey with multitudinous pictures, most of which are old friends. More in the "sensational" vein is an English translation of Louis Rousselot's "Two Cabin Boys,"⁶ a tale of wild life and startling adventure. For the younger folk, we find Susan Coolidge's collection⁷ of deftly-told tales, whose titles are borrowed from Mother Goose, and in "Mammy Tittleback and her Family,"⁸ by H. H., the same younger brood of readers will light on a wonderfully real and jolly tale of a cat and her family.

Special mention should also be made of Mr. Horace Scudder's admirable compilation⁹ of stories, new and old, entitled, "The Children's Book." This volume is a monument of industry, a library of juvenile literature in itself. Mr. Scudder's plan includes selections from stories, ballads, and verses for young folks, that have stood the test of time and criticism. Grouped under their appropriate heads, are fables of Æsop, Gay, and Fontaine, the fairy tales of our childhood, some of the best things from "The Arabian Nights' Entertainments," Gulliver's travels, and Baron Munchausen. Among the ballads we find "The Children in the Wood," "Chevy Chase," "Robin Hood," etc., and in the section devoted to tales in verse, the delighted children will find "Mary's Lamb," "The Pied Piper of Hamelin," and other prime favorites. The editor of this collection of juvenile classics has earned the everlasting gratitude of all young people. The book is the most complete work of its kind ever printed. Something more than a passing notice, too, is due to the book about Boston¹⁰ which Mr. Samuel Adams Drake, who writes *con amore* of "The Hub," has written for young people. In these fair pages is condensed all the history of Boston which it is worth while to put into a boy's hands. It is the story of Boston from the time when the Puritans first hung up their hats there until the British evacuated the place and sailed away. And the story is told so entertainingly, and with so much anecdote, that he must be a dull child who does not read, and remember what he

3. Phaeton Rogers; a novel of boy life. By Rossiter Johnson. Illustrated. New York: Charles Scribner's Sons.

reads. Another benefactor to the coming generation is Mrs. Harriet Beecher Stowe, who has collected several of her stories for children, issued at intervals during the past ten years, and who has presented the little folks with three ¹¹ dainty volumes, bearing the titles of "Pussy Willow," "A Dog's Mission," and "Queer Little People." These charming tales are good for the young ones, and some of the children of larger growth will renew pleasant and half-forgotten sensations when they re-read their old favorites in the new dress given them by the publishers.

Finally, no buyer of books should overlook Sidney Lanier's version ¹² of the old Welsh tales of King Arthur, first introduced to English readers by Lady Guest. In this attractively illustrated volume we have the foundation, so to speak, of the wonderful Arthurian romance, celebrated alike in song and story. It is a book for boys, to be sure, but "The Mabinogion" contains a charm to bind the attention of all who have a liking for ancient romance, martial prowess, and tales of heroes. And if modern witchery in story-telling seems more subtle a magic with the young, there will be found in Frank Stockton's latest fairy book ¹³ one of the most delightful collections of improbable tales ever invented. We have known gray-headed grandsires to read with delight and laughter some of these delicious stories. There is about them a certain mock gravity and unconsciousness of humor that commends all of Mr. Stockton's stories to the favorable judgment and the applause of critics and readers. It is difficult to say which has done his work better—the artist who writes these stories, or the artist who has illustrated them so pleasantly.

The Wesley Memorial.*

If the reader of this paragraph should ever find himself walking through that part of the city road in London where stands the famous Wesleyan Chapel of that name, let him turn in and look at the tomb in which rests the man aptly called by Mr. Lecky "the greatest figure who has appeared in the religious world since the Reformation." Though the reader may chance to differ a whole sky's-breadth from Wesley's creed, he cannot but feel a profound veneration for the earnest and indefatigable genius who succeeded in lifting English and American life to a higher plane than that on which he found it. The obloquy which John Wesley endured in his life has given place to a general admiration equally unfavorable to a critical estimate of the man and his work. His followers compose more than a dozen powerful religious bodies in Europe and America, historians write his name with enthusiasm, high-churchmen build the tomb of the prophet stoned by their fathers, broad-churchmen like Stanley erect memorials to him in Westminster Abbey, and the world at large pays to Wesley every honor except that of imitating his self-denial and conforming to his precepts. The contributors to the "Memorial Volume" are representatives of all, or almost all, of the Methodist sects, great and small, English, American, Canadian, and Continental European, and there are articles from three or four non-Methodists—notably from Dean Stanley and Edmond de Pressensé. There are also interesting letters from others—Lecky, Gladstone, and Spurgeon, for example. The several articles in the book are pitched in a key of eulogy too high for critical judgment, but, since they are for the most part from very eminent Methodists, they are in themselves proofs of the tremendous and persistent influence of John Wesley in our own time. The Rev. Dr. J. O. A. Clark, of Macon, Georgia, is the editor of the volume.

* The Wesley Memorial Volume; or, Wesley and the Methodist Movement, Judged by Nearly One Hundred and Fifty Writers, Living or Dead. New York: Phillips & Hunt.

THE WORLD'S WORK.

THE ATLANTA COTTON EXPOSITION.

THE Exhibition of raw materials and machinery connected with the production of cotton and its manufacture into threads and fabrics, recently held at Atlanta, Georgia, was, in many respects, the most interesting exhibition ever held in this country. It was of value, first, to the planter and the maker of tools and fabrics; and secondly, in a more general way, to all the people. It showed, on the one hand, the sources of raw materials, and on the other, the wants and limitations of those who use these materials. In cotton spinning and weaving, invention has been active for years, and the business is in a measure fixed and settled. Cotton raising and shipping has, on the other hand, been for generations conducted in a simple and rather inefficient manner, and by the aid of tools that were badly designed or built upon unbusiness-like principles. It is

best, therefore, to consider here only those new tools and methods, shown at the Exhibition, that appeared to be of most promise to the cotton producer.

The Exhibition was practically divided into two parts. There was a display of appliances used in the production of cotton, from the actual plants growing in the fields to the finished bale ready for market, and a display of textile machinery used in all the processes, from the opening of the bale up to the finished cloth. It has been supposed that these two classes of men, the planter and the manufacturer, were sharply divided, and that the bale was the dividing mark between them. The Atlanta Exhibition plainly showed that this is not so. The planter's field of work extends far beyond the bale. He is grower and manufacturer, too, and has as much interest in machinery as the mill-

owner. Moreover, the dealer who buys the bales of the planter to sell to the mill has much to learn. His ways are unbusiness-like and wasteful, and his machinery imperfect. If the planter is wise, he will consider also the new ways and tools that may help him to save something of the ruinous loss that follows his beautiful product while it is in the hands of the factor and shipper.

Improved Cotton Planter.

COTTON is commonly planted by hand or horsepower machines in drills, and when the plants are up, a portion in each row is destroyed, leaving the rest to stand at regular distances apart from each other. This system involves a loss of seeds, young plants, and much labor. A horse-power planter, first used in planting corn in the hill, was shown at the Exhibition as adapted to planting cotton-seed at certain fixed distances in a row, thus saving the labor of removing the plants not needed. The machine consists essentially of a box or hopper for holding the seed, a simple device for opening the ground, and a simple mechanism for counting the seeds and dropping one or more at fixed distances in the furrow. In the hopper containing the seed is a small wheel, intended to revolve on a horizontal axis in such a position that it will be about half-buried in the loose seeds. On the rim of the wheel are a number of buckets or cups, each intended to hold one seed. In connection with each cup is a grip, or pawl, that by its weight drops over the cup and keeps the seed in place. As this wheel is turned, by suitable connections with the wheels of the machine as it moves over the ground, each seed is carried over the top and dropped into a spout. The grip lets go its hold at the right instant, and thus the seeds are dropped one at a time, each revolution of the wheel delivering a fixed number of seeds over a known space of ground.

The spout delivers the seed to the drill just behind the cutter that opens the ground, and it is then covered by the broad tread of one of the wheels of the machine. In this spout there is also a valve, that may be controlled by a boy riding on the machine, or by a simple mechanical device that opens and closes the valve at regular intervals. It is easy to see that in such a machine it is possible to both count the seeds and to place one or any number in a hill, at any desired distance. A change in the gearing alters the spacing in the drill, and once fixed, it drops the seeds at regular distances apart, whatever the pace of the horse. Two styles of this machine were shown—one intended to be guided like a plow, and a larger machine, that plants two rows of seeds at the same time, on which the boy who tends the dropping device and the driver may ride. We would suggest that the machine should be automatic, to get rid of the work of the boy. The measuring device sometimes used should not be separate. In other words, the planter should be automatic and self-contained.

Insect-destroying Apparatus.

THE cotton-worm, Colorado beetle, and other insects injurious to the cotton-plant, may be destroyed either by sprinkling solutions of various chemicals, such as London purple, over the plant, or by dusting the foliage with various poisons in the form of dry powders. A

number of appliances for showering the plants with the solutions or powders have been introduced, but none have been constructed upon so large and complete a scale as some new machines, shown at Atlanta for the first time. The largest of these sprinklers is automatic in action, may be easily moved by one horse or mule, and will thoroughly drench every plant in twenty rows at the same time. It consists of a horizontal triangular frame of wood and iron, supported on three wheels,—one guiding-wheel in front and two trailing-wheels behind,—a tank for the liquid, and a sprinkling device of novel form. On top of the frame is erected a wooden tripod, or derrick, and from the center is suspended, near the top, a barrel for holding the solution. A rope, pulley, and small windlass are also provided for lifting the barrel to its place. A rubber pipe extends from the bottom of the barrel to the rear of the machine, where it divides into branches—each branch hanging down behind the machine and between every second row of plants. Thus, if there are twenty rows of plants to be sprinkled, there are ten branch pipes. The elevated position of the barrel gives a good head to the streams, and the motion of the apparatus over the ground keeps the solution agitated and prevents the mixture from clogging the pipes.

The delivery-pipes that hang between the rows of plants at the back of the apparatus divide just above the ground into two branches. Inside the two branches are coiled springs that tend to keep the pipes spread apart, and at the end of each is a brass nozzle, designed to trail along the ground as the machine moves forward. The distance between the rows of plants is greater than the spread of these branch pipes, and as they are dragged over the ground, they strike the stems of the plants on each side. The spring allows them to pass and then spreads them out again, so that each nozzle must pass close under every plant in its row. It has been found that, to destroy the insects, the spray must be driven upward from below the plant. This arrangement of the delivery-pipes, and the fact that the jets are all delivered upward, accomplishes the purpose admirably, and is a most ingenious application of means to ends. The jarring of the elastic pipes against the plants also tends to scatter the shower of spray in every direction, and every plant and leaf is reached by the liquid poison. The nozzles used in this apparatus are of a new form, that may prove of value in other hydraulic machines. They consist of brass cups fitted with tight covers, having a small hole at the center. The delivery-pipe enters this cup at the side next the bottom, and the water is carried round and round the inside of the cup till it is filled, when the excess escapes upward in spiral or rifled jet. The machine examined was in operation, and of a small size, and thoroughly drenched every plant in twelve rows at one time. In practice, the barrels, filled with the poison in solution, are placed at convenient distances in the field, and when one is empty it is lowered from the machine, and either refilled and hung on the machine, or a fresh barrel is taken. In moving the machine on roads, the horizontal frame is shut up by sliding the parts of the frame one over the other and clamping them in this position. The wheels and the upright tripod remain fixed, but the wheels are sufficiently near together to enable the apparatus to
